VOL. VI NEW YORK, THURSDAY, JANUARY 7, 1909

No. 3136

(Copyright, 1909, by THE INDEPENDENT.)

Survey of the World

Judge Taft and the South

William F. Stone, Collector of the Port of Baltimore, wrote to Judge

Taft asking for his views concerning the proposed constitutional amendment to be submitted to the people of Maryland in November next. In proposing this amendment, Mr. Stone said, the publicly avowed purpose of the Democratic majority in the Legislature was "to disfranchise the bulk of the colored vote in Maryland," and the Democrats were asserting that Judge Taft had favored such action in his recent address before the North Carolina Society. Replying on the 22d ult., Judge Taft said:

"I don't think any one can read my North Carolina speech with any care and on it base the belief that I would favor such a bill as that proposed in Maryland. The provision that the first class of eligible voters shall be those persons who on the 1st day of January, in the year 1869, or prior thereto, were entitled to vote under the laws of Maryland, or any other State of the United States wherein they then resided, and that the male descendants of such persons, as a second class, shall be entitled to vote, was intended to exempt the persons thus made eligible from the educational or property qualifications which follow in the descriptions of the fifth and sixth classes of persons who shall be entitled to vote. The same thing may be said of the third and fourth classes, which include foreign-born citizens of the United States naturalized between January 1, 1869, and the date of the adoption of the proposed section, and the male descendants of such mentioned persons. This is in order to exempt such immigrants and their descendants from educational or property qualifications.

"Now, we know the first four classes include no negroes at all. In other words, it is intended to free the whites from educational or property qualifications, but to subject all negroes to them.

"The whole law ought to be condemned. It is not drawn in the spirit of justice and equality, having regard for the Fourteenth and Fifteenth Amendments, and I sincerely hope that

no Republican and no Democrat who desires equality of treatment to the black and white races will vote for it."

Because of the favorable attitude of many Southern Democrats toward Judge Taft, it was recently suggested that Taft Clubs should be formed in all the Southern States. The President-elect was unwilling that his name should be used in this way. After a conference, on the 31st ult., with Chairman Hitchcock and others, concerning "the action to be taken with a view to the organization of the real sentiment in the South in favor of a political change in that section," the following authoritative statement as to the plan agreed upon was published:

"The Republican organization is to be maintained in all the States, and efforts are to be made to increase the ranks of the Republican party as fully as possible. With the purpose, however, of securing the assistance of those who do not desire to ally themselves with the Republican party as Republicans, but only wish to act independently of the Democratic party in national campaigns, it was thought best to secure the names of those who would take charge of this independent movement in each State, with a view to their subsequent organization at a time when such political action would be opportune."

There was no decision as to the name which these clubs should bear, but they may be called Independent organizations. Speaking for a visiting delegation from Birmingham, Ala., on the 2d, Gen. Rufus N. Rhodes, a Democrat, said to Judge Taft that the men of Birmingham regarded the result of the recent national election "as a benediction from God to the people of the South over their own protest." In the course of his response Judge Taft promised to visit the leading cities of the South in the early part of his term. He heartily welcomed expressions of opinion by General Rhodes and others

which indicated that the South was to be a place where national politics would be a subject for free discussion and independent action.—Answering the cabled request of *Le Matin*, of Paris, for an expression of his wishes for the new year, Judge Taft sent the following message:

"My most earnest wish is for the preservation of the peace of the world and for the continuance of the friendly relations which this nation enjoys with all other nations of the earth. Let us hope that, with the completion of the year 1909, the necessity of settling disputes between nations by brute force will be found even more remote than it is now."

—Beekman Winthrop, now an assistant Secretary of the Treasury, is to be Assistant Secretary of State. He is thirty-four years of age and a graduate of the Harvard Law School, was Judge Taft's private secretary in Manila, has since been Governor of Porto Rico, and was Judge Taft's choice for the office in Cuba to which Governor Magoon was appointed.

The Ohio Senatorship

By the withdrawal of Charles P. Taft (half-brother of the President-elect), on the 31st ult., the contest for the seat in the Senate now held by Mr. Foraker, of Ohio, was ended, and Congressman Theodore E. Burton, of Cleveland, was nominated by acclamation, on the 2d, in a Republican caucus. He will be elected on the 12th. For about twenty years he has been a member of the House at Washington. He is a lawyer and a student of finance. It is said that altho, at the time of Mr. Taft's withdrawal, Mr. Burton had not enough votes for a caucus majority on the first ballot, it was known that a sufficient number would be given to him on the second. A caucus majority is 46; he had 38 securely pledged. Mr. Taft's withdrawal followed a long conference between Mr. Burton and himself, and preceded by two or three hours that of Senator Foraker, who had the support of a few members. There are conflicting reports about the condition of the contest at that time and about the influences exerted. Some say Mr. Burton would have failed to get a majority, and that a long and bitter struggle might have ended in the election of a "dark horse" or even of Mr. Foraker. Mr. Roosevelt and Judge Taft desired,

of course, that such a struggle should be avoided, but evidence is lacking that either of them interfered. In a published statement Mr. Taft said that conditions had arisen which imposed upon him a higher duty than the gratification of any personal ambition. Altho it did not appear that any candidate had votes enough for a caucus nomination, it was clear that a prolonged contest would divide the Republican party of Ohio, and he was not willing to be in any way responsible for such division. Senator Foraker also gave out a statement in which he congratulated the party, the State and the nation upon the assured election of Burton, who, he said, was well qualified for the office "by experience, ability and character."

Engineers Going to Panama

Alfred Noble, whom the President recently invited to accompany Judge Taft during the latter's approaching visit to the Isthmus, is unable to leave the important work in which he is engaged, but upon his recommendation the President has invited the following prominent engineers, and it is understood that they have consented to go:

Arthur P. Davis, of Washington, chief engineer of the Reclamation Service, who has had personal supervision of Government works and who made the hydrographic examination of the Panama and Nicaragua routes; John R. Freeman, of Providence, a well known authority concerning water supplies; Allen Hazen, of New York, who had charge of the drainage at the Chicago World's Fair and was chief engineer of the filtration works at Albany; Isham Randolph, of Chicago, chief engineer of the Sanitary District of Chicago for twenty-five years; James Dix Schuyler, of Los Angeles, known as a builder of sea walls, water-works and great dams; Frederick P. Stearns, of Boston, chief engineer of the water supply and sewerage system in that city.

Mr. Randolph and Mr. Stearns were two of the five members of the Advisory Board of Engineers who signed the minority report in favor of a lock canal. Mr. Noble was another. These six engineers will now make a thoro inquiry and will report concerning the questions which have recently been raised. The members of Congress who have gone to the Isthmus will consider measures for revising and improving the present plan of government for the Canal Zone.

Fourteen Years' Sentence for Ruef

Abraham Ruef, found guilty on December 10th of bribing a supervisor to vote for granting an overhead trolley franchise to the street railway company in San Francisco, was sentenced on December 29th by Judge Lawlor to be imprisoned for fourteen years in the penitentiary. This was the longest term that could be given for such an offense. Upon notice of appeal a stay of execution was granted. Delays in the past show that more than two years may elapse before a final decision is reached. It is said that \$250,000 was paid for the franchise in question, and that Ruef and Mayor Schmitz divided \$100,000 of this sum. This was Ruef's third trial. It consumed nearly four months, and in the course of it Prosecutor Heney was shot by Morris Haas. Heney has entirely recovered. While in New York last week he asserted that Haas had been employed or urged by "the Ruef forces" to kill him. There are still more than 100 indictments against Ruef. The trial of Patrick Calhoun, president of the street railway company, is to begin this month. Ruef became a political boss in 1901 by means of his influence with the workingmen, and with the aid of the labor unions he elected Schmitz mayor. Schmitz had been the leader of a theater orchestra. At one of his trials Ruef confessed guilt, but his confession was afterward withdrawn.—On the 31st ult., E. A. S. Blake, convicted of attempting to bribe a juror at Ruef's first trial, was sentenced to be imprisoned four years. In a confession he had asserted that two of Ruef's attorneys employed him to offer the bribe, and that the same lawyers, after he had been indicted, promised to support his wife and pay him \$10,000 if he would take punishment without implicating them. One of these attorneys has recently been tried on this charge and acquitted.—Before the corrupt councilmen were arrested in Pittsburg, a few days ago, all the evidence was laid before President Roosevelt, who urged the prosecutors to be sure to punish the bribe-givers as well as the bribe-takers. It appears that the latter have been giving a share of every bribe to William A. Martin, a councilman now in the penitentiary, to which he was sent for his conduct with

respect to the Tube City Railroad franchise. He has received his share because he protected his corrupt associates.—William L. Mathues, formerly Treasurer of Pennsylvania, who was recently sentenced for his complicity in the Harrisburg Capitol frauds, died on the 30th ult. His death was hastened by the judgment of the court.

Trust and Railroad Cases

The Standard Oil Company of Indiana now seeks permission to do business in Missouri, under regulations which the courts may prescribe. By a decision of the Supreme Court of that State, on the 23d ult. it was ousted from Missouri and required to pay a fine of \$50,000. At the same time an order was issued for the dissolution of the Waters-Pierce Oil Company, to be executed unless the company should prove its purpose to do business as an independent corporation.—A new investigation of the methods of the Beef Trust is now in progress before a Federal grand jury in Chicago. More than 100 witnesses have been summoned. It is reported that secret service agents have found evidence of rebate agreements with several railroad companies, the allowances having been disguised in many ways; also that fresh proof of an unlawful combination has been discovered.—More than a hundred mass meetings were held in California on the 29th ult., to make protest against the impending increase of transcontinental railroad freight rates. It was asserted that this increase would be equivalent to a tax of \$10,000,000 a year upon consumers.—T. H. Bunch, a grain dealer at Little Rock, Ark., has been fined \$15,000 for accepting rebates from the Missouri Pacific Railroad Company. He had admitted his guilt.—It is expected that the Pennsylvania two-cent passenger fare law will be repealed this month. The courts have pronounced it unconstitutional so far as it affects the Pennsylvania Railroad Company.—The Supreme Court January 4th denied the petition of the Government for a review of the decision of the Federal Court of Appeals reversing the fine of \$29,000,000 imposed on the Standard Oil Company by Judge Landis.

Various Topics It is reported, apparently upon good authority, that Secretary Root and Ambassador Bryce have agreed upon three treaties for the adjustment of differences between the United States and Canada and Newfoundland. The first, it is understood, provides that The Hague Tribunal shall make an authoritative and final interpretation of the treaty of 1818, relating to the rights of American fishermen in Newfoundland waters. The second is concerned with the control of international waterways and the distribution of water for power purposes at Niagara Falls. Provision is made in the third for a settlement of pending pecuniary claims for damages.—In the case of the complaint of George L. Fox against George L. Lilley, Governor-elect of Connecticut, under the Corrupt Practices law of that State, the two judges who acted as an election court have pronounced the law unconstitutional upon the ground that the defendant, if found guilty, would be disfranchised and thus be deprived of his franchise rights without trial by jury. The judges commended Mr. Fox's sense of public duty.—There has been one conviction in the cases arising out of the race riots in Springfield, Ill., in August last. Abraham Raymer, believed to have been the leader of the mob that lynched negroes and burned houses, was acquitted when tried for murder, and again when tried for destroying property, but he has been found guilty of larceny, a jury deciding that he stole a militia officer's sword, which was worth \$15.—F. C. Lillis, a wealthy banker, has been sentenced at Fresno, Cal., to be confined six months in jail and to pay a fine of \$1,000 for unlawfully fencing large tracts of Government land.—By his approval of new rules prepared by the New York Civil Service Commission, and also of a resolution which the commission adopted at his suggestion, Governor Hughes has taken out of politics and subjected to the requirements of the merit system 309 offices to which appointments have been made in past years, as well as about 100 new places (those of county superintendents and engineers) connected with the highway improvements, for which large sums have been appropriated.

Venezuela's New Government So far as can be learned, the authority of President Gomez is recognized thruout Venezuela. At one point on the coast, Macuro, his forces were opposed by General Torres and a garrison, and twenty men were killed in a fight between these adherents of Castro and a gunboat bearing officers and men to displace them, but Torres, after repelling the gunboat, decided to submit. The Governor of the province of Falcon, it is said, declined to recognize Gomez as President, and therefore was placed in prison. Dr. Morales, formerly Castro's Minister of Finance, has been lodged in jail upon the charge that with money he promoted the plot for the assassination of Gomez. Among Castro's political prisoners whom Gomez has released are some who had been in chains for eight years. Special Commissioner Buchanan arrived on the 28th ult., and, with the United States warships, was cordially received. Gomez said he was most anxious for an adjustment of all differences with this country. It is reported that he promptly agreed that the pending disputes should be submitted to arbitration. Castro, in Berlin, says that if he had suspected Gomez of disloyalty to himself he would not have left Venezuela to regain his health. "I have always been," he adds, "a slave to honor and duty, and my only fear is the fear of God." Gomez, he remarks, has probably acted as seemed best from his point of view, concerning foreign relations, and he (Castro) does not intend to interfere, but he insists that his own previous action was justified. It is said that claims in court against Castro will consume the \$2,000,000 worth of property he did not take away.—The new Central American Court of Justice has decided in the case of Honduras against Salvador and Guatemala that the defendants are not guilty. The claim was that they had promoted or aided a recent unsuccessful revolution in Honduras. It is said that the decision was reached by a vote of 4 to 1, the dissenting member being the judge appointed by Honduras. A prominent Washington correspondent says our State Department has been considering a suggestion that our differences with Venezuela might well be submitted to this court for

arbitration.—About 400 American marines and several companies of infantry sailed from Havana on the 31st ult. Other American troops are soon to follow, and in a few days only three or four companies of the army of interven-

is between 100,000 and 130,000. The value of the property is calculated at more than a billion dollars. This is probably ten times greater than the destruction of life and property in the eruption of Vesuvius that overwhelmed Pompeii

THE SCENE OF THE ITALIAN EARTHQUAKE.
The parts in black represent the devastated area.

tion will be left in Cuba. These will leave the island on April 1st.

Earthquake at Messina

Earthquake at Messina One of the most appalling catastrophes recorded in history was the destruction of the cities on both sides of the Strait of Messina in Southern Italy by an earthquake on December 28th. No reliable estimates of the loss of life have yet been made, but it is generally believed that it

and Herculaneum in A. D. 79. Messina, the most important city destroyed by this earthquake, contained in its commune about 175,000 people, of whom no more than 60,000 are thought to have survived. This city was over 2,600 years old and had been involved in most of the Mediterranean wars during its existence. It has suffered repeatedly from earthquakes, the most serious being those of February, 1783, when 20,000 persons perished, and of November, 1824. The opposite Cala-

brian shore was severely shocked in September, 1905, and October, 1907. The Strait of Messina, which divides Sicily from Calabria, is 24 miles long and from 2 to 12 miles broad. The rockiness of the channel and its extremely swift tidal currents made navigation dangerous in ancient times and gave rise to the legends of Scylla and Charybdis. The rocks and shore lines on both sides of the strait are reported to be changed, and doubtless the cause of the earthquake is a slipping of the shores along a fault in the strait such as originally formed it by the breaking off of the Island of Sicily from the Italian peninsula. The volcanoes of Etna to the South and Stromboli to the north are active, but they had no direct connection with the earthquake so far as known. The rumor that the Lipari Islands had been sunk proved untrue. The devastation was confined to a small area along both shores of the strait. On the Calabrian side, Reggio, a city of 44,000 inhabitants, was destroyed, and also the smaller towns of Scilla, Palmi, Pezzo, Bagnara, Villa San Giovanni and Santa Eufemia. Messina was not a popular tourist town, and there were few if any Americans there except Consul Cheney and his wife, who were buried in the ruins. Taormina, further down on the Sicilian coast, where there were many American tourists, was not affected. As in the San Francisco earthquake, it was the low-lying land along the shore that was most severely shaken. A tidal wave caused by the earthquake swept away buildings and people on the Calabrian coast.

The Work of Rescue

The first and strongest shock occurred at 5:25 on the morning of December 28th. It was followed by twenty or more during the day, one in the evening adding to the damage by shaking down the cracked walls of buildings. The extent of the disaster was not appreciated at first, because the district was cut off from communication with the outside world by the breaking of telegraph lines and railroads. The first news from Messina was brought by a torpedo boat, which ran down the coast from town to town until a telegraph terminal was reached. A

British warship was first to go to the rescue of that city in the morning, followed by Russian in the afternoon, and later by German and Italian. By Sunday there were twenty naval vessels at work bringing food and hospital supplies and carrying away wounded and destitute people. Six thousand soldiers and sailors were landed to restore order, put out fires, and assist in the rescue of imprisoned and injured families. Racial distinctions were forgotten, Russians and British worked side by side among the ruins. Three of the Russian soldiers were killed by a falling wall. A thousand physicians and surgeons, military and civil, brought to the spot were unable to attend to all the cases needing relief. The wounded by thousands were conveyed to the Naples hospitals, and all the towns of Southern Italy and Sicily were soon filled. Men, women and children, who were injured or imprisoned in their ruined homes, died in numerous cases before they could be rescued. Their cries could be heard for days after the shock. It was four days before the fires could be put out in Messina. The weather was cold and stormy, causing great distress to the fugitives, who were mostly without clothing. The water supply was cut off at first, and what could be found later was too polluted to drink. Food was lacking. Men fought each other for it in the streets with knives or their bare hands. The collapse of government released the brutal element of the population from all restraint. Bodies were robbed and stores looted of jewelry and other valuables which could not be carried away. Men and women crazed by shock and suffering committed suicide, refused to leave crumbling dwellings, or fought their rescuers. Corpses were devoured by dogs, and great swarms of crows gathered from all directions. The telegram of the King of Italy, that shiploads of quicklime were more needed than food, conveys the horrible conditions. King Victor Emmanuel and Queen Elena visited Messina as soon as possible, and took an active part in the rescue and relief work. The Queen was in a hospital when one of the later earthquakes caused a panic, in which she came near being crushed. Reggio was longer than Messina with-

out aid, and the distress was still greater. The Mezzacapo barracks were destroyed, and out of the 900 soldiers lodged there only 150 escaped. These voluntarily organized a patrol and succeeded in overcoming the bands of ghouls and looters who had possession of the city. At a convent in Reggio seven of the twenty-one nuns were killed and all the servants. Of the sixty pupils only twelve escaped. Some of the young girls jump-

Reaction in China

Great anxiety has been felt everywhere since the death of the Empress Dowager, as to whether the Regency would follow the progressive policy of her later years. An event of the past week gives rise to the fear that a reactionary policy has been adopted. Yuan Shi-kai was dismissed from his offices of Grand Councillor and Commander-in-Chief of the Imperial forces. The reason given for this, that

VIA GARIBALDI,
One of the principal streets of Messina, now in ruins.

ed from the windows and walked in their night clothing twenty-five miles into the interior in search of help. Almost all the buildings in Messina and Reggio are completely demolished. According to the official report 10,370 injured persons have been removed by the warships, including 1,209 by the British, 909 by the Germans, and 880 by the Russians; the rest by the Italians. Contributions of money and supplies have poured in from all parts of the world. New York City has already raised \$300,000, to be expended chiefly by the Red Cross Society.

he has rheumatism of the leg, is obviously fictitious, for the edict concludes, "Thus our clemency toward him is manifested." A Manchu, Na-tung, formerly Governor of Peking and now Comptroller of Customs, has been appointed to the Grand Council in place of Yuan Shi-kai. This leaves only two Chinese members of the Grand Council and indicates that the Regent is disposed to restore Manchu supremacy, which had been imperilled by the series of edicts in recent years depriving the Manchus of their special privileges and reducing them to an equality with the Chinese. The edict to

remove Yuan Shi-kai was not signed by Prince Ching, the President of the Council, in person, and it is reported that the Grand Council was not consulted in regard to it. Yuan Shi-kai is the most able and progressive statesman whom China has produced in the present crisis. While Governor of Chili he organized the first efficient native army, controlled and equipt in a way that commanded the admiration of foreign military experts. When the diplomatic corps and foreign residents of Pekin were imprisoned in the compound at Pekin and besieged by the Boxers, Yuan Shi-kai, then Governor of Shanghai, procured the first news of their survival and situation, which was conveyed thru the American Consul to Mr. Hay, and resulted in a relief expedition. He has been repeatedly charged by his enemies with disloyalty and intrigue against the reigning dynasty, and is even accused of poisoning the late Emperor. It is apprehended that his fall will compromise the future of his followers, mostly young men of foreign education, like Tang Shao-yi, who is now in Washington on an important mission to this country. A meeting of the diplomatic corps was called immediately on the publication of the edict, and this has been followed by several other conferences, altho no definite line of action has been agreed upon by the representatives of the foreign Powers. It is reported that the American and British ministers wish to protest against the dismissal of Yuan Shi-kai as injuring the credit of China and endangering foreign relations. But the Japanese minister, who appears to have known of the action earlier than any of his colleagues, fears that such interference with the internal policy of China would be an impropriety.

Foreign Notes Father John, of Kronstadt, died on January 1st at the age of eighty.

He was revered as a saint by Russians of different classes because of his charitable enterprises and church reforms.

—The accidental explosion of a bomb left upon a café table by a student at St. Petersburg has given rise to rumors of extensive terrorist plots against the Imperial family. A waiter was killed and the café wreckt by the explosion.—The

large number of death sentences recently imposed by the Government were generally condemned in debate in the Duma. The radical members of the Duma were not successful, however, in carrying the resolution presented by Professor Miliukov expressing the horror of the Duma at "this growing harvest of death, which is blunting the moral sense of the community and destroying the honor and prestige of Russia as a civilized state."

A novel postal check system has come into operation with the new year in Germany. Nine special check offices have been established. Any person maintaining a minimum balance of \$25 can draw checks, which are in the form of postal cards. They can be used for payments, both at home and abroad, up to \$1,500.—The fact that the Emperor of Germany at his New Year's reception shook hands with Chancellor von Bülow and ignored the Presidents of the Reichstag and Landtag is presumed to be fraught with deep political significance.—The opposition to the Shah of Persia on account of his refusal to call a National Assembly is said to be increasing and menacing. Sayyid Ali Agha, the chief ecclesiastical authority of the Shiite Mohammedans, has denounced the Shah openly from his pulpit for his reactionary policy, and the Nationalist movement is becoming as strong and popular as it was before the *coup d'état*. Government officials and employees have received no pay since the dissolution of the Assembly, and the tribesmen supporting the Shah have received their compensation in permission to loot caravans approaching the capital.—The election of Senators in France last Sunday will increase the Government majority by fifteen. Premier Clemenceau concluded his campaign proclamation with the words:

"The representatives of clerical domination are always running, and do not fear even to cut into the play the danger of revolution and make us run the risk of civil war—all this to bring about every chance for the bloody return of Papism and the monarchy."

—A riot occurred at Tittaghur, near Calcutta, on account of the prohibition of Mohammedan sacrifices of cows in deference to Hindu feelings. The troops were obliged to fire upon the rioters, killing several and injuring sixty.

What Organized Labor Ought to Have.

A Reply to Mr. Gompers

BY EVERETT P. WHEELER

[Mr. Wheeler is a well-known New York lawyer who has always taken an active part in public movements and affairs. In view of the recent sentence of Mr. Gompers to a year's imprisonment for violating an injunction the following article is of extreme timeliness.
—EDITOR.]

HENRY GEORGE said that labor asked for justice. This it certainly should have—absolutely impartial justice. But it ought not to have special privileges. This, it seems to me, is what Mr. Gompers asks.

His fundamental mistake is in his claim that there can be no property in anything intangible, and that labor is intangible. A right of property in the labor of another man, he says, means slavery. He declares that it is an inalienable right of freemen "to work for whom you please, to stop work when you please, for any reason you please, or for no reason."

This definition of slavery is erroneous. Slavery means the subjection of one person who is of full age, and possess of his faculties, against his consent, to the control of another. But if the consent be given, there is no slavery. If a Circassian sells his daughter to a Turk, against her will, she becomes the slave of the Turk. But if she voluntarily marries him, she becomes his wife. As a wife she owes many duties to her husband. To the performance of these she voluntarily bound herself when she became his wife. This is not slavery. So with a man's labor. It is his property, and a sacred and indispensable property. He is free to sell it or to refuse to sell. But once he contracts to give his labor, the person with whom the contract is made has property in its performance.

If a manager contract with a singer to sing in opera, the tenor must keep his contract or respond in damages. The contract for his service is just as much property as the lease of the opera house.

When a trades union or a single workman agrees with a corporation or an individual for the doing of work, the right to have that contract performed is property. Well does Mr. Gompers say: "The trade agreement between the union and its employers we believe to be the key-

stone of peace in the industrial world today."

When that trade agreement is made, each party has a vested right to its performance by the other, and that right is property.

Therefore, the Canadian Arbitration Statute and the American Railroad Act are right. The American act is entitled "An act concerning carriers engaged in interstate commerce and their employees." It was approved June 1st, 1898. It provides that "whenever a controversy concerning wages, hours of labor or conditions of employment shall arise between a carrier subject to the act and the employees of such carrier, seriously interrupting or threatening to interrupt the business of the carrier," either party may demand an arbitration. Pending the arbitration the status existing immediately prior to the dispute must not be changed; provided that no employee shall be compelled to render personal service without his consent. Employees dissatisfied with the award are forbidden to quit the employer's service before three months after the award, without giving thirty days' notice. In like manner a dissatisfied employer cannot discharge employees on account of dissatisfaction with the award without giving thirty days' notice.

This act was successfully invoked in March, 1907, to prevent a great railway strike west of Chicago.

Both the American and Canadian acts provide a definite method of enforcing some of these trade agreements. They recognize the great injury to thousands of innocent people that may be caused by a sudden strike or a sudden lockout in the management of a public service corporation. (The American act is limited to railroads.) And they forbid a strike or lockout, in the case of disagreement between employer

and employed, until there has been an arbitration. This is a great step in advance. Civilization means the enforcement of contracts by lawful means. To compel another, by individual warfare, either to make or to keep a contract, is barbarism.

In the long run, the sacredness of contracts means more to the labor union than to the employer. What the honest workman wants is steady work on terms to which he has freely agreed, and the performance of which he can enforce.

The justice of Mr. Gompers's criticisms on the Sherman Act must be admitted. That law was tost into the statute book by that hysterical wave of prohibition that has been sweeping over this country. An evil is seen. The hasty impulse of the sincere fool, and the ready compliance of the shortsighted knave, is to put a prohibitory law on the statute book. The first satisfies his morbid conscience. The second curries favor with the noisy constituent, and thinks the law will never be enforced.

By all means amend the Sherman Act. Repeal the prohibition against combinations, whether of labor or capital. Instead thereof, regulate both. Provide an effective remedy by which the illegal acts of either can be readily restrained.

It will be asked: What would you designate as illegal acts? I answer: Interference with the property rights of others, whether employer or employed. The blacklist ought to be illegal. The workman has a right to contract for his labor. The employer ought not to interfere with this right. On the other hand, if one workman has contracted to labor for an employer, another ought not to entice him to break that contract. Each party to the contract has a property right to its performance by the other.

Mr. Gompers says to us: "Labor's weapons are in no sense weapons of aggression; they are nothing more than purely passive resistance."

If this were true, there would be no just cause for complaint. But is it true? In the Danbury hat case, a manufacturer in Danbury was peaceably making hats. He had in his employ men who had freely contracted to work for him in that business. Was it no aggression to boycott his customers and prevent him from making sales, and his workmen from working to make hats? Is the law so

blind that it can only see direct acts of violent aggression? Is it murder to stab a man to the heart, and not murder to kill him by poison sent thru the mails? Mr. Gompers can never convince the American people that there is any difference in guilt between the two or that there should be any difference in the legal remedy.

He argues that the criminal law affords sufficient protection. Unfortunately, it does not. The criminal law of America was not devised for the purpose of punishing the guilty. It expressly declares that it is better that ten guilty men escape than that one innocent man be punished. And if it were otherwise, criminal law is a poor protection for civil rights. Leave that to the civil courts.

Now, it may be that in some cases injunctions have been improvidently granted. Judges are not infallible. But the means of redress are available. Who can name a labor suit where an improvident injunction has been in the end sustained? On the other hand, the injunction was of invaluable service to the public in the Chicago railroad strike and in the San Francisco longshoremen strike. The brutal violence of the strikers was the reverse of "passive resistance." If continued, it would have caused a complete cessation of commerce. "Commerce," as the Flemish burghers said to Charles the Bold four hundred years ago, "commerce is irreconcilable with war."

Again, Mr. Gompers declares: "No man has a property right to the custom of any other man in business." This is his second fundamental mistake. The good-will of a business is a property right, and often very valuable. It is constantly bought and sold. The good-will of a business is the interest of the owner in the custom of that business.

Let me illustrate by a case in my own experience. Over thirty years ago the Atlantic and Pacific Telegraph Company was competing with the Western Union. The latter had then the monopoly of the cable lines to Europe. It refused to transmit over these cable lines messages forwarded by its competitor. I obtained an injunction restraining it from refusing. Under this order cable messages were transmitted until the merger of the two companies. This injunction was

vital to the existence of the competing company, for its customers, as a rule, would not deal with it unless they could have cable as well as land messages forwarded.

There the court recognized property in the custom which the telegraph company had obtained. And it recognized property in the contract of the operators to transmit messages. It protected the one and enforced the other.

Mr. Gompers is right in saying the labor union "sells the power to labor." In making this sale it should obey the laws of trade. These are to make a good article and to sell at a fair price. Let organized labor strive for both ends, and it will have the support of all good men. But, he adds, the labor union is not a trust because it "deals, not with material things, but with the labor of its members; it aims, not to confine its benefits to a few, but to bestow them on every member of the trade."

There again is the fundamental mistake that a combination is not a trust because it deals only with immaterial things. They are just as much the subject of property as material things. Light and air are just as necessary as bread and water. The elevated railroads have in many instances paid as much as a million dollars per mile for interfering with the light and air of the abutting owners. When you buy a corner house you pay more than for a house on an inside lot, because you get more light and air. Whether, therefore, a combination deals in labor or in sugar, it is equally a trust, and ought not to be prohibited, but be allowed perfect freedom as long as it does not interfere with the rights of others, but no longer.

And when we are told that the labor union limits its aim to "every member of the trade," we, who are not members, feel that the aim is narrow and shortsighted. The real good of the members of the trade is bound up with that of those who are not members. If a union man does a good job, the customer is benefited. If he scamps his work, the customer suffers. When many customers suffer, their ability and their disposition to pay good wages are both diminished. "When one member suffers, all the members suffer with it."

One other flaw in Mr. Gompers's argument requires consideration. He maintains that an act lawful in the individual ought not to be unlawful to a combination. Let us see. If one man enters my house and behaves decently he is welcome. But if a thousand men come at once and fill it, they violate my right to use my own home. If the grocer nearest me dislikes me and refuses to sell me food, I can buy elsewhere. But if all the provision dealers in town combine to refuse to sell me food, they starve me to death. That is murder just as much as if they killed me with a pistol.

"You take my life when you do take the means by which I live."

The test of the lawfulness of a combination should be the lawfulness of the purpose for which it was formed. A combination to economize the cost of production and thereby give the buyer a better article at a cheaper rate should always be lawful. A combination to destroy a man's business is the "ferocious competition" of which Mr. Justice Holmes speaks, and should always be unlawful. On these lines, let the Sherman Act be amended.

In conclusion, Mr. Gompers declares: "The workingmen constitute the great majority of people in the world; finally, they will take over the power of government." Yes, the workingmen. But who are the workingmen? Farmers and farm laborers are workingmen. Those engaged in personal service are workingmen. Ministers, lawyers, doctors, engineers, teachers are all workingmen, and generally work more than eight hours a day. "Organized labor" does not include more than one-tenth of the population of America. Trades unions have been in many instances of great service to their members, and to the public. As long as they ask for justice, and limit their endeavors to that, they will have public support. But when they seek to gain their ends by violence, direct or indirect, the pistol, the club, or the boycott, they will be defeated. This is a free country, and the man who does not belong to a labor union has just as indefeasible a right to sell his labor as if he were a member. This right the laws of a free country will always protect.

NEW YORK CITY.

The Romance of Early Civilization

BY FLINDERS PETRIE, LL.D., F.R.S.

Flinders Petrie, LL.D., is Lecturer in Egyptian Archaeology at University College, London. He has spent more years in Egypt than any other of the present generation of Egyptologists, and has published a multitude of reports and volumes on Egyptian history and archeology. No living scholar has given more study to the subject here treated. At the same time it must be remembered that he allows a greater age to Egypt than many other scholars. Thus Meyer and Breasted suppose that the first dynasty does not go back of 3500 B. C. The following article is copyrighted in the United States.—EDITOR.]

WHEN we look at some parchment stained by age, which has brought down the account of past times for a thousand years, and can be read by us as it was by some Saxon, we seem much nearer to our forefathers, and wonder while we think of all that has gone on in our country since that page was written. And we can not only handle the history written a thousand years ago, but there is lying at Turin a part of a chronicle of kings, written more than three thousand years ago, before David and Solomon, probably before Moses. And, more than that, it has lately been discovered that we have part of the history of the oldest kingdom in the world, engraved six thousand years ago. In the Museum of Palermo stands a slab of polisht black stone, covered with minute writing, which any one may hold in his hands; this is the oldest history in the world, a part of the records of a thousand years of kings, which was engraved about as long before Solomon as he is before our time. This stone is the beginning of exact history, stating the main events of every year, and the day on which each king was crowned and died.

THE FIRST DYNASTY

The oldest entries are names of kings of the Delta who reigned before Egypt was united, nearly 8,000 years ago. Then, after the union of the country under Mena, the yearly record begins. In the early centuries the conquests of the negroes and of the marsh dwellers in the Delta are the main events, with a

great hippopotamus hunt, and building of temples, and festivals of various gods. After this a regular census was taken every alternate year of all the cattle for taxing purposes; and this developed into a census, not only of cattle, but of valuables and of land. All thru this history from the beginning, the exact height of the Nile inundation is recorded every year, as being the main event, on which the prosperity of the country entirely depended. Probably the amount of taxation in kind, levied on various crops, was regulated by the rise of the river, as it was in later times. This was the oldest register of any natural phenomena that we know—the ancestor of the Thames Conservancy and Metereological Office. The register is kept exact to the finger's breadth in the earlier centuries, more than six thousand years ago; and goes to details of a quarter of a finger's breadth in later entries.

When we reach the times of the pyramid builders, this history shows the development of the navy. Ships of 170 feet in length were built year by year, and in a single year sixty ships of 100 feet in length; this year's output probably was as good a fleet as anything that existed in England before the Armada. Besides this, forty ships were brought to Egypt in the same year; and as they were of cedar wood they seem to have been built at Beirut on the Syrian coast, from the forests of the Lebanon. Besides this activity on the sea there was development on land. The Sudan was attacked, and seven thousand captives with

two hundred thousand cattle were brought to Egypt. The desert was improved by making one hundred and twenty-two tanks, for watering the cattle which browsed on the uplands; and by building thirty-five hunting lodges, for controlling the distant pastures. All this rapid development ushered in the rise of the great pyramid builders about 4000 B. C. Two or three centuries later we find that the priesthood had absorbed the energies of the kingdom, and the records are almost entirely of endowments of land and goods for the gods. Foreign expeditions to Sinai and South Arabia show that a fleet was kept in the Red Sea, and trade was carried on there.

Now all this is but a fragment, perhaps a tenth, of what the national annals were. They show that the detailed records of a thousand years were kept, and were solidly engraved nearly six thousand years ago.

To fill in further our view of this early civilization we turn to the actual objects left behind by these kings, which I have found during the last few years in their tombs. These show that in each year there were named the great officers of the kingdom—the chief of the nobility, the king's seal bearer, the royal servitor, the royal architect, and the chief of the executive, or prime minister. The officials were named each year, and the year was defined by their names, much as years are remembered in London as those of various Lord Mayors. Beside these great court officials, there were hundreds of others in the country, some of whom we know about because they chanced to seal the provisions which were placed in the royal tombs. More than two hundred different seals have been found, and from them we can restore a small part of the organization of the country. One of the earliest and greatest officials was the regulator of the inundation of the Nile, who had charge of all the dykes which control the flow of the water over the land, ensuring its staying a suitable time in each district. The charge of keeping up the embankments, and levying the laborers to watch the safety of the dams which divide the country, is a very serious one at the present day. An hour's neglect of a leak may bring about the destruction of whole villages; and thus the

regulator of the inundation was an office of great importance, both for the security and the agricultural prosperity of the country.

The land was already divided into administrative districts seven thousand years ago, each province known by its special emblem, which continued to denote it for over five thousand years subsequently. The towns also had their governors appointed, and the control and management of the country seems to have been effective in ensuring peace and prosperity. At no age of Egyptian history was there a strong centralization; at all times the great men of each district managed it, and made it entirely self-contained; the only payment out of it was a small tribute for the support of the court, and the only external control was that of "the King's Peace," as in Saxon England, and the power of raising men and provisions for war. It was a simple and low form of political organization, tho it is a form which finds its admirers today among those who cannot see the power of union. To maintain good order there were inspectors, called "the eyes of the king."

The royal estates were the main support of the king's household, as is shown by the royal provisions in the tomb. There were royal vineyards of different kinds of grapes in Upper Egypt and in the Delta, and the royal winepress is named. There were recorders of the stores and scribes of the stores. The royal sealers were the equivalents of both the tax collectors and treasury clerks, as they sealed the receipts, the contracts and orders for payments in kind, in a system where there was no currency. We even find a special seal for the men who gathered the seed of the lotus, which was used for making a kind of bread.

Other offices were more directly connected with the court. There were the companions of the king in the palace, the director of the festivals, the keeper of the mausoleum, and such a trifling matter as the supply of royal mouth-wash was provided with a seal.

From this one side of the management of these remote times we can get a little insight on the subdivision of work and responsibility which is implied; we can see that there was a stable and useful

government three hundred generations past, as long before Abraham as he is before our own times.

We have also much of the material civilization before us in the offerings which were placed in the royal tombs. The use of brick building had come down from the still more remote prehistoric times; and the early kings built immense brick forts, two of which are still standing at Abydos, beside constructing large tombs of brickwork. Timber was then abundant in the country, and the framing and roofing of the tombs, and doubtless of the houses also, was of joinery work on a large scale. In a rainless country the use of stone is only a luxury, and brick and timber sufficed for many centuries. The title of royal architect was denoted by two axes, as the carpenter's work was the highest expression of construction.

Working in hard stone was a speciality of the early civilization. In the prehistoric times great ability had been shown in this, and most beautiful vases of the hardest rocks were carved entirely by hand. The early kings took up this art and developed it on a larger scale. In their tombs they had buried some of the objects of daily use from their palaces, and we find large dishes of pink granite, drinking bowls of rock crystal, porphyry, and all the hardest rocks, basins of marble for washing the king's hands, and

parts of a traveling service marked for the royal ship.

In the more delicate work of the goldsmith and jeweler they also excelled. The hammer-working, soldering of gold, and polishing of gems, shows a skill which could not be surpassed in such times of craftsmanship. The artistic quality of the ivory carvings of this age equals that of any later time; and the exquisite finish and delicacy of detail in minute work proves the taste and refinement which demanded and produced such a high standard.

We have now before us a view of the powers of man of the earliest point to which we can trace written history, and what strikes us most is how very little his nature or abilities have changed in seven thousand years; what he admired we admire; what were his limits in fine handiwork are also ours. We may have a wider outlook, a greater understanding of things, our interests may have extended in this interval; but so far as human nature and tastes go, man is essentially unchanged in this interval. This is the practical outcome of extending our view of man three times as far back as we used to look, and it must teach us how little material civilization is likely in the future to change the nature, the weaknesses, or the abilities of our ancestors in ages yet to come.

The March of the Years

BY CHARLES LEMUEL THOMPSON

To the beat of a million years far-flung,
To the dance of a million wild,
To the dirge of the bells old Time has rung
Where the far dead worlds have fled;

To the throb of the summer flaming high,
To the tread of the muffled snows,
To the sunset such an evening sky,
To the pulse of the opening rose;

To the process of morning steaming far
To the beautiful sun of the noon,
To the sinking light of the evening star
And the soft glow of the dawn;

To the baby's cry—the shout of the boy,
To the maiden's ripening grace,
To the strong man's grief or his conquering joy,
To the sigh of the upturned face;

It is march—march—march—no halt, no pause;
God's regulars one by one;
As they doff their plumes to the changeless

The years that go marching on.

It is "Hail and Salute" as they bring our fate—
The wreath or the punitive rod;
For they swing—in their sovereign soldier
state—
The guards of the Sovereign God.

A Midwinter Idyll

BY E. P. POWELL

AUTHOR OF "OUR HEREDITY FROM GOD," "THE COUNTRY HOME," ETC.

TO throw off your coat on Christmas Day and sit in your broad veranda, with an October sensation tickling your brain, is at least novel to a Northerner; but when a mockingbird jumps down to pick up a piece of apple that you have discarded you pinch yourself to make sure of realities. A robin is talking, not singing, over in the grove of pines—as if to him also things were not quite homelike. He comes to this land once a year, not to sing or build a nest or rear a family. An old mockingbird's nest is near the end of my porch in a persimmon tree, and the remnant of a blue heron's nest is in a bunch of plum trees a little way off. It is a careless piece of work, but I suppose it served the purpose and was well ventilated. There will be no more nest-building until some time late in February. I have not seen a cardinal bird since reaching Florida. I imagine there is something very much like migration going on among those birds that never go North. They have places for spending their vacations—perhaps down on the coast.

Just now it is as really winter here as in New England; the difference is in the degree of cold. All the deciduous trees have dropped their foliage, and the grass is about as brown as it is in New York State in November. Pine trees will shed their leaves a little later, and we shall gather them for making our roads. Indeed, they are already falling, brown and beautiful. There are wild flowers all winter, lots of them—the white predominating at present, and the yellow and lavender later. One of the most conspicuous is a superb coreopsis two inches in diameter, and with round seed heads as large as plums. Blackberry bushes of the running sort are still green, and the sweet-potato vines, where they have not been frosted. Several varieties of oak are evergreen. It is real winter so far as ripening is concerned, and largely coloring; for some of the black jacks are about as beautiful in their gorgeous red

and gold as a combination of Virginia creeper and sumach. It is winter, with neither chill nor snow; a winter that lets you stay out of doors nearly all the time, and gives you crumbs of May, June, July, clear down to October—that is, as you know them in the North.

The pine is our chief tree, and I have forty acres of eighty-foot trees for a park just to the south of my yard. We do not have to be pinched here for room, only the Yankees are coming in with increasing rapidity. Pine woods are open, and they are clean in contrast with a forest of mixed deciduous trees. This makes them look very much like a large village park. We have a few straight roads around the villages and cities, but for the most part we follow trails under the trees, occasionally winding around a fallen tree, and so meandering from neighbor to neighbor and from town to town. We never, however, turn out for a stone, for you cannot find a stone bigger than your thumbnail for many a mile. One special charm of these woods is the chance for shadows. These are always on the move, so that the woods seem to be peopled; some of them crossing constantly the open spaces, while others go down to bathe in the edge of the lake.

On the lawn are big beds of roses, still in full bloom, altho the leaves are getting russety for a rest. This is just the land for roses, and cannas with chrysanthemums blossom thru the winter months as well as the summer, and I have one grand gladiolus stalk still in its scarlet beauty. None of these things have to be lifted for winter, only trimmed once a year, and divided once in two or three years. Frosts we do have, but nothing that penetrates the ground enough to affect roots. The winter noonday stands at about seventy to eighty, and the night at fifty to sixty; only we do have two or three times in the winter a snip of frost. The tail end of a Northern blizzard swings around just enough to remind us of what we are escaping. I found a few wild violets the

other day, the tiny white ones that lie close to the ground, while over them hang huge bunches of steevia. The tall blue violets, six or seven inches high, with lanceolate leaves, will not blossom until February, altho the English violets on the lawn are still sending up a few flowers. If the people of this State would stop burning over the wild lands once a year, the fields would be much richer in wild flowers. I have two acres for a house yard that have not been burned over for fifteen years, and the succession of flowers is amazingly abundant and rich. A little later than now the sensitive plants will almost make a sod of themselves, and the fly-traps will be about equally abundant. Vegetable life is almost as aggressive in the water, and you will find great fields of yellow in the shallow lake edges, and these gradually edging down to water-lilies of many sorts. There is nothing more beautiful than the water hyacinth, with its profuse rich green foliage and its purple blue stalks of flowers; only these have shown a power of development that blocks up streams and fills lakes to the brim. It has a vitality utterly amazing, so that navigation can be sustained only by a continual dredging. This water hyacinth has become a great Southern problem, a most gorgeous pest.

If, however, you wish to be illusioned completely, come around the corner of my house into the orange orchard of my neighbor, Hawkins. He has begun his harvest, but the trees are still loaded and the limbs are hanging over to the ground, so that every tree appears like a mound of fruit. There were at least two thousand boxes in this single grove or orchard, and the harvest will continue until May. The trees are about fifteen feet high and twelve in diameter, making them nearly round. This comes from grafting half a dozen shoots at the ground, instead of one shoot, which, alone, would make a taller tree. Grapefruit trees are almost exactly the same in general appearance, only that the heavier fruit, growing in huge clusters, hangs down so low that some of them rest on the soil. *Eschscholus* are up, and in blossom I never saw a handsomer sight. Every other day all winter this neighbor of ours will pick into bags enough to fill his pressing order—he and his helpers—and

on alternate days they will pack and ship. The picked oranges are poured into sorters, that catch the rolling fruit according to size, and slide it away into separate boxes. Nature has a tidy way of adjusting foliage, fruit and climate; and surely the orange belongs, in every sense of the word, to Florida. At any rate, the people are orange struck, and will remain so. If a dozen freezes occur they will go on planting orange trees.

The sun is near setting, and in this latitude goes down quickly. It is laying a vast column of crimson clear across the lake—a broad twinkling band that gives to sunset a new glory and a new thought. On your veranda you glance from the dark pines to the flame on the waters, and the world has a new meaning. I think every one should close his days like this, with a broad joyous smile of satisfaction. Yet there are people who never see these sunsets, and never hear the God-call that invites us into the life beautiful. I do not like to sentimentalize, and yet why should not every phase of existence have something beside work and worry to mark it? The young folk have just taken their boat and are rowing out into the lake, right thru this crimson sunset. Lake Lucy is about half a mile across, and the bluffs on the opposite side are as steep as a New York hillside, altho not so high. It is a mistake to suppose that Florida is all flat, for here in the center of the State is a ridged backbone, and every hollow is a lake. These little lakes are perfect mirrors, where you see the sturdy pines, quite as well as you see them out of the water. The boat is now near the middle of the lake, and Gladys holds the oars steady, while Hal and Phil drop lines for a supper of fish. Our two pet alligators are buried in the mud, and will not show themselves again until warmer days. They are harmless fellows, whom we protect from the destructiveness of crackers and tourists. I know of nothing about the alligator in this section that is objectionable, only that, in mating season, they go across the country from lake to lake bellowing like bulls. I have never heard that anyone or anything has been injured by them. They eat possibly an occasional duck, but the lake is never without large flocks of two or three kinds

of wild fowl, and they are quite welcome to a grebe supper.

White egrets are getting to be very common again, and they do their fishing quite boldly about our smaller lakes. Now that they are protected from the women, these beautiful creatures bid fair to be very plentiful once more. I saw a large flock the other day, and there is one just now in sight, accompanied by a blue heron. They like to find grassy spots, where they stand and do their fishing. The mourning dove is found about as universally over the United States as any known bird, but here they are the first to be heard in the morning, and at night a large encampment of them sleeps in a grove of small pines just at the end of our lake. The ground dove has a pretty habit of running around in pairs, and I frequently startle up a couple in my lawns. They are very much like quails in habit and appearance. Bob-white, however, tells of his presence by frequent calls. He comes strolling thru my yard and up to my steps. I do not mean to let these beautiful creatures get disturbed, but make my whole homestead a bird paradise. Why not? What possible pleasure can one have in killing every beautiful creature, and cutting down every beautiful tree? We are not savages, and we are not enlightened; we are about half way between the two. It is a wretched state of instability.

I never knew what night could be until I came to Florida. The stars are so bright that some of them cast shadows. The moon is really a queen; and one does not care for human companionship under such a canopy. My collies lie down on pine needles, and look up, and then around, as if half conscious of the Somebody, over all, "in whom we live and move and have our being." I got lost one night following the trails from the depot to my lake. The sensation was not at all unpleasant, for the moon made the whole woods enchanted, and there were inviting places where one might lie down on the pine needles and go to sleep with the stars for company. I hear the boat touch the sand, and the young folk are approaching. They report that the fish would not bite; there is something very curious about the biting of fish. It is an unsolved riddle.

Indoors there is a big welcoming fireplace—the lost art of our Northern homes, but the very life and glory of the Southern house. I have four of them, and none too many. We do not need stoves nor furnaces, and coal bins and coal bills are never heard of. There are pine knots and big pine cones, and lots of them. They make a blaze in five minutes that will warm you clear thru—and you may have open windows at the same time. If you will pull off your shoes, and stretch out your feet toward the hearth, and begin to think of your neighbors in New York shivering under the reign of zero, you will soon have the sleep of common sense. Or if not, just count your toes and repeat "intra, mintra, cutra, corn, apple seed and apple thorn," until you find that your head has to be picked up off your chest.

Your neighbors in Florida rarely ever hit your elbows. The nearest is a big orange grower, and the next is a transplanted Yankee farmer, and the third is a doctor who himself needs to be doctored by a happy climate. Clear around the lake, a two mile walk, you come on only two more families. You sit down on the higher points, and look down upon and over the lake, and you wonder how long before twenty cottages will occupy the vacant places, and their gardens touch each other all around the lake. There are no high hills, but some of them are steep, and everywhere the outlook is exquisite. The flat meadow borders of the lake are just the places for celery and lettuce, for the soil is nearly black with muck. Peaches and grapes naturally crown the slopes, and melon gardens are found higher up, until one touches the orange groves.

The human is always the one thing most interesting after all, and those who mean by going back to Nature, getting away from folk, will find it as impossible as it was for Thoreau. They can stand it for one year, maybe two; but they will develop a good deal of cynical sentiment, and, catch them on the sly, the chances are they are correspondents for a magazine or a newspaper. These people scattered about the Florida woods are a social tribe, and they have a very pleasant way of interchanging courtesies. I never get down to my winter cottage

without finding a chicken supper with plenty of guava and loquat sauce already on my table. Some of the Crackers are the best of farmers and have not only orange groves but vegetable gardens, full of sweet potatoes, cassava, onions, carrots, cabbages and egg plant. The black folk also are fine gardeners, and with freedom they are developing individual character. The trails, however, for the most part, lead you to Northern settlers, folk from New York, Ohio, Michigan, Wisconsin and Maine, who have run away from winter's severity. There are within a ten mile radius five or six ranches of great wealth. "No suh," says my black plowman, "a Babtist preacher," "no suh, I certainly doesn't take much stock in politics; looks mighty like you Northerners gettin' so thick round here you run things yourselves soon."

A very expensive house, however, is a most abnormal affair in these eternal ruralisms. It has no fitness, nor any conceivable utility. One needs a shelter when it storms and a sleeping place, but a house should be mostly verandas and the rest fireplaces. Take these two things and mix them up in all sorts of ways, and Nature will supply the rest. Even the hens only need a safe place from the foxes at night, and your horse will lie down safely and happily under the pine trees. I do not know why it is that the robins will never build their nests down here; they come every winter and are here a full half of the year. They do not sing with any freedom. The mocking-bird's nest is a rough-and-tumble affair, a good deal like his singing; and the bob-whites squat down in the grass most anywhere. A heron's nest is so rude as not to deserve the name. No! this is not a house-building country, but one may build a true home, and line it with love all the same. Men and turtles are the chief house builders here, but even the turtles show the completer art—for each one builds his own separate house, and enlarges it as his needs enlarge.

But if you want to see how utterly and hopelessly inartistic a house may be—just like a shed for wood, an exact adjustment of structure to animal wants, forgetting that a man is not all animal, come down here into these pine forests. The

first crop of Northerners came in the '80's, with borrowed money, to get rich quick and then clear out. They had no time for the artistic; not a thought went into the house. More recent comers are beginning to grow themselves into houses, and to express some degree of soul etiquet. But even here once more the turtles have the best of us, for somehow during the long past these gopher turtles have evolved most elegant structures; you would hardly think it of them. I am going out to lie down for a while on some pine needles under neighbor Hawkins's orange trees. I will not think of houses, only of flowers and fruit and other delicious things.

Old Billy is just starting off mechanically, as he does once a day, down thru the forest trails, to the depot with a load of boxes. He always walks seriously and thoughtfully; has some sort of objection to a trot. An automobile would paralyze old Billy; he is growing gray about his feet and legs. A magnificent *tecoma venusta* absolutely shuts out my neighbor's house from sight. It is a marvelous affair that will occasionally freeze down, but in a single season climbs up again seventy feet, and punctuates every foot of the way with swinging ropes and festoons of rich golden flowers. Florida never cries enough over the brighter yellow hues, either in fruit or flowers. Finest of all is the Cherokee bean, with a root as big as a post, big enough and fat enough for a long dry spell, and out of which in January rise stems four to five feet high, all ablaze with crimson scarlet. A mass of these surpasses the finest *salvias*; this, while I am holding in my hand a copy of De Morgan's "Somehow Good," and around me lie half a dozen books to be reviewed. What curious things books are! They make the pine woods populous, and one may select his own neighbors. Blessed be the man who invented books; and more blessed those who made good books cheap enough for everybody; for this is the one flood that never abates, but rises higher and higher every year, flowing into huts and hovels as well as palaces. Now will I to my work; and to THE INDEPENDENT and its readers farewell.

GREAT AMERICAN UNIVERSITIES

INTRODUCTORY NOTE

WHEN it was decided by the editorial staff of THE INDEPENDENT that a series of articles on the larger universities of the United States should be made the special feature of the magazine for the year 1909 two plans were considered. One was to have each university described by a member of its faculty who by long residence and official position was intimately acquainted with its history and condition. It was thought, however, that such articles would not bring out what was regarded as the chief object of the series, that is, to give a comparative survey of the institutions as they are today. On this account the alternative plan was adopted of sending a member of the editorial staff to each university in turn to collect material and vivify it by such impressions as might be gained by personal observation and association with faculty and students. The period of residence at each university was limited to one week in order to have them all seen within as short a time as possible. The articles will be written by Edwin E. Slosson, M. S. (University of Kansas), Ph. D. (University of Chicago), who was for thirteen years Professor of Chemistry in the University of Wyoming before joining the staff of THE INDEPENDENT. He will have throughout the counsel of his editorial associates, who are all graduates of Eastern universities.

The choice of the universities to be discussed was somewhat embarrassing, as the number could not be extended beyond fourteen, and any method of selection would be open to objection. It was intended to confine the study to the large universities, not because small colleges were thought unimportant—for there are many signs indicating that they will have a more definite field of usefulness in the future than in the recent past, but because the larger institutions present more novel features and unsettled problems. After much consideration it was decided to include nine endowed universities: Harvard, Columbia, Chicago, Yale, Cornell, Princeton, Pennsylvania, Stanford and Johns Hopkins, and five State uni-

versities, those of Michigan, Minnesota, Wisconsin, California and Illinois. Afterward we were gratified to see that our choice was confirmed by the highest and most impartial authority on the subject, the Carnegie Foundation for the Advancement of Teaching. This organization has been requested by the Association of American Universities to undertake the classification of the universities of this country and as a step in that direction has published in Bulletin No. 2 a table ranking them according to the money annually spent by them in instruction, which is probably a fairer criterion than any other single objective standard. Above the \$250,000 mark on this list are all the institutions we have selected with the exception of Johns Hopkins and with the inclusion of the University of Toronto and the Massachusetts Institute of Technology. The two latter are without the scope of our series, but it would be impossible to discuss American universities without including Johns Hopkins, which, though now inadequately supported, has always laid the greatest emphasis upon the most distinctive feature of a university—that is, graduate work. As a starting point for the consideration of the subject are given below part of the figures of Bulletin No. 2 of the Carnegie Foundation, June, 1908, altho they are somewhat incomprehensible, even misleading, as they stand. In the course of these articles more recent and extensive statistics will be given and attention will be called to the many factors that have to be taken into consideration to make such comparisons significant and just. The number of students and faculty in the case of Princeton and Stanford and the three last columns giving the ratio obtained by dividing the amount spent for instruction by the number of students and the same after subtracting the college tuition fee, have been added by us.

The author of the series asks us to express his thanks here for the hospitality and kind assistance that he has everywhere received, and he wishes in defense of his hosts to have it understood that any adverse criticisms he may make on a university are based either on his own

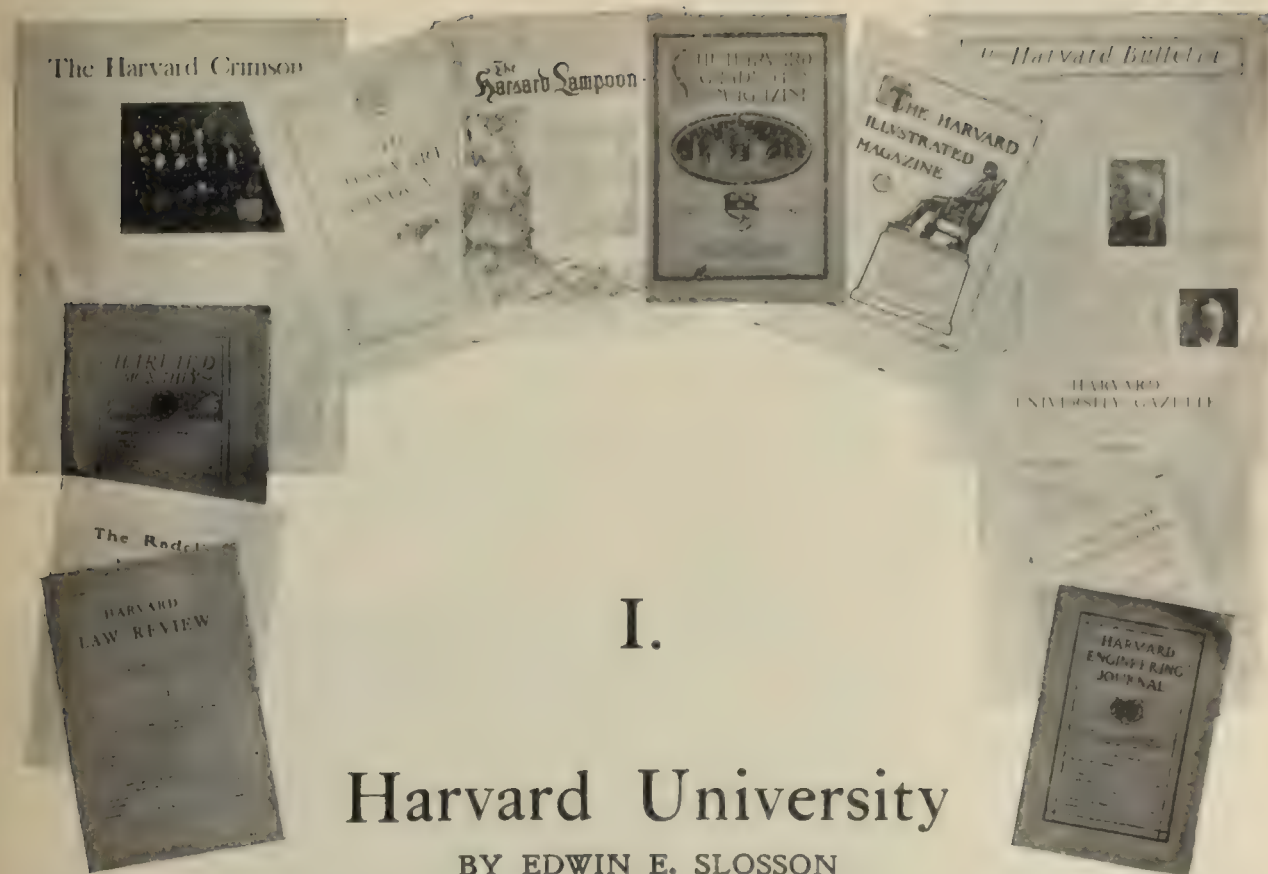

observations or on what he heard about it elsewhere, and that, therefore, those with them. The Monthly Number of THE INDEPENDENT for February will contain the

I.

Harvard University

BY EDWIN E. SLOSSON

THE story is told that one of President Eliot's predecessors was accustomed to conclude his chapel prayers by asking the Lord to "bless Harvard College and all inferior institutions." Whether there is any documentary evidence for the anecdote I do not know, but this is unnecessary, because its authenticity is sufficiently proved by the fact that the prayer has been answered. Harvard College has prospered beyond all anticipation, and the inferior institutions have been blest even more abundantly. In the total number of students receiving instruction during the present year Harvard with 4,948 has now been past by three other universities, Columbia with 5,675, Michigan with 5,188 and Chicago with 5,114. But, as women are included in the totals in the three institutions last mentioned, it is only fair to count Radcliffe in with Harvard, in spite of the reluctance of Harvard to consent to such inclusion. This brings Harvard into the second place, with 5,342 students this year.

Universities in the West and in the large cities are, however, growing more rapidly than Harvard, which will probably be outstript in numbers by several

other institutions before long. Wisconsin and California, for example, are reconstructing their buildings to accommodate 10,000 students, and at the present rate of increase the buildings are likely to be needed before they are completed. As the State universities develop their graduate schools, the number of those who go East for advanced work will decrease relatively, and perhaps actually, just as the number of American students in Germany has fallen off since the rise of true universities in the United States. Three years ago there were 200 American students in Berlin. Now there are only 68 men and 27 women.

As the accompanying table and curves show, Harvard University as a whole has not grown in the last ten years, and there is no apparent reason to expect any great increase except in the Summer School, which has unlimited possibilities.* The most interesting point in the registration

*I should state at the outset that in presenting such statistics of attendance I do not mean to imply that a university is the better for having more students. I am not at all convinced that, other things being equal, a boy with 5,000 schoolmates has any better chance than with 500 and I am quite sure that with 10,000 he would be worse off unless they were more thoroly organized and controlled than at present. It should not be assumed that a rapid growth is the outward and visible sign of an inward and spiritual grace.

figures is the decline in the Freshmen and Sophomore classes. A geographical analysis shows that the loss is not from the West or South, but from New England. That is, Harvard still attracts students from a distance even more than ever before, but Massachusetts and the neighboring States are failing in their support. This, taken in connection with the fact that the New England colleges are growing rapidly of late, indicates a general belief that undergraduate work, at least for the first two years, can be done better in a college than in a great university.

Our American institutions of higher education have never been quite decided

backed up by a capital of \$60,000,000 is no longer merely "academic." When order is brought out of chaos it seems likely that the natural cleavage plane between collegiate and university work will be found to be between the Sophomore and Junior year, about where it is in Germany.

This President Harper foresaw, as he foresaw many other things now coming to pass, and he endeavored to provide for it by cutting the undergraduate course at Chicago into two parts of two years each, the Junior College and the Senior College, and turning over the work of the former as far as possible to smaller affiliated colleges in all parts of the country.

SEVER HALL.

Built in 1880, used for lectures and recitations.

as to what they should call themselves or what they should do. But this cloudiness in regard to name and function is rapidly being cleared up now, largely thru the influence of two powerful organizations, the General Education Board and the Carnegie Foundation, which is being exerted to that end. An academic opinion

Unfortunately this plan was never thoroughly carried out, and the distinction between the two colleges in Chicago is now little more than a catalog fiction.

This plan President Jordan now desires to have carried out in Stanford University, believing that graduate and professional students cannot do their best

work in an institution where they are largely outnumbered by younger men requiring a very different sort of training.

The plan favored by the two Western presidents seems likely to be imposed upon Harvard by outside pressure. Harvard is constructed upon the theory that there should be no definite dividing line between any of the college years or even between undergraduate and postgraduate work, but parents are determined to make such a dividing line by keeping their boys out of the university until the Junior year or later. The faculty has recently endeavored to check this tendency to substitute non-residence work in the earlier years by limiting the amount that can be accepted in place of work done at Harvard and by imposing a stricter examination for advanced credits. Harvard and Stanford are thus as far apart in educational policy as the Atlantic is from the Pacific. Stanford wants to get rid of its Freshmen and Sophomores. Harvard fears to lose them. Perhaps the fact that at Harvard the undergraduates pay in tuition fees more than their share of the expense of instruction, while at Stanford they pay nothing, is one cause of the difference in the way they are looked upon.

So long as Harvard retains its prestige as the foremost of American universities—and there are no signs yet of its losing that rank—its degrees will be sought by ambitious students from all parts of the country. It can maintain its numbers and extend its influence if it is not made too difficult for students to transfer to Harvard for the last two years of their college course, or for graduate study. A more liberal policy in the allowance of credits for collegiate work done elsewhere, even where this is not strictly equivalent to that of Harvard, and in the acceptance of preparatory work, even tho this may not be done in the Harvard way, would enable the university to concentrate its efforts on the advanced work in which it has fewer rivals. This can be more readily done under the free elective system than in an institution which prescribes a rigid sequence and range of studies. It does not involve the lowering of the present high

standard of entrance requirements or necessarily the abandonment of the examination system.

DISTRIBUTION OF HARVARD STUDENTS,
1907-8.

But the secondary schools, particularly in the West, are becoming "class conscious," and will no longer permit the colleges to dictate their courses of studies and how they shall be taught.* As Harvard becomes less of a New England college it must condescend to coöperate with high schools all over the United States, for if it depends on its own special preparatory schools it will lose not only in numbers, which may not be a real loss, but, what is important, in the quality of its students. Out of 199 scholarship holders in 1905-7, 129 were prepared in public schools, 49 in endowed schools, and 21 in private schools. About a third of the students at Harvard are now prepared in the public schools, and, as a rule, they stand higher in both admission and graduation examinations. These facts, as President Eliot says: "So far as they go, tend to prove that the product of the public schools has more character and power of work than the product of the other schools."

Harvard has of late shown a disposition to modify its entrance requirements in conformity with those of other institutions and the desires of the secondary

*Mr. Flexner's harsh criticism of university methods in his recent book, "The American College," is one of the signs of the times.

NUMBER OF STUDENTS IN THE VARIOUS DEPARTMENTS OF HARVARD UNIVERSITY FOR LAST TWENTY YEARS.

schools, as in dropping Latin poetry, while insisting on admission by examination alone and maintaining an entrance standard higher than any other university. In requiring examination for entrance to college, Columbia, Chicago, Johns Hopkins, Princeton and Yale stand with Harvard. The other universities have succumbed to the temptation, or have become convinced of the educational advantages, of admitting on certificate. In the State universities the opinion is generally and sincerely held that the certificate plan is the better, but since their policy is obviously to keep a close connection with the high schools of the State, it is more to the point to quote Stanford. That university now makes little use of entrance examinations, but admits on probation by a form of

certificate in which a personal and specific recommendation by the principal is regarded as an important factor. Here again is a striking contrast between these two endowed universities so similarly situated. It is harder to get into Harvard, but, once in, comparatively easy to stay there. It is easier to get into Stanford, but a great many students fall out by the way. The difference is essentially whether the sifting can be best done at the door of the university or in the class room.

The stringency of the Harvard entrance requirements is ameliorated by special action of the faculty in deserving cases and by admission with conditions. In 1907 55 per cent. of those admitted had not fulfilled the entrance requirements.

It is impossible to compare admission requirements by merely quoting the number of points or units from the va-

¹Admission requirement of a preliminary degree or the rank of Senior in Harvard College took effect this year.
²The above exception in favor of Harvard College Seniors was abolished, putting the school squarely on a graduate basis.
³Requirement of a degree for admission took effect.
⁴Admission requirements raised.
⁵Veterinary School closed.
⁶Initial enrollment. About half are candidates for the degree of M. B. A. in 1910.
⁷School founded this year.
⁸Lawrence Scientific School closed to new students. The degree of S. B. as a general degree was establish in the college, and all special degrees in applied science placed on a graduate basis.
⁹Including about 300 men transferred from the Scientific School.
¹⁰These totals do not represent the number of different individuals receiving instruction during the year, for many students in Harvard and Radcliffe take work in the Summer School, and in such cases are counted twice.
¹¹This is the enrollment in November, 1908. It will, of course, be greater by the end of the college year in June, 1909.
¹²These figures give the total number of students reported in November of each year after deducting for double registration. They are taken from the tables prepared by Professor Tombo, of Columbia, and published every December in *Science*, the most useful and timely source of comparative statistics of university attendance.

rious catalogs, because these have very different meanings. Each college has its own system of valuation, and is generally unable to convince other colleges, or all of its own faculty, of the justice of its system. So I hasten to take shelter under the authority of the

the bottom of it this matter of the equivalence of studies; and it would be appalling to know how much scholastic time and temper have been wasted over the interminable question. It is, for example, hard to ascertain how many hours of blacksmithing are equal in educational

THE LIVING ROOM OF THE HARVARD UNION

The Union is the general club house of the students of the university. This room is 100 feet long by 40 feet wide.

Carnegie Foundation, which has made a special study of the question, and by reducing the entrance requirements to a common denominator of its own, get the following results for our endowed colleges: Harvard, 16; Princeton, 15.8; Cornell, 15; Johns Hopkins, 15; Stanford, 15; Pennsylvania, 14.5; Yale, 14.5; Columbia, 14.5.

But any system of valuation can be attacked, because there is no objective standard. Being a question of taste there is no end of dispute about it. Every faculty or committee meeting which has to deal with admission requirements, graduation qualifications, adoption of curriculum, elective system, migration of students, or change of courses, finds at

profit to one hour of piano playing, because few people are equally proficient in both. Educators are likely to come to an agreement on this question about the same time that economists agree how high a wall a bricklayer would have to build to entitle him to hear Caruso sing. There are educational Marxians whose theory of value leads them to reduce all studies to a common level of labor hours, but this is generally modified by some acknowledged or unconscious preferential weighting. Even Harvard, which has been conspicuous for this Marxian tendency, has handicapped some of the sciences, such as zoölogy and botany, and has favored Greek. But, as President Eliot says: "This artificial stimulation of

the study of Greek does not appear to be successful, unless perhaps in retarding the decline of the study. The selection of Greek in the June examinations for the last five years has been as follows:"

	1903.	1904.	1905.	1906.	1907.
Elementary Greek....	141	121	105	95	82
Advanced Greek.....	276	264	249	226	196

As I was writing this I was interrupted by a call to look over a bound volume of *THE INDEPENDENT* for the year 1850 and my eye being sensitized to the word Harvard I caught it in glancing down the long column. There was an item setting forth the same complaints that are now made against Harvard, that it is expensive, aristocratic, and does not have enough students from Massachusetts.

prices, \$15 a year for room rent and \$75 for instruction.

Harvard has had the good fortune to outgrow its song. The gloomy prophecy implied in the closing lines of "Fair Harvard,"

"Be the herald of light and the bearer of love
'Till the stock of the Puritan die,"

that the future of the university is dependent upon the perpetuity of the Society of Mayflower Descendants is already disproved. The old stock has been successfully grafted with new life. From a State university it has become national and is now one of the leaders in the new international movement, which is one of the most striking developments of American universities at the present time.

THE DINING ROOM OF MEMORIAL HALL.

Over 1,300 students can take their meals here, but not so many do.

The Legislature had appointed a committee to see what could be done to save "this State institution" from its evil ways. There were only twenty-three undergraduates from Massachusetts, the college was costing \$60,000 a year and yet the students were charged exorbitant

prices. Harvard offers more courses in a greater variety of subjects than any other American university. It has not only the largest faculty, it has also the most eminent. The latter fact can be stated with as much positiveness, altho not with the same definiteness, as the former. We

are not, however, without numerical data on this delicate question. Prof. J. McKeen Cattell, of Columbia, a few years ago prepared a directory of Americans who had made contributions to science, about 4,000 in all. From this list the thousand most prominent names were selected and these arranged in ten groups according to their achievements in the judgment of ten of the foremost men in each of the twelve sciences considered, i. e., mathematics, physics, chemistry, astronomy, geology, botany, zoölogy, physiology, anatomy, pathology, anthropology and psychology. The results show that there is very little difference of opinion as to the relative standing of men of eminence as judged by those who know most about their work. The curious objectivity of the scientific attitude is brought out by the fact that a man's error in the estimate of his own achievements is likely to be more accurate than that of any one of his colleagues.* Probably authors and artists would not be so successful in ranking themselves. A few of the figures that concern us here are given in the following table:

TABLE SHOWING THE DISTRIBUTION AND EDUCATION OF THE THOUSAND LEADING MEN OF SCIENCE.

	Men of the First Rank	Men of the Second Rank	Total of the Ten Ranks	Where the Men Were Trained
Harvard	19	8	66	237
Columbia	7	6	66	171
Chicago	5	5	39	93
Cornell	3	6	33	74
Johns Hopkins	9	2	30	70
California	1	1	28	36
Yale	2	1	27	61
Michigan	1	1	20	30
Wisconsin	1	1	18	20
Pennsylvania	1	1	17	10
Stanford	3	1	16	10
Providence	1	1	14	10
Minnesota	1	1	10	10
Illinois	1	1	6	10

The first column shows the hundred foremost men of science as distributed among the fourteen institutions under consideration. The next column shows those who are ranked as the second hundred, and the column of totals gives these and the other eight groups of one hundred each. It appears from this that Harvard possesses nineteen of the hundred men who, in the judgment of their American col-

MR. ELIOT'S HOUSE.

In some other universities it would be called "The Presidential Residence."

leagues, are most eminent in science, eight men out of the hundred of the second degree of eminence and sixty-six of the thousand. The last column shows where these thousand leading scientists received their training; 237 having taken undergraduate or graduate work at Harvard, 171 at Johns Hopkins and 93 at Yale. I am not aware that any similar attempt has been made to get a consensus of opinion on the distribution among the universities of scholars outside the physical and natural sciences, but there is no doubt that in the humanistic branch the relative standing of Harvard would be quite as high. It is the chief glory of Harvard that it has never underestimated the importance and value of men, has never succumbed to the temptation to cut salaries in order to put up splendid buildings. Some other universities have found that there are many things which show off better than brains. The Corporation has always held that its income was to be spent for the education of the present generation and it has so spent it, year by year, neither hoarding for the future, nor borrowing from it.

An incident that occurred during the negotiations for the merger of the Massachusetts Institute of Technology with Harvard University may be mentioned

*For the method of selection and probable error see the original paper in *Science*, November, 1903.

here for the benefit of other universities. When the matter was being discust in a faculty meeting it was shown that about three-fifths of the funds for the combined school would have to be supplied by Harvard. Some one thereupon asked, "But what will Harvard get out of it?" President Eliot settled the subject by replying in his usual calm and decisive manner: "That question has not been raised. The matter is in the hands of a joint committee of gentlemen whose sole interest it is to promote technical education in Massachusetts."

spirit of pessimism prevails in all departments."

In order to get some definite information in regard to the actual workings of the elective system I obtained, thru the kindness of the president's secretary, Mr. Jerome D. Greene, copies of one hundred record cards of the class of 1907, taken in alphabetical order but omitting the names. The study of these brings out many interesting points, but only a few of the most significant can be mentioned here. According to their choice of studies the records of these students may be

arranged in four classes: First, Concentrated, in which the courses are practically confined to a particular field; second, Correlated, in which the most of the courses are grouped around a definite subject or "core"; third, General, which show that the student was seeking a general education, arranging his courses accordingly, without marked co-ordination; fourth, Scattered, in which the student was desirous merely of getting thru, disarranging his courses accordingly.

I	Concentrated17	per cent.
II	Correlated53	" "
III	General16	" "
IV	Scattered14	" "

Whether this is regarded as a good or bad showing for the elective system depends on the reader's educational

THE COLLEGE YARD.

Looking toward Stoughton Hall, Holden Chapel and Hollis Hall.

Harvard University is so complex and diversified that almost any statement may be made about it with some degree of truth, except a general statement. Each department has an independent life and character, with its own theories, methods and traditions. Nobody worries because they are not alike. Nobody tries to make all the rest adopt his pet plan.

The Harvard man, anyway, is not apt to be a propagandist. He does not force his views upon other people; perhaps because he lacks confidence in his views, perhaps because he lacks confidence in other people. A Harvard professor, of whom I inquired about the spirit of the university, said, "A healthy

philosophy. More than half of them are sufficiently diversified and specialized to be called a satisfactory undergraduate course according to the consensus of opinion among educators, in so far as there is any consensus of opinion among educators on this point. About 70 per cent. of them could be fitted into the course of study of almost any of the colleges having the "major," "semi-elective" or "group" system, without more twisting, bargaining and special action than is customary in these colleges.

The question comes in regard to those who deviate from this norm in one direction or the other, and may be used as evidence in support of the two opposite objections to the elective system. It will be noticed that rather more students take advantage of the system for the purpose of undue specialization than for the purpose of getting thru easily, and, in my opinion, this is the chief danger of unrestricted election. It is intensified by the new Harvard plan of degree with distinction which puts a premium on limitation of field. Of these hundred men forty-one were graduated with distinction, ten of whom took what I have called a "Concentrated" course, that is more than half the group were so honored. Of the "Scattered" men only one was graduated with distinction. There is not so much harm done when a lazy student takes a scattered course as when

a good student takes a narrow course. The mind of the poor student is not likely to be injured by desultory study and it does not matter much if it is, but a man with a powerful mind, asymmetricaly trained, is too dangerous to be let loose in the community.

Let us consider two examples of these highly specialized courses.

This course is more narrow than that of the classical college of fifty years ago. It does not appear that this young graduate learned anything about the world he lives in or the people he lives with. There is no trace of mathematics and science, physical or biological; no history except medieval; no study dealing with the thought and work of the present generation except constitutional government, and possibly the latter part of the courses on the history of philosophy and literature. Yet for this he received the degree of A. B. magna cum laude. Should he

have received even A. B. if that means a *liberal* education?

It is hard to match this from the other wing of the university, but here is one, a transferred Lawrence student:

THE COLLEGE COURSE OF MR. B.

Freshman, 1903-4.

English—Comp.
German.
French.
Algebra.
Trigonometry.
Chemistry.

Junior, 1905-6.

Math.—Calculus.

Analytic Geom.

Senior, 1906-7.

Chemistry—Organic.
Chemistry—Organic.
Chemistry—Elec.
Chemistry—Biol.
Mineralogy.
Physics—Gases.

And he also receives praise, tho not much. He also is certified as an educated man, yet his motto is evidently "Nothing

such instances as these show that under the free elective system there is no assurance that such a foundation has been laid. The technologists have very generally come to believe that their students need to have some training in literary, esthetic and historical studies. The humanists, or some of them, are willing to concede that a man may be the better for a dip into science. There are two plans now proposed for bringing in these cultural or avocational studies, the perpendicular and the horizontal plans. The perpendicular plan provides that thruout the technological or professional course one or more studies must be chosen from other departments, preferably as remote as possible from the vocational study. This plan does not work very well, because the cultural studies are contemned and neglect-

LANGDON HALL.
The new Law Building.

humanistic has anything in it for me." I do not mean to imply that such narrowly specialized courses as these may not be justified in individual cases. But the main argument for requiring a college course as an antecedent to professional study is that it provides a broad cultural foundation for future specialization, and

ed and are apt to get crowded out. The horizontal arrangement puts a college course underneath all the professional and technological schools. This is the Harvard plan, but it also does not work well because the cultural studies are apt to get crowded out, as we have seen.

Of course, in judging of any particular

case we must take the whole educational career into consideration. If, for example, Mr. A. is going to devote the next four years exclusively to the study of aeronautics, electrons or Mendelism, or some other ultra-modern and scientific subject, he will come out with a tolerably well-balanced education. Similarly Mr. B.'s college course would enable him to concentrate his attention on some historical, sociological or literary subject without fear of becoming too narrow. But I find on reference to my notes that these men have adopted the opposite policy from that I have indicated. Both have entered the graduate school for three or four years of specialized work, but Mr. A. is going to devote himself to the classics and Mr. B. to chemistry! Here is another young man who has taken eleven courses in German, two in English, three in French and two in Italian—nothing but language and literature in the four years except three courses in beginning economics, botany and chemistry; not a bad education for a man who is going to bury himself in the back woods, where he will be out of reach of books, and for the rest of his natural life would have to draw his literature from his well-stored mind. This may be the case, for his occupation is put down as "lumberman." Even then, I venture to suggest, tho at risk of having such a long and ugly word as utilitarianist applied to me, that he should have mixt in a trifle of mathematics, botany or forestry.

It is probably because they have no definite aim in life that so many students elect a shotgun course. Here is a good example of our Group IV:

THE COLLEGE COURSE OF MR. C.

He began fifteen distinct subjects, but carried none of them beyond two years. His grades are all C's and D's, and he is now a teacher, transmitting his educational theory and practice to the second

generation. One would expect to find these scattered courses altogether different, but there is a curious similarity between many of them. The students of the scattered mind are devoted equally to music and anatomy, are inclined to pry into the private life of the Romans, Athenians and North American Indians, are strongly drawn toward Slavic literature and the history of art, and before the end of their course are likely to need poor relief. It should be said that the worst effects of the elective system are not shown at Harvard, but in the institutions that have attempted to imitate Harvard in the multiplication of courses without sufficient resources.

I do not mean to imply that the studies called in various colleges "soft," "snap," "athletic" or "pleasant" courses are necessarily objectionable. On the contrary, it seems to me that the chief fault of the free elective system is that it assumes and enforces an unnatural equivalence of studies in the matter of difficulty as in other respects. This has led some departments, especially the esthetic and literary, to introduce a large amount of extraneous and fruitless drudgery into their courses to avoid the reproach of being called too easy, and by doing this have perverted these studies from their proper aim and deprived them of their true educational value.

A frank recognition of the fact that certain studies are not naturally, and ought not to be made, so hard as some others, and a due allowance for this by restricting the number of such courses or the credits to be given for them, would obviate the difficulty and avoid the necessity of eliminating or deforming them. Harvard could have better spared some of its hardest taskmasters rather than to have lost Professor Norton's and Professor Shaler's inspiring lectures, altho these were sought by many unworthy of the privilege.

That many students abuse the elective system is obvious, but the prescribed system abuses many students, and this is worse. My own opinion is that the advantages of the elective system, especially its flexibility and adaptability to the needs of the individual, decidedly outweigh its disadvantages, but in order to secure these advantages as well as to

prevent the misuse of its privileges, the choice of studies should be controlled, not by rules and restrictions, altho these may be needed, but by personal guidance. The most extreme cases of specialized, scattered or topsy-turvy courses may be justified by peculiar circumstances. The examples I have cited with disapproval may have been the best possible courses for these particular men. Who knows? Not, I venture to say, the president, dean, adviser or professors who had them in charge. A prescribed course is never quite right, but it may never be so far wrong as an elected course. A ready-made suit of clothes is likely to fit better than a suit made for a man who pays no attention to the opinions of his tailor.

The system of free election, with which President Eliot began his administration, will probably not long survive it. It was a great reform, because it introduced the principles of freedom and individuation into the machine-made education of the day. It will be the duty of President Eliot's successor to see that this individualized education is applied to the proper individuals.

Here is the weak point of all the great colleges and even of the smaller ones—the lack of personal contact between teacher and student. It is not due to the influx of an overwhelming number of students, because the faculty has generally grown in proportion or more. It is partly due to defective organization and partly to the development of a new school of teachers, who detest teaching, who look upon students as a nuisance and class work as a waste of time. The ratio of students to instructors at Harvard is, as we have already seen, seven. It could therefore be reasonably expected that every student should have at least one friend in the faculty, some one who knows his training and home conditions, his mode of life and ways of working, his aims and prospects, his capabilities and deficiencies. How much and what manner of control should be exercised over him is another question. But whatever were done with him would be

based upon personal knowledge. Surely an instructor of any grade could keep acquainted with seven young men without seriously interfering with his research work or his social duties, and he might find the knowledge thus gained of the workings of the adolescent mind useful to him in his business, whatever he conceived his business to be.

All the universities I have visited are awake to the need of improvement in this respect, and are more or less actively engaged in making motions for amendment. Princeton has shown the most enterprise in establishing the preceptorial system. In Harvard the adviser is supposed to make the acquaintance of the Freshmen in his charge but this is generally a perfunctory relation, sometimes no more personal than the interpretation of the curriculum of railroad trains to the passengers in a union station.

The publication of the Briggs's report* was the beginning of an era of reform in American collegiate instruction. Plenty of people had been saying that our college students studied too little and nobody paid much attention, but when Dean Briggs demonstrated just how little they did study the educational world took notice. It has been well said that other colleges might have made as poor a showing as Harvard, but no other college would. If we may believe campus

*Report of the Committee on Improving Instructions in Harvard College. *Harvard Graduates' Magazine*, June, 1904. It is reprinted as an appendix in Birdseye's *Individual Training in Our Colleges*.

GORE HALL.
The University Library.

gossip more than one rival institution made a similar investigation, but the outside world was not permitted to profit by it. That is not Harvard's way. The sharpest criticism of Harvard, as well as of the rest of the universe, has come from Harvard men.

In the Briggs investigation answers to letters of inquiry were received from 245 instructors and 1,757 students. The comparison of the two brought out the interesting fact that an instructor usually estimated the amount of work done by his students at about twice what they were really doing. The average amount of work done in a course (one study) by an undergraduate getting high marks was less than three and a half hours a week. Since he was expected to carry four courses at a time, of three lectures a week, it was evident that good students were spending only about twenty-five hours a week in intellectual labor, even when we count in the twelve hours occupied in listening to lectures as intellectual labor. And this was more than they were required to do. Many of them got thru on much less work. Six courses taken by 876 students involved less than two hour's work a week each.

The frank and detailed criticisms of the students on the courses they had taken were typewritten without their names and filed for the instruction of the instructors, who in this way had a unique opportunity of seeing themselves thru their student's eyes. As a result some courses were dropt, others reformed, and an hour of quiz and conference in small sections substituted for one of the weekly lectures. This plan has the further advantage of permitting a partial segregation of students according to their ability and preparation. After the first month the men doing work of A grade are gathered together as far as possible, the B men in another group, etc. The conference work is naturally of a very different character in the various sections. In the A section the instructor acts as moderator, keeping the men from talking too much; in the D section he must be an instigator and keep on prodding them.

As a result of these and similar reforms, such as the introduction of "degree with distinction" and the "Dean's

list" of earnest students, there has been a marked improvement in undergraduate work at Harvard, altho the students do not yet work so hard as in the Western universities. In the professional schools a different spirit prevails; the Harvard law school is reputed, East and West, to have the hardest working and most enthusiastic body of students in America. Those who oppose the Harvard collegiate system on the ground that the desultory and leisurely habits it permits or promotes unfit a man for earnest work later are confronted by the fact that the miracle does happen. The dilettante and indifferent student in many cases does turn over a new leaf when he enters upon his professional work, and competes successfully with men more strictly trained. Still I do not think it is safe to rely upon miracles.

Harvard stands opposed to any method of telescoping the university course, or any "repeating" scheme by which the same study is counted twice in the work for different degrees. It insists upon the regular four years' college work as a preparation for professional study, but it is willing, even desirous, of having this work done in three years. That this can easily be accomplished by any earnest student has been demonstrated, and it will not be long before a student who spends four years in college will be looked upon as lazy or unlucky, just as the student who takes five to get thru is now. Of the 379 men who received the degree of A. B. in 1908, 137 had completed the requirements in three years, and there were 45 more who were only one course behind.

This is accomplished partly by working in the summer school, partly by obtaining credits at entrance for advanced courses, partly by taking more than four courses at a time. The first two are commendable, the last open to the very serious objection that it dissipates the energies and distracts the mind. In recent years about a third of the students who have thus shortened the college term have carried six courses for one year and another third of them for two years, and a few for all three. To be sure, these students got better grades than those who took less work, but that is chiefly because they were better students. It is

one of President Eliot's fundamental theories that a study should be taught in the same way to all students, whatever may be their present inclinations and future intentions, but nevertheless it seems to me that it would be better to provide special classes for the earnest students, so arranged that they could finish their college work in the three years without carrying more than four, preferably no more than three, different studies at a time. This arrangement would have the further advantage of forcing into prominence the question of whether it is worth while to keep up the other classes for the students who are not in earnest.

Revolutionary as were the changes made by President Eliot at the beginning of his administration, they were not more important than those of the last few years, particularly the establishment of strictly graduate professional schools, including technological and commercial branches. No other university has set so high a standard. It is not desirable that all universities should, for not every one who wants to be an engineer, doctor or business man is young enough or rich enough to devote three or four years to a preliminary collegiate education, and yet he should not be deprived of the opportunity of professional training. But Harvard, unlike a State university, is not under obligation to serve the needs of all the people of a given community. It can pick such students as it wants from all over the world, and it has the opportunity of demonstrating that a long and broad education pays, in the best sense of that word.

This means in some cases the creation of a new type of professional training. Dean Gay, for example, has to show that "accounting" as taught to college graduates is something very different from and superior to what goes by the same name in business colleges, commercial high schools and correspondence courses. He must disprove the statement that "the only place to learn is in the office," as it has been disproved in medicine and law. We must look with admiration and sympathy upon the thirty-nine young men who this year have signified their willingness to be the first to bear into Wall Street the banner with the strange device M. B. A. They will meet with

sharper scrutiny and distrust than their successors, yet their training—with due respect to the present equipment of the School of Business Administration—will not have been so competent.

The new Graduate School of Applied Science takes the place of the undergraduate Lawrence Scientific School, closed at the end of its sixtieth year. A million dollars from the estate of the late Gordon McKay will be available for use this year

CHARLES WILLIAM ELIOT.

Born in Boston, March 20th, 1834. President of Harvard University 1869-1909.

and will be followed by five or more millions. This will permit the development of advanced courses of instruction and research in practical science to an extent unprecedented in this country. Professional degrees are offered in the following subjects: Civil, Mechanical and Electrical Engineering, Mining and Metallurgy, Architecture and Landscape Architecture, Forestry, Applied Physics, Applied Chemistry, Applied Biology, and Applied Geology. Such a prospectus as this arouses the imagination. When we read the list we catch a glimpse of a new

civilization based upon a technology yet unknown. In fact, it will be impossible to find suitable men for some of the chairs which are ready to be established.

The Bussey Institution was one of the earliest of agricultural colleges in this country, but has long since been overshadowed by those founded in every State thru national aid, and has of late been the resort of students seeking easy berths. It is now transformed into a laboratory for the training of men in our new professions of biological technics. Botany and zoology have ceased to be observational and descriptive sciences. They are entering upon their creative period, and, like chemistry and physics, putting new tools in the hand of man. The Bussey Mendelist will not be content to catch wild animals, and describe and mount them for the museum. He will make new species to suit himself, drawing up beforehand his plans and specifications as an architect sketches a future building or a chemist draws a graphical formula of the next unknown compound he is going to prepare.

In these higher branches the distinction between pure and applied science fortunately disappears. The line dividing them is an imaginary one, and there seems to be no sufficient reason making the two schools so distinct. A student in physics in the School of Arts and Sciences may be doing the same or even more practical work than a student in the School of Applied Science, and *vice versa*. The matter of degrees is conventional and arbitrary, as it is everywhere. Whether a man is called a Doctor of Philosophy or a Doctor of Science does not necessarily depend upon the type of his mind or the dominant character of his education or the subject of his original work. It may depend merely on whether he did or did not read *De Bello Gallico* in the original seven years before. Imperious Cæsar still rules.

The Divinity School was the first of the professional schools to become strictly graduate. It is reinforced this year by Andover Theological Seminary, which was founded just a hundred years ago in opposition to Harvard Unitarianism. Now this is allied with its former antagonist, bringing with it to Cambridge its million dollar endowment, its seven professors and its four students. The most original

and interesting feature of the Harvard Divinity School is the Summer School of Theology. Last summer this was devoted to the subject of "The Relation of Christianity to Other Religions" and was attended by 66 students, of whom 57 were ministers drawn from 12 different denominations, the Episcopalians leading with 17 representatives. Five of the students were women.

The Medical School of Harvard has only one rival in advanced work, that of Johns Hopkins. Like Johns Hopkins, it is now located at a distance from the rest of the university and is practically an independent institution, with a student life of its own. Its five new marble buildings, erected at a cost of about \$3,000,000, are unequaled in the United States. Three of them were given by J. Pierpont Morgan, one by David Sears and one by Mrs. Collis P. Huntington, while an endowment fund of a million dollars was provided by John D. Rockefeller. Connected with the medical group is the new building of the Dental School, the only one of the professional schools which does not require a bachelor's degree for entrance.

The new law and medical buildings, splendid as they are, do not add to the architectural attractiveness of the university as a whole, but rather make more conspicuous its incongruities. The stranger who has formed a mental image of Harvard corresponding to his appreciation of its history and standing is painfully disappointed when he visits Cambridge. He enters the yard thru one of its ostentatiously unpretentious gateways and finds a confusion of buildings, old and new, handsome and homely, dormitories, laboratories, chapels, offices, lecture halls, but he is likely not to find the buildings he wants, for these may be scattered anywhere around the town, mixed up with dwelling houses and stores. In a raw Western university, dependent for its buildings on the spasmodic generosity of legislatures, such a state of things might be excusable, but not in the oldest and richest of American universities long under one administration. I do not mean that all the buildings should be alike—Columbia and Chicago err on the other side—or that a larger proportion of the income should have been spent on buildings, but convenience of arrange-

ment and unity of design could have been attained without difficulty. The present condition seems to be the consequence of a lack of forethought and a wilful disregard of appearances.

The worst architectural deficiency is the library. No university has a large enough library building, not even Columbia, but Harvard's is the most inadequate even with its recent extensions. Harvard has the largest library of any university, nearly 800,000 volumes, and it claims to make the most use of its books. Its building should be the finest of all, with the best possible system of seminar and reading rooms.

Radcliffe College is still regarded, and what is worse, regards itself, as an "annex," altho it has dropt the name. It is neither free nor equal. Harvard, which boasts of its democracy and welcomes the races of the antipodes, meets the demands of American women for higher education with a grudging concession and an ostentatious discrimination. The catalog of Radcliffe is so extremely feminine in its modesty and diffidence that I suspect it is written under masculine dictation. Other college catalogs are inclined to exaggeration. Radcliffe minimizes or omits to mention its advantages. If it did not it would soon more than double in numbers, and a thousand women are not wanted in Cambridge. It is amusing to see what opposite measures are taken by different institutions in their attempts to ward off the woman's invasion. Yale admits women to the graduate courses to work for Ph. D., but refuses to grant M. A. because that would be too attractive. Harvard, conducting this branch of business under the firm name of Radcliffe, offers the master's degree, but does not mention the fact that women can do and actually have done work for the doctorate in several departments.

The summer school will do much toward breaking down the artificial barrier between the sexes. Last summer there were 856 men and 476 women at Harvard. The university authorities will learn by observation how groundless are their fears lest the presence of the women should have a bad effect upon scholarship, or morals, or manners, or whatever it may be that they fear.

Besides the summer school about sev-

enty of the graduate courses in Harvard University are now open to women. The instruction in all the work of Radcliffe is given by Harvard men, the college is under the control of the Harvard Corporation, and the diplomas are signed by the Harvard president. It is very hard to ascertain where the line is drawn between the two institutions and altogether impossible to ascertain why it should be drawn. The fact that extra pay is given when a special women's class is formed tends to increase the segregation. It also has a tendency to throw the instruction in Radcliffe into the hands of younger and inferior men.

The question of social intercourse is, of course, entirely distinct from that of scholastic equality, but is interesting in itself. I asked a Harvard professor why the Harvard men did not associate with the Radcliffe students, and he said it was because the latter were of inferior social rank, "being mostly from around Boston and merely teachers." A student I met at the Memorial dining table gave another reason. He said he had called on two Radcliffe girls the evening before, and "I never had a more tiresome time in my life. Those girls study so hard all day that they haven't a bit of life left in them." I sympathized with him, also with the Radcliffe girls, for I, too, had had to listen to his conversation.

The most conspicuous deficiency of Harvard has been the lack of a strong department of applied sciences. This is about to be remedied by the aid of the McKay millions. But Harvard also needs a strong department of applied humanistics. In letters and the fine arts its tendency is toward the critical rather than the creative. Its men of science are in the thick of the fight, inventive, productive, progressive. Its men of letters seem to stand aloof, commenting and criticising, and more concerned with the past than with the present and future. No doubt it would be well if a scientist should once in a while climb up out of the dust to survey the field even at the risk of getting his head in the clouds, but if they all tried to be war correspondents there would be no war. The department of chemistry would hardly be willing to recommend for the doctorate a student who had confined his studies to a criticism of the theories of Paracelsus. He

must make some new compounds or discover a new law before he can call himself a chemist. Would it be too much to ask that every doctor in literature produce an original poem, drama, novel or similar work of a high order of merit? Some such requirement seems to be necessary if the degree is to stand in literature for productive ability as it is supposed to in science. In the last number of the *Harvard Graduates' Magazine* I find references to over a hundred recent publications by alumni and officers of the university. A very large proportion of them must be classed as parasitic literature. I do not use the word parasitic in a derogatory sense. One could hardly do so remembering how much the orchid and the mistletoe contribute to the joy of life. I mean merely that they are books growing out of other books, such as translations, annotated texts, compilations, criticism and literary history. None of these Harvard publications seems to me likely to provide material for future commentators to work upon. There are many valuable publications, especially in history and civics, but only a few that could be put into the category of what is called by some "pure literature" and others "mere literature." Among these are possibly three volumes of essays, three of plays and three of fiction, the last consisting of a detective story, a boy's book and a comic sketch. And the editor informs us that the "past year has been marked by a most unusual degree of literary and scholarly productivity on the part of the officers of the university." Perhaps no other university could make a better showing in this particular, but we expect more of Harvard than of any other university in a literary way. We have been led to expect more by the traditions of the institution and by what Harvard men say about it.

In methods of administration all the other universities of America have gone to school to Harvard, and those who have been slow to learn her lessons have

usually suffered for it. When a professional school for the training of college presidents is established its best text-book will be "University Administration," by Charles W. Eliot.

Harvard has been in education what France has been in sociology, the first to be confronted with the new problems arising out of changed conditions of life. Harvard has had to deal without precedent with the difficulties of handling large numbers of students, of the admission of new sciences, of the relation of the professional school to the college, of the demand for industrial education, of increased cost of living and instruction, and of the growth of a student leisure class. These and innumerable minor questions of the kind President Eliot has had to meet and solve, or at least to settle. He has not waited till difficulties came upon him, but he has met them before they came, for he, above other men, has the genius of the seer, the ability to recognize new conditions and the courage to act accordingly. In social mathematics all the quantities are variables, always shifting in value by imperceptible degrees, but the commonplace man who does not perceive this solves his problems by the old rules, and gets wrong answers.

Besides his insight and courage, President Eliot has been distinguished by his frankness, or perhaps I should say, truthfulness, which includes that and more. The freedom of speech he has permitted those under him he has made good use of himself. He has never been cowed into conformity by the responsibility of his position, nor has he been tempted into eccentricity by his conspicuousness. I emphasize his courage and truthfulness because they are virtues not easily cultivated in the presidential office. In talking with many men of many faculties I have found the opinion deplorably prevalent that a college president is *ex officio* somewhat of a coward and a liar. President Eliot is not.

NEW YORK CITY

Events of Political Omen in Westminster

BY JUSTIN McCARTHY

THE great, the constitutional, struggle between the House of Lords and the House of Commons seems now to have reached something like a climax. The peers have rejected by a large majority that measure for the regulation of publicans' licenses which the representative assembly had carried by a superb majority and over which the most important part of the whole session in the House of Commons had been spent with unwearied attention. Then there came on the Education bill, which also had aroused the keenest interest and the utmost anxiety among all parties and sections and religious denominations thruout the country. This measure had not past the Commons, but it already excited the utmost hostility on the part of most of the archbishops and bishops in the House of Lords, and an association of Peers had been actually formed for the purpose of adopting a pledge that the bill should be thrown out whenever it should come into the hereditary chamber.

The education measure, I should explain, had been opposed by many religious denominations thruout Great Britain and Ireland and by many sections of members in the House of Commons. I may say that it was opposed resolutely by the Irish Na-

tional party in that house on the ground that it did nothing like justice to the claims of the Catholic population in Great Britain and Ireland. There was, however, some possibility, or even probability, that the Government would have amended their measure in order to meet the just demands of the Irish National party, demands which were set forth with absolute clearness, reasonableness and force by my dear old parliamentary and political colleague of past days, John Dillon, and like concessions would probably have been made to other claims as well. But the majority of the Peers had already made up their minds, and before the Education bill had past thru the House of Commons that majority declared their purpose by a sort of proclamation issued after a meeting convened in Lansdowne House.

Then the Government adopted a somewhat unusual course. Mr. Asquith, the Prime Minister, announced to the House that it was not the intention of the Ministry to proceed any farther with the Education bill that session. The meaning of this resolve was explained to be that the

THE MARQUIS OF LANSDOWNE,
Leader of the Peers in their battle for
political existence.

Government had still some very important work which ought to be accomplished as soon as possible, and that, as the House

MILTON STATUE.

In front of Parish Church of St. Giles, Cripplegate, London.

of Lords had proclaimed thru its majority a determination to reject the measure if sent up this session, it would be only a waste of power on the part of the Ministry to spend any more time just then over the Education bill. Now, I cannot say for myself that this was a very wise or dignified course to pursue. Not much more of the representative assembly's time could have been spent over the Education bill, for that measure had practically past thru all its stages, and as it was to be thrown out by the House of Lords in any case, it might have been as well thrown out this session as in the next. Nevertheless, it was the House of Lords which caused the Government to withdraw a measure that had been virtu-

ally carried by the House of Commons, and in the one case as well as in the other the House of Lords had prevented the House of Commons from realizing the purposes of its majority. That is the one main fact of essential importance to the public, and which ought to occupy the serious attention of the country.

The struggle between the two Houses must come soon, and the sooner it comes the better. Everybody must see that it would be impossible to go on wasting session after session in passing measures thru the representative chamber which the hereditary chamber has already proclaimed its determination not to accept, and the sooner the constituencies insist upon some decisive and final action for the reconstruction of what is now absurdly called the Upper Chamber, the better it will be for the prosperity and the progress of the whole empire.

I am afraid, however, that Mr. Asquith's Ministry is not entirely made up of statesmen who are eager or even ready for energetic and decisive dealing with the House of Lords. Some of the members of the Cabinet, men like Mr. Birrell, for instance, have energy, foresight, and wisdom enough to

prompt them toward a policy of decisive action, but there are others, I fear, who find certain relief in the postponement of the encounter, and perhaps are even not altogether out of sympathy with some of the doings of what is called the Upper House. However that may be, it is quite certain that a great part of the time of the House of Commons, the time that belongs to the people of these countries, has been utterly wasted for this session at least by the action of the Peers. The national patience which could long endure this condition of things could hardly be accounted quite a virtue. There is, I feel sure, a feeling of dissatisfaction spreading thruout the country among all advanced

Liberals because of this policy of what seems to be meaningless drifting at so important a national crisis. Of course, nobody expects the Government to call for a general election between this time and the Christmas recess, but what most Liberals of all ranks and classes do think is that the statesmen in office ought to give the country full assurance that they are determined to find the earliest available opportunity for making the recent action of the Peers the one predominant constitutional question for the decision of a general election. No advantage whatever is to be gained by the attempt to carry to completion any other important legislative measures or measure in the meantime, and, as the great battle has to be fought, the sooner it is fought the better. This is especially a case in which delays are dangerous.

One does not often find occasion for breaking into enthusiasm over the festivities given by the Lord Mayors of London in the London Mansion House. But the present Lord Mayor has just given a banquet there which is sure to arouse in-

terest, sympathy and approval among the lovers of the world's great poets. The dinner was given in celebration of the tercentenary of the birth of John Milton, and the name of Milton must ever be associated with the city of London. Men of the highest distinction in literature and art and science as well as in political life were among the guests at the banquet, and many of the speeches were in the best sense effective, brilliant and appropriate. My American readers will be especially interested in knowing that one of the most telling, graceful and in every sense felicitous of these speeches was made by Mr. Whitelaw Reid, the United States Ambassador at the Court of King Edward VII. Mr. Whitelaw Reid has made himself a favorite in this country wherever he is known, not because he is in any sense a man who lays himself out for fashionable or for popular favor, but because he is a man of high intellectual gifts, thoroly sincere in all his purposes, a representative devoted to the interests of his own country, and at the same time most honorably considerate of the right-

WHITELAW REID AT A PUBLIC FUNCTION IN ENGLAND.

ful interests of the country in whose capital he has so long held a conspicuous position. The city of London has done itself much honor by this celebration. Wordsworth's famous line would come in appropriately here: "Milton, thou shouldst be living at this hour." Milton would then have seen for himself that his native city appreciated him and was endeavoring to prove itself worthy to be his birthplace.

A new novel, "The Rescuer," by Mr. Percy White, has been recently published by Messrs. Chapman & Hall, of London. Mr. Percy White might justly be said to live in his novels—and I make no doubt that he can well live by his novels also, for he is always and deservedly popular—but he seems to me to live in his stories, for he throws his whole heart and soul into each one of them, and never appears to be writing merely because he thinks the time has come for the publication of a new volume. "The Rescuer" is a rapid, vigorous piece of fiction, in which the characters are all made to appear real and lifelike even when the narrative itself has somewhat startling improbabilities, and sometimes momentary contradictions. The very villain of the book, altho he performs extraordinary and systematic villainies of a kind not much dealt with in every-day fiction, is still regarded by the reader as a personage with whom it would have been not impossible to meet in the ordinary ways of life, and whom, indeed, one might have come into contact with many times before discovering that he merely belonged to the recognized order of villains in the drama or the romance. "The Rescuer" has a mystery in it, and a very profound mystery, too, altho it bears no resemblance whatever to the order of mystery which we usually meet with in the pages of modern romance, while at the same time it must be said that it would be hardly possible to come across it in the pages of the more ancient romance, "The Mysteries of Udolpho," "The Castle of Otranto" or other such delights, enjoyed in the days of our grandfathers and grandmothers. I have no intention, however, to betray any of the secrets of Mr. Percy White's latest novel prematurely to any of its intending readers. The reader will find himself well repaid if he

will follow out the story for himself and thus get at the heart of its mystery. I shall only say that the characters are all lifelike and real personages, and that very striking contrasts are brought into realistic force without any touches of exaggeration. We have, for instance, a mother and daughter, each of whom is in her own way an amiable, meritorious and attractive woman, but who are thrown into contrast, misunderstanding and opposition thruout the greater part of the story, but with each of whom the reader may be brought alternately into sympathy according to each new phase of the antagonism which the varying conditions occasionally impose upon them. Colonel Drayton, who must be regarded as the hero of the story, is a fine presentation of a true-hearted British officer—a sort of English Guy Mannering—but I do not know whether the novel-readers of the present day are very familiar with the character and the ways of the principal figure in Scott's delightful romance. I may at least say that I think if Colonel Guy Mannering could have been projected into the same set of conditions which surround Colonel Drayton the two men would have acted on the same principles and under a similar inspiration. However that may be, I can cordially recommend "The Rescuer" to the attention of novel-readers in the United States.

I have already told my American readers that a series of popular works entitled "The Irish Library" is about to be published by Messrs. John Ouseley & Co., of Farringdon street, London. This series is to appear in monthly volumes containing the lives of illustrious Irishmen and the story of great historical events, and the volumes are to be brought out in good form and in fine clear type at the very low charge of sixpence a number. The first of the series has now made its appearance and is entitled "The Life and Times of Robert Emmet." This first part of the series contains a catalog of the subjects which are to occupy the monthly parts of the coming year. History ranges up and down in this marshaling of events and of men. In the second number we are to have "The Story of the Manchester Martyrs"; in the third we are to be told of "The Irish in America," while in the fourth we go back to

"St. Patrick and the Saints of Ireland," and in the fifth we come on to "Daniel O'Connell and His Day." We are to be told of "Lord Edward Fitzgerald and the Rebellion of '98," of the "Irish Brigades on the Continent," "Tom Moore and the Poets of Ireland," and other subjects, each illustrating some special phase of Ireland's history, until we come down to "The Irish Parliamentary Party and Its Work." The catalog of the coming numbers does not give us the names of any of the authors, an omission which is possibly deliberate, but which seems to me to be rather a mistake. Irish read-

ers would surely be glad to know who is expounding each successive subject to them and to have this information even at the first reading. The story of Robert Emmet's life is clearly and even vividly, and, as it seems to me, very accurately told, and is a just appreciation and not by any means a mere eulogy of the brave and devoted young man who, during the excited era of the Napoleonic convulsions, devoted his opening manhood to an attempt at the liberation of his native land, and died the leader and the victim of a brave but hopeless movement and the hero of a most pathetic love story.

LONDON, ENGLAND.

Ballad of the Hungry Woman

BY MARGUERITE OGDEN BIGELOW

A GRAY-EYED woman, hunger spent,
Went wandering wide, until one day
She met a man right sweet and sound
Upon the desert way.

She stopped him with an upward glance,
He saw her tears of bitter need,
Her hands that beat an empty breast,
And gave her bread indeed.

She ate his bread in thankfulness,
And drank his kindness right swift,
Her gray eyes brightened and she sought
For him a fitting gift.

And from her lips, grown warm with life,
She took a jewel, fiery fair,
And trembled, as she gave it him,
Sweet, tender, true and rare.

Then, from her breast a second gem
Of fairer hue she gave to him,
And opened wide life's mysteries
That once had all been dim.

She taught him why the summer breeze
Of evening sings a siren strain,
And what deep hopes of life renewed
Are in the summer rain.

She taught him how the thing that is
Grows dim beside what is to be;
She taught him of the law of life
And showed him ecstasy.

With giving, not with hunger, spent
The swift-flung moments backward sped;
To earth she brought her greatest gift,
And then he murmured, "Dead!"

Oh, what a mighty thing it is
To give both bread and kindness!
And, oh, how small, with heart and soul
And life and death to bless!

EVANSTON, ILL.

Ferrero's History of Rome

THE hearty reception given to Professor Ferrero wherever he lectures in this country shows how well he has introduced himself by the earlier volumes of his history of the *Greatness and Decline of Rome*.* Of these two new volumes the third is devoted to the Fall of the Aristocracy, and opens with the day of Cæsar's death in March, 44 B. C., closing with the renewal of the Second Triumvirate, to take effect from January 1st of the year 37, and the fourth volume to the Empire Under Augustus. The vital points of historical interest to the student lie first in the three days succeeding the assassination, when the precise order of events to an hour are important in determining the meaning of subsequent events and the relation of parties; after that, in the evolution of a new imperial force culminating, at a later date, in the Augustan line of emperors. The historians have long been divided, their accounts conflicting, and the sources of their information involved in the same sort of contradictory sympathies that we have grown accustomed to in seeing the question settled as to who "shot up" Brownsville. The accounts are varied, perplexing, and in vital matters undoubtedly "doctored" by later generations, when the bewitching Canidia had ceased gathering her bitter herbs for Horace, when Virgil was no longer hieing the farmer back from the city to his neglected furrow, when Cicero was no more an irritating memory to emperors.

Professor Ferrero's work reflects the minute investigations of the coin hunters, and the sweat of brain of modern critics. Whether Marc Antony stayed in his house after the murder because he feared the assassin's dagger, or because he was feeling about to discover what friends he had, what troops he could rely on, what alliances he might profit-

ably make; whether Cicero had the courage of his private convictions or only the courage of his opportunities; whether the Senate, which was "a feeble club of business men, politicians and dilettanti severally pursuing their own interests and ambitions," really thought the dictator a tyrant, and were secretly glad to have him out of the way—these and the like questions become important and are made to glow under the historian's treatment.

If Cæsar was a tyrant, then his body should be denied the honors of a public burial. "The law would require that the body should be thrown into the Tiber and that all Cæsar's acts should be declared null and void." That last argument was ingeniously pressed home by Marc Antony. For if Cæsar, a corpse, swam with the undercurrents of the muddy stream, then the republic would claim his immense estates; his official appointments would be canceled, and a very numerous body of senators chosen by the dictator would lose their seats—a grievous calamity. This was the "*argumentum ad hominem*," and the senate prudently listened to the sage advice of Cicero, who, in good time, bethought himself of an ingenious custom of the Athenians, who used to bring their civil wars to a close by means of an amnesty, "providing that all illegal actions should be forgiven and forgotten." Under this decision, therefore, Cæsar was a tyrant whose lawless actions were legal, whose beneficent life was happily terminated, whose body—one arm falling out and dropping beside the litter—might be left unburied until it was decided that he had in him the elements of a saint translatable later into the midnight skies as a star of high magnitude.

In disentangling the threads of this most important but very confusing historical worry, our up-to-date historian keeps a constant eye on modern tangles which have had to be worked out within very recent times. The struggle among the "masses" for "light and leading" in Italy, France and Germany—to say noth-

* *Greatness and Decline of Rome*, Vols. II and IV. The American Edition. Translated by Rev. H. C. Wright, D. D. Illustrated by A. Fremont, Captain, U. S. Army. Printing Office, New York, 1900.

ing of some lessons of the sort in our own happy country—has of late staggered all bookish men, so that they are more and more inclined to believe that there is at all times a perverse disinclination in man to hurry on the Millennium.

ratives of cotemporaries, the gloss of historians and orators, who, living at the time, may be supposed to have known as much as the high actors permitted to be known, we get a story of great charm. The author never hesitates to sever the

FERRERO.

Author of "Greatness and Doctrine of Rome." Putnam's.

Whatever the decision of the experts in coins and manuscripts may be, it must be said that this story of the fall of an aristocracy is made highly "taking." Out of his frank restudy and abundant use of the old material—letters of Cicero, for instance, and his Phillipics, the nar-

string when the tangle of authorities becomes too knotty—dropping Plutarch for Cicero, Cicero for Plutarch, Dion for Appian, Appian for Dion, Livy for Sallust, Sallust for Livy—sometimes giving sound reasons, but quite as often only his "I think so." That is the democracy

of today, which is ready to look kings in the face, and match authority for authority. Certainly Professor Ferrero rounds out a consistent tale by a consistent use of that "human nature" which is said to be so pervasive a feature in the race of man. He assumes, as we are all learning to assume, that the temporary amenities do after all quite often take the place of the "eternal verities"—and certainly he establishes a right to an emphatic "I think so," even when, on the strength of

upon a strong natural tide under pilotage better than his own, he past the Isles of the immortal Sirens into the glorious quietude of old age in beautiful Capri.

✱

Three Books of Travel

MORE than a decade ago, M. Paul Bourget, then in full pursuit of the most elusive nuances of psychological ingenuity, found, while endeavoring to decide

THE DRUMMER AND MAORI SALVATION
From "The New Zealand Magazine"

a coin or an exhumed picture, he decides that Cleopatra was not as pretty as she might have been—when he finds in Antony not so much a lovelorn Sybarite as an astute manipulator of the weapons of the little god Cupid—when Augustus, under shrewd analysis, proves to have been anything but the "august" in those early days of young ambition, when he was only Octavianus, hesitating, trembling, dodging, sowing wild oats, shrinking from the front ranks in battle; his manhood none too robust, when, floating

upon a name for his book of Italian travel, that the conventional word "impressions," sanctioned by much usage, was far too positive a term to express with the proper degree of delicacy the intimate subjectivity of his perceptions. Wherefore he chose the title "Sensations d'Italie." The distinction was duly appreciated by his trained admirers.

Another novelist, an English one this time, approaches his subject with even more subjectivity, but the title of his book (which was probably selected for him by

his publishers) gives no inkling of the nature of its contents, nor does it, indeed, bear a close relation to them. *Egypt and Its Monuments*¹ are most decidedly *not* the subjects of this sumptuous holiday volume; "Mr. Hichens in Egypt" would be much nearer the truth.

The book bears the stamp of a labored attempt to perform a task for which the writer selected was not equipt, if his subject was to be what the title indicates. The insufficiency of his preparation for it is manifest on every page—one is tempted to add, his indifference to ancient Egypt as well. He endeavors conscientiously to imagine himself in the presence of a glorious, mysterious past that he cannot vivify, because he lacks the knowledge and the inspiration; he succeeds only in bringing that past, vaguely seen, imperfectly interpreted, into the presence of Mr. Robert Hichens, a psychological novelist, devoted heart and soul to the life around him. Occasional Egyptological lapses one could forgive if the subjectivity of the book were spontaneous, genuine, but it is not; it is almost painfully *voulu*. The word "pot-boiler" rises to the tip of the tongue and slips out.

The selection of the author of "The Garden of Allah" for the task was a wise venture; that he has failed cannot be held against the editors of the magazine that engaged him, or the publishers who have reissued his articles in book form.

Mr. Jules Guérin's twenty paintings of the Egyptian monuments, reproduced by the three-color process, are highly, almost sensationally, decorative. M. Bourget's word again is applicable. But the student of Egyptology will pin his faith to and center his interest upon the forty superb full-page photographs. But it is a sumptuous gift book, filling to the eye if not to the mind, or satisfying to the historic imagination.

Prosaically matter of fact, without the briefest acknowledgment even of what its subject symbolizes, in history, in legend, and in poetry, not only to one of the great races of the world, but to the whole world at large, Mr. H. J. Mackin-

der's *The Rhine*² is described with full measure of fairness and justice as a geographical account of the river, from its Swiss sources to its Dutch mouth. The geological observations hardly serve to brighten the text, nor does the passing recognition, here and there, of the wisdom of Nature, pointed out long ago by the Dutch observer, which causes great rivers to flow by great cities.

This is a text-book, pure and simple, with all that makes the Rhine of perennial interest to all civilization scrupulously left out. Why its publishers should have endeavored to illustrate it in colors is a question to which it would be vain to seek an answer. We say "endeavored" purposely, for the crudely colored reproductions of Mrs. Jardine's pictures are no more faithfully illustrative than they are artistically decorative. An utterly unimaginative waste of a splendid opportunity.

The Hon. William Pember Reeves's *New Zealand*,³ written primarily, one is inclined to believe, for the information of Englishmen, serves well its purpose of arousing an interest that will not be confined to the mother country alone. Notwithstanding many books already written upon its subject, this new one fills admirably well its assigned place, which is not a too ambitious one.

A New Zealander himself, Mr. Reeves is proud of what his countrymen have already achieved in the islands, and surveys it all, briefly, clearly, without straying into statistics and losing himself, and his readers, in their arid sands. He has a word to say of commerce and industry, of agricultural and town life, of education and the salient characteristics of his people, of sport and athletics, but his main interest is neither economic nor social. Rather would he invite us to share with him his enjoyment of the country's natural beauties, his interest in its wonders, and here he is, indeed, at his best. He addresses frankly the prospective settler, and still more directly the intending tourist, to whose guidance he devotes a helpful closing chapter.

¹THE RHINE. By H. J. Mackinder. Illustrated in Color after Mrs. Jardine. With Two Maps. New York: Dodd, Mead & Co. 8vo. \$3.50.

²NEW ZEALAND.—Painted by J. and W. Houghton. Described by the Hon. William Pember Reeves. New York: The Macmillan Co. 8vo. \$6.00.

³EGYPT AND ITS MONUMENTS. The Text by Robert Hichens. Illustrated from Paintings by Jules Guérin. New York: The Century Co. Royal 8vo. \$6.00.

MOONRISE—THE GREAT PYLON OF EGYPT.
Painting by Jules Guerin, reproduced in full color in "Egypt and Its Monuments."

The Maori comes in for his share of attention, both as regards his present and future and his past, with its numerous legends. He is also properly remembered on the cover and the title page of the book, in a design of the New Zealand jade (*punamu*) idol—a *ti-ki* it is called, if memory do not play us false.

The colored illustrations, reproduced from paintings by F. and W. Wright, vary in merit so far as the printing is concerned. Some of them visualize strikingly the beauties of which Mr. Reeves writes so lovingly and enthusiastically.

The Catholic Encyclopedia

THE fourth volume of the Catholic Encyclopedia* points the moral, as the other three volumes did, that while splendid scholarship exists in the Catholic Church, and appears to admirable advantage in the discussion of what we may call neutral matters, still as soon as it approaches the more delicate topics of modern criticism, it is either clouded by prejudice or paralyzed with fear. Here we have the author of a highly respectable article on Clement V speaking of Boniface VIII's "courageous resistance to Philip's cunning, violence and usurpations." The writer of those words must be aware that Boniface VIII's "*Unam Sanctam*" and "*Clericis laicos*" would, if carried out, reduce every independent state to Papal vassalage; and he ought to be aware that some of the most influential French bishops of that time begged Boniface to let their country alone, as he was destroying the loyalty of Frenchmen for their king. Boniface displayed not "courageous resistance," but a stubborn insistence upon a Papal absolutism under which liberty would be impossible. The writer of the studies on Demoniacs, Demonology and Devil is evidently well read in the literature of those vitally important subjects; but when he comes to the difficulties, such as the probable Hebrew borrowing of Babylonian and Persian devil doctrines, or the serious imputations which criticism has put upon the evangelical and Pauline theology on this point, he either wholly evades the

issue or takes refuge in an extremely lame apologetic. This is all the more deplorable, as beyond question he is a competent scholar. He simply illustrates what the anti-Modernist tyranny can inflict upon scholarship. It is doubtful if a more outrageous falsehood could be made in the name of history than the statement quoted from von Ketteler in the article on Conversion, namely, that the medieval punitive measures against heresy were executed only on public and *formal* heretics, and even then in but few instances. The Inquisition, it appears, not only committed sanctified murder during the five hundred years of its sanguinary supremacy, but is still effective in perverting the intelligence of its apologists. David is described as having appointed twenty-four thousand Levites for the Temple Service, as calmly as tho the Pentateuch and Chronicles were as untouched by modern criticism as they were in the days of the Venerable Bede. The destruction of Korah, Dathan and Abiran "contains nothing improbable," and as for the Deluge, it destroyed every member of the human race except Noah's family, and it is only perverse rationalistic criticism that can question its historicity. Confirmation is treated with a pitiable neglect of the erudition of the subject. Constantine is represented as having had nothing to do with matters of dogma, notwithstanding that he summarily summoned a council at Arles to revise the decrees of one—and an orthodox one—previously held at Rome; notwithstanding that he convoked the Council of Nicæa in a letter to the bishops which declared that "it had seemed good" to him to have them assemble; notwithstanding, finally, that he called himself an "*episcopus ad extra*," and as such took a practically controlling part in the first General Council. The author of the account of Biblical Criticism is a little hasty in stating that Dr. Drummond defends the historicity of the Fourth Gospel. The article on Contrition might as least have referred to one of the most celebrated controversies in the history of moral theology, namely, whether the contrition requisite for the Sacrament of Penance should not contain as a condition of validity some motive of love of God. And, finally, in an ency-

*THE CATHOLIC ENCYCLOPEDIA. Volume IV. (Clandestinity—Diocesan). New York: Robert Appleton & Company. \$6.00.

lopedia of the pretensions of this one, the editors' pencil should have been drawn thru such offensive statements as that Denys the Carthusian had ecstasies of two and three hours as a novice, later of seven hours, and at last would be lifted from the ground every time he heard the singing of the "Veni Creator."

Painfully as some of the surest results of criticism are treated in this volume, high praise must be given to such articles as Daniel, Cosmogony, Communism and the Cross; altho the legend of St. Helena's finding the true Cross is discust in an utterly inadequate fashion. Other articles of great merit are contained in the volume, quite enough indeed to prove that Catholic scholarship would not remain long in its present inferior rank if the perpetual obsession to apologize for something were removed from the minds of Catholic students, and the yoke of iron tyranny were lifted from their necks.

Canadian Types of the Old Régime, 1608-1698. By Charles W. Colby. New York: Henry Holt & Co. \$2.75.

Professor Colby has all his life been identified with French Canada. His father, who was prominent in Canadian politics from 1867 until 1891, went to Canada as a youth, and made his home in the Eastern townships—that section of Quebec which was largely colonized by English and Scotch. Professor Colby was born in the Province of Quebec, and his loyalty is rather to the Province and its inhabitants than to the little, dwindling English colony of the Eastern townships. Certainly the championship of the early French settlers of Canada could be entrusted to no abler or more ardent admirer than the McGill professor, and while Professor Colby's book makes no pretense of scholarship or of original research, the Province of Quebec has cause for gratitude for his able and attractive presentation of her founders. Professor Colby begins by sketching the historical background of New France, the military, political and religious traditions of Old France of the sixteenth and seventeenth centuries. Then follow nine chapters, representing nine lectures, each devoted to one of the various types of men who

created a new empire for their country—an empire which, by no fault of theirs, France was unable to hold. This division into types necessitates some repetition, the explorer, the missionary, the colonist, the soldier and the *coureur des bois* were all contemporary; and their work and exploits have to be fitted into the same historical framework. Nevertheless, there is a distinct gain of human interest in fastening attention for the moment exclusively on one class and on typical individuals in that class; and Professor Colby has been able to people the wilderness with stalwart, living, red-blooded men and women and to convey to his readers a realization of the hardships and dangers they encountered and the motives and feelings that inspired them. Exception might be taken to the treatment of Frontenac and Laval as types respectively of the Governor and the Bishop. These men were individual rather than typical—they can hardly be considered as merely the greatest and strongest amid a number of men engaged in similar work and distinguished by similar qualities. Still a work on the founders of Canada would be incomplete without mention of these two great leaders, and the plan of Professor Colby's book leaves him only the alternative of treating them as types or omitting them altogether.

John Watts De Peyster. By Frank Allaben. Frank Allaben Genealogical Co. 2 vols. \$2.50.

General De Peyster is a good example of the man, more rare in the United States than in European lands, free, by reason of inherited wealth, to choose his own path, who sets himself to a thoro study of one subject and becomes in it an authority. His knowledge of military affairs was gained by careful and long study abroad and by practical work in the National Guard at a time, from 1850 to 1860, when such expert knowledge was rare in this country and greatly needed. These volumes include, beside the records of the De Peyster and Watts descents, some entertaining chapters from General De Peyster's autobiography, which picture the fashionable life of New York in the early part of the nineteenth century.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Messina Earthquake

THERE are two great earthquake belts in the world, one encircling the Pacific Ocean, the other extending nearly east and west and including Central America, the West Indies, the Mediterranean, Asia Minor and Southern Asia. In the second belt one of the regions most liable to severe shaking is the Mediterranean, and every few years a strong and destructive earthquake occurs there, while in the intervals between there are hundreds of minor shocks. This is because the Mediterranean basin is a great sunken block of the earth's crust in which the downward movement is still in progress. As the sinking continues, adjustments of the rock layers are made necessary, and when the strain becomes sufficiently powerful relief is obtained by the sliding of the strata along a plane of breakage called a fault plane. Then an earthquake is generated by the jarring and grinding of the rocks together as they slip, and the intensity of the shock varies with the amount of movement. Sometimes it is only enough to cause a tremor, passing unnoticed except where recorded by delicate instruments; or it may be a movement of sufficient strength to be felt by seismographs in all parts of the world,

and to cause vast destruction near the center of disturbance.

In the Mediterranean region no section is subject to more frequent and destructive earthshaking than that of the southern end of Italy, called Calabria, and the neighboring island of Sicily; for here there are many fault lines along which relief is found from the strains that are set up in the crust. Among these fault lines, long known to students of earth history, is the one that extends along the Strait of Messina. Indeed, the Strait of Messina has been caused by movements along this line of faulting, and the separation of Sicily from the mainland is of recent date, speaking in terms of geological history. The recent earthquake which has so horrified the world is evidently due to a renewal of movement along the fault line of the Strait of Messina. It is not the first earthquake generated by movement along this fault line, and in all probability it is not the last one.

The proximity of Mount Etna has naturally given rise to a widespread belief that the Messina earthquake is in some way related to volcanic action connected with Etna itself. The relation of earthquakes to volcanoes is a subject too abstruse for discussion here, but it may be said that volcanic action and earthquakes are not necessarily related, for we have had many very severe shocks, like that of San Francisco, far removed from the nearest active volcano. Even in the Messina earthquake it is to be noted that the most severe shaking was not near Etna, nor near the volcano Stromboli to the north, but about midway between the two. The shock was, without doubt, generated beneath the waters of the strait, by movements of the underlying rocks, altho it cannot be denied that the movement itself may in some way be related to the presence of lava in this region of notable volcanic activity. Science has not yet found it possible to give definite interpretation to those hidden phenomena within the earth, as a result of which volcanoes burst into eruption and great masses of rock slide over one another in the process of mountain formation and the settling of basins.

Measured in terms of destruction of life and property, the newspaper reports indicate that the Messina earthquake is to rank among the great horrors of the

world's history. Hitherto the Lisbon earthquake of 1755, when 60,000 people were killed, has been in the first rank among the cataclysms of Nature, tho some of the earthquakes of Southern Asia have destroyed far more lives. It may surprise people to know that, notwithstanding the vast destruction of life caused by this most recent of great earthquakes, it does not rank among the strongest shocks even of the present year. The seismographic records show far less disturbance than many a shock about which the public has heard nothing. It is the unfortunate location of the fault line, in a densely settled region, and beneath the sea, close by two cities, that has given rise to such frightful disaster.

Four phenomena associated with earthquakes are responsible for most of the loss of life—the falling of buildings, the starting of a conflagration, the development of a tidal wave, and the opening of fissures in the earth, as at Lisbon, in which people may be swallowed up and entombed. Any one of these may cause great loss of life, and usually not more than one, or at most two of these, are combined; but when there are three of these phenomena resulting from the earthquake, the destruction may become appalling. It was the occurrence of the three first of these in combination that gave to the Messina earthquake its terrible power of destruction. Heavy stone buildings, thrown down in cities located close by and on either side of the fault plane on which the earthquake was generated, caused great loss of life, which was further increased by the fires that naturally followed. Then came a water wave, generated by the movements of the strata beneath the strait. Had the fault line been on land, as was the case in the San Francisco earthquake, or had the shock been generated by eruptions of Etna, the horror of the so-called tidal wave would not have been added to that of falling buildings and fire.

We are gaining much knowledge about earthquakes, and some day, it may be hoped, this knowledge will be applied to the preservation and protection of life and property. One lesson that has been learned again and again is that the location of a city on or close by a fault line where movements are still in progress is a dangerous one. All things considered,

it would be safer, and perhaps wiser, to abandon such a site as that occupied by Messina or Reggio; or, failing that, it is a matter of public duty, which the Italian Government has already recognized, to see to it that buildings erected on such a site are so constructed as to resist earth-shaking, and placed in a position safe from the frightful destructiveness of the tidal wave.

'Twixt Scylla and Charybdis

ONCE again the imagination of man has proved incompetent to exaggerate reality. For three thousand years poets of the greatest genius have striven to make people shudder at the thought of Messina Strait yet none of them has imagined events of more horror than those of the last few days, or described them in a way to affect us more than do the hasty scribblings of these unknown newspaper men.

No detailed report of the geological effect of the earthquake has yet reached us but it seems evident that the fault or crack extended thru the strait causing both shores to slip and shake. It is said that the strait has been widened and both Scylla and Charybdis have disappeared, the rocks on the Italian side containing the cave in which the monster Scylla lurked and those on the Sicilian side forming the whirlpool of Charybdis. The modern tourist passing thru the strait on a comfortable steamer run according to Cook's time table is sadly disappointed not to see anything remotely resembling the perils that beset the frail boat of Ulysses.

"Two are the rocks: one lifts to the
broad heaven
Its pointed summit, where a dark gray cloud
Broods, and withdraws not; never is the sky
Clear o'er that peak, not even in summer days
Or autumn; nor can man ascend its steep,
Or venture down,—so smooth the sides, as if
Moons and had polished them. There is the
midst
Upon the western side toward Erebus
There yawns a shadowy cavern; thither thou,
Noble Ulysses, steer thy bark, yet keep
So far aloof that, standing on the deck,
A youth might send an arrow from a bow
Just to the cavern's mouth. There Scylla
dwells,
And fills the air with fearful yells; her voice
The cry of whelps just littered, but herself
A frightful prodigy,—a sight which none
Would care to look on, tho he were a god

Twelve feet are hers, all shapeless; six long
necks

A hideous head on each, and triple rows
Of teeth close set and many, threatening death.
And half her form is in the cavern's womb,
And forth from that dark gulf her heads are
thrust,

To look abroad upon the rocks for prey,—
Dolphin or dogfish, or the mightier whale,
Such as the murmuring Amphitrite breeds
In multitudes. No mariner can boast
That he has passed by Scylla with a crew
Unharm'd; she snatches from the deck, and
bears

Away in each grim mouth, a living man.

"Another rock, Ulysses, thou wilt see,
Of lower hight, so near her that a spear
Cast by the hand might reach it. On it grows
A huge wild fig-tree with luxuriant leaves,
Below, Charybdis, of immortal birth,
Draws the dark water down; for thrice a day
She gives it forth, and thrice with fearful
whirl

She draws it in. Oh, be it not thy lot
To come while the dark water rushes down!
Even Neptune could not then deliver thee.
Then turn thy course with speed toward Scyl-
la's rock,

And pass that way; 'twere better far that six
Should perish from the ship than all be lost."

The peculiar position and constitution
of the island of Sicily were accounted for
by the ancients as due to the battle of the
gods and giants. As the giants were
fleeing after their defeat by the aid of
Heracles, Athené threw the island of
Sicily at Enceladus and this giant of a
hundred arms was buried beneath it. To
this legend Virgil alludes in the lines:

Enceladus, his body lightning-scarred,
Lies prisoned under all, so runs the tale;
O'er him gigantic Etna breathes in fire
From crack and seam; and if he haply turn
To change his wearied side, Trinacria's isle
Trembles and moans, and thick fumes mantle
heaven.

But Virgil, in spite of his reverence
for tradition, was not able to resist the in-
fluences of an age of enlightenment so
we find a rationalistic explanation of the
Strait of Pelorus (Messina) which
would satisfy a modern geologist.
Apollo of Delos thus describes the origin
of the channel between Sicily and Hes-
peria or Italy thru which pious Aeneas
is to make his way:

"After departing hence, thou shalt be blown
Toward Sicily, and strait Pelorus bounds
Will open wide. Then take the leftward way;
Those leftward waters in long circuit sweep,
Far from that billowy coast, the opposing side.
These regions, so they tell, in ages gone
By huge and violent convulsion riven

(Such mutability is wrought by time),
Sprang wide asunder; where the doubled
strand

Sole and continuous lay, the sea's vast power
Burst in between, and bade its waves divide
Hesperia's bosom from fair Sicily,
While with a straitened firth it interflowed
Their fields and cities sundered shore from
shore.

The right side Scylla keeps; the left is given
To pitiless Charybdis, who draws down
To the wild whirling of her steep abyss
The monster waves, and ever and anon
Flings them at heaven, to lash the tranquil
stars."

Longfellow, in his "Enceladus," again
makes use of the old legend:

Under Mount Etna he lies,
It is slumber, it is not death;
For he struggles at times to arise,
And above him the lurid skies
Are hot with his fiery breath.

The crags are piled on his breast,
The earth is heaped on his head;
But the groans of his wild unrest,
Tho smothered and half supprest,
Are heard, and he is not dead.

And the nations far away
Are watching with eager eyes;
They talk together and say,
"Tomorrow, perhaps today,
Enceladus will arise!"

And the old gods, the austere
Oppressors in their strength,
Stand aghast and white with fear
At the ominous sounds they hear,
And tremble, and mutter, "At length!"

Ah me! for the land that is sown
With the harvest of despair!
Where the burning cinders, blown
From the lips of the overthrown
Enceladus, fill the air.

See, see! the red light shines!
'Tis the glare of his awful eyes!
And the storm-wind shouts thru the pines
Of Alps and of Appenines,
"Enceladus, arise!"

Enceladus has arisen, and with each of
his hundred arms taken a thousand lives.

Cowper, in "The Task," describes the
earthquake of February, 1783, in words
that apply as well to the present. It is
interesting to note that the Christian poet
is no less anthropomorphic than the
pagan, but instead of malevolent mon-
sters the disaster is the direct act of an
Almighty God, intended as a warning to
the human race:

Alas for Sicily! rude fragments now
Lie scattered where the shapely column stood.

Her palaces are dust. In all her streets
The voice of singing and the sprightly chord
Are silent. Revelry, and dance, and show,
Suffer a syncope and solemn pause,
While God performs, upon the trembling stage
Of His own works, His dreadful part alone.

The hills move lightly, and the mountains
smoke,
For He has touched them. From the extremest
point

Of elevation down into the abyss,
His wrath is busy, and His frown is felt.
The rocks fall headlong, and the valleys rise,
The rivers die into offensive pools,
And, charged with putrid verdure, breathe a
gross

And mortal nuisance into all the air.
What solid was, by transformation strange,
Grows fluid; and the fixed and rooted earth,
Tormented into billows, heaves, and swells,
Or with vortiginous and hideous whirl
Sucks down its prey insatiable. Immense
The tumult and the overthrow, the pangs
And agonies of human and of brute
Multitudes, fugitive on every side,
And fugitive in vain. The sylvan scene
Migrates uplifted, and, with all its soil,
Alighting in far distant fields, finds out
A new possessor, and survives the change.
Ocean has caught the frenzy, and upwrought
To an enormous and o'erbearing height,
Not by a mighty wind, but by that voice
Which winds and waves obey, invades the shore
Resistless. Never such a sudden flood,
Upridged so high, and sent on such a charge,
Possessed an inland scene. Where now the
throng

That pressed the beach, and hasty to depart
Looked to the sea for safety? They are gone,
Gone with the reflux wave into the deep—
A prince with half his people! Ancient towers,
And roofs embattled high, the gloomy scenes
Where beauty oft and lettered worth consume
Life in the unproductive shades of death,
Fall prone; the pale inhabitants come forth,
And happy in their unforeseen release
From all the rigors of restraint, enjoy
The terrors of the day that sets them free.

Who then that has thee, would not hold thee
fast,

Freedom! whom they that love thee regret,
That even a judgment, making way for thee,
Seems, in their eyes, a mercy, for thy sake.

The Persistent Antinomy

The terrible Messina earthquake, the most destructive of life in all known history, imperatively raises the eternal question, never solved, of the existence of suffering and evil in the presence of a good God. This and similar questions were discussed by our forefathers, but their authority on the doings in Heaven and Hell, before the Fall of Man; for then and there the evil spirits—and why not the holy also?

“reasoned high
Of providence, foreknowledge, will and fate
Fixt fate, free-will, foreknowledge absolute,
And found no end in wandering mazes lost.
Of good and evil much they argued then,
Of happiness and final misery,
Passion and apathy, and glory and shame,
Vain wisdom, all, and false philosophy.”

But there are no real antinomies, only apparent ones, for truth cannot contradict itself. There is—there must be—a final solution to every antinomy—whether of fate and free will, or of the goodness of God and the presence of evil and sin. Fate can be denied, or free will denied, or some definition or explanation may harmonize them; and, equally, there must be some harmony between the goodness of God and the presence of evil, some sort of solution. The followers of Democritus have solved the problem by denying the existence of God; John Stuart Mill said that God is, but is not wholly good; and yet others put God far away beyond the little concerns of earth; while most of the rest of us raise the question—we cannot help that—and put it aside as “vain philosophy,” awaiting further light in other worlds.

For we refuse to solve the mystery by denying God. The consensus of humanity, by its very instincts, insists on God. We cannot believe in a finite, uncreated world. There must be an infinite source of finite existence. But whatever the arguments for God, we believe in Him because we cannot help it, more certain of the fact than of the proofs. We cannot deny God.

Nor can we deny evil. It is all about us, in the suffering of the field-mouse caught by the owl, in the pangs of human birth and death, in the griefs of childhood and the despairs of disappointed hope; and occasionally in some huge catastrophe of nature which swallows up thousands of men, women and children and leaves thousands of others to linger out maimed lives of bereavement and pain. The world looks on with horror and hastens to extend sympathy and help. Where was God in all this? Did God do it? Did not He care? Could not He prevent it? If He could and did not, is He good? Such questions in various personal griefs have made atheists of many people.

We cannot answer these questions to

the satisfaction of those that suffer. The chief escape is to the determined faith which believes that God is, and that God is good, and that He understands in His infinite wisdom what our weakness forbids us to comprehend.

But some things we know. We know that this universe has been made a system, and that the system is very wise and is predominantly good. Evil and suffering are not predominant, but exceptional, and good comes out of evil. All the processes of Nature are beneficent, spring and summer and autumn and winter; the frost as well as the summer rain. The sun which parches the desert germinates a hundred times as much fertile land. The system of Nature is good; even death is good. Could "the wise Lord God, Master of every trade," have created a system whose orderly movement would have involved no evil? We do not know that he could. We do not know that the processions of the millions of stars could have been arranged to escape occasional attractions and collisions which should blaze out in new stars and in the beginning of new worlds. Nor do we know that the orderly course of Nature can escape volcanoes and earthquakes; and no more do we know that the possession and orderly exercise of massive free will could avoid the presence of sin. Because they are, and because we believe that there is a good God, we accept the order of Nature as the best that could be devised, and as involving necessarily some evil with much good.

What is sickness? It is exceptional; health is the rule. What causes it? The violation of some rule of Nature. It is our part to learn and obey the rules. The rules are good. The normal processes are good. Whether we believe in God as Master of Nature, or in Nature as its own master, thru God and evolution, or thru evolution without God, the result is good.

But we are not of those who see God's direct volition in every act of Nature. Some say that a rule of Nature is only a habit of God's activity. Did God by a special act of will choose to push the sliding of the earth's crust along a fault which he had purposely created along the strait between Etna and Stromboli,

close by two populous cities, which he knew men would build, and did he choose to have the earthquake come just when the inhabitants were in their beds, and when the destruction of life would be the greatest, just when and where it would do the greatest evil? That is not easy to believe. It is easier to believe that the good God does and must govern himself and his universe by stable laws, whose exceptional operation involves evils that seem to us very terrible, but yet which are small when compared with the mighty sweep of beneficent forces moving thru all the celestial ages. Is it not better for us to be able to depend on fixt law than to be uncertain of God's constant interruptions of Nature.

Then can God interrupt the course of Nature to accommodate us, or in answer to our weak and inconsistent prayers? If not, where goes the doctrine of special providence? Here are more antinomies than we can explain. We will still pray, "Give us this day our daily bread," but we will plan that the prayer be answered in accordance with eternal law and by our own efforts; and when those efforts fail we may rest back on faith, as so many have done, or we may with equal faith yield to the good law under which we suffer. For there are famines, and yet God is good.

Evacuation of Cuba

THE great main acts of our nation are creditable. The main policy of the individual States is usually meant to be honest and decent, altho there are discriminations and failures which prove that our people have not yet quite learned what is just and right. But, as in the case of the abolition of the convict lease system in Georgia, and the temperance legislation in other States, it is evident that when a wrong is once clearly seen the people will be ready to correct it. The people as a whole are not corrupt; they need enlightenment, so that the facts can be known to them and their conscience stirred up. Hence it is well for public sentiment all over the country to be turned against an evil condition prevalent in a State, as in the late case of the Georgia convict leases, and in that of the

Louisiana lottery of a few years ago. It is in the smaller civil divisions, in Boston, New York, Philadelphia, Pittsburg and San Francisco, that corruption is more likely for a while to have bold rule.

We have no reason to be ashamed of the ethical attitude of our nation of late years toward other nations; whether we think of the return of the millions to China or of the evacuation of Cuba by our army. It was an army not of conquest but of pacification. It was asked for, and it remained only two years. It kept the peace—that was all. It prevented disorder, and it provided for a peaceful election; and then, on the last day of the year, the evacuation began. The new President, General Gomez, will be inaugurated in a few weeks, and no American soldiers will be left. There have been less than six thousand of them at the most, and that reduced to five thousand. They have mapped the island, have attended to sanitation, have helped in creating a code of laws, and in directing public works. They have left the island better than ever before. They have been no expense to the Cuban treasury. Now they leave and give the people another full chance to show whether they are capable of conducting a government of peace and order, such as can protect the property and rights of resident foreigners.

We hope they can, but we do not feel too sure. The election favored the more democratic party of the common people, including those of darker color, as against those of pure Spanish blood and of wealth. It was a compromise of the rival radical chiefs that elected Gomez: will they remain together in peace? There is a considerable number of the land holders interested in sugar production who would much prefer that the United States should rule Cuba and give the island free access to American markets. Will not they give secret aid to any faction that may be stirred up to violence against the present administration? There is serious danger of it; and there are interests in this country which would rejoice in such an eventuality. It is greatly to be desired that General Gomez may prove a wise and yet a strong ruler, and that the rural guards may be able to keep the peace.

But if this should prove a vain hope: if there should arise fresh rebellion and the peace of the island should be again destroyed from whatever cause and in whatever way, it is only fair and frank to say that it would mean the probable end, not of Cuban freedom, but of Cuban independence and a separate nation. The Cuban people so understand it; they cannot understand otherwise. Twice now have we given Cuba her absolute independence, and we shall not be likely to do it a third time. The world wondered that we did it at the end of the war with Spain. It wonders again that once more we set up the island as a free and independent nation. No other nation can be surprised, and no one can blame us, should we have to intervene a third time, if we remain in control. We have thus far denied ourselves our own national ambitions and our interests as masters of the neighboring Panama Canal; we shall be under no obligation to deny ourselves further. It will be better for Cuba, better for us, better for the world. But it is right and decent that we keep our promise and now leave the little republic with our blessing. We hope it will prove worthy.

Nineteen Hundred and Nine

THERE was something peculiar about 1908 that it propounded problems and solved none. It left us with a frayed edge. We cannot recall any one great enterprise that it quite finished. Perhaps this was due in part to the enthusiasm and aggressiveness of President Roosevelt. His mental and moral activities were certainly able to cover a vast field of intentions. We have left on our hands the waterway problem, the forest reserve problem, the Panama Canal, the solution of the white plague crusade, the revolution in educational effort and the industrializing of our institutions, the struggle with corporate greed and commercial meanness—in fact, in every direction we have our hands full. It has been not only the political revolution that went on, bringing to the front men of moral nerve, but a social yearning for less turbulent and reckless commercial methods. In fact, at the beginning of this year we are in a boiling cauldron.

and there is no rest, as there is no summary of events.

What a contrast with fifty years ago. It is not easy to conceive that if we could slip back of 1850 we should find ourselves in a world without telegraphs, telephones, the fast trains if not the railroads themselves, ocean cables, and telegraphic communication between the Pacific and the Atlantic. There were sewing machines and reaping machines then, but as yet they had little effect on human life indoors and out of doors. The years went on, inheriting no vast problems from the past and promising little that was startling for the future. Even the tariff was still on the Madison basis, and there was almost an exact balance between the industries. The output of agriculture was about 10 per cent. ahead of manufactures, and our foreign commerce was very closely in tally with that of England. Slavery was making the one exception, and that one problem was surely enough. Its solution was thought to belong in the far future; it was just at the threshold. One of our eminent statesmen expressed regret at the closure of this great struggle, because it would leave nothing to create character for American youth.

A French writer has recently said that humanity goes to sleep by periods in order to recuperate, and be able to grapple with the issues of a terribly wide-awake time. Are we not now in need of such a sleep? Speaking of the steam age and its lapse, Edward Orton some twenty years ago expressed an opinion that early in the twentieth century we must, in a general way, react from the furious haste which preceded it. He anticipated Wagner by suggesting a simpler life, the replanting of our forests, and a return to the day of country homes, fireplaces, and wood for fuel. Certainly Nature seems never to neglect to repeat her periods of rest as well as their activities; and we are an integer of Nature. Spring and summer forerun the babbling of tired autumn brooks and the days when Nature puts aside her tools. The social reaction is very perceptible toward simplicity in the place of luxury, and toward that sort of comfort which depends upon an abatement of the roar and rush that have characterized the

steam age. There was less nerve wear and less insanity in those elder days. To rush across the Empire State in seven hours was not the supremest earthly achievement. It took seven days to go from Buffalo to Chicago; and those who traveled out from New England in ox carts could not have understood the Empire State express. The first platform of the Republican party had but two problems to propound: one was the restriction of slavery, and the other was the building of the Pacific Railroad. Contrast this platform with one of President Roosevelt's annual messages and we get some apprehension of the change wrought within a half century.

Will we be able to react, or must we rush on to the exhaustion of our social and political power? An agricultural address, delivered at Salem, Mass., in 1834, lamented the establishment of manufactures and the setting up of power looms "that put out of use spinning-jennys and out of employment our other Jennys." It longed to hear once more in the farmers' cottages the flying of the shuttle and the deep bass of the spinning-wheel. About the same time England undertook a formal effort to revive the spinning-wheel economy. It was difficult to find such a wheel in all the kingdom; and one being found, no one knew how to run it. Evidently there was a lost art in domestic life, and it was as useless to undertake its resurrection as to revive the art of kindling fire by twirling sticks. Out of domestic life went not only the spinning-wheel, but dyeing and fulling, soap-making and candle-making, cloth-weaving and carpet-weaving, carpentering and house-building; and a little later went also the swinging of the scythe and the art of the needle.

Among all the unfinished work of 1908 nothing stands more important than the restoration of the industrial home life and the exaltation of labor. We must not only get rid of our loungers, our spendthrifts, and our loafers, but must learn the dignity of the hands as well as the glory of the brain. The keynote of the coming day will be dishonor for idleness and honor for labor. The distinction between the laborer with the hands and the laborer with the brain must close

up. Franklin said: "May it never be said that American women rise fifteen minutes later than the sun." In the simple days ahead we will make the same mistake over the whole world.

History and Political Science

THE annual meetings of the American Historical Association and the American Political Science Association were held from December 28th to 31st, the first day being spent in Washington and the remainder of the time in Richmond. This progressive arrangement, altho admirably managed by the local committees, necessarily resulted in some discomfort. It was, however, deemed essential because of the affiliation of the former organization with the Smithsonian Institution, rendering it advisable to hold occasional meetings at the Federal capital; whereas Richmond has been agreed upon as the principal place of meeting for this year. Accompanying the progress of the two principal bodies were two sister organizations, the Bibliographical Society of America, in its fourth annual meeting, and the young Mississippi Valley Historical Association, in its third semi-annual conference. On the thirty-first was the usual conference of State and local historical societies; and during the week was organized at Richmond the Jamestown Exposition Historical Association, aiming still further to cultivate the historical spirit in Virginia, whose praiseworthy self-consciousness in this respect already equals and possibly surpasses that of New England. Without exception, the numerous meetings, altho frequently simultaneous as to hours, were well attended, and the papers and numerous conferences of specialists were, on the whole, worthy of the attention paid them. The political scientists had appropriately chosen Ambassador Bryce as their president of this year. His address at Washington on the night of the 28th was, as to be expected, of great interest and abounded in kindly expressions and witty sallies tending to soothe the feelings of the academicians, while he advised them not to take themselves too seriously or to imagine that their favorite prescriptions were really of much value in the practical government of men. His

thesis was, that whatever any government might be called, absolutism or democracy, it was in effect government by the few, and it was chiefly essential that those few should be properly schooled in this science. The scholarly address by Dr. George B. Adams, of Yale, president of the historians, entitled "History and the Philosophy of History," expressed small patience with the popularizers of history, and laid down such lofty ideals for his craftfellows that many of them must have suffered from qualms of conscience. In the Political Science Association, our colonial problems were attacked with some vigor, with conclusions rather discomfiting to ultra-imperialists. Recent constitutional developments in the United States, and the ever-vexing problems of municipal government, were also discussed with acumen. In the historical meetings, aside from a few notable papers, perhaps the most significant features were conferences on the relations of geography to history and on the much but not too often discussed topic of history in the secondary schools. The conference of historical societies resulted in practical discussions concerning the case of archives, photography as a means of reproducing historical manuscript, etc. There was also here set on foot a well-conceived plan for properly calendaring all material in the Paris archives relating to New France, so far as concerned the Mississippi Basin, to be financed by the leading historical societies of that section. The final meeting of the historians, on New Year's Eve, was of special interest to Virginians, who packed the large auditorium to listen to three technical studies of the Wilderness Campaign. Gen. Edward P. Alexander represented the Confederate point of view, and startled his hearers by presenting apparently conclusive evidence that Griffin's and Cutler's brigades of Grant's army fired into each other for several hours thru some fatal blunder "perhaps not properly chargeable to the commander-in-chief," whose tenacity and skill this essayist and eye-witness of the campaign frankly acknowledged. Col. William R. Livermore and Major Eben Swift, of the Federal army, gave testimony as to the conduct of the campaign from the Federal side.

The hospitality of the Washington and

Richmond hosts was of the abundant and heartfelt character to be expected from Southern men and women. The conferences concluded with the spending of New Year's day at Charlottesville, guests of the University of Virginia. The majority of the members took advantage of the opportunity afforded them, to visit Monticello. The various associations, together with the American Economic Association, will meet next winter in New York City. The historians paid a graceful and well-merited compliment to Dr. Albert Bushnell Hart, of Harvard, now on a tour around the world, by electing him as their president for the New York meeting.

Sociology and Economics

THE annual meetings of the American Economic Association and of the American Sociological Society are always successful, from both the point of view of discussion and that of personal interest and a general good time. This year these associations, the American Association for Labor Legislation and the American Statistical Association met together at Atlantic City, and while regrets were here and there expressed that the tradition of meeting with the American Historical Association had for once been broken, it was agreed on all sides that the week was intellectually stimulating and thoroly enjoyable.

Perhaps the most interesting single incident was the presence of Prof. William H. Sumner, who presided over the meetings of the Sociological Society, and the joint meeting of that society and the Economic Association. Professor Sumner was, we think, the first college or university professor in this or in any other country to give sociology an academic standing. It was back in the seventies that he introduced Spencer's "Study of Sociology" as a classroom text at Yale. He has not been identified with the Economic Association, nor taken part hitherto in its proceedings. His presidential address before the Sociological Society on "The Relation of the Family to Social Change" was a further contribution to that fruitful study of the "Folkways" with which his name has become permanently identified. It abounded in his inimitable phrasing, sparkling

with gentle satire, and that humor which shades into substantial wisdom.

The presidential address of Prof. Simon N. Patten was brilliant and paradoxical, and perhaps a bit unsound, but it provoked thought, none the less, and probably called forth more agreement than was expressed by its contention that the professional economist studies books too much and facts too little, and, as Mr. Samuel Bowles would tersely have said, "Uses too many words"—that is—writes books too big and too many.

Papers that awakened keen interest were those of Mrs. Gilman on "How Home Conditions React on the Family," and of Dr. Devine on "The Results of the Pittsburgh Survey." Few among economists or sociologists, to say nothing of the larger public, have realized hitherto the full scientific and practical value of this broadly planned and admirably accomplished investigation, or the character of the conditions that it has revealed. It is not too much to say that Dr. Devine's paper will have far-reaching consequences upon the intellectual attitude of many thoughtful men toward the problem of the inter-relations of private gain and public welfare. Mrs. Gilman's paper was a sane and thoughtful analysis of the domestic industrial problem.

The Association for Labor Legislation in a quiet way is doing work of substantial utility. Professor Farnam's presidential address and the discussion of employer's liability were marked by a close adherence to the significant and telling facts and a fine comprehensiveness of view, in which humane and scientific considerations were nicely balanced. Professor Farnam made a strong impression by his plea for that program which emphasizes the rights of posterity in contrast to a selfish individualism on the one hand, a militant socialism on the other.

The papers that struck fire were those read before the Sociological Society upon the topic "Divorce." The statistics of the Census Bureau's new report on this subject were very clearly summarized by Mr. Joseph Adna Hill, of the bureau, and the question, "Has the Freer Granting of Divorce Proved an Evil?" was negatively answered by Prof. George Elliott Howard in an analysis which was a hard bit of inductive logic for the no-divorce people to grapple with. The attack upon it

made by Mr. Walter George Smith from the standpoint of Roman Catholic dogma was, however, as brilliant an example of pleading as one could wish to hear, while the reply to it by Professor Ross was a sword play not soon to be forgotten by those who were there to see and hear.

The World's Response

It is a good world. The people in it are kindhearted and benevolent; they are not totally depraved. The response of the world to help the sufferers from the Messina earthquake is beautiful. Rich and poor unite. The King and Queen of Italy set a noble example of both gifts and service, and the Pope at Rome joins hands for once with King Victor. All the nations send their material sympathy, and not least the United States, which does not forget San Francisco's horror. We are glad that our own Government makes its contribution, and private charity will be liberal. Ambassador Griscom immediately drew on the American Red Cross for \$50,000 and on *The Christian Herald* for \$20,000. One vessel has sailed with food, and our fleet at the Suez Canal is hastening with provisions and medical attendance. President Roosevelt has wisely asked that contributions be sent to the Red Cross, and the clergy of all denominations and the boards of trade unite in calling for large and small gifts. The terrible losses make it sure that no bounty will be extravagant.

Religion Free or Pauperized

Trinity Church, New York, has published for the first time a statement of property, receipts and expenditures. That is, it gives an account of the value of its taxable property, but not of its untaxed property, its churches, chapels, schools, etc. Its taxable property, tenements, etc., have a taxable valuation of \$13,646,300, which brings in \$750,000, which is not quite 6 per cent. on the taxed value. We notice the defense the Trinity Corporation makes of the charges of bad condition of rental properties, and it appears, on the face of it, to be satisfactory. But one lesson not quite on the face of the report particularly strikes us. The total income is \$780,000; and of this only \$18,410 comes from the pew-rents of the ten churches and chapels—that is,

but \$1,821 each—and they include large, rich and fashionable churches. All the rest of the cost of supporting these ten churches is paid out of the rents of tenements. That is scarce half of what a moderate-sized country church raises for its current expenses. The twenty-eight clergy receive average salaries of \$3,620, but the people do not pay scarcely one-sixth of their pastors' salaries and but one-third of the cost of the music. They do not contribute enough of the running expenses even to pay for the salaries of the sextons. To be sure, they do give \$94,500 for charitable and missionary purposes, but for the support of their own religious privileges they pay but a mere trifle. That this is the best way to conduct religious worship we cannot believe. It makes religion not so much free as pauperized. It is a pity for any church to be burdened with such wealth that its members get their religion without expense to them, as a heritage from their ancestors.

Societies and associations by the score have met during the holiday week, and we treat editorially of but nine. Besides these others equally important held meetings in Toronto, New York, Baltimore and elsewhere; and questions of trade, finance, philology, literature, art, archeology and pure and applied science were answered by the best masters. Yet the meeting of the men in personal conference is the best part of these sessions, when the freest discussions and criticisms can take place. College faculties ought to expect their members to attend these meetings. Think of the advantage from the tariff discussion at the meeting of the American Association at Baltimore.

Esperanto is showing signs of life, or at least the first sign of life, which is fission. The newly budded cell is called *Ilo*, which is, they say, as much easier than Esperanto as Esperanto is easier than German. In time the international language may come within the range of the meanest intellect.

The British, French, Russian and Italian warships have done good service this last week. Why not turn all the navies over to the Red Cross Society?

INSURANCE

Complications Over the Washington Life

LAST week the Washington Life Insurance Company entered into a reinsurance contract with the Pittsburg Life insurance and Trust Company, under which the assets, books and papers of the Washington Life were removed from the home office, No. 135 Broadway, New York, to Pittsburg. The transfer took place under cover of darkness on Tuesday night last, and, as it appears, without the knowledge and consent of the New York Superintendent of Insurance. Much secrecy was observed regarding other details of this transaction, and it was not definitely known until Saturday of last week that a contract of reinsurance had actually been carried thru. It was only then learned that copies of the resolutions past by the directors of both companies had been shown to Mr. Kelsey and his counsel. The contract was not approved by the New York Insurance Department, and Superintendent Kelsey at once made a demand from Albany, both by telegraph and mail, upon the Pittsburg Life Insurance and Trust Company to return to the jurisdiction of this State the removed assets, books and papers. The property involved includes not only all the books and papers of the Washington Life, but also about \$5,000,000 of its securities and cash. Its real estate and mortgages in this city were transferred or assigned to the Pittsburg Life, making a total of some \$18,000,000, the return of which Mr. Kelsey demands.

If the Pittsburg concern does not comply with the order, the next step in the contemplated program is to put examiners in the vacant offices of the Washington Life, make a formal finding that the assets are no longer in this jurisdiction, and that the company is therefore insolvent in New York State. Application for a receiver would follow next, and he, when appointed, would apply to the State courts here for the invalidation of the transfers and assignments of real estate and mortgages. In the Federal courts of Pennsylvania the receiver would ask for an order directing the Pittsburg Life people to return the \$5,000,000 of cash and securities.

While the State Insurance Department or the receiver is taking this action, the probabilities are that some interesting developments will occur from the point of view of the minority stockholders of the Washington Life if the Pittsburg Life and Trust people persist in their present attitude.

The contention of the New York department is that the contract of reinsurance in a company not admitted to this State is illegal, for the reason that any insurance company taking its charter under New York laws concedes to the State the right of supervising its business in the interest of the policyholders, whom the State assumes to protect. If a New York company may reinsure in one not admitted to this State, and hence not subject to such supervision, there remains no protection for policyholders who take out their insurance confident that the New York department will protect their interests. Mr. Kelsey and ex-Judge Mayer, of counsel, believe that the courts will uphold this view of the law.

That concern for the fate of the policyholders in this connection is not merely an academic matter has appeared from certain facts connected with the Pittsburg Life itself and the State Insurance Department of Pennsylvania, to which it owes its right to do business. It came out on Wednesday last that the Pittsburg concern would have been in an impaired condition if the Pennsylvania department had not arbitrarily raised the valuation of some of its real estate \$150,000 over figures reported by the appraisers of the New York State department in an examination made at the request of the Pennsylvania department.

Meantime, policyholders of the Washington Life are in process of forming a protective committee. The Pittsburg concern has issued a letter signed by W. C. Baldwin as president, in which the supposed benefits to accrue from the merger are set forth, but the letter omits information regarding reinsurance or the particular form under which the merger was accomplished. Dispatches from Pittsburg state that W. C. Baldwin and the other officers of the Pittsburg Life and Trust Company have refused to comply with the demands made by Mr. Kelsey and the New York department.

The Accounts of Public Service Corporations

At the beginning of the present year the street railway, gas and electric companies of New York City and vicinity were required to adopt a new system of accounting planned by the Public Service Commission, and designed to prevent some of the abuses disclosed by the Commission's investigations during the last year and a half. This system is the result of a year's study, of conferences with other similar commissions, and of public hearings. Perhaps the most important requirement of the Commission's order is that nothing but actual cash invested shall be charged to capital account. This must put an end to stock watering by the companies under the Commission's jurisdiction. The evils of such inflation, planned for the enrichment of speculative financiers, have been shown plainly in the history of the dismembered and wrecked street railway combination in New York. Certain other provisions may be summarized as follows:

Franchises shall not be treated as capital except for their actual cost, and shall be kept in a separate franchise account. A complete system of amortization shall be maintained, including the annual writing off of an adequate charge for depreciation of plant and equipment and the distribution of discount, underwriting expenses and similar items thru a period of years, instead of making the total charge against the one year in which the expense was incurred.

The Commission's aim has been, in part, to establish uniformity of method in all corporations of the same class, and to make the accounts show clearly and accurately not only the specific sources of all income, but also the purpose of every expenditure. The new system tends to prevent manipulation of accounts for the benefit of speculators who may exercise control of a municipal franchise corporation. Obviously, for this reason and because of the provisions concerning depreciation, it gives to investors a guarantee of much value.

....For the six months ending with December, the expenditures of the Gov-

ernment exceeded the receipts by \$64,-288,463.

....J. & W. Seligman & Co., of New York, and Kidder, Peabody & Co., of Boston, offered last week to investors, at 101½ and accrued interest, a portion of an issue of \$15,000,000 ten year 6 per cent. collateral trust sinking fund gold bonds of the United States Rubber Company. As these securities are redeemable at 105, and, at the announced price, yield 5.80 per cent., they were quickly taken.

....The banking house changes announced on January 1st include the admission of Henry P. Davison, formerly vice-president of the First National Bank, as a partner in the house of J. P. Morgan & Co.; Hans Winterfeldt, as a partner of Speyer & Co.; Elisha Dyer, as a member of the firm of Ulman & Co.; J. A. L. Blake, of Boston, as a member of the firm of Blake Brothers & Co., and Louis Crawford Clark, Jr., and J. Ellis Postlethwaite, as members of Clark, Dodge & Co.

....Edwin S. Marston, president of the Farmers' Loan and Trust Company, has recently celebrated the twenty-fifth anniversary of his connection with that institution, and has been receiving many congratulations. Mr. Marston has held many positions in the Farmers' Loan and Trust Company, and was promoted a number of times until he was elected president ten years ago. During the panic of 1907 he was one of the members of the Trust Company Committee of Five.

....At the meeting of the American Association for the Advancement of Science, in Baltimore, on the 30th ult., an address upon "Speculation and Investment" was made by Henry Clews, of New York, the well-known banker, who pointed out the difference between speculative trading in securities and mere gambling. Mr. Clews cordially welcomed the approaching investigation of Stock Exchange methods by Governor Hughes's Commission, saying that the most searching inquiry would show that honesty and fair dealing are the foundation of the Exchange's business.

VOL. LXVI NEW YORK, THURSDAY, JANUARY 14, 1909

No. 3137

Survey of the World

The President's Secret Service Message

Mr. Roosevelt sent to the House, on the 4th, a message of nearly 6,000 words in response to the resolution asking for any evidence upon which he had based the statement in his annual message that "the chief argument in favor of this provision [relating to the Secret Service] was that the Congressmen did not themselves wish to be investigated by Secret Service men." It also asked him to transmit any evidence "connecting any member of the House with corrupt action in his official capacity," and to say whether he had "instituted proceedings for the punishment of any such individual by the courts," or had reported "any such alleged delinquencies" to the House. He was wholly at a loss, he said at the beginning, to understand the concluding portion of the resolution:

"I have made no charges of corruption against Congress nor against any member of the present House. If I had proof of such corruption affecting any member of the House in any matter as to which the Federal Government has jurisdiction, action would at once be brought, as was done in the cases of Senators Mitchell and Burton, and Representatives Williamson, Herrmann and Driggs, at different times since I have been President. This would simply be doing my duty in the execution and enforcement of the laws without respect to persons. But I do not regard it as within the province or the duties of the President to report to the House 'alleged delinquencies' of members, or the supposed 'corrupt action' of a member in 'his official capacity.'" Quoting from his annual message his remarks about the Secret Service, he asserted that a careful reading of them would show that he had said nothing to warrant the interpretation, in the resolution, that "the majority of the Congressmen were in fear of being investi-

gated," or that "Congress as a whole was actuated by that motive." He had always deprecated "the practice of indiscriminate attack upon Congress," and no one held the authority and dignity of Congress in higher respect. But what he had said about "the chief argument" was sustained by the facts. He then directed attention to the official report of the debate in the House, pointing out the remarks of Messrs. Tawney, Smith, Sherley and Fitzgerald. The amendment in question had been reported by the first two. He had no doubt that many members had simply followed their lead. Quoting from the speeches in debate, he asserted that they "entirely supported" his original statement. Mr. Tawney had said that a letter in his possession from Secretary Cortelyou admitted violations of law in his Department with respect to the Secret Service. "It makes no such admission," said the President, who added that the letter was an emphatic protest against the proposed legislation. Parts of Mr. Sherley's speech were quoted to show that he had argued against the investigation of the conduct of Congressmen. Mr. Roosevelt also referred to an article contributed to the *Chicago Inter-Ocean* by L. W. Busbey, private secretary to Speaker Cannon, in which the Secret Service officers were denounced for "shadowing Congressmen." This meddling of detectives, Mr. Busbey said, was resented and would not be tolerated by the legislative branch of the Government. The work of the Secret Service at that time, Mr. Roosevelt remarked, included investigation of great land frauds. He had frequently discuss the matter with members, and the reasons alleged to him for

the hostility of Congress to the Secret Service, "both by those who did and by those who did not share this hostility," had almost invariably been those set forth by Mr. Busbey, one of whose assertions was that the chief of the Service had shadowed members "with a view to involving them in scandal that would enable the bureau to dictate to them as the price of silence." Such allegations, Mr. Roosevelt said, were wholly without foundation in fact. Turning then from the question of motives, he took up "the real issue," which was: "Does Congress desire that the Government shall have at its disposal the most efficient instrument for the detection of criminals and the prevention and punishment of crime, or does it not?" He showed that for a long time he had sought, but in vain, to prevent "the wrong" involved in the legislation to which he objected. "Messrs. Tawney and Smith and their fellow members on the Appropriations Committee paid no heed to the protests." Therefore he had at last spoken "plainly and directly" in a message. He then at considerable length narrated the achievements of the Secret Service men since 1901. They had detected the land frauds of men of great wealth and wide political influence, causing conviction in twenty-eight cases in Nebraska alone. They had been employed to do this work because Secretary Hitchcock could not trust his own subordinates, having discovered that the Land Office's special agents' division or corps of detectives "was largely under the control of the land thieves." Mr. Roosevelt gave in detail the history of the work which caused the indictment of Charles T. Stewart, of Council Bluffs, Ia. Mr. Stewart is friend and fellow townsman of Congressman Smith, who was associated with Mr. Tawney in supporting and procuring the restrictive legislation which the President denounced, and therefore this part of the message has been regarded as hostile to Mr. Smith:

"If the present law, for which Messrs. Tawney, Smith and the other gentlemen I have above mentioned are responsible, had then been in effect, this action would have been impossible, and most of the criminals would unquestionably have escaped. No more striking instance can be imagined of the desirability of having a central corps of skilled investigating agents who can at any time be assigned, if

necessary in large numbers, to investigate some violation of the Federal statutes, in no matter what branch of the public service. In the land cases most of the men investigated who were public servants were in the Executive branch of the Government. But in Oregon, where an enormous acreage of fraudulently alienated public land was recovered for the Government, a United States Senator, Mr. Mitchell, and a member of the lower House, Mr. Williamson, were convicted on evidence obtained by men transferred from the Secret Service, and another member of Congress was indicted."

Mr. Roosevelt also showed what the Secret Service had done with respect to naturalization frauds, peonage, smuggling, lotteries, etc. Now the Government was crippled, not only by the restriction in question, but also by a law forbidding the employment of private detectives. The restriction, he repeated, was "of benefit only to the criminal class." It would be a gross abuse to use the Secret Service for the investigation of purely private or political matters, but there had been "no single instance of such abuse" during his term as President. In conclusion he urged that the restrictive legislation be repealed, that the salary of the head of the Secret Service be increased, that the Service be made a bureau of the Department of Justice, and that explicit authority be given for the use of it "to detect and punish crime wherever it is found."

Rejected by the House This message caused resentment and anger in Congress, and especially in the House, where action upon it was delayed, however, until the 8th. In the interval the breach between Congress and the President was widened by the latter's sharp reply to the Senate's resolution concerning the purchase of the Tennessee Coal and Iron Company, and by his publication of the report of an inquiry concerning Senator Tillman's connection with transactions relating to tracts of public land. The House galleries were crowded on the 8th, when the special committee appointed some time ago to consider Mr. Roosevelt's remarks about the Secret Service presented its report, which was in the form of resolutions (signed by the three Republicans and the two Democrats) declaring that the President's language in his message of December 8th was "unjustified and without

basis of fact," and that it constituted "a breach of the privileges of the House." Saying that the House declined "to consider any communication from any source which is not in its own judgment respectful," the resolutions provided that so much of the annual message as related to the Secret Service be laid on the table, together with the message of the 4th inst., the latter "being unresponsive to the inquiry of the House and constituting an invasion of the privileges of the House by questioning the motives and intelligence of members in the exercise of their constitutional rights and functions." The speeches in support of the resolutions were regarded as quite temperate. Mr. Perkins, chairman of the committee, said Mr. Roosevelt's original statement meant that Congress voted for the restriction from an improper motive. The lawmakers should not permit the integrity of their motives to be lightly questioned. There was danger in any impairment of public confidence in those who make the laws. The failure of popular government would be demonstrated if there should come a time when a majority of the House "were controlled by a craven fear of a detection of their crimes." If Congress should listen tamely and timidly to such reflections upon the character of its members and its honesty of purpose, it would deserve and receive the contempt of the public. Mr. Denby said the most distressing feature of the painful episode was that the President, justly honored and beloved, should so little appreciate the effect of his own words and so little consider his own great fame. Mr. Tawney said no disclaimer could change either the meaning of the language used or the country's interpretation of it. No response to the House's resolution could be accepted, said Mr. Sherley, that did not contain an apology. The President had not apologized, but had sought to obscure the real issue. Mr. Bennet and Mr. Driscoll spoke against the report. Mr. Gardner proposed a brief substitute declaring that there had been a misunderstanding and expressing confidence in the Appropriations Committee. This was lost, 23 to 225. The debate consumed nearly seven hours. At the close of it the report was adopted, 212 to 35. All the negative votes were

cast by Republicans. On the 9th, the House ordered an investigation of the Secret Service by a special committee.

✱

Sharp Message to the Senate By unanimous vote, on the 4th, the Senate "directed" the Attorney-General to report whether he had brought suit under the Anti-Trust law against the Steel Corporation, on account of its purchase of the Tennessee Coal and Iron Company, in November, 1907; if not, why he had failed to do so; and, if he had given an opinion as to the legality of the transaction, to send a copy of it. Two days later, the President (not the Attorney-General) replied, transmitting a brief letter of the Attorney-General to himself, merely saying that no suit had been brought. "As to the transaction in question," said Mr. Roosevelt, "I was personally cognizant of and responsible for its every detail." To explain, he appended a long letter sent by himself to the Attorney-General on November 4th, 1907, immediately after Judge Gary and Henry C. Frick, representing the Steel Corporation, had called upon him. This was in the early days of the panic. They had told him that a certain business firm "of real importance" would fail if help were not given, that a majority of the stock of the Tennessee Company was among its assets, and that the Steel Corporation had been urged to buy this stock. They did not care to purchase it as a mere business transaction. It had been the Corporation's policy to avoid the acquisition of more than 60 per cent. of the steel industry. Still, the purchase would not give the Corporation more than 60 per cent., and they were willing to go into the transaction "to prevent a panic and a general industrial smash-up." They would not do it, however, if the President should say it ought not to be done. "I answered," the President wrote, "that while of course I could not advise them to take the action proposed, I felt it no public duty of mine to interpose any objection." Afterward he was advised orally by the Attorney-General that there was no sufficient ground for legal proceedings against the Steel Corporation, and that the situation had not been

changed by the acquisition of the Tennessee Company. Mr. Roosevelt then said to the Senate:

"I feel bound, however, to add that I have instructed the Attorney-General not to respond to that portion of the resolution which calls for a statement of his reasons for non-action. I have done so because I do not conceive it to be within the authority of the Senate to give directions of this character to the head of an Executive department or to demand from him reasons for his action. Heads of the Executive department are subject to the Constitution, and to the laws passed by Congress in pursuance of the Constitution, and to the directions of the President of the United States, but to no other direction whatever."

This excited opposition in the Senate, where, on the following day, Mr. Culberson said that the President had been guilty of an arbitrary and lawless act and had sanctioned a direct and deliberate violation of law. He asserted that the Government was prosecuting the Tobacco Trust for transactions like this one which Mr. Roosevelt had approved. Upon his motion, and by a vote of 47 to 14, the Judiciary Committee has been directed to report whether the President was authorized to permit the absorption of the Tennessee Company by the Steel Corporation.

Charges Against Senator Tillman

Senator Hale is chairman of a committee that is making an inquiry concerning the work of the inspectors, special agents, Secret Service men and other detectives or investigators connected with the several executive departments. What may be called the case against Senator Tillman is set forth in a letter from the President transmitting to Mr. Hale reports and other evidence which the committee sought. The evidence relating to Mr. Tillman was procured by post office inspectors really at his own request, following his complaint in the Senate (February 19th, 1908) that certain land speculators in Oregon were lying about him in circulars asserting that he had taken for himself a quarter section, and for ten of his relatives ten quarters, of land in a grant alleged to be held wrongfully by a corporation. The aim of the speculators was to compel either a restoration of the land to the public domain or the sale of it to themselves and their associates at \$2.50 per

acre. Mr. Tillman, on February 19th, 1908, denounced the authors of the circular, saying:

"I have not bought any land anywhere in the West, nor undertaken to buy any."

Mr. Roosevelt shows, by photographic copies of the letters, that on October 20th, 1907, Mr. Tillman wrote to Reeder & Watkins, of Oregon, attorneys representing applicants for land in such grants:

"William E. Lee, my agent, will see you about land. I want nine quarters reserved. Will forward signed applications and money at once. Members of my family are entry men. I wired Mr. Lee to see you and locate quarters for the seven members of my family who are of age, and one for my private secretary, J. B. Knight, whom I desire to let in to the deal."

Also that Lee wrote to them that if the Senator should "get in on the deal" he could be "of great help in getting matters started from Washington and cause the Government to get busy." He would "set up a howl" there. And on January 31st, 1908, the Senator introduced resolutions directing the Attorney-General to sue for the restoration of such grants on the Pacific slope to the public domain. On February 15th, four days before his disclaimer in the Senate, he wrote a long letter to the Oregon firm, saying that what he was doing in the Senate was not related to any personal purchase, but adding:

"If I can succeed in causing the Government to institute suit for the recovery of the land and make it easier for others as well as myself to obtain some of it, I shall do it without any regard to the dealings with your firm. I will be glad for you to hold in reserve eight of the best quarter sections, and I will in the meantime press the investigation and other work here which will facilitate the final purchase and in effect obviate the necessity of your making any case in the courts at all."

This letter, on private business, was sent in a franked envelope. Mr. Roosevelt speaks of Mr. Tillman's proposal "to use his influence as Senator to force the Government to institute a suit which would make it easy for him personally to obtain some of the land."

Reelfoot Lake Night-Riders Convicted

The eight night-riders held for the murder of Capt. Quentin Rankin near Reelfoot Lake were convicted, at Union City, Tenn., on the

7th. Garrett Johnson, Tid Burton, Robert Ransom, Frederick Pincon, Arthur Cloar and Samuel Applewhite were found guilty of murder in the first degree, "with mitigating circumstances." Murder in the second degree was the verdict against Bud Morris and Robert Huffman, the jury deciding that their punishment should be twenty years in prison. Two days later, Judge Joseph E. Jones sentenced the first six to be hanged on February 19th, saying he could find no "mitigating circumstances." The jury's decision was followed in the cases of the remaining two, altho there had been testimony from the confessing witnesses that the shot which killed Rankin was fired by Huffman. While pronouncing sentence Judge Jones said that the testimony given "bristled with perjury." On the last day of the trial one of the jurors was ill with measles. He lay on a cot in a small room adjoining the main courtroom, and arguments were made there in the presence of the defendants and the entire jury. Defendants' counsel was reprimanded by Judge Jones for asserting that Governor Patterson had intimidated the people by filling the county with soldiers, and had bribed men to perjure themselves in testimony against the men on trial. Attorney-General Caldwell, in the course of his argument, addressed the night-riders in the audience, saying he knew they had sworn to kill him. "I defy you," he added; "you can do no more than take my life, and I would gladly lay it down if by the sacrifice my county and State could be rid of the terrorism and outrages of night-rider mob law."

British Old-Age Pensions The workings of the Old-Age Pension Law, which went into effect the 1st of January, are watched with great interest because it is the most important measure which the Ministry has succeeded in getting thru, and is a novelty in British legislation. The expense to the Government cannot yet be determined. The latest estimate of the Chancellor of the Exchequer was that over 600,000 persons would be entitled to pensions, and the annual cost would be \$37,500,000. Up to December 5th the total number of claims filed were 690,027, of

which 490,028 had been past upon by the officers and recommended; 51,353 had been rejected and 148,646 were still pending. The law provides a pension of \$1.20 a week for any man and woman over seventy years of age who is not receiving poor relief and has an income of less than \$105 a year. If the means of the applicant are less than \$157 a year he may receive a part of this weekly pension of 5s. according to a sliding scale. It has been found impossible to calculate in advance from the census returns the number of persons entitled to old-age pensions. The Chancellor of the Exchequer in his statement to the House of Commons showed that the percentage of persons claiming old-age pensions to the population over seventy years of age, after deducting those in receipt of poor relief, was, in England 54 per cent., in Wales 56 per cent., in Scotland 60 per cent., and in Ireland 128 per cent. The number of applications filed in Ireland (209,135) is more than half the total for England. Excluding the cases of intentional fraud, the exceptionally large number of pensioners in Ireland is due to the emigration of younger people leaving a decreased population composed of older men and women, and to the natural tendency to exaggerate the age. In a large number of cases in Ireland it was impossible to find any records of birth. Some of the women who claimed to be over seventy years of age were refused, because, according to the ages recorded in their marriage certificates, they were several years younger. Many difficult cases occurred in the application of the law, particularly where the claimant was practically supported by his children, or was in receipt of an income which, tho entitling him to a pension, would be raised by that pension above the legal limit.

The Messina Earthquake The work of rescue and relief has continued actively all thru the week, and as late as five days after the catastrophe living persons have been taken from the ruins of the cities. The total loss of life will never be known. The latest authoritative estimate gives the number of dead in the sixty towns destroyed as 105,000. This did not include, however, the deaths among the

thousands of sick and wounded who are in the hospitals. In spite of the large number of workers only a slight beginning has been made toward the clearing of the ruins. Eight trenches, each long enough to hold 1,000 corpses, are dug daily, and sometimes these are filled. Owing to the necessity of disposing of the bodies as rapidly as possible lest the locality should become uninhabitable, there is great confusion and uncertainty which will cause serious complications in the future, especially in regard to life insurance, property transfers and securities. Messina was a wealthy city, and the bonds lost are estimated at \$90,000,000. Coin to the amount of \$13,200,000 has been taken from the ruins and conveyed to the Bank of Naples. The prompt and generous action of the United States in sending money and supplies to the distressed people has created a profound impression throughout Italy. The relief fund raised by the city of New York was about a half million dollars. President Roosevelt recommended to Congress the appropriation of \$500,000, which was raised in the House to \$800,000, and in this form the bill was past and signed. The American Red Cross ship "Bayern" arrived at Messina on Friday and distributed its stores along the coast. The United States supply ships "Yankton" and "Culgoa" were detached from the fleet at Port Said and conveyed to the devastated cities large quantities of food, medicine and clothing. When the wounded refugees were brought to Rome the Pope and the Mayor forgot their hostilities and joined in the work of relief. The election of Signor Nathan as Mayor has been particularly offensive to the Vatican because he is a free Mason and an Anti-Clerical. When the first trainload of wounded arrived from Naples he appealed to the Pope to open the Vatican Hospice of Santa Maria, and his request was at once complied with. The Mayor afterward visited the hospital to consult with the ecclesiastical authorities and Cardinal Merry del Val, the Papal secretary. This is the first time since 1870 that a Mayor of Rome has set foot within a Papal building. The Pope also at another time visited the hos-

pital, altho it is technically outside the limits of his "Vatican prison." The hospital is on Italian soil, altho connected with St. Peter's by a bridge over which the Pope past. A great number of slight earthquake shocks have been felt throughout the week in Sicily, southern Italy, and have added to the destruction by throwing down the shattered walls. Shocks are also reported from Lisbon, Canary Islands, and Mexico, but it cannot be proved that these have any direct connection with the earthquake at Messina. According to the report of Professor Ricco, Director of the Conservatory at Catania, the ruin spread from Castoreale in Sicily to Palmi in Calabria, or a distance of forty miles. Damage to buildings occurred from Riposto and Patti in Sicily to Pizzo in Calabria, a distance of eighty-six miles. The earthquake was felt violently from Mistretta and Noto in Sicily to Cosenza in Calabria, a distance of 186 miles. It was felt, tho only slightly, at Marsala and Trapani in Sicily, and even at Naples.

✱

The Balkan Question The Russian reply to the proposals of Austria-Hungary for the modification of the Treaty of Berlin is of so much importance as defining the view taken by Russia of the annexation of Bosnia and Herzegovina that we quote the opening paragraphs of the note of Foreign Minister Isvolsky to the Russian Ambassador at Vienna:

Monsieur l'Ambassadeur—On September 24 (October 7) of the current year Count Berchthold communicated to the Imperial Cabinet a circular despatch in which Baron von Aehrenthal informed the representatives of Austria-Hungary of two decisions taken by the Imperial and Royal Government. The latter "renounced in the future the making good of its rights in regard to the Sanjak of Novi Bazar" and "resumed as regards Bosnia and Herzegovina its entire liberty of action." On the same date a series of measures promulgated at Budapest extended the sovereign rights of his Majesty the Emperor Francis Joseph over the two provinces aforementioned. Two days before Prince Ferdinand of Bulgaria had assumed the royal title and proclaimed the independence of Bulgaria.

In the one as in the other case Europe found herself facing a unilateral act bringing about a *de facto* modification in the order of things established by the Treaty of Berlin.

In 1871 the European Powers assembled in

conference in London had solemnly recognized the essential principle of international law that no Power could detach itself from the engagements of a treaty nor modify its provisions except as the result of an agreement of the contracting parties by means of an amicable understanding. Since then we have for our part constantly observed this principle; and although the Treaty of Berlin contained clauses which were particularly onerous both for Russia and for the Balkan States, toward which we have at all times borne a traditional interest, we have never sought to infringe the stipulations. It is evident that any deviation from this principle is calculated to shake seriously the bases of the existing political balance and consequently to endanger general peace. Indeed, the acts accomplished by Austria-Hungary and Bulgaria have resulted in immediately creating a most strained situation in the Balkan peninsula and in plunging Europe into a state of disquietude which still exists.

Mr. Isvolsky goes on to say that the Powers are obliged to take cognizance of Turkey's protest against the violation of the Treaty of Berlin, and that if a European conference is called its action cannot be confined to the abrogation of Article 25, as desired by Austria, but must consider the whole question of the Balkan provinces. Article 25 of the Treaty of Berlin states that Austria's occupation of the provinces is essentially provisional and is dependent upon the consent of all the signatory Powers. The secret treaty between Austria-Hungary and Turkey concluded July 13th, 1878, which was divulged by recent events, also alludes to the occupation as provisional. The Russian note concludes by agreeing with the compromise proposed by Austria-Hungary, that the scope and method of procedure of the future conference be made a matter of preliminary negotiation between the Powers.—The Marquis Pallavicini, Austro-Hungarian Minister to Turkey, has informed the Grand Vizier that Austria Hungary is willing to pay 2,500,000 Turkish pounds (\$11,000,000) as indemnity for the annexation of Bosnia and Herzegovina.—Austria took offense and made diplomatic protest against the language used by Mr. Milovanovitch, the Servian Minister of Foreign Affairs, in a speech before the Servian parliament, in which he declared that the people of Bosnia and Herzegovina had been reduced to slavery. In reply to the Austrian demand for an explanation the Foreign Minister stated

that his words were not correctly reported. He had simply said that the provinces had been subjugated by Austria. This amelioration of his language is accepted as satisfactory.

The Fall of Reports from Peking are still confused with regard to the dismissal of Yuan Shi-kai and its political significance. The deposed Councillor has not obeyed the order to return to the Province of Honan, but instead escaped from Peking in disguise and took refuge in Tientsin. He has since been ordered back to the capital by the Government, probably to stand trial for treason, but he has not complied. It is expected, on the contrary, that he will either stay in the treaty ports or leave China for England or elsewhere. It is believed that the edict for his dismissal was forced upon the Great Council by the Prince Regent and was disapproved by at least all the Chinese members of the Council. But Yuan Shi-kai's conduct has not been so consistently progressive that his removal is necessarily to be regarded as a reactionary step. He checked the rapid and radical reforms of the late Emperor in 1898 by placing his army, the only efficient one in China, at the disposal of the Dowager Empress. Afterward, however, he frustrated her plans for the destruction of the foreigners in Peking and later co-operated with her in her constitutional and progressive measures. The foreign ministers at Peking have decided that it would not be good policy to protest to the Government against his dismissal, altho it is feared that it indicates the adoption of an anti-foreign policy. All of Yuan-Shi-kai's protégés, appointees and favorites have been removed from office. Tang Shao Yi, who is one of these, has been recalled, and has already left Washington. He had rented a handsome residence in Washington until after the inauguration and evidently intended to carry on a series of elaborate entertainments, presumably for the purpose of strengthening the bonds between China and the United States. If he had any hopes of effecting a formal alliance between the two countries he has probably before this abandoned it.

Time, the Teacher

BY ALFRED AUSTIN

POET LAUREATE OF ENGLAND

I WROTE my name upon the sands of time,
Deeming that it would there remain for aye,
When lo! there came a rush of spray and slime,
And with a crush swept the vain words away.
Then I engraved it on the granite rock,
Assured that there it ever would abide;
But breaker after breaker, flock on flock
Of waves unshepherded, vociferous tide,
Broke on the beach, and thunderstruck the air.
Then backward ebb'd. But when I gazed around
Thru tattered hollows of subsiding sound,
To find my name, not even the rock was there.
Thus humbled, I rejoiced that I should be
Merged in the incommensurable sea.

SWINBURNE OLD MANOR, REVE, ENGLAND.

Postal Savings Banks

BY THOMAS H. CARTER

UNITED STATES SENATOR FROM MONTANA.

IN the Christmas number of THE INDEPENDENT Mr. Charles E. Sprague, president of the Union Dime Savings Institution, and formerly president of the Savings Bank Section of the American Bankers' Association, undertakes to overwhelm Postmaster-General Meyer, who ventured to set forth in THE INDEPENDENT of November 5th certain persuasive arguments in favor of the establishment of postal savings depositories.

Mr. Sprague charges the Postmaster-General with misleading the public by stating that there are only 1,453 savings banks in the United States, as reported by the Comptroller of the Currency, and he seeks to refute the official statement by explaining that "west of New Jersey," under the laws there prevailing, State and national banks and trust companies solicit savings accounts, and then, to make the discomfiture of the Postmaster-General complete, Mr. Sprague cites the case of a lady guest of the Waldorf-Astoria who did not make a deposit in a savings bank because she did not know that there were any savings banks in the vicinity of the hotel. Truly the Postmaster-General must feel greatly embarrassed at this exposure of his ignorance of conditions "west of New Jersey," to say nothing of his obvious indifference to the embarrassment of the well-fed guest of the Waldorf-Astoria Hotel.

Incidentally, this portion of Mr. Sprague's reply seems to indicate that he views our great country from the sum-

mit of Trinity steeple. Between the paragraph disclosing the ignorance of the Waldorf-Astoria guest and that alleging that Mr. Meyer fell into a "gigantic error" with reference to the number of banks west of New Jersey willing to receive savings deposits, Mr. Sprague—rather inadvertently, I think—averts that corporations in the State of New York strive to entice unwary persons by "interest departments" and "special accounts," and apparently fraudulent imitations of pass books of legitimate savings banks to jeopardize savings in a manner which Mr. Sprague very properly denounces as "all wrong." It is just such practices by corporations and institutions acting wrongfully, as Mr. Sprague alleges, that cause the hoarding and hiding of at least 25 per cent. of the coin and currency of the United States.

If in the State of New York, with the most carefully guarded savings bank law on the statute book of any State, corporations "wrongfully" strive to entice savings depositors to imperil their money, what can be expected in States which have failed or neglected to provide any safeguards at all for the hard-earned savings of the struggling poor? Approximately one-third of all the savings on deposit in banks in the United States is on deposit in the State of New York, and this important fact naturally springs from the confidence inspired by a good law faithfully executed. In the stringent provisions of the New York law and the extensive savings facilities accorded we have an illustration of the best thus far

provided for the safety and accommodation of the people, and because of such features of safety and convenience the savings banks of that State are liberally patronized by the masses.

Massachusetts ranks next to New York in excellence of statutory provisions relating to savings banks, and as a result of the confidence thereby inspired such banks in that State have one-fifth of the aggregate of all savings deposits in the banks of the United States. The people of New York and Massachusetts have on deposit in savings banks something in excess of one-half of all the savings deposits of the country.

It is noteworthy that the New England States generally have very carefully guarded statutes with reference to savings banks—institutions of this kind being organized there and likewise very largely in New York on what is known in common parlance as the "old style," that is, institutions organized under the law without capital and managed by benevolently inclined persons who serve without compensation, the only expense attached to the operation being for necessary clerical force and moderate compensation for the active officers. According to the intent of the law, depositors in this class of banks receive all the earnings, less necessary expenses of administration.

Every other person in New England has a savings account and in New York the percentage of savings depositors is large. On the other hand, in the country "west of New Jersey," to which Mr. Sprague refers, there is but one savings account on the average to every one hundred and fifty odd of the population, and in that region, be it known, the savings banks are not as a rule of the "old style," but are organized in the main as stock companies, the interest of the depositor being at best only equal to that of a stockholder, and probably in most cases subordinate to the desire of the stockholders for dividends.

In none of the thirty-nine States and the several Territories beyond the limits of New England and New York do we find the statutory safeguards thrown about the depositor under which Mr. Sprague's Union Dime Savings Institu-

tion is operating, and since, under the New York law, to quote Mr. Sprague, "some other corporations (wrongfully, in my opinion) strive to entice the savings depositors by 'interest departments,' 'special accounts,' etc.," what may be expected in the absence of the restraining force of law? The answer is found in the undisputed fact that but a small percentage of the people have sufficient confidence in the unguarded savings institutions to entrust their money to them. The people "west of New Jersey" are not essentially different in habits and disposition from those east of that State, and since to the north and east of New Jersey approximately every other person has a savings account, while west thereof not more than one in one hundred and fifty of the people have savings accounts, may we not inquire why? In my opinion the answer is simple and may be summed up in seven words—want of confidence and want of opportunity.

Undoubtedly in many cities west and south of New Jersey savings banks are conducted on as sound and safe a basis as in New York or New England, but stock companies organized to conduct savings banks naturally select favorable locations, where large deposits may be expected and thus large dividends insured; but after all such favorable locations west and south of New Jersey have been occupied, there will still remain whole Congressional districts and even States without any savings banks at all. In sparsely settled regions private capital cannot be expected to establish and maintain savings institutions for the mere purpose of encouraging thrift and a saving disposition among the people. Capital seeking investment in any profit-yielding venture does not as a rule adopt benevolence as a primary motive.

A cursory examination of the map and of the last census returns will demonstrate that approximately one-half of the total population of the United States abides in places having no savings banks at all. Since it is conceded that savings facilities, coupled with confidence in the banks, will encourage thrift, keep money in circulation, insure more home comforts, and develop better citizenship, the question naturally arises, Why not make

some effort to extend the beneficent influence of sound savings institutions to the one-half of our population which does not now enjoy the advantages common to those residing in or near the great centers of population?

Why are the people residing outside the centers of population in the United States not entitled to savings institutions as sound and convenient as the respective governments furnish for the country people of Great Britain, France, Austria, Italy, Russia, Japan and their colonies? The initial cost of installation and the expense of maintenance unite to forbid the thought of providing thru private enterprise any such safe, ample and convenient depositories for the small savings of the people as the postal system can supply as a mere incident to its present business and without additional expense to the postal revenues.

Certain cherished facilities for saving small amounts of money now enjoyed by some of the people can be extended to all the people in a lawful way and without expense to the Government or injury to any one, and the postal system has the machinery installed and in operation thru which such facilities may be extended to the patrons of every one of the forty thousand money order post-offices in the country, just as such accommodations are vouchsafed to the people by nearly every enlightened government in the world.

The bill now pending before the Senate is neither mysterious nor complex. It provides that every money order post-office in the United States and such other offices as the Postmaster-General may designate shall be postal savings depositories, in which any person may open an account by the deposit of \$1, and increase it by the deposit of 10 cents or multiples thereof. Two per cent. interest per annum will be paid on such deposits, and the Postmaster-General is required to deposit the funds thus accumulated in national banks as near as may be practicable in the immediate vicinity of the places at which such funds are received, at a rate of interest not less than $2\frac{1}{4}$ per cent. per annum. No interest will be paid on any part of a postal depository account in excess of \$500, exclusive of accumulated interest, and no

account will be permitted to exceed \$1,000, nor will any person be permitted to deposit any amount in excess of \$200 in any one calendar month. There are many administrative features connected with the bill which I need not go over in detail.

In conformity with suggestions made by me in the Senate recently, amendments will be proposed by authority of the committee having the bill in charge restricting the aggregate individual deposit, exclusive of accumulated interest, to the sum of \$500, and reducing the amount that can be deposited in any one calendar month to \$100. Another amendment will be proposed to strike out that feature of the bill allowing deposits to be made by persons as trustees, thereby restricting each individual over ten years of age to one account at one post-office. This bill, as amended, will provide a depository in which every one under all circumstances and conditions may have abiding confidence, and will undoubtedly insure the accumulation in the postal depositories of the coin and currency of the country which is constantly in hiding, and moreover will collect the very large aggregate made up of the vast number of small sums which periodically retire from existing banks when signs of danger appear.

Large depositors could not avail themselves of the postal depository because the limit of \$100 to the credit of any account in any calendar month would prevent the use of the postal system as a refuge for capitalists. The proposed system will be self-sustaining and will not take \$1 from the postal funds; on the contrary, it is believed that some slight profit will accrue to the postal revenues from the operation. Provided with the extensive facilities offered by the postal service, there is no reason to doubt that 50 per cent. of the men, women and children of all these United States will have savings accounts, just as 50 per cent. of the people of New England have such accounts under existing conditions which furnish that region facilities not enjoyed in other sections of the country.

"But," says Mr. Sprague, "every day citizens go to the post-office, fill out forms more simple than those which will

be required under the proposed law, pay for a money order and send it to some savings bank, even to the greatest one in the world, if they prefer." In this statement no account is taken of the material fact that it costs \$3 per thousand to transmit money by post-office order, and of the further and very pertinent fact that not one person in ten thousand, on the average, knows the address of the greatest savings bank in the world, but every one knows the exact location of the nearest money order post-office. It must be remembered, also, that every resident of the United States feels perfectly at home in the local post office. It is the common meeting place of the people. Every citizen feels a certain sense of proprietorship in the post-office. The man who buys one two-cent stamp is quite as welcome as he who buys one thousand dollars' worth of stamps, and the pending bill is intended to appeal to the thousands and hundreds of thousands of people who never visit a commercial bank, who would feel a certain sense of confusion and embarrassment in approaching the marble counters and gilded trimmings of the pretentious banking institution.

This class of people would deposit their small earnings in the local post-office with a heightened sense of self-respect. Mr. Sprague would penalize thrift by having the people charged exchange for the money orders, whereas it seems to me that enlightened public policy requires that thrift be encouraged by offering absolute safety and moderate returns on the savings.

It is true, as Mr. Sprague asserts, that "this country does not need to grab the pennies of the thrifty as do the European countries, with their perpetual debt," but this Government does need the devotion and affectionate regard of the masses of the people whose interests would be promoted by the establishment of the postal savings system. In the Postmaster-General's article of November 5th the statement was made that eight millions of dollars in money orders were purchased during the current year, payable to the buyers themselves, indicating that this sum was deposited with the post-offices for safekeeping. The force of this announcement Mr. Sprague

seeks to evade by saying that the comparatively few nomadic actors engaged in theatrical work throuout the country are in the habit of buying money orders, payable to themselves, to the end that they may thus accumulate funds to be later spent in New York. I submit that this is an evasion rather than an answer.

Again, Mr. Sprague avers that people would withdraw their money from the postal savings depositories as quickly as they would withdraw their deposits from any other bank in a time of financial panic. Slight inquiry into the cause of bank withdrawals will refute this assertion completely. The small depositor withdraws money from a bank in time of financial trouble because of impaired confidence in the bank. If the faith and credit of the United States Government became the subject of doubt Mr. Sprague's assertion would find support, but until the people cease to trust the Government, I submit that postal deposits would increase rather than diminish in times of panic, and that, in consequence, it would follow as the night the day that the postal savings depository system, as provided for in the pending bill, would be a powerful aid to the banks in time of panic.

The withdrawal of money from a bank would be followed by its deposit in the post-office, and at the close of the day the postmaster would return the aggregate of withdrawals to the nearest national bank. Banks conducted under State authority would be indirectly aided by the process because the withdrawn money would be kept in circulation rather than retired to seclusion. During the financial disturbance of 1907 the Secretary of the Treasury deposited large amounts of Government money in national banks, and it is a matter of common knowledge that the money thus deposited was used by such banks to aid trust companies, savings banks and commercial banks organized under State laws.

I agree with the proposition of the Postmaster-General which Mr. Sprague controverts that "opposition to the postal savings system proceeds from a misunderstanding of its purpose or purely selfish motives." The bank that is consciously weak, the bank under suspicion

because of bad management, the bank lacking public confidence on any account, might and probably could suffer loss of deposits thru the establishment of the postal savings system, but solvent banking institutions, properly conducted, would find no competition at all in the system. Only by a stretch of imagination could the postal depositories be regarded as a banking institution. True, they would receive on deposit small sums and in turn deposit the aggregate thereof in national banks nearest the place of receipt, but they would not cash checks, issue bills of exchange, discount paper, or perform any of the functions inseparable from the conduct of a regular commercial bank. Nor would the postal depositories compete with well-conducted savings banks, because the rate of interest paid by savings banks thruout the country is on the average nearly double the rate the postal depository will be authorized to pay. Then it will be more difficult to withdraw money from the postal depository than from the ordinary savings bank, for, as the Canadian told Mr. Sprague, it is pretty easy to put money into postal savings banks, but a wearisome process to take it out. This is true because an application to the Postmaster-General for the payment of any portion of the deposit would have to be made, and some little time would elapse before the return of a check in response to the application.

It is not intended to furnish banking facilities thru the postal savings depositories, but only to furnish absolute safety coupled with widespread opportunity to save. It is this element of absolute safety that induces the foreigners abiding in this country to send, as the Postmaster-General reports, one hundred millions of dollars per annum for deposit in the postal savings banks in the countries from which they come. It may be true that some portion of this aggregate is intended for the maintenance of the old folks at home, but the records of the Post-Office Department show that the moving motive is safety.

It is not necessary, nor is it desirable,

to recapitulate the numerous disastrous failures which have swallowed up the hard earnings of struggling men, women and children thruout this country in the years that have gone by. There is no more pathetic sight anywhere to be seen than that presented by a mass of anxious men and women assembled in front of the closed doors of a bank in which their hard-earned savings are impounded. Such scenes breed anarchy, for it is difficult for people of small means to comprehend how they can be deprived of that which they accumulated thru self-denial save by the failure of Government to discharge its duty.

Bank officers are the immediate objects of wrath, but in the last analysis the Government is blamed for permitting such things. The opposition to the postal savings system now being urged in this country is but a reproduction of the opposition urged to the establishment of a like institution in Great Britain for fifty years prior to the passage of the postal savings bank bill in 1861. Dire predictions were indulged by the banks, but no backward step has ever been taken by Great Britain or any other country that has adopted the postal system, and no banker is now heard anywhere to question the wisdom of its continuance.

With nearly a billion dollars at present on deposit in the postal savings banks of the United Kingdom, the banking activity of England is greater, stronger, and more secure now than at any previous time. The subject is neither new nor novel. The adoption of postal savings banks has been advocated by the Postmasters-General since 1871. Every political party in the United States stands committed to the system, the President and the President-elect both cordially favor it and the Senate Committee on Post Offices and Post Roads unanimously reported the bill now under consideration. The only opposition to the bill comes from a few bank officials inspired by motives which can scarcely appeal to enlightened public spirited men even in the banking business.

WASHINGTON, D. C.

Members of the posse which searched for the murderers of Captain Rankin.

The Reelfoot Lake Night Riders

BY ARTHUR CLEVELAND HALL, Ph.D.

[THE INDEPENDENT commissioned the author of the following article to go to Union City and the Reelfoot Lake County during the holidays and make a report to our readers of what he could find out at the trial of the Night Riders as to their organization, their crimes and their grievances. Dr. Hall is Professor of Economics in Kenyon College and is the author of a standard volume in criminal sociology, entitled "Crime in Its Relation to Social Progress." He writes us that he believes he went with a thoroly unbiased mind to Union City and that he is somewhat surprised at the conclusions he has reached, and will be glad of nay new light on the problem. Since this was written eight of the night riders have been convicted of murder in the first or second degree.—EDITOR.]

EIGHT night riders are now on trial at Union City, Tenn., for the murder of Capt. Quentin Rankin, October 19th, 1908. The entire winter and spring sessions of the court will probably be devoted to the trials of many members of this large band of armed ruffians—estimated at fully two hundred strong—for their many crimes of arson, assault, murder, etc. Their organization is secret and oath-bound. Frank Fehringer, one of the worst of the gang, who has turned State's evidence, testified before the court:

"We were all in night riders' clothes at all our meetings, we were armed and in disguise, but we knew each other. Some of the masks worn were black, with white tassels on to represent a beard; some were all black. Some of the masks were black, some had white tassels, some were light colored."

The night riders' oath, as disclosed by the same witness, is as follows (most of the men take it voluntarily, but some on compulsion and fear of death):

"Do you solemnly swear, in the presence of God and these witnesses, that you desire to become a night rider; that you will not write, talk, or tell to any one any of the secrets of this order of night riders; that if you do write, talk, or tell to any person any of the secrets of this order we are permitted to do with you as we see fit, for you know that death, hell and destruction will be your portion, and that your body will not be buried in a graveyard? Do you willingly and freely submit to all this, so help you God?"

The night riders' "hailing sign" or password is: "Who comes there?" Answer: "Seven wonders." Reply: "I wonder."

The night riders' signal is two long whistles and a short one.

It is probable that fifty or more crimes and outrages have been committed by this band, some of whose members are now on trial. The exact number of crimes is not known, for the victims are afraid to tell.

In the tobacco regions of Kentucky, in the cotton belt of Alabama and Missis-

ssippi, in Humphreys County, the peanut region of Tennessee, and elsewhere, other bands of night riders have been imposing their will as law upon the people of their communities, by threats, whippings, arson and even murder. What is the cause of this widespread, organized terrorism, or are there many causes, some general, some purely local? What kind of men are these night riders, engaged in criminal practices which threaten the overthrow of law, order and civilization in large areas of prosperous States? Are they degenerate and lawless men, thoro-going toughs and criminals, or have they been till recently law-abiding and reputable citizens? What are the facts? What is being done to remedy these dangerous evils? What can be done to remove their causes, the roots of this lawless discontent? The following study is an attempt by a student of such problems, present at the trial, to learn the facts about one particular band of night riders in the extreme north-western corner of Tennessee.

The district covered is about fifty miles square, from Union City on the east to the Mississippi on the west. It encloses Reelfoot Lake, one of the best hunting and fishing resorts of the Southern States, about twenty-five miles long and from one to eight miles wide. The region is very fertile, with diversified crops of corn, wheat and hay, but little cotton and no tobacco; so that the inhabitants are not dependent for a market upon any trust or combination of buyers.

The trouble began in early April, 1908, with the sending of anonymous letters threatening the lives of men connected with the West Tennessee Land Company, which was making good its claim to exclusive legal rights of ownership and control over the lake and its border lands. A letter received by Mr. Burdick, who had leased fishing rights from the company, is a fair sample. It reads:

"Office of Justice--By Order Post: You close up that fish buis, never to be opened again under penalty of death, Hell, and the Grave. If you think this is a joke, try it a few days longer and see.

"Yours for who shall live the longest.

"NIGHT RIDER."

"Being in Hell you may raise your eyes if you don't obey."

The business was not closed, and the

burning of fish docks and buildings belonging to Mr. Burdick's company followed on the nights of April 11th and 16th. But the night riders did not seem to take their first work very seriously, and some of the law-abiding citizens of Union City (a town of 5,000 inhabitants) are said to have regarded it almost as a joke. Nobody was punished for these acts. Indeed, the sympathy of fully 90 per cent. of the people of the entire community has been and is strongly with the night riders, not countenancing in any way their serious crimes, but believing that the fishermen and farmers of the lake region have been greatly wronged, or at least very hardly dealt with, under the cloak of law. The reasons for this are to be found not so much in the undeveloped moral sense of the people, for the great majority are religious, educated and law-respecting, but because the lake and its low-lying bottom lands to the north, affording good pasturage, have for generations been free for the use of all men. Between one and two hundred fishermen make their scanty living from the lake, and some of the neighboring farmers have long been accustomed to let their horses and cattle range at will and without price over the unenclosed bottom lands.

As several of the prosperous and respected business men of Union City said to me: "The real cause back of all this trouble is graft, the successful attempt of a few shrewd men—with one exception all lawyers—to secure for themselves very valuable property rights in what has long been regarded and used as common property; most of which should be free to all men, even if it is not now legally so." Whether this view of the case is right or wrong is not now considered. Suffice it that it is widely held and of course passionately advocated by those most directly interested, who dwell near the lake, to the east, in Obion County, from whom the ranks of the night riders are recruited. Let the fact be emphasized, that these people are kind-hearted and simple-minded, quick-tempered but not vicious naturally. A young man who has taught in several of their primary schools states: "They are above the average of country folk. They are quite religious, and eager to have

ATTORNEY-GENERAL D. J. CALDWELL,
Who is prosecuting the defendants.

their children educated. The schools are only about three miles apart, and they pay their teachers sixty-five dollars a month, while in regions near by the pay is often not more than forty-five or fifty dollars."

The claim to the exclusive private ownership of Reelfoot Lake is tangled in a long confused history of land grants by North Carolina in 1784, and later grants by Tennessee in 1796, after it became a separate State—grants at a time when the whole region was a wilderness, where Indians and hunters roamed, and of which no very accurate survey was made until after the face of the region had been entirely changed by a series of earthquakes in 1811-12, which probably dammed up the waters of a little river and brought Reelfoot Lake into existence. The land was not valuable then, neither was the standing timber. Any one could settle there unmolested. The lake proved attractive, and many hunters and fishermen settled near it, regarding the lake as public property, like the Mississippi River. For generations they and their children remained undisturbed, inheriting the now fixt tradition that "the lake belongs to the people," as they ex-

press it, and cannot be taken from them. Civilization advanced, cities and towns grew, land and timber became valuable, railroads bound the ends of the continent together, but all these changes barely touched the lives of the people of Reelfoot Lake. They have been living in a

JUDGE J. E. JONES,
Before whom the night riders are being tried.

little pocket of the world, largely self-sufficing and self-regulating.

Finally the law came down upon them. They heard of old grants giving legal right to the land at the bottom of the lake, and to surrounding fields and wood land. They heard of plans for draining the lake to secure the valuable timber it contains, and to convert the lake bottom into farms. Surveys were made and a drainage canal actually begun. The fishermen saw their living about to be taken from them. Small farmers near the lake saw their titles seriously affected. Naturally, these people resisted. They believed right was on their side, and they sought relief thru the courts. An injunction was secured in 1899, prohibiting the draining of the lake as violating the riparian rights of certain landowners, but the court also stated definitely, for

the first time, that the lake could be held as private property if the claimant could prove title to all the shore land, as well as that which the lake covered. The victory of the people was short-lived. Their opponents bought some more old claims, and also joined forces with a number of lawyers who had purchased small tracts of shore land not covered by the original grants. These lawyers had all been employed at various times past by the fishermen and farmers in defending their interests before the courts. Some of the lake people thought the lawyers had be-

Reelfoot Lake Fish Company, wholesale and retail dealers, who had agreed to pay a royalty of one-half a cent per pound to the West Tennessee Land Company for their exclusive rights. Dissatisfaction grew rapidly, for the fishermen thought the dealers and the land company were being enriched at their expense, since there was no longer any competition for their catch, and the price of fish was low. Some of them tried to compete in distribution with the lessees just mentioned, and were speedily enjoined by the courts from fishing at all for profit in the lake.

FRANK FEHRINGER,

Night rider and illicit whisky dealer, who has turned State's evidence.

trayed them. Others thought not, but regarded the newly formed West Tennessee Land and Improvement Company as securing a compromise between conflicting interests, by which the fishermen would have a permanent right to fish for profit, and the lake remain undrained. But the fishermen were compelled to sell their fish only to a Mr. Ward and to the

TED BURTON,

Fisherman and night rider, now on trial for murder.

On March 14th, 1908, the defendants moved to dissolve the injunction. Judge John S. Cooper overruled the motion, and in April night rider outrages commenced. Judge Cooper's life has since been threatened. In October the same judge confirmed the title of the West Tennessee Land Company to the exclusive ownership and control of the lake and made the injunction perpetual. This decree was handed down on October 14th, 1908. The murder of Captain Rankin occurred on the night of October 19th, and Colonel Taylor, his law partner,

barely managed to escape death by diving into an arm of the lake and hiding behind a log while the bullets whistled around him. These gentlemen were both members of the West Tennessee Land Company and both had previously been attorneys for the fishermen. By testimony brought out at the murder trial now in progress, it is evident that the two lawyers were hated as traitors by the night riders, and that the death penalty was inflicted on that account. Thus, Frank Fehringer—night rider and illicit whisky dealer—who has turned State's evidence, testifies that on the night when Captain Rankin and Mr. Taylor were captured he

"heard Garrett Johnson (captain of the night riders) ask Mr. Taylor why he done like he did when the people had hired him to look after the case, and when he found the lake suit pending why did he drop the people and turn to Harris, and try to take the people's lake away from them and their homes and everything. He said every time he thought about it he felt like shooting one of them."

On this same day the night riders were scheming to capture Attorney-General Caldwell, who was prosecuting some of the gang, and another lawyer whom they hated, by a raid on Union City, carry them off to the lake region and there beat them, perhaps kill them. The Attorney-General was born and bred not far from the lake, his wife's family live near it still, and her half-brother was ~~compelled by fear of death to join the~~ riders, who wanted him for a decoy, and also because of his position in the community. It is probable that many young men have thus been forced into the night riders' organization, as it grew powerful

and its offenses serious; the leaders and the more reckless of their followers being resolved that all the men of the community should be equally compromised and bound to support each other. Fehringer and others testified that when members of the band failed to appear for the rides the others "went after the missing men and forced them to go with them." Whippings and threats of death came to those who were believed to be giving evidence against the riders. Thus, Fehringer states that "Johnson gave orders that Shaw was to be taken out and hanged if he went before the grand jury. Next Monday night we whipt Shaw." By such means the night riders have terrorized and completely dominated the entire lake region. Even now, when the night rider organization is broken up and its leaders are on trial for their lives, the witnesses against them are in mortal fear of death and can hardly be induced to speak loud enough for the jury to hear them.

The State has made out a strong case against most of the eight defendants, the jury seems to be a good one, and at the time of writing witnesses for the defense are on the stand. The pleas so far are alibis. Indeed, the defendants are not in a position to make any other plea. Witnesses for the prosecution have shown how the night riders grew bolder and bolder; how their crimes increased in seriousness from threatening letter writing and the burning of not very valuable buildings, to many whippings of men and women and finally murder. The movement seems to be a purely local one, not connected in any way with the more extensive and better organized night riding of Kentucky and Alabama, except by way of imitation. The main reason given by Garrett Johnson to Frank Fehringer and others for joining the night riders was "to free Reelfoot Lake," and the band owes its strength chiefly to the wrath of many men, good and bad, over the success in court of the West Tennessee Land Company. Like the Mafia of Sicily, these men think themselves robbed and cheated by the rich and powerful, and finding that the law supports such evil doing, have tried to substitute laws of their own making, by which to regulate all the affairs of the community.

Among other things they are said to have limited the private ownership of land to five hundred acres per man, and the rate of interest on money to six per cent. They decreed that landlords must take part of the crop as rent, and must not demand money; also that no man shall be permitted to employ negro laborers in the lake region after January 1st, 1909. Thus, while the "freeing of Reelfoot Lake" was their primary and main aim, they planned to regulate also the entire field of business and social life. A young woman was whipt for refusing to withdraw her suit for divorce against a friend of the night riders. Her father was whipt for taking her side. Several men do not know to this day why whippings were inflicted on them, and witnesses in court have testified that members of the band that did the whipping sometimes knew no reason for it except their captain's orders. The night riders sought to extend their authority even to religious matters, for they ordered a Baptist Sunday school near the lake to be transformed into a union Sunday school. One of the men now on trial for murder is a church member in good standing, and is prominent as a recruiting officer for the night riders. He first approached the brother-in-law of the Attorney-General, his third cousin, and urged him to become a member, saying: "We are doing good work here—things the courts won't attend to right; don't you think so?" The evidence is strong that this same man aided and abetted the murder of Captain Rankin. Other men believed to be night riders are also well known as church members, and many of the band are Odd Fellows. The eight men now on trial make their living as follows: Four are small farmers, paying rent for their land; one owns his own farm; two are lake fishermen, and one had a raft for dancing by the lake shore.

Any good observer would select Garrett Johnson as their leader, for his manifest intelligence and will power. The two troop captains also have intelligent and apparently not vicious faces. Of the rest, two seem to be distinctly bad, tough specimens. The fishermen's heads show weakness, coarseness and low-grade mentality. As for the mass of the night riders' band, there are doubtless a good

many "toughs" and a few hardened criminals among them, but most are simply wild and rather ignorant young men, from twenty to thirty years of age. Their lives have been narrow and monotonous probably, and many of them were doubtless attracted to the night riders' organization at first by desire for excitement and for sociability. They were all angry over what they deem their wrongs. Their neighbors and relatives were joining the riders, and they did likewise. Serious offenses against the law were probably far from the thoughts of most of them at first. Indeed, it is more than likely that their first acts of violence were sanctioned by the moral sense of the community and not regarded as crimes. But once well started on their career as regulators there was no safe stopping place. They must carry the whole community with them, by persuasion, intimidation, violence if need be. They must punish not only those whose actions were opposed to the night riders' code of ethical conduct in business and social life, but also all who tried to bring the laws of the State of Tennessee against them. They tried to establish a self-governing state within a State.

When it came to murder they lost immediately the support of the largest part of their sympathizers, and the Governor of the State acted promptly and energetically against them. Strong armed posses took the field—even women taking part in these expeditions—the State militia aided, and most of the night riders were soon in captivity or dispersed. Altho we may sympathize with these ignorant and misguided men, yet it would be a terrible blow to our civilization if the most guilty among them escaped severe punishment. Night riding has become epidemic among us. The full strength of law is needed against it and is needed at once. But while fighting hard against these vicious and contagious manifestations of disease, we must seek to discover and remove their ultimate causes. The night riders' movement in Northwestern Tennessee takes that form of revolt because of the larger and older movements of like character elsewhere in the country. We are all of

us creatures of imitation. In Kentucky I believe that night riding is only the extreme and lawless force of the general revolt against monopoly and trust domination. It will cease with the legal curbing of predatory wealth, which President Roosevelt has done so much to secure. The Reelfoot Lake outrages may be traced ultimately to the same general cause. The claims of the West Tennessee Land Company are probably perfectly legal, but the community injured does not so regard them, and from

the viewpoint of abstract right there are many elsewhere who will think that the law here falls somewhat short of justice. The strength of the night riders' movement everywhere is in the toleration and the active support of the better classes of our people. That support removed and night rider organizations drop dead. But there will always be danger of a recrudescence wherever the majority of citizens believe that they are being ground under the heel of law-aided predatory wealth.

GAMBIER, OHIO.

A Protest

BY UPTON SINCLAIR

AUTHOR OF "MANASSAS," "THE JUNGLE," "THE METROPOLIS," ETC.

IN THE INDEPENDENT for November 19th I notice the following statement concerning myself in an article by Mrs. Harris: "He lacks that delicacy commonly known as self-respect, which, if gossip is true, permitted him to play butler behind a rich man's chair in order to eavesdrop from him material for his last novel."

I am able to make the statement that during my entire career as what Mrs. Harris delicately terms a "buzzard novelist," I have yet to have a single misstatement of fact brought home to me. Mrs. Harris, on the other hand, at the very outset of her career as buzzard critic, repeats a grotesque and hateful slander, which is without the remotest basis of truth, and which I have denied in print at least a dozen times.

This story started in a newspaper which caters to the taste of New York City's Tenderloin. From there it went all over the world; I still get clippings about it from Austria to Australia. I forced the paper to print a retraction and apology, but of course that never got any further than New York City's Tenderloin. I never expected, however, to read this story in THE INDEPENDENT, whose editors know me. Please give me space to state that in seeking material for my novels I have never pretended to be any one but myself. I have never sought information from any one who did not

know who I was, and for what purpose I meant to use it.

I am pleased to observe that even Mrs. Harris is making progress. She admits that there are social evils which have been left to us muck-raking novelists, while the ministers of Christ are "fishing and picking literary bluebells in Canada"; but still she cannot get over the repugnance with which our work fills her. It is like the attitude of the Middle Ages toward the public hangman. The bourgeois mind is a peculiar thing; I wonder just what are the particular virtues of our bourgeois civilization which constitutes its awful sacredness to Mrs. Harris. Certainly it does not seem to be our bourgeois novels, for she searches the whole field over, and cannot find anything to please her.

When Mrs. Harris was in New York we invited her to dinner at Helicon Hall. I felt even then the pitiful inadequacy of this procedure. Some one should invite Mrs. Harris to a year of starvation and misery in a garret. I say this with all respect and in all sincerity. I cannot think of any other way to open her eyes to the absurdity of her doctrine, that conditions which are not too horrible to be permitted to exist—that things which are permitted to happen to living men, women and children—are too horrible to be described in novels of contemporary life!

PALO ALTO, CAL.

The Prosperity of the Farmer

BY CYRUS H. McCORMICK

[Mr. McCormick is the son of the inventor of the reaping machine and since his father's death, in 1884, has been at the head of the McCormick Harvesting Machine Company. Since 1902 he has also been president of the International Harvester Company. The following article is the substance of an address delivered in this city a few days ago.—
EDITOR.]

A FEW years ago William Allen White, the brilliant editor of the *Emporia Gazette*, of Kansas, said: "All Kansas smells of fresh paint." Following his expression we may say that today the agricultural area of the whole United States "smells of fresh paint."

Merchants may appear and disappear, banks may succeed or fail, corporations may progress or retrograde, but the farmer grows steadily more prosperous as the years roll by. His personal credit and responsibility were never so high as today; they have so increased during the last five or ten years that, whereas six per cent. a few years ago was the current rate of interest for farm mortgages, he can now obtain all the funds he requires at four and a half to five per cent., and *wherever there are* mortgages on his farms they are *not defaulted*. I know of a man who, for fifteen or twenty years, has made a standing offer to buy any Iowa farm mortgages which were defaulted, but he has never secured one.

Farmers can buy their agricultural implements for cash or on time. About ten years ago they were paying for these implements about one-third cash and two-thirds in notes. Now they are paying two-thirds in cash and one-third in notes.

If prosperity can be measured by bank accounts, the farmer is indeed prosperous. In the typical agricultural State of Iowa the deposits in the State and savings banks today are eighty-four millions

as compared with fifty-eight millions five years ago, and the same proportion will apply to national banks. Some years ago every large bank in the East was obliged to send a considerable amount of money westward in the fall to move the crops, but today the funds in local banks are sufficient to carry on the business of the territory they serve, including a large part of the money needed for moving the crops. This saves to the local field each year much interest money which was formerly sent to the East.

Partly thru his own efforts in making more fertile the soil of his farms and partly thru the general rise in values of everything in this country, we find that farm land as a whole has steadily increased in value. The number of farms has also greatly increased, this being due to the opening of new territory, and also to the fact that in the grazing States many of the ranches have been changed to farms. In 1850 the number of farms in this country was 1,449,000. Today the number is 5,740,000, the increase in the last ten years alone amounting to more than 1,000,000 farms. Besides the increase in the number of farms, due to the two causes mentioned, millions of acres of new land have been brought under cultivation by means of irrigation.

That the farmers' wealth is greatly increasing is shown by a comparison of the money value of the principal crops for 1897 and 1907:

	1899	1907	Increase
Corn	1,000 millions	\$1 3,70 millions	167%
Hay	400 "	144 "	87%
Wheat	4,717 "	7,412 "	57%
Cattle	400 "	1,000 "	150%
Pigs	400 "	1,000 "	150%
Sheep	400 "	1,000 "	150%
Horses	400 "	1,000 "	150%
Roots	400 "	1,000 "	150%
Other crops	400 "	1,000 "	150%
Total	7,412 millions	11,370 millions	53%

The fundamental fact which proves the prosperity of the farmer is that the grand total of all the products on all the farms of this country has increased from 4,717 millions in 1899 to 7,412 millions in 1907, or an *increase during this eight-year period of fifty-seven per cent.*

The farmer of today has learned the great principle of insurance and the application of the adage, "There is safety in numbers." Instead of depending entirely upon one or two crops, as was the custom among large farmers years ago, not only does he now raise a greater diversity of crops, but, with more intelligence, he rotates his crops, thus materially increasing the yield. In addition to this, by study he has become better acquainted with his own soil and has learned how to enrich it and what crops to grow upon it to the best advantage. An interesting example of this diversity of crops is found in the State of Minnesota, which has always been regarded as a wheat State, but where dairying is now becoming so important that the dairy products of that State have grown in value during the last fifteen years from five millions to thirty millions of dollars.

The dignity as well as the profitable progress of agriculture will be maintained by the character and quality of men who manage the enterprise, and it is one of the hopeful signs of the times that this branch of industry is now being studied more scientifically by a better class of men than ever before. The workshop, the laboratory and land of adventure have always held out to promising and ambitious young men the prospects for an inviting career, but the farm has not been looked upon as their competitor. Rather has it been felt that the young men from the farm possess the fiber and stamina to succeed as merchants or professional men in the cities. Now, however, we discover a marked change in this respect, and many who are seeking careers of usefulness and success are turning to the farm as a

business enterprise in the same way they would turn to manufactories or mercantile pursuits. Men are now realizing that farming is no longer the haphazard business of a former day, but if properly developed is one of the most exacting, scientific and profitable pursuits. This knowledge brings a higher respect for the vocation and a stronger desire to enter the industry. I believe the time is not far distant when farming will be held in the same high regard as the so-called learned professions. The chief cause for this new outlet for men of brains, as well as those of brawn, is found in the work of the many agricultural colleges, which are raising the intellectual standard of the study of farming as a science. The graduates of these colleges are needed as managers of farms and dairies, as judges of live stock, to direct pruning operations and for the care of trees, to investigate and report upon blights and plagues which attack both animal and plant life, and to conduct many other kinds of agricultural operations. In short, the modern agricultural education opens to an ambitious boy new and attractive opportunities for a career, and this, too, in a profession that is far less crowded than are those of literature, medicine or law.

While speaking of the importance of the agricultural college let us not lose sight also of the great educational work being carried on thru the Department of Agriculture and the various State Experiment Stations. The latter especially are doing a vast amount of fundamental research work along agricultural lines, and the knowledge thus gained is being rapidly disseminated among the farmers, by published reports and by practical demonstrations of improved methods. In 1907 more than six millions of farmers' bulletins were thus distributed broadcast, and Congress (in addition to the yearly expenditure for these purposes made by the States and Territories) appropriated eleven and a half million dollars for the activities of the Department of Agriculture. This amount is greater than the appropriations made for the same purpose by any other government.

Not many decades have past since farm life was held to be synonymous with drudgery, loneliness, monotony, overwork and almost imprisonment. The

wife of the farmer, especially upon the prairie farms of the West, became so lonely that not infrequently her mind gave way under the strain. Today, however, the conditions are far different. Improved farm machinery; the construction of better public roads; the energetic trolley car pushing its lines in all directions; the moderate priced automobile; the rural telephone; the free rural mail delivery, which carries the daily paper; the improvement in the construction of homes, making them more sanitary, more cheerful, and more artistic; the correspondence schools of education and the correspondence bureaus of lectures—all these have changed the character of life in the country, taking away its disadvantages, and yet leaving with it the advantages of air, sunshine and of health, with which no occupation and no surroundings can compete. Under these circumstances it will not be difficult to prove that farming today is one of the pleasantest and one of the most independent occupations within our knowledge.

Another evidence of the prosperity of the farming community is the fact that they were but little affected by the panic which all other industries of the country felt so seriously in the fall of 1907. While merchants, manufacturers and bankers wore anxious and careworn faces, and were looking with apprehension upon the rising of each day's sun, business with the farmer went on as if there had been no panic—in fact, as was reported to me by well-informed men, who traveled in the West at that time, the farmers *would not have known* there was any stringency or any panic if the knowledge had not been forced upon them by the sensational reports from the East. And it is to the everlasting credit of the small country banks and bankers who were close to the farmers, that during those days which tried men's souls *they* weathered the storm, *they* stood the brunt of the stringency, patiently, without complaint, and without a friend at court in the large centers to take care of *their* interests at a time when clearing-

house certificates were being freely issued and freely used in the large cities of the East. The prosperity of the farmer was the bulwark which held these country banks steady and enabled them to stand firm until the financial cyclone had past.

I would add a few words in praise of one great branch of our Government—the Agricultural Department. It was started in President Harrison's time by Jeremiah Rusk, of Wisconsin, who laid the foundations; he was followed, under President Cleveland, by J. Sterling Morton, the founder of Arbor Day, the man who made two trees grow where no trees grew before. Then in 1897 President McKinley appointed a man who has brought the department to the highest standard; he is known in Iowa as "Tama Jim," in Washington affectionately and popularly as "Uncle Jimmy," thruout this country and in every part of the world as "Secretary of Agriculture, James Wilson." To him, more than to any other living man, is due the great progress made in the diversity of our crops during the last few years. His agents have gone into every part of the world, seeking for plants which will grow on our arid and swamp lands. President Roosevelt reappointed Secretary Wilson, and next March he will have served for twelve years. With one exception this is the longest Cabinet term of service in the history of our Government. All honor, therefore, gentlemen, to the man who, as private citizen and eminent public official, has done so much for the agricultural development of our country.

The skies of our business world have ceased to be filled with clouds and the barometer of public opinion and public sentiment is rising. The present conditions and the future outlook for the farmer of the West are brighter today than ever before. The farmer is the backbone of the country. As he goes, so must all go. The country is now prosperous and will be so increasingly because the farmer is prosperous.

CHICAGO, ILL.

Argentina, Uruguay and Paraguay

BY JOHN BARRETT

[This is the second article by the Director of the International Bureau of American Republics in our series of six on the "Opportunities in Latin America." The first was published in our issue of December 3d and discussed Brazil. Next month Mr. Barrett takes up Chile, Peru and Bolivia. These articles will be especially valuable to ambitious young men seeking careers away from home.—EDITOR.]

THE region of the River Plate is bound to be, before the middle of the century, one of the great granaries of the world. Twenty-five years ago all the flour used in Argentina was imported, while today the annual production of that article is over 5,500,000 tons. Last year that country exported \$4,696,934 worth of flour, in addition to \$82,727,747 of wheat, and the grand total of exports of agricultural products amounted to \$164,000,000.

Take the wheat production of the world. In 1906 the United States led with 735,000,000 bushels; the Russian Empire follows with 450,000,000 bushels; then come France, British India, Hungary, Italy, Spain and Germany, Argentina with 134,000,000 bushels preceding Canada and Rumania. But the Rio de la Plata basin has hardly been en-

tered, while every other country, excepting Canada and Russian Siberia, can already set a practical limit to the bread supply it can offer man.

It is worth our while, therefore, to weigh carefully the future of such a land of promise, and to study the opportunities for material and industrial, for social, domestic and intellectual welfare offered here, because, after all, this is only the beginning, and it will take scarcely a generation to develop such a country into a world power in every sense of the word.

The waters of the Rio de la Plata have washed the shores of three Spanish-American republics, Argentina, Uruguay and Paraguay. This river is itself but the outlet of two tributary streams, the Uruguay to the east and the Paraná to the west, but this latter is again com-

A "ROUND UP" IN URUGUAY.

FRONTAGE ON RIVER PARANA OF ASUNCION, THE CAPITAL OF PARAGUAY.

posed, like the Mississippi, of two great branches, similar to the Missouri and the Mississippi, called the Paraguay and the Paraná. This Paraná, the mother of the sea in the Indian language, is alone 46 per cent. larger than the Mississippi, but when added to the eastern affluent the total volume of water is 85 per cent. larger than our own "Father of Waters." The mean average annual discharge from the Mississippi is 156 cubic miles, while from the Paraná come every year 288 cubic miles, or something over 1,000,000 cubic feet each second.

The area comprised within these three republics is 1,366,000 square miles; 1,136,000 of this belongs to Argentina, 158,000 to Paraguay, and 72,000 to Uruguay. All except the extreme northern tip of Argentina and the region known as the Paraguayan Chaco is well within the temperate zone. The climate of this northern section may be called tropical, altho modifying conditions of the atmosphere and soil make it far different from the "jungle" so traditionally associated with the neighborhood of the Equator. Otherwise, however, the climate may be compared favorably with that of the larger portion of the United States, excluding the region of severe cold, characteristic of Maine or Minnesota. Even in the extreme south of Argentina, what was formerly the unknown Patagonia, the rigors of a North American winter are unfelt, and land on the border of Magellan Strait that not a generation ago was condemned as unfit because rude and savage Indians drew only a scant living from it and led within its confines a

nomadic existence of semi-starvation, has been developed into some of the richest pasture for cattle and sheep of all South America. The same story may be told here, as it has been demonstrated time after time in our own country, that land, condemned at the first superficial glance as unproductive for climatic or other reasons, has finally become reckoned among the richest agricultural assets of a nation. In the Chaco, to the west of Asunción, the capital of Paraguay, a like remark may be made. This is being slowly thrown open to settlement and cultivation, and the howling wilderness in the story books "of the blood-curdling adventurer in the wastes of South America" will soon be claimed, and with better sense, as land suitable for the productive abode of man.

Let us examine this immense region of South America more in detail. Argentina is larger than the combined areas of all the States east of the Mississippi, together with Minnesota, Iowa and Missouri; Paraguay is practically as large as California; and Uruguay, the smallest of the South American republics, is larger than all New England. No spot in Argentina is more than 750 miles from tide water; a journey of 300 miles brings all the products of Uruguay to an ocean-going vessel; and Paraguay, altho its capital, Asunción, is 1,000 miles from the mouth of the River Plate, has today the advantage over her sister city in the northern continent, St. Louis, in that sea craft can moor at her very wharves, while the time is not far distant when heavier cargoes can be loaded on steamers that

will carry them direct to the markets of the world.

Paraguay is already noted for her tobacco, her fruit and her cotton. In these great staples she is a land of milk and honey, the garden, the sanatorium of South America. The soil is scarcely scratched, and what industry had developed before the devastating war of the last generation has not yet regained its due place, because of the lack of labor and, to some degree, the stimulus of diversified outlet. But this will soon be overcome; besides the existing traffic on the Paraguay River, communication thru the heart of the country is almost established with a railway from Buenos Aires; American capital and ambition are prom-

Uruguay may be compared with Iowa as regards soil, mountain and stream and general fertility, but imagine Iowa close to the Atlantic seaboard on one side, and with a climate, bracing in both summer and winter, yet never so cold or so hot that fear for crops may be felt on account of frost or drought, and the picture is close enough for purposes of illustration. In Uruguay are 1,217 miles of railway, with other lines in construction. The harbor of Montevideo, also the capital of the republic, has depth for the largest steamers, and when the port works now under way are completed it will be one of the finest harbors on the Atlantic Ocean.

Argentina—The Argentine Republic—

MERCADERES MARKET BUENOS AIRES

ising a line westward from the Atlantic coast direct thru the rich plateau of temperate Brazil, and it is not an unwarranted guess that long before the middle of the century the Chaco will be pierced by a railway connecting the mineral regions of Bolivia with the equally rich but agricultural regions of Paraguay.

ought to be well known to North Americans, but I have found that facts about this wonderful country are still too vaguely realized here, and that even those who have heard them seldom grasp their significance. Broadly speaking, the country is one-third the size of the United States. Its illimitable plains seem

to have been designed by Nature for the production of all manner of grain, for an abundant agriculture that astonishes him accustomed to the hard-earned crops of a long-tilled European farm, and for the nurture of live stock of all varieties.

merce of the lower middle section of the country passes. Into this newer territory railways are pushing vigorously, even keeping in advance of the population, as was the case in the United States a few years ago, but it is probable that

WATER WORKS OF BUENOS AIRES, OFFICE.

Not only that, but in the energy of the inhabitants may be found an augury of what is sure to come. The population has now increased beyond 6,000,000, and growing at the rate of 150,000 and more each year. The railway mileage aggregates 14,000 miles, and the remoter portions of the republic are rapidly brought closer in touch with the world. The annual foreign commerce of the country aggregates \$600,000,000, a higher per capita result than that of any other civilized nation. Two-thirds the trade flows thru natural and long defined channels toward the chief ports, Rosario and Buenos Aires; and the Government is doing all in its power to increase shipping facilities by enlarging the capacity of the adjacent port of La Plata. To the south is the rapidly expanding port of Bahia Blanca, toward which the com-

the extreme southern portion of Argentina will find a trade outlet of its own, either in some undeveloped harbor, or thru the free port of Punta Arenas (in Chile), on Magellan Strait, where the great streams of eastern and western commerce meet.

Argentina has about 26,000,000 cattle, 77,500,000 sheep, 6,000,000 horses and mules, and 2,500,000 goats. This industry is scattered over the central pampas, somewhat further westward and southward than the grain area; this is quite in accord with what is happening in the United States. Today cattle men are finding their grazing land too valuable for pasturage, and are turning it into grain; they are crowded out, and must seek the wilder, less crowded lands of Mexico. Grain is, therefore, the crop that will establish Argentina in the mar-

kets of the world. A noted English scientist has estimated "that by 1931 the world's supply of wheat will be unequal to the increase of population," and therefore the country that can supply bread has its future assured. Roundly put, one-third the area of Argentina is woods, rivers and mountains; one-third is at present called cattle country; but fully one-third, and, in my opinion, higher than that, can be computed as arable, suited, more and more as time goes on, for the production of the essential foods of man. Here is a country capable of sustaining 100,000,000 inhabitants, peopled at the opening of the century with only 5,000,000. The possibilities of development tax the imagination!

If the country of this marvelous region of South America stimulates the onlooker with visions, he is equally aroused by contact with the town. To be sure, history tells us that the settlement of the

was founded in 1561, and there are cities scattered along the highway connecting Buenos Aires with the Spanish viceroyalty on the Pacific, which were flourishing centers of civilization long before our pioneers had crossed the Alleghanies. But they have sprung into new life within the last few years. Buenos Aires, Rosario, Bahia Blanca, La Plata, Santa Fe, Montevideo, Asunción are today as fresh, as modern in what constitutes municipal progress as any of our own cities; urban life in them differs scarcely at all from that to which we in the United States are instinctively accustomed. The water supply, house construction, street pavement and rapid transit present about the same problems and are solved in much the same way. They can learn lessons from us, but, on the other hand, we could learn lessons from them, and occasionally I am tempted to the conviction that an exchange of experience would be rather to

EXHIBITION OF THE BOARD OF EDUCATION, BUENOS AIRES

region of the River Plate dates back to the early part of the sixteenth century. Mendoza, close up against the Andes,

our advantage than to theirs. Be that as it may, the traveler will gather a rich store of enjoyment from a visit to these

great political and industrial capitals of our transequatorial sister republics. Socially there are differences, but no more than will be noticed in the well-known cities of Europe. Spanish is the language of intercourse, of business, and naturally of political and governmental life, but English is understood by most of the city dwellers; it is the readiest language for intercourse in all places of industrial activity, and only when out of beaten paths and among the older towns or the newly arrived immigrant home seekers from across the water does the stranger fully realize that the country is

of that republic are reasonably well scattered thruout the country. They welcome any one able and willing to work, but he must take his chance with all the rest, and buy land where he wishes to dwell. In Paraguay circumstances are otherwise. Here land can be had for the asking; the spaces are wide and only scantily occupied. The region is largely virgin, because agriculture is only beginning to be understood in its later-day sense, and life comes so easy that the ambition developed by competition does not always persist. Paraguay will rank with the industrial nations only when

NATIONAL GOVERNMENT HOUSE VESTIBULE, BUENOS AIRES.

peopled by those from South rather than from North Europe.

This brings us, then, to the question of opportunity. It is a big word, used in this connection. There is an immense variety from which to choose, an immense field of activity in which one can move. Considering the immigrant first, he is today playing an important part in the growth of the whole region. Uruguay is perhaps the most, certainly the fullest, settled. The 1,000,000 inhabitants

migration is attracted to her in larger numbers, but the man who wishes first of all for a home—his twenty acres and a cow—can find no pleasanter spot in all the world than here. Argentina also welcomes the immigrant and the individual worker, whether he desires land on which to settle or a laborer's wages which he will expend as suits his judgment later on. Granted that a single man can speak or is determined to learn Spanish; that he will put up with the differences in cus-

toms, habits and modes of life; that all he is looking for is a chance to get ahead, he can find this chance in Argentina. There are sure to be hardships, days of homesickness, but there need never be days of misery. Energy and ambition count here as well as elsewhere, and life out in the country, among the pleasant if peasant-like people of the "camp," is never so unhealthful as in the crowded, sweated streets of our larger manufacturing cities. Often enough I have heard the complaint that men were driven into town by the isolation of the country; I know also the justifiable complaint of the American consular officer that young men are left stranded, and nothing could be done except to send them back to "the States"; but I know also of better experiences, where men of pluck, of thrifty habits and with a keen eye for a good chance, have stuck to it, bought land after earning money for that purpose, and can now show a growing farm of cattle or wheat, which will enhance in value as the years run by.

The colony, however, is the method on which the Government largely depends for populating the soil, both in Paraguay and Argentina, and the colony is the subject of much careful and economical legislation. Land is granted to a colony formed either on a commercial or a philanthropic basis. Rules are laid down to be followed from the incipiency of this colony to its final establishment as a firm and self-sustaining settlement. Hundreds of colonies thruout the provinces (the same as our States) testify to the wisdom of this policy, and a history might be written about the whole system.

It must not be understood, on the other hand, that employment is easy of attainment by the mere seeker for a job. The farms and ranches are producing as fast as the railway can carry the crops; trains are full to the utmost, and docks are crowded by cars and ships hurrying these products to markets across the sea, but there are plenty of hands to handle these wheels of industry. Skilled labor is in demand, wages are comparatively good and work abundant, but the Northerner is handicapped by lack of familiarity with his surroundings. Moreover, there are English, German, French, Italian and Spanish mechanics already on

the ground, and a man must possess unusual dexterity and experience before he is chosen from a number of applicants. Such a man finds work closer at home. The same is true of the more sedentary occupations—clerks, bookkeepers, shopkeepers, retail tradesmen, and those in general who know only the routine of business or would be out of their element away from a city. The country is not new, so far as they are concerned, like the Klondike or the freshly irrigated areas of the Southwest. Their place is close to the country of their birth, and they should recognize the fact with contentment.

Yet no region of the earth, with a productive capacity such as this of the River Plate, and with only 8,000,000 inhabitants in it, can develop without capital. Capital must be represented in two directions: There must be cash to carry out the innumerable projects that go to build up a country, and money already invested in manufacturing at home what a growing and expanding country most needs for its future and present industries. This is the great opportunity for Americans. No attempt can be made here to advocate any particular investment. But England, Germany and other nations of Europe find profitable employment for capital in South America, and still there is room for more. The whole region wants railroads, new areas planted in grain, fresh pastures turned over to cattle, modern buildings of all kinds. The forests must be cut and the arid places irrigated (altho these three republics have splendid conservation laws that prohibit the wanton desecration of their wooded lands, and their irrigation plants, where needed, serve as example to both the Old World and the New).

Docks are to be constructed, some cities must be paved and drained, and the demands of rapid transit must be met. All this requires capital there as much as it does here, and the man or corporation with money at command should be made to understand it. Let the business men of this country pursue as wide awake a policy as actuates Europe, and they will find plenty of opportunity to assist in the up-building of this magnificent portion of our hemisphere. To carry on these undertakings,

however, an equipment with the machinery for the work is essential, and the American manufacturer should be second to none in supplying their necessities. Our associations should send out commercial investigators who can report on what is wanted. Traveling men must learn what the trade expects, how to master it, and how to adjust our own output to attract the buyers in a foreign field.

There are numerous ways by which our exports may be sold to the consuming public to the south of us, but, to acquire our full share in their purchasing desires, a foundation of two elements must be laid. We must have a representative bank thru which exchange can be effected directly between South and North America, and we should have such proper communication, under our own flag, that the Stars and Stripes will be better recognized as the harbinger of all that is best in Americanism. I know that it is said that an American bank will not pay. I do not believe it. Perhaps for the first few years of its trial the income may be meager, but when one reads of 10 per cent., 15 per cent, even 20 per cent. dividends of other banks in South America, it is undemonstrable that in the long run an American bank, managed in a similar way, will not meet the same good fortune. We must look ahead, that is all. I know of a large American corporation that some years ago established a branch in Buenos Aires to cover that portion of the world. At first it was run at a loss. "What of it?" said the manager. "We are here not for the day, but for the future, and we are first. It is merely a question of time when this branch will pay well, but then it will be extended into other territory, and we shall reap a bountiful harvest." In the United States are now 25,000 banking institutions, and the banking power of the country is growing at such a rate that it is today in excess of the banking power of the whole world in 1890. This shows how tremendously our industry is

expanding, and what our future capabilities are. Therefore let the stronger of these great corporations together found an American bank in Buenos Aires, and keep it going as a matter of patriotism. The loss to each stockholder would be trivial indeed, but I venture to say that it may be nothing at all.

It cannot be said, with equal positiveness, that a steamship line between New York, Rio de Janeiro and Buenos Aires would pay, at once, in a strictly commercial sense, but that should not militate against the necessity of it. The unavoidable conclusion is just as evident that, if we desire to strengthen the ties of friendship and trade between our sister republics, we must have first-class fast mail, passenger and express steamers between the United States and South America. For communication on the high seas such steamers are just as necessary as first-class mail, passenger and express trains are on land. To carry down to this wonderful land of the future business men, travelers and tourists, or to carry to our shores the representative men of those great republics, we must have ocean steamers fully equal to those carrying such men to Europe. More passengers sail every week from Buenos Aires to Europe than sail in a year for New York; the present business is now transacted on the European triangle because of the slow transference of mails between the great capitals of North and South America. Brazil has recognized the necessity of increasing communication between her ports and the United States by sending her national line into New York harbor; Argentina stands ready to encourage the movement whenever we say the word; the English and German lines have seen the growing demand for a better service and have commendably met it by better steamers direct from New York to Rio, but we should have an American line under the Stars and Stripes! Here is the crowning opportunity.

From haste or hesitation bravely free—
He is the Captain of her Ship of State,
Fronting the tumult of an untamed sea.

The Precedents of 1610

BY PROF. CHARLES A. BRIGGS, D.D., LL.D.

[Professor Briggs, as an authority of the first rank on biblical and ecclesiastical subjects, does not need any introduction. The current and critical religious topics particularly attract him, and he speaks with conviction. The present discussion arises out of the Lambeth Conference, and bears on the recognition of Presbyterian orders as they exist today and in this country.—EDITOR.]

THE Lambeth Conference of 1908, of the Bishops of the Anglican Communion, adopted the report of their committee on reunion, to this effect:

"It might be possible to make an approach to reunion on the basis of consecrations to the episcopate on lines suggested by such precedents as those of 1610."

This precedent was the consecration of three bishops for the Church of Scotland. King James was the head of the Church of England by the action of Parliament and Convocation in the reign of Henry VIII. He now assumed the same relation to the Church of Scotland and by gradual and persistent pressure compelled the Presbyterian Church of Scotland to engraft bishops as permanent moderators with superior jurisdiction over presbyteries and provincial synods. By his royal commission he required the Bishops of Ely, Bath and Wells, and Rochester to consecrate the Archbishop of Glasgow and the Bishops of Brechin and Galloway. Previous to the consecration the whole situation was carefully considered by the Archbishop of Canterbury and the bishops of his province. Spottiswoode, the Archbishop of Glasgow, then consecrated, who was subsequently transferred to St. Andrews and became the Primate of Scotland, tells us of the discussion in his "History of the Church of Scotland"

(Bk. VII). This is testimony of the highest value by a man present at the time, who was himself consecrated by these English bishops and who thoroly understood the state of opinion in England and Scotland and who as an ecclesiastical of the highest rank and ability could not have made a mistake in this all important situation. This is what Spottiswoode tells us:

"A question in the meantime was moved by Dr. Andrews, Bishop of Ely, touching the consecration of the Scottish bishops, who, as he said, 'must first be ordained presbyters, as having received no ordination from a bishop.' The Archbishop of Canterbury, Dr. Bancroft, who was by, maintained 'that thereof was no necessity, seeing where bishops could not be had, the ordination given by the presbyters must be esteemed lawful; otherwise, that it might be doubted if there were any valid vocation in most of the Reformed Churches.' This applauded to by the other bishops, Ely acquiesced, and at the day and place appointed the three Scottish bishops were consecrated."

These words of Archbishop Bancroft express the common opinion of his time among the Anglican divines, as we know from the writings of Hooker, Richard Field (1606-10), Mason (1613), his contemporaries, and Joseph Hall and other Anglicans a little later, before the civil wars divided the Christians of Great Britain into so many warring factions. They also suit the situation in Scotland, for these Scottish bishops after their consecration recognized the Presbyterian or-

ders of their presbyters and in no instance did they venture upon giving episcopal ordination to those who had been ordained as they themselves had been by presbyters only. There should be no doubt, therefore, that in the consecration of three bishops for Scotland by three English bishops acting under the authority of the Crown and the Primate of All England, the Church of England committed itself to the recognition of the validity of Presbyterian orders and only attempted to add episcopacy to Presbyterianism so far as Scotland was concerned.

There is, however, another interpretation of this consecration which has come down as a tradition in a large number of Anglican writers which is altogether inconsistent with the statement of Spottiswoode. These statements may be traced back to Heylyn, whose "*Aerius Redivivus*" or "*History of Presbyterianism*" was published in 1670, shortly after his death. Heylyn was chaplain to both Charles I and Charles II, and a violent adherent of Archbishop Laud and his policy, and a fierce and unscrupulous polemic divine. He gives an account of the circumstances leading up to the consecration of the Scottish bishops and then goes on to say:

"The character was only necessary to complete the work, which could not be imprinted but by consecration according to the rules and canons of the primitive times. And that this character might be indelibly imprinted by them, His Majesty issued a commission under the Great Seal of England to the bishops of London, Ely, Wells and Rochester, whereby they were required to proceed with the consecration of the said three bishops, according to the rules of the English ordination, which was by them performed with all due solemnity in the chapel of the Bishop of London's house, near the Church of St. Paul, October 21st, 1610. But first a scruple had been moved by the Bishop of Ely concerning the capacity of the persons nominated for receiving the episcopal consecration, in regard that none of them had formerly been ordained priests; which scruple was removed by Archbishop Bancroft, alleging that there was no such necessity of receiving the orders of priesthood, but that episcopal consecration might be given without it, as might be exemplified in the cases of Ambrose and Nectarius, of which the first was made Archbishop of Milan and the other Patriarch of Constantinople, without receiving any intermediate orders, whether of priest, deacon, or any other (if there were any other), at that time in the Church" (Lib. xi, p. 382).

The Anglican tradition since Heylyn builds upon him exclusively so far as I have been able to determine. Thomas Frere, in his "*History of the English Church in the Reigns of Elizabeth and James I.*," refers to Collier's "*Ecclesiastical History of Great Britain*" as his authority, and Collier refers to Heylyn. Hook, in his "*Lives of the Archbishops of Canterbury*," makes the same statement without giving his authority. Perry, in his "*History of the Church of England*," refers to Spottiswoode, Heylyn and Collier, but follows the latter. It is indeed astonishing that so many able historians should neglect the testimony of Spottiswoode and follow Heylyn. The explanation is probably that Heylyn's interpretation seemed to them the only reasonable one, because they were themselves all involved in the opinion of the school of Laud that the Presbyterian orders of Scotland could not be regarded as valid and therefore it was impossible that they ever could have been so regarded by English bishops. But in this opinion they entirely ignore the opinions of the greatest Anglican authorities of the first half of the seventeenth century. No one who knows the character, ability and standing of the two men, Spottiswoode and Heylyn, could help giving the palm to the former in the case of conflicting testimony, especially as Spottiswoode knew of his own knowledge the facts of the case, whereas Heylyn could only have known about them by hearsay or written testimony. He mentions no authority whatever. We can only think, therefore, that he is giving merely a hearsay tradition without attempting to verify it; and his testimony is also vitiated by the fact that it is so closely attached to his theory that the consecration of a bishop imprints an indelible character.

I do not mean to intimate that Heylyn deliberately changed the story to suit his theory. He probably, in his usual careless manner, put into the archbishop's mouth words used by another and omitted the real words that the archbishop said because they seemed to him improbable. We might reasonably have made this conjecture on the principles of historical criticism as the only way in which to save the veracity of the man, at the expense of his accuracy and partisan-

ship. But indeed we have evidence that such was really the case. Neale, the careful and usually accurate historian of the Puritans, says:

"Andrews, Bishop of Ely, was of opinion that before their consecration they ought to be made priests, because they had not been ordained by a bishop. This the Scots divines were unwilling to admit, thru fear of the consequence among their own countrymen; for what must they conclude concerning the ministers of Scotland, if their own ordination as presbyters was not valid? Bancroft therefore yielded, that where bishops could not be had, ordination by presbyters must be valid, otherwise the character of the ministers in most of the reformed churches might be questioned. Abbot, Bishop of London, and others were of opinion that there was no necessity of passing thru the inferior orders of deacon and priest, but that the episcopal character might be conveyed at once, as appears from the examples of St. Ambrose, Nectarius, Eucherius, and others, who from mere laymen were advanced at once into the episcopal chair."

This on the face of it seems to explain the discrepancy between Spottiswoode and Heylyn. Spottiswoode gives the words of the archbishop because they were the only important ones and the only ones which, in his opinion, had anything to do with the consecration. Heylyn gives the words of the Bishop of London, which in some way by a tradition which had come to him were transferred to the archbishop, the words of the archbishop himself having been forgotten.

This theory of Abbot, the Bishop of London, that a layman might be made a bishop *per saltum* and receive by such consecration all the ministerial orders with their functions, together with episcopal jurisdiction, seems an easier way of avoiding the recognition of the validity of Presbyterian ordination than it really is. As Neale says:

"But whether this supposition does not rather weaken the arguments for bishops being a distinct order from presbyters, I leave with the reader."

The great Anglican authority on the Church, Richard Field, in 1606 says that "all the best learned among the Romanists" agree in this that "a bishop ordained *per saltum*, that never had the ordination of a presbyter, can neither consecrate and administer the sacrament of the Lord's body, nor ordain a presbyter, himself being none, nor do any act peculiarly pertaining to presbyters."

If Field and these Roman canonists are

correct and these three Scottish bishops were consecrated *per saltum* as so many Anglican writers following Heylyn suppose, then their consecration of the other Scottish bishops was invalid, and their ordination of all priests of the Scottish Church was also invalid, and the ministry of the Episcopal Church of Scotland was put in a far worse position than were those of the Presbyterian Church of Scotland. In fact, according to the consensus of the ancient canonists, episcopal consecration is not strictly an ordination at all. It bestows order only in the sense of regimen or jurisdiction, not in the sense of ministerial character, which is imparted in the ordination to the priesthood, and cannot be imparted in consecration to the episcopate. We do not know what position the Lambeth Conference really meant to take, but they say:

"In so far as these precedents involve consecration to the episcopate *per saltum*, the conditions of such consecration would require careful investigation and statement."

This looks as if they were doubtful, to say the least, that there had been any such ordination *per saltum* in 1610. I can hardly think that such an eminent scholar as the Bishop of Salisbury, who so distinctly in his writings recognizes the validity of Presbyterian orders, and who is the best informed scholar on the matter of the history of orders in Great Britain, could give any such interpretation to the consecration of 1610.

These words probably mean to be a caution to the explanation of the consecration of 1610 common in the Anglican historians; a caution which they should take to heart lest they be caught, as Neale and Field suggest, in their own trap. They certainly will fare much better, both as historians and churchmen, if they abandon this false conception of consecration *per saltum* and frankly admit the historical fact that the Church of England did, in 1610, by the consecration of these presbyterially ordained Scottish presbyters as bishops, in fact recognize the validity of Presbyterian orders, as did all the contemporary Anglican authorities. If that consecration is to be a real precedent they must follow it in that respect, and so open the door to the reunion of British Christianity.

UNDER THE NATIONAL SEMINARY, NEW YORK

Literature

The Latins in the Levant*

It is not often that a work of such importance as this swings into our ken. It is perhaps unfortunate that the last words of the author should be a dig at "the stern classicist," who out of the depths clings to the Parthenon, Perikles and potsherds. He would have done better to exult a little over his own work, a *monumentum aere perennius*.

What would Perikles have said if, after sixteen centuries, he had once more climbed the Akropolis? "Barbarians all," no doubt. The Nike Temple, the Erechtheion, the Propylæa, probably the Parthenon and the Theseion, had long been churches or chapels, and terribly transformed. The Spartans were no longer warlike, and the Franks were making the most of it. One battle settled all. Some 600 Franks imposed their rule over the Peloponnesos and overflowed into central Greece, where Othon de la Roche built the beautiful Athenian monastery of Daphne. Venice also was on hand, and secured two valuable harbors, Coron and Modon, which it held from 1205 to 1463. It set its foot on Eubœa also, and soon made the whole island its own. The choice part of it was the Lelantine Plain, "a garden of the Lord," fought for by Chalkis and Eretria twenty centuries before.

The Frank, William Villehardoin, built Mistra, on the slope of Taygetos, not only as a strong tower of refuge, but also as a thing of beauty. He fought in Macedonia the great battle of Pelagonia, in which he was taken captive after "cheerfully sacrificing his German mercenaries." Now the Angevins have their turn, and in every part of the Greek world they had their day, and their object was to overthrow the Eastern Empire.

"The founder of a dynasty is always able and his sons feeble. So it was with Andronikos II. Nature had intended him for a professor of theology." Now

came the Catalans, "rough mercenaries from Barcelona," who were expected to be a prop to the sinking dynasty of the Eastern Empire. But the weak Emperor soon had reason to say:

"Die ich rief, die Geister,
Werd' ich nun nicht los."

They were not men to be easily handled. Only about 5,000 were real Catalans; the rest, 1,100 Turks, supposed to be Christians, and some stragglers. With two months' pay in advance, the Catalans lost no time in giving their master, Duke Walther of Athens, the worth of his money. "At the end of a six months' campaign they had captured more than thirty castles for their employer." The question now was how to get rid of them. The Duke selected 200 of the best horse-men and 300 foot soldiers, and said to the rest, "I have done with you," but they had not done with *him*. He thought to sweep them easily away. At a point on the sluggish Boeotian Kephissos, not far from Chaeroneia, the Catalans prepared a trap by plowing up the already soft soil on their front and giving it abundant irrigation. Into this trap fell the chivalry of Athens. The mighty Franks were swept away. For a long time the Catalans did not cease from troubling. In fact, there was "a Catalan Duchy of Athens," which lasted two generations or more.

"But while the Latin rulers of Greece were intriguing against each other, the Turks were threatening the existence of them all." The cloud, once no bigger than a man's hand, was now portentous of a storm.

The downfall of the Servian Empire in 1389 brought the weak Eastern Empire face to face with its future masters; the decaying dynasty of the Palæologos, a father and six sons against a strong, relentless and fanatical race.

The Greeks hastened to repair the Hexamilion, the six-mile rampart, made by Justinian across the Isthmus, with intent to save the Morea. It was at this critical time that we find the Athenians calling upon the Turkish commander of

*THE LATINS IN THE LEVANT. By William Miller. Author of "The Balkans," etc., associate of the British Schools at Athens and Rome, with Bibliography, Tables of Frankish Rulers and Index. New York: E. P. Dutton & Co. Pp. xx, 675. \$5.00.

the Akropolis to assist them in getting rid of the *filioque* clause! After some delay the Hexamilion was actually taken in hand, and in twenty-five days, under the Emperor's eye, completed, with 153 towers and a moat. It was none too soon. Murad II was warlike, and the ubiquitous Turakhan laid it in ruins again, a process that was still again repeated.

We now suddenly find that in 1432, after the lapse of two hundred and twenty-seven years, the whole Peloponnesos except Modon, Coron, Nauplia and Argos, was Greek. This uniformity was too good to be true, too good to remain so. Constantine was the best, but not the oldest, of the four remaining brothers, and circumstances brought him to the front. Compared with them he was a man of action. He was once known to have taken a town first and afterward made diplomatic excuses.

When the empire was falling to pieces, civil war broke out between Theodore and two of his brothers. It was, however, agreed that Constantine should go to live in Constantinople. Then for a moment before the blast the prospect seemed good. But after the crushing defeat of the imperial forces at Varna, in 1444, there was no hope. Mohammed II was perfectly sure of his game. No one was surprised when the news came that Constantinople had been taken by storm, and that Constantine had fallen in the breach and died like a hero in the fight. He met the foe squarely, shedding honor on the name of Palæologos.

Venice now came in as the champion to stay the Turk and hold Negroponte. After considerable losses in minor battles, the Turkish fleet of 300 sail, with 60,000 or 70,000 men on board, issued from the Dardanelles, rounded the southern end of Eubœa, and came up to the strait. Skirmishes began, but on the third day, "the ardor of the garrison was checkt by the spectacle of a long line of Turkish troops descending from the pass of Anephorites, along the road from Thebes, headed by the great Sultan himself. For two hours Mohammed II stood at the head of the bridge over the Euripos and carefully examined the scene, which from Anephorites is the most beautiful in Greece."

The Sultan summoned the Venetian bailie to surrender, giving many inducements. But he said that with God's help he would burn the Sultan's fleet. The interpreter was bidden go tell his master to eat swine's flesh and then try to storm the moat. From that moment Mohammed resolved that the garrison should have no mercy. The Turkish cavalry scoured the island, killing every one above the age of fifteen. Suddenly Canale's fleet of 71 sail was seen coming down the Atalante Channel. In a moment the situation was changed. The Sultan expected the Venetian admiral to break the northern bridge of boats, fire the other, and shut him up in the island. He shed tears of rage. He actually mounted his horse to recross the bridge. Had Canale done his duty he could have saved Negroponte and ruined the great conqueror. But he waited and vacillated, and finally cast anchor six miles up channel. Now the great man of action acted. Seeing in the morning that Canale was still inactive, he made his final assault upon the town. "One of the fairest cities in Greece was converted into a charnel-house. Every male in Negroponte over the age of eight years was slaughtered." The Sultan proceeded to Constantinople. Once again the irresolute Canale allowed him to go on his way unmolested, "courteously escorting it," as the Turkish admiral sarcastically said, "alike on its outward and its homeward voyage."

Mrs. Eddy and Others

LAST year was a strenuous one for Mrs. Mary Baker G. Eddy. There was the account of her life and works in *McClure's Magazine*, which was nothing short of scandalous in many of its revelations. There were the attempted legal proceedings instituted by her son and other relatives to protect her from what was supposed to be the undue influence of certain members of the Christian Science faith. And there were repeated efforts made by the vulgar and curious public to invade the spiritual privacy of her home at Pleasant View for the purpose of discovering whether she really lived at all or not.

whether she was in her dotage, whether she was dying of a malignant disease. But by the pure grit of a famously invincible will, or by the strength of her faith, the old lady weathered her mild persecutions, and now, in the eighty-sixth year of her age, is still writing scriptures for her students at Chestnut Hill, her new home in the suburbs of Boston. Miss Wilbur's biography¹ is meant as an answer to the attacks made upon Mrs. Eddy in *McClure's Magazine*; not that the latter are mentioned, except covertly, but the substance of the book is in direct contrast to the representations made by *McClure's*. Mrs. Eddy was a saintly child, a delicate and saintly widow, and afterward one of the greatest and wisest saints of all times.

There is something helpless, pathetic about faith. If it is fixt upon an error there is no chance for enlightenment. The very conditions of perfect faith preclude enlightenment. The disciple has set belief above reason. It is in this spirit that Miss Wilbur writes of Mrs. Eddy. And there also is the beauty of the thing. She tells just what would be suitable to the character of a great and good woman rather than the truth. Faith has that quality. It clings to whatsoever things are of good report, and upon these Miss Wilbur builds the character of the saint at Pleasant View. Many of her statements are manifestly and sweetly false, but doubtless she is unaware of this, as the blind woman was unaware that she was still blind after she had been successfully treated by the Christian Science healer. There is, for example, the speech made by little Mary Baker at the age of nine to her brother, which would do credit to President Eliot, of Harvard University. And there is the account of the death of Mr. Eddy. The author has made a pathetic fable out of the truth in this instance. She evidently desires to produce the impression that Mrs. Eddy could have kept her husband alive, and that he died because she happened to be out of the room.

The worth of the book consists in the simplicity of the author's faith, and in her ability, therefore, to present Mrs. Eddy in a character suitable to the belief of her "students." And this is necessary; for, if a certain class of people find peace and innocent happiness in Christian Science, the effect upon their moral characters will be infinitely better for accepting Mrs. Eddy as represented by Miss Wilbur, instead of as represented by the writer in *McClure's Magazine*.

We take pleasure, therefore, in recommending this volume to our Christian Science readers. And the rest of us may as well admit that Christian Science is a good belief for believing persons, judging by its effects on Mrs. Eddy herself. Few women who past their youth and middle years in a constant state of hysteria have gained better control over themselves by therapeutic methods, whether the doctor was a Christian or an infidel.

We cannot recommend to the same class of readers, with equal favor, Henry Frank's book on the *Mastery of Mind*.² Mr. Frank appears to have got his amoeboid cells sadly mixt with his spiritual effulgence. And he writes too much as if the human soul were a bone or a gristle in the human body. And we go so far as to object to the picture and posture of Mr. Frank which adorns the first page.

If, however, there are any of our readers who contemplate joining the Christian Scientists with a view to profiting by their healing methods, we suggest that they read beforehand David Bruce Fitzgerald's little volume on Christian healing.³ They will find Mr. Fitzgerald sufficiently radical to fit their case. At the same time he is a Presbyterian minister with a hard head, good reasoning faculties, a reverent sense concerning the miracles of Jesus, and he has a clear literary style—which is rare among the Christian Scientists.

Idyls of Greece. By Howard Southerland. Boston: Sherman, French & Co. \$1.00

These are four tales of classic times prettily told in fluent verse. In the first Prokris is separated by intrigues from her beloved Kephalos and dies by his hand. They are stories of love and

¹THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. New York: The Concord Publishing Co. \$2.00.

²THE MASTERY OF MIND. By Henry Frank. New York: R. F. Tenno. \$1.00.

³THE LAW OF CHRISTIAN HEALING. By David Bruce Fitzgerald. New York: Fleming H. Revell Co. 75 cents.

death and in "Acis and Galatea" we meet the sweet strain:

"Love shall outlive the doubt of centuries."

The fourth and last poem steps across the centuries and introduces us into heartless, cruel Rome. The Roman atmosphere is not congenial to Oeme who is a Christian girl from Argos, and who tells her lover:

"The gods are not; the gods have never been, One God there is, eternal, everywhere."

Her confession of faith horrifies Aenus, but love conquers, and with it the Christian faith which unites them.

The Cell as the Unit of Life.—By Allan McFadyen. London: J. A. Churchill.

For those who are interested in getting at the present position of progressive biologists with regard to the mystery of life and its theoretic and scientific explanations, Professor McFadyen's book will have a distinct appeal. It is occupied mainly with technical matters, but this makes its references to the failure of the mechanical explanation of life all the more striking, since it is evident that they represent the opinions of a working biologist of the present day. Professor McFadyen died a year ago last March at the early age of forty-seven. The estimation in which he was held may be appreciated from his selection as the Fullerian Professor of Physiology at the Royal Institution, London, and it was here that the lectures out of which this book has been made were delivered. It is the memento of a life cut off all too soon and from which much had been hoped. Thruout all the lectures the paramount importance of the cell is the dominant idea. Professor McFadyen again and again reiterates his belief that the fundamental problems of biology are centered in the cell and that every physiological and every pathological problem is utterly cellular. All of his work in biology has been concentrated on this point. His opinion, then, with regard to explanation of life or mechanical or chemical or physical principles is extremely interesting and represents present-day biology as well as anything that can be quoted. In his first lecture he quotes with approval Bunge's well known opinion that

little phenomena of life as the movement of the leaves and branches on a tree when shaken by a storm."

For his own part Professor McFadyen adds:

"The phenomena of absorption would no doubt meet with a very good explanation on the principles of diffusion and osmosis thru a membrane. But on examination it is found that the intestinal wall does not behave like a parchment membrane in the process—the protoplasm of the cell undergoes contraction and is actively engaged in the process just as in the case of the simple amoeba. And we have already indicated the selective power of cells, as for instance, in the case of the absorption into their substance of fat globules."

Some of Professor McFadyen's work on the ferments or enzymes, which are at the present moment attracting so much attention in biology, is contained in this book. It was his observations in this department that gave him his prominence before the English-speaking world and led to his invitation from Glasgow to London. He has particularly studied the clotting enzymes, showing that such apparently various processes as the curdling of milk, the clotting of muscle juice, the clotting of blood, and the jelling (if there is such a word—*pace* our domestic friends) of vegetable and fruit jellies are all due to the same process and probably to the same agents. His work in this line has been most suggestive, and as life has been recently defined as a series of fermentations, the man who had studied ferments so successfully must surely have the best right to generalize with regard to the meaning of life, and so Professor MacFadyen's opinion as to the utter failure of physical principles to explain vital manifestations deserves to be widely known.

A Parable of the Rose, and Other Poems.

By Lyman Whitney Allen. 16mo. pp. 140.
New York: G. P. Putnam's Sons. \$1.00.

Some of the earlier poems by Dr. Allen, now pastor of a large Presbyterian city church, were published by THE INDEPENDENT when he was a theological student. He has held devotedly to the service of the Muse, and a poem of his in epic form on "Abraham Lincoln" some years ago was a volume that attracted much approval. In this volume he has gathered over fifty shorter poems and sonnets that are written with grace, and mostly with a personal flavor. We par-

"All the processes in our organism which can be explained on mechanical principles are as

ticularly notice "The Vision of a Mature Mind" and "The Captain on the Bridge," the latter of which is suggested by Tennyson's "Crossing the Bar."

Literary Notes

....*The Hibbert Journal*, of Boston, is usually up to date, sometimes even ahead of it, but the last number contains an unusual proportion of "live matter," such as the discussion of spiritistic phenomena by Gerald W. Balfour and John W. Graham, psychotherapeutics by Dr. Henry R. Marshall, socialism by Miss Vida Scudder, and Fechner's "Earth-Soul" by Prof. William James.

....We have bought the *World* almanac for 1909 and we are disappointed in it. It is not up to date. The population of the globe is the same as last year, 1,520,150,000. That is hardly probable. And we are sure that the age of the earth, 72,000,000, is not right. It should be 72,000,001, unless there was a mistake in last year's almanac. The Constitution of the United States is also reprinted unchanged, yet we had supposed from reading newspapers that hardly a line of it remained unchanged.

....The tenth issue of the *Jewish Year Book* (Philadelphia): The Jewish Publication Society of America, 75 cents, is this year compiled under the auspices of the American Jewish Committee. It contains a summary of Sunday laws of the United States and leading judicial decisions having special reference to the Jews, by Albert M. Friedenberg, and a review of the past year by Louis H. Levin, which refers to immigration, philanthropy, education and other matters concerning Jews in the United States and abroad. A significant statement in regard to foreign countries is: "Bulgaria exhibits a welcome change from the usual tale of Jewish oppression." Among the other details is a record of bills and resolutions introduced in Congress relating to immigration passports and Sunday closing. It is a useful reference book for current Jewish affairs.

....Year by year the women novelists are gaining on the men. According to the reports of sales all over the United States summarized in the *Bookman* the most popular novels of the year 1907 were written by 25 men and 7 women. In 1908 there were 22 men and 16 women among the successful authors. This is one of the few fields where women can compete with men without being handicapped by their sex. It is no longer necessary for them to assume a masculine pen-name, and there is no reason on the other hand to suppose that a woman's name adds to the popularity of a novel. It cannot be claimed that the men's novels are essentially different in character from the women's. The most conceited publisher would hardly claim that he could tell the difference between them with his eyes shut. What we want to know is how many other things there are that a woman can do as well as a man when she has a chance.

Pebbles

"ONLY fools are certain, Tommy; wise men hesitate."

"Are you sure, uncle?"

"Yes, my boy; certain of it."—*Tatler*.

"I DON'T believe in that doctor."

"Why?"

"He didn't tell me everything I wanted to eat was bad for me!"—*London Opinion*.

LEADING TRAGIC MAN—Did you see how I paralyzed the audience in the death scene? They were crying all over the house!

Stage Manager—Yes, they knew you weren't really dead.—*Tit-Bits*.

MEDICAL STUDENT—What did you operate on that man for?

Eminent Surgeon—Two hundred dollars.

Medical Student—I mean what did he have?

Eminent Surgeon—Two hundred dollars.—*The Christian Register*.

....*The Western Watchman* has printers whose blunders are sometimes unusually brilliant. Some time ago, referring to the vivacity of two of the very highest dignitaries in the American Catholic Church, it described them as "nutered galliards," meaning *mitered*. In a late issue it discusses the Keiran failure, and says it does not see how anybody can lose by lending to Catholic institutions, as "they have always been ranked among the most guilt-edged securities."

"DOIN' any good?" asked the curious individual on the bridge.

"Any good?" answered the fisherman, in the creek below. "Why, I caught forty bass out o' here yesterday."

"Say, do you know who I am?" asked the man on the bridge.

The fisherman replied that he did not.

"Well, I am the county fish and game warden."

The angler, after a moment's thought, exclaimed, "Say, do you know who I am?"

"No," the officer replied.

"Well, I'm the biggest liar in eastern Indiana," said the crafty angler, with a grin.—*Recreation*.

You can't always tell, says an exchange, what will happen. For instance, there is a story of a man who determined to commit suicide. He went to the store and bought a rope, a can of coal oil, a box of matches, a dose of arsenic and a revolver. He went down to the river and pushed the boat from the shore and waded to where a limb hung over; saturated his clothing with the coal oil, lighted a match and set fire to his clothing, took the dose of arsenic, put the muzzle of the revolver to his temple, pushed the boat from under him and pulled the trigger. But the bullet glanced and cut the rope above him and he fell kerflop into the river; the water put the fire out and he got strangled and coughed up the arsenic. He rose and waded out, and declared himself a candidate for the Legislature on the reform ticket.—*The Wayne Register*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Rebuking the President

By a vote of 212 to 35 the House of Representatives has rebuked the President, declaring that his language to Congress was disrespectful, and the statements made in his Message as to the reasons why Congress limited the use of the Secret Service were not true. That is the substance of the rebuke. Notwithstanding the needless brusqueness of the President's language, we stand with the thirty-five.

The two most impulsive, most energetic rulers today are President Roosevelt and Kaiser William, and both of them have now been sharply rebuked by their lawmakers. The Kaiser has accepted his rebuke and is silent; but not President Roosevelt. He believes he is right and he sticks to it with emphasis. There is this further difference, that the German people and the Reichsrath took offense at action which seemed to endanger peace with foreign nations. It was his interference with politics abroad that turned them against their Emperor, a matter of most serious concern. It is a much smaller matter which has provoked both Houses of Congress. They

are offended at an aspersion of their motives, and feel a personal affront. They are standing for their own dignity, not for the interests of the country—except as these are involved in maintaining their dignity.

The President replied that he had been misinterpreted, that he meant no reflection on the integrity of the House. This might have been taken as an apology, but the House would not take it so. They said that they could interpret his language, and that it did convey the meaning which he repudiated. We are sorry they did not make the best instead of the worst out of the matter. But they were offended because the President proceeded to defend his statement that the chief reason given for the restriction of the use of the Secret Service was that Congressmen did not themselves desire to be investigated by that Service. He appears to have proved that such was a reason given, if not the chief reason, and the President's evidence, sent to the Senate, showing how Senator Tillman seemed to be involved in shady land business, supports his contention. And yet we doubt much if that was the chief reason. The real reason could not be given. Here was the culmination of past grievances. Congress has not liked the President's pressure, criticisms and hectoring in his effort to secure legislation which Congress was slow to give. Here was the chance to annoy him, to interfere with his activity in prosecuting offenses of which powerful corporations or individuals, even Senators or Representatives, had been guilty, and they used it. Of course, the spying of the Secret Service never pleases those, whether innocent or guilty, who are under investigation. The President had not said that Congressmen would be afraid to be found guilty, but that they did not wish to have the detectives follow them, quite a different matter, and yet one which might be interpreted in that unfavorable and guilty way in which the House chose to take it. The worst of the President's language was that in which he suggested that if Congressmen did not wish to be investigated they should have made themselves a special exception. That was sharp and unnecessary, perhaps discour-

teous; but it is by no means a novelty to except certain officials from the usual operation of law.

The first fault was with Congress in limiting the use of the Secret Service, and in doing this to annoy the President. The President did right in criticising the law and asking that it be repealed. He used emphatic language, unnecessarily tart, and such as would suggest, but not charge, corrupt motives on the part of Congressmen. It was not prudent, restrained language. But in his response he has denied the evil interpretation, and the House ought to have accepted it, even with a grimace, and then devoted itself to the serious question raised by the President as to the use of the Secret Service. Instead, it has laid that portion of his Message, and his reply to the House, on the table as an expression of resentment. They say that the country would not respect them if they did not maintain their own dignity. Their dignity and their duty could, we think, have been better maintained and performed.

Revenue and Corporation

AT its short session, which must end on March 4th, Congress does not begin to work until after the holidays. And then there is time for little except the great annual appropriation bills. It may be remembered that those which were past at the last session called for \$1,008,804,000 of the public funds. This winter, altho Congress has done little or nothing, an important committee of the House has been at work for several weeks upon a new tariff bill. No action is to be taken concerning this bill before the end of the session. At a special session, beginning on March 15th, the bill will be laid before a new Congress. It could be prepared by the present Ways and Means Committee, because there will be very little change in that committee after March 4th. Mr. Cannon will again be Speaker, and nearly all of the present members of the committee will be reappointed.

Altho tariff discussion and the passage of a revision bill are to be reserved for the new Congress, the projected tariff legislation must be considered to some extent at the present session. It is

intimately related to the appropriations. Congress voted an expenditure of \$1,008,804,000 for the current fiscal year in the face of a growing deficit. In the year ending with June last, expenses had exceeded receipts by nearly \$60,000,000, altho in the year immediately preceding there had been a surplus of \$87,000,000. Now we see even a larger deficit in only half a year. For the six months which ended with December it was \$64,288,000. Therefore a shortage of from \$100,000,000 to \$120,000,000 for the full fiscal year may reasonably be expected, with an equal excess of expenses in the year to come, unless appropriations shall be cut down or income increased by new taxes or by a modification of old ones.

Because there will be little or no reduction of the national expenses, the tariff revisers are forced to consider the effect of their action upon revenue. It is now conceded that there will be a reduction of a majority of the present duties. Such a reduction does not necessarily involve a reduction of the revenue collected; it may even increase the customs receipts. A sharp reduction of a duty now prohibitive might cause the importation of goods and thus give revenue where now there is none. Again, a reduction of a duty that now yields revenue might or might not enlarge receipts. A lower rate would be collected upon a greater bulk of imports. It is impossible to estimate closely the effect of such changes. But it is not the purpose of the majority in Congress to increase imports of goods that compete with American manufactures or other products, and therefore we may safely assume that the coming revision of duties now imposed will not considerably enlarge the customs revenue. On the other hand, this revenue may be reduced by the revision. But the imposition of new duties is another matter.

The committee has been asked to place in its bill a duty of 5 cents a pound on coffee. This would yield about \$45,000,000 a year. Some who oppose protection would have such a duty because, as they say, it would be purely a revenue tax. But the Republican majority of the committee is considering the question from the protectionist's point of view. Porto Rico asks for the duty in order that her

coffee industry may be protected and stimulated. The assertion is made that under the shelter of such an impost on the coffee of foreign countries, Hawaii and the Philippines would soon produce large quantities, and (with Porto Rico) in twenty years would supply the entire demand in the States. Three-quarters of our supply is now drawn from Brazil. That country imposes a small export tax, which might be withdrawn under the operation of our proposed maximum and minimum tariff. It is asserted that on this account a duty of 5 cents would not increase the cost of the greater part of our supply by 5 cents, altho for every pound imported there would be 5 cents in the Treasury. Probably, however, a duty of 5 cents would add not less than 5 cents a pound to the price paid by consumers of coffee in the United States.

It is necessary to increase the revenue in some way. Many years ago we had a duty on coffee. Nothing but a very sharp reduction of the present duties on manufactures, especially of those rates which serve the interests of Trust combinations, would prevent a popular protest now against a restoration of it. A vast majority of our people would prefer that the needed revenue should be procured by income or inheritance taxes.

Even in a long session there might not be sufficient time for a careful and adequate consideration of the questions involved in the propositions for an amendment of the Anti-Trust law and for the official supervision of great corporations engaged in interstate business. But in the present session these very important questions should not be overlooked or avoided. The people are familiar with Mr. Roosevelt's various recommendations and with Mr. Bryan's plan. Judge Taft now proposes another. He would make the Interstate Commerce Commission a quasi-judicial body and would increase the powers and enlarge the scope of the Bureau of Corporations. It seems to us that the whole subject of great combinations in trade, the supervision of powerful corporations, the regulation of railway competition, etc., deserves to be considered carefully by a group of competent persons who can give to the work their time and energies. The ideal study

of this problem cannot be made by a busy Congress or in the White House. Congress at its present session might well consider the expediency of obtaining a report and recommendations from a commission composed of economists, jurists and representatives of industrial and railway interests.

Professor Burgess's Defense of the Kaiser

WE are ready to accept every word that Professor Burgess, of Columbia University, lately Roosevelt Professor at Berlin University, had to say, at an address last week, in defense of Kaiser William's character. He has talked intimately with the Kaiser and understands his simple candor and sincerity. Professor Burgess says:

"It has never been my fortune to come into contact with a man of keener intellect, wider information, warmer heart, larger ideals, sincerer courtesy, truer deference for the opinions of others, greater desire to do good and be helpful in all directions and to everybody and stronger loyalty to friends, country and the interests of general civilization than his Majesty the German Emperor. Simple and temperate in his personal habits, a devoted husband and father, a true friend and benefactor, a devout believer, a great statesman and philanthropist, a genuine idealist with a rare resourcefulness, an indefatigable worker for the weal of his country and the peace and civilization of the world, in a sentence a man, a Christian and a gentleman in the highest sense of these words—such is the picture of the Emperor as I know him both from afar and at rather close range."

That is a great deal to say, and we believe it substantially true.

But it is not so easy to accept his defense of the Kaiser's "calculated indiscretion" in the case of the famous interview which has so stirred Germany and driven the Kaiser into retirement. He is inclined to call it not a "petty indiscretion," but a "grand" one. And thus he explains it, after describing the German policy of peaceable trade and commerce with the world:

"Any successful attempt to restrict this sound development, sound both from a national and a world point of view, is bound to result in an explosion which will rock Europe from one end to the other and threaten the welfare of America. Again, China and middle Asia, with a population of six hundred millions of people, have now appeared at the threshold of modern civilization and are about to open

their doors to free commerce and intercourse with all civilized nations for the welfare and advantage of all concerned. Any successful attempt by Japan alone or by Japan, England and Russia in league to bar the way of this development would be not only a moral affront to China and middle Asia but a challenge to all other nations, and would inevitably produce a struggle between the Orient and the Occident in which the Powers of the Occident might be themselves divided. No more perilous situation to these United States of America and the civilization of the modern world could be imagined than this. Now, if the recent excitement occasioned—I will not say caused—by the words of his Majesty, the Emperor shall call the earnest attention of all nations to these two greatest of perils to civilization and the peace of the world, then will those words be seen to have been words of the highest discretion and the most far-reaching wisdom."

If that is the best that can be said for the Kaiser the attempt might as well be given up. Professor Burgess sees what the German people do not see, or they would not have so unanimously condemned their Emperor. Professor Burgess's defense is an attack on Great Britain, but the Kaiser's letter was the expression of good will to Great Britain. The Professor sees two dangers, which were, first, the attempt to restrict German commerce, and, second, to do it by the union of Great Britain, Russia and Japan to shut out German trade with China. Professor Burgess must have been affected by the manufactured terror of German jingoes. It has never been and never will be British policy to close the door of the trade of other nations. The fear of Japanese or Russian exclusion had regard only to Manchuria, not China, and that is now removed. The interview cannot be explained as an effort to prevent England from joining Russia and Japan in an effort to monopolize Chinese commerce, for that would be impossible. What Germany thought, what all the world thought of that interview cannot be thus diverted by anticipating a danger that is purely imaginary.

The Last of the Gallicans

At Chambery, in December, on his way from Rome to Lyons, Cardinal Lecot died of apoplexy. He was the bearer of messages from the Vatican to the French cardinals who were awaiting him at Lyons.

The dead prelate was a liberal of the

school of Gratry, Lacordaire and Montalembert, and also, we may add, of the American Church from Cardinal Gibbons down. In other words, he was a loyal Frenchman and a loyal Catholic. To him it was no anomaly that he was French and that he believed in the Papal Infallibility.

In the earlier years of his priesthood he started a paper, *Foi Picarde*, in his native Picardy, but his ultramontane bishop soon suppress it. During the Franco-Prussian war he was a chaplain and served with his regiment thruout its campaign. In 1886, the Government named him Bishop of Dijon, and in 1890 transferred him to the Archbishopric of Bordeaux; three years later Leo XIII created him cardinal. The same year he endeavored to settle a strike of the masons of that town, as Manning did the dockmen's strike in London, and gave orders that the families in need should be aided.

Again, he was in sympathy with the party, then known as "Christian Socials," and the Abbé Naudet, whose journal, *Justice Sociale*, Pius X suppress, belonged to his diocese, and even after the Pope's action was not troubled by his bishop.

When, in 1892, Leo XIII, in his famous letter to the cardinals, archbishops and bishops of France, called on them, their clergy and their people to rally round the Republic, Lecot followed it up by a pastoral letter to the diocese of Bordeaux which sent a thrill, second only to that of the papal letter, thruout the whole country. When toward the end of his term of office President Loubet made the visit to the King of Italy, Cardinal Lecot, either of his own initiative or inspired, labored to have the Pope receive the President. He wanted the Papacy to extend to a Catholic ruler the same courtesies it grants to a Protestant. When, for instance, the German Emperor visits King Victor Emmanuel, he returns afterward to the German Embassy, which by a fiction of law is German territory. Thus he passes from Italian upon German soil and so visits the Pope. In this case what is sauce for the goose is not sauce for the gander. No Catholic ruler is thus favored. In reporting to the various Nuncios this wicked visit of President Loubet

the Vatican omitted a phrase, not over-respectful, in the copy sent to Lorenzelli, Nuncio at Paris. This started the ball a-rolling which ended in Separation.

In the law of Separation there is a provision called the associations for public worship. The bishops of France met, and under the inspiration of Cardinal Lecot, by a majority of twenty-two votes, accepted this chance of state recognition and aid. Lecot at once recognized the cultural associations in his province, Gironde. The Pope, as all know, condemned the measure, but dared not order the dissolution of the Gironde associations. It was a victory for Lecot, but mingled with a little gall, for Pius X forbade any other bishop in France to do the same. Later on the bishops of France assembled in the chief cities where the cardinals lived. But on the eve of the meeting at Bordeaux Cardinal Del Val telegraphed Lecot to do nothing and to await the official program from Rome. Again, when the general meeting of the hierarchy of France was about to take place in the principal city of Aquitaine, Rome again stepped in and annulled the whole proceedings. In both instances the old Cardinal smothered his feelings and yielded.

His last trip to Rome was in behalf of his Gallican sentiment that Rome and France should again enter into friendly relations. His death stopped it. Now the *Corrispondenza Romana* denies categorically that Lecot had any messages favorable to such relations.

Curious to relate, the French press regard this apparently open, aboveboard denial as an infallible proof that Cardinal Lecot had instructions on the subject, which he intended to explain to the expectant cardinals at Lyons. What a comment on the Papal organ! Strange, moreover, is the action of the Government. The prefect at Chambéry telegraphed the account of the death to headquarters at Paris and then called at the death chamber. The prefect at Bordeaux called on the lay president of the Catholic associations, who returned the call and asked that Cardinal Lecot be buried in the cathedral. The Government consented to this.

The dead Cardinal of Bordeaux was a practical, common sense man of affairs. He kept away from Modernism, save in

so far that he was friendly to the Abbé Naudet. He is about the last Gallican, even in the mildest sense of the word. Rome now has a freer hand, and but a trivial acquaintance with history is needed to understand how it will use a boomerang.

The Collective Will to Live

AMID the rumblings of international unrest one clear note is heard. The European nations were never more on their guard than they are today. Each tries to draw closer the bonds of friendship with neighboring Powers, not because of affection felt, but in the dread that any day the need may arise for the helping hand of a loyal ally. In Asia great peoples are awakening to political consciousness. Persia and China will follow close upon Japan in the creation of constitutional governments. India feels the stirrings of aspiration for an independent political existence. No man can foretell the things that fate has in store at this hour for a human race, outnumbering by hundreds of millions the human race that has past into history, and which is becoming a mighty solidarity thru swiftly developing mobility and communication. No statesman deceives himself with the thought that things can continue as they are.

The one clear note that sounds above the clamoring voices of cheer and of warning is the answer which this modern time is giving to the long debated question, What is a nation? Long ago the notion that a people of one blood and tradition should always and everywhere be regarded as the sufficient staff and basis of a political state, was abandoned by men of the inductive mind. Twice in the history of Europe it has momentarily seemed that this idea might find realization. The nations that divided the Empire of Rome among themselves were relatively homogeneous ethnic groups. The collapse of the Napoleonic Empire again gave Europe over to an ethnic nationality. But today the population of the world is in motion; not in banded armies, but as a ceaseless flow of individuals and families seeking economic opportunity; and each nation, once relatively homogeneous in blood, is becoming

ing an aggregation of all heredities and tongues.

The conception of a nation as a mere ethnic unity was supplemented in the nineteenth century when the international flow of population began to arrest the attention of political philosophers by the further notions of territorial unity and a common consciousness. The boundaries of states were observed and classified as natural or artificial. Territorial regions, marked off from one another by seas or mountain ranges, and having distinctive economic advantages, were looked upon as the natural substrata of political aggregations. The people inhabiting any one of them, having common interests, living by like occupations, easily maintaining communication among themselves, while naturally separated in some measure by physical barriers from other populations, must acquire a common consciousness. Disraeli invented the phrase, "the scientific frontier," and it threatened the peace of Europe.

The actual evolution of modern national states has proven this conception also to be more academic than historical. If there is a population on the earth which all men would allow to be in a supreme sense of the word a nation, it is the people of the United States. Yet it is a people without ethnic unity and occupying an area which consists not of one, but of three badly combined physical units—the Atlantic seaboard, the Mississippi basin and the Pacific Coast. And one of these, the Atlantic seaboard, extends without physical barrier into the vast domain of Eastern Canada, occupied by another nation. Not less significant is the maintenance of a political line of demarcation between France and Germany, striking across a physically homogeneous plane.

What, then, is a nation as modern political evolution reveals it? Like a variety or a species in the organic world, it is a thing not satisfactorily described by boundary lines or limits. Its true nature is indicated rather by some central tendency. Ethnic composition changes; boundaries may be shifted; the central tendency remains—a fact of norm, or type, or mode. And, as in the life of an individual, so in the life of a nation, as the events of today are proving, the cen-

tral tendency, the essential fact or force in national life is the will to live. About the will to live everything else in individual life, in national life, is clustered. By it all the clustering facts are organized. . . . Wherever a multitude of human beings is found sharing a common purpose to dwell together, collectively determined to defend their common interests, and collectively striving to work out their own distinctive phase of civilization, there is a nation, which persists thru all changes of ethnic composition, thru all shiftings of boundary lines, thru all transformations of the common consciousness, so long as the collective will to live and to achieve, is powerful enough to compel all other aggregations to respect the intention and to recognize the achievement.

Recognizing this collective will to live as the essence of national existence, the statesmen of the twentieth century will see reasons for revising some of their forecasts of the political future of mankind. Not all the differences of race and of territorial situation that distinguish the Empire of Britain from the Empire of Germany will henceforth count for so much as will some revelation, that any day may be made, that one or the other of these aggregations has the more vital will to live. And not all the civilization of the Western World, nor all its armies or navies, will enable it to dominate the future political evolution of mankind if presently it shall appear that the human millions of India, of China and of Japan have in reality the more powerful collective will to live.

Freedom of Investigation in Government Departments

LAST week there was a rumor current that Dr. H. W. Wiley, of the Bureau of Chemistry of the Department of Agriculture, was about to lose his position on account of his publishing, without official warrant, his bulletin against the use of benzoate of soda in food and his refusing to sign, as chairman of the Food and Drug Inspection Board, a circular permitting the continued use of this preservative. Fortunately there is little danger of Dr. Wiley's removal, for he has so

thoroly identified himself with the pure food movement that such action on the part of the President would be regarded as a surrender to unscrupulous manufacturers and would arouse a storm of protests from the public. The general question involved is, however, of growing importance and deserves careful consideration now that the State and national Governments are conducting research on an extensive and increasing scale. It must be clearly understood and firmly established that a scientific man in a governmental department always retains his right to express his opinions on his own authority, and he must never be called upon to decide between losing his job and approving of the judgment of his superior officer. If one would know how serious this question is he has only to listen to the private conversation of scientists who are or have been attached to some branch of governmental service, such as the geological survey, the engineering works, the forestry service, or the agricultural department. Their complaints are sometimes obviously founded on an exaggerated sense of the importance of their work and usually betray some trace of the common human disposition to "kick about the boss," but one hears of so many alleged cases of scientific reports modified, delayed or suppressed because they do not agree with the theories of the head of the department at Washington or at the State capital that one cannot doubt the reality of the evil.

The difficulty comes in chiefly in cases like the one under consideration, where the business of scientific research is combined with executive functions. Dr. Wiley has been for years engaged in a national campaign for pure food, lecturing, writing, investigating and preparing legislation. It is a grand and useful work in which no other man has and few could have done so much. Recently he has added to his repertoire of official duties those of fixing standards, making decisions and enforcing the pure food law. Like many of the State food commissioners he has had to be public agitator, prosecuting attorney for the people, law maker, expert witness and judge.

Now no one man can do all these things well. The more successful a man is as an advocate the more he is unfitted for calm scientific investigation in un-

trodden fields. When we say, as we have said, that Dr. Wiley's bulletins on preservatives show a disposition to make out a case against them we are not alleging that his experiments are valueless or that he is not a good chemist and a useful public officer. When his benzoate bulletin was published we studied it thoroly and gave in our issue of September 3d what we regard as sufficient internal evidence to prove that his sweeping condemnation of benzoic acid and other preservatives was not justified by his experiments on the Washington "poison squad." Since then we have talked the matter over with many of the most prominent chemists in the country and none of them were inclined to disagree with our position on the question. Their opinions, however, are never forced upon the attention of the public by street car and periodical advertisements and they do not furnish good campaign material for the food reformers. In fact, the public expression of such an unpopular view as that preservatives may be harmless and useful by any chemist and especially an official one would bring down upon him a storm of criticism and vilification. Public sentiment is so warm on the question that he would at once be charged with being bribed by manufacturers.

We have no inside information as to what will be the decision of the board of review, composed of Professors Remsen, Long, Chittenden, Taylor and Herter, to which the question has been referred, but we believe that their verdict in the case of Wiley vs. Preservatives will be the same as ours, that is, the Scotch verdict, "not proven."

But as executive officers Secretary Wilson and Dr. Wiley have to make a ruling, however insufficient the evidence. They may not know, but they must decide. A scientific man may have to keep his judgment in suspense for years or thruout his life. A judge must express an opinion whether he has a right to one or not. If benzoate of soda is harmless and they decide against it they will be inflicting an injury upon a legitimate business and interfering with a convenient method of preparing food. If it is harmful and they permit its use, they will be allowing the digestion of the American people to be damaged by an imperceptible poison. Which of these risks they shall

run is a question of public policy. Science has not spoken and the case is not closed.

Shall the Yosemite Be Despoiled?

THE Yosemite National Park contains two valleys that are wonderfully exact counterparts of each other. Both are hemmed in by stupendous granite walls, festooned with the highest and most picturesque waterfalls in America. Only the preservation of Yosemite Valley had been assured by the creation of a State park. At the instance of public spirited men, notably John Muir, the National Park was created in 1890 in order to protect also the Hetch-Hetchy Valley and the Tuolumne Meadows from the hand of the spoiler. Last spring, Secretary Garfield granted this priceless valley to San Francisco as a reservoir site. But the city cannot float bonds on a revocable grant. Therefore the city's representative in Congress has introduced a bill authorizing the exchange of lands outside Hetch-Hetchy for areas within the valley. If effected this will confirm the grant and surrender to the city a priceless scenic treasure in exchange for areas that are absolutely worthless in comparison. The exchange of Niagara Falls for a bit of Salt Lake would not be more preposterous than the proposed trade of Hetch-Hetchy for "Hog Ranch." Far from entertaining such a ridiculous proposition, the policy of the Government should be to extinguish all private holdings in national parks.

Doubtless Secretary Garfield, who has never seen the valley, was misled by *ex parte* representations. But it is surprising to find him stating in the terms of the grant that he does not feel called upon to decide whether this is the only available source of water supply for the city, declaring expressly that the decision of the city's representatives on that point is sufficient. But the city's own report on available water supplies and the published investigations of eminent hydraulic engineers show an abundance of other adequate sources. Not only are the rights of ninety million people endangered on the claim of a spurious necessity, but water power values estimated at more than forty million dollars are given away without even the requirement of a rental for

the maintenance of the park. This water power is the ulterior object of the advocates of the scheme, for they could get water elsewhere.

But the issue involves more than the destruction of Hetch-Hetchy. The Secretary's grant assumes a divided use of the Tuolumne watershed, by the city as a source of water supply, and by the public as a recreation ground. The present state of sanitary progress holds these two uses to be absolutely incompatible without filtration or other purification process. The city's advocates pass by nearer sources on the ground that they require filtration. Therefore, the next move will be the restriction or exclusion of the public, for camping and recreation, from more than five hundred square miles of the Yosemite National Park. This includes, as the most immediate areas above the reservoir, the Tuolumne Cañon and the Tuolumne Meadows. The former is the most remarkable cañon in the United States next to that of the Colorado; the latter is the finest and most spacious alpine valley for camping purposes in all the Sierra Nevada. The National Park is full of beautiful lakes, but Yosemite and Hetch-Hetchy are the only valleys of their kind in the United States, if not in the world.

This alone answers the question of damage against the contention that the reservoir would be a scenic feature. Aside from the fact that the precedent involved endangers the perpetuity of national parks generally, this is really the first step toward the diversion from public to domestic use of what constitutes scenically more than one-half of the Yosemite National Park. It is time for public spirited men to insist upon an exhaustive congressional investigation of the ultimate issues involved in this grant. National parks should be inviolate against every claim except that of absolute public necessity.

Physical Tests for Naval Officers

The citizen in civil life whose concept of the sailorman is that gained from the reading of sea romances will find it difficult to understand why the President, in prescribing the physical tests for fitness applicable to naval officers from the rank of lieutenant to rear admiral, has included long-distance

walking, and especially long-distance saddle-riding. These accomplishments seem as unsuitable to an elderly sea-dog as a high average at billiards or a knowledge of thoro bass. In the development of trustworthy "sea legs" the sailor needs to forget pretty much everything which pertains to the art of walking. To accommodate himself to the oscillation of an unsteady deck he learns to stand with his feet wide apart, as St. Gaudens shows us in his Farragut. In moving from place to place on shipboard balance is about the only thing to be considered—unless it be something to hold on to. This gives him the rolling, ducklike motion which is the typical sailor gait. That it is wholly unsuited to long-distance walking on land, especially against time, is obvious to every one who knows what real walking means. As for horseback riding—well, the sailor on horseback has been a joke for at least two centuries. Hence, to test a sailor for horsemanship naturally prompts the irreverent to ask if it is the intention of the President before March 4th to create a force of horse marines to take the place of the infantry organization lately relegated to shore duty. The Spanish adventurers were both sailors and cavaliers, but since their time the professions have not been combined. Hood's sailor on horseback, who followed his ship to her first port, did make the ride, but to keep his place in the saddle he had recourse to the expedient of tying his ankles together. This was natural and clever, and if the horse had not doubled his abdominal circumference by a copious drink the sailor who rode him would not have become bow-legged. We venture the opinion that there are many brave and capable officers in the United States Navy who would stand on the bridge day and night for a week more willingly than they would undertake a hundred-mile walk, and whose principal function in the saddle would be to contribute to the gaiety of nations.

Presbyterian Orders

Professor Briggs's article on "The Precedents of 1610" seems to concern a purely technical matter in Church order, but it is one that has close bearing on so important a subject as Church fellowship and even union. Professor Briggs shows that in 1610, in the consecration

of Scotch Presbyterian ministers as bishops, the validity of their orders as priests was accepted, altho no bishops' hands had been laid on their heads. Now, if their orders were valid, bestowed by ministers only, *pari passu* the orders of American Presbyterians today should be accepted as valid by Episcopalians, altho they may be thought not quite regular. Practically, the American Episcopal Church, as well as the Anglican, does not accept them as valid, and a certain quasi recognition of them by the last Protestant Episcopal General Convention at Richmond is severely criticised by High Churchmen, who are much more eager for fellowship and union with the Roman or the Greek Church than with other Protestants among whom they live. To most people in this country the historical question how and by what tactual succession the gospel ministry has come down to this generation seems academic and trivial; and they jump the whole interval since the Apostles and simply depend on the present guidance and gift of the Spirit of God. But for those who need some other authority for recognizing their brethren we commend the convincing paper by Professor Briggs; and we take the liberty to recall the question as to the certain validity of the Connecticut orders obtained thru Bishop Seabury, who was himself consecrated by the authority of no convention and by Scotch Nonjuring bishops.

The Trinity Church "Parasites"

We thought it best last week to be somewhat hesitant critics of the management of Trinity Parish, but what Episcopalians think of it appears from the severe comment of *The Churchman* on this financial report. It takes up the same line of criticism we raised and shows how Trinity's present policy pauperizes the chapels it supports and weakens their religious activity. It contrasts their life with that of the independent churches founded under an earlier policy, to which Trinity then gave ten or a dozen lots of land each and allowed them to set up for themselves; and these nine chapels for which it has built splendid edifices and which it supports. *The Churchman* takes eight of the independent churches which Trinity either founded or helped to establish, and compares the nine chapels

it now fosters. The eight churches have 12,920 communicants, while Trinity and its nine chapels have 6,939. The eight churches paid their own expenses and gave \$33,697 to the Board of Missions, while the ten Trinity churches, not one of them self-supporting, but each and all provided for by the corporation from its endowment, gave only \$12,820. It says:

"In other words, these ten churches of Trinity Parish are parasites, living on an inherited income and without sufficient vitality to take anything like their part in the aggressive missionary work of the Church at home or abroad, or even in the City of New York. The mother church has never paid its apportionment to missions."

What disturbs *The Churchman* and the critics of Trinity is the fact that its wealth was not given to it for Trinity Parish alone, but for all Episcopalians of the city. The grant reads that it is given for "the use on behalf of the inhabitants from time to time inhabiting and to inhabit in our said City of New York in communion of our said Protestant Church of England as now established by our laws." In 1814 the present charter was given, which was meant to legalize grants made to independent churches like St. George's, St. Michael's and Grace; and for some years such grants of land continued, but later the new policy was established of making no grants, but of setting up chapels of Trinity, which the close corporation should own and maintain. They have no rights of self-government, and their congregations are not entitled to seats in the diocesan convention, a policy which *The Churchman* calls "essentially un-Catholic and un-American," a judgment with which we coincide. A supported chapel may do for an infant church, but as a permanent policy it means the imposition of an infantile and humiliating condition.

The Civic Forum, now well into its second season, is an organization that should be duplicated in every large city of the land. A body of New York's most public spirited citizens organized it to provide a non-partisan, non-sectarian platform for the public discussion of important political, social and educational questions by the most distinguished speakers of the world. The Forum has found that Carnegie Hall was none too large to hold the audiences. Already Bryan, Taft, Hughes, Folk, Knox, Judge

Brewer and President Eliot have discussed the affairs of the day on its platform, while Professor Milyoukov from St. Petersburg, Dr. Van Eeden from Holland, and this week Keir Hardie from England have crossed the ocean for the sole purpose of addressing the audiences. Mr. Robert E. Ely, to whose energy and ability is largely due the success of the Forum, can be addressed at 23 West Forty-fourth street, and will be glad to give any information he can to other cities wishing to follow New York's lead.

Mr. Taft strikes true every time. A letter from him has just been published in which he strongly opposes the adoption in Maryland of a constitutional amendment of the nature of the "Grandfather" acts in some Southern States intended, he says, to free the whites from educational or property qualifications and subject negroes to them. The letter is written for use in the coming election. He says:

"The whole law ought to be condemned. It is not drawn in the spirit of justice and equality, having regard to the Fourteenth and Fifteenth Amendments, and I sincerely hope that no Republican and no Democrat who desires equality of treatment to the black and white races will vote for it."

It is startling to learn that the strongest man in China, Yuan Shi Kai, has been removed from power by a combination of Manchus opposed to the Chinese. He represents the progressive liberal movement in China, and if he chose he had, as Grand Commander, the army at his back and could create a revolution. We are not surprised that the Ministers of the various Powers in Peking have agreed to ask their respective Governments to protest to the Chinese Government that this removal of the trusted Grand Counsellor shall not affect the policy of the Empire toward foreign Powers and political progress. The change portends evil, and may lead to dangerous outbreaks.

Privy Councillor Klehmet, of the German Foreign Office, has been dismissed because of his failure properly to censor the interview with the Kaiser which was published in the London *Telegraph*. This implies that an officer who has no more discretion than the Kaiser is unfit to be in government employ.

New Fraternal Mortality Table

THE Associated Fraternities of America, realizing that the fraternal societies stand in need of reorganization, has appointed a commission to prepare a new and more scientific mortality table, to be based upon the mortality experience of American fraternal beneficiary societies. This ought, in point of fact, to have been done long ago, but perhaps it may truly be said of these as of other things, that it is better late than never. Upward of 3,000,000 of exposed lives will be under observation by the commission, which will also consider a large amount of material relating to temporary and permanent disability as a further aid in table construction. A table as to occupation mortality which the commission proposes to make a part of the work will alone make this movement one of international importance in life insurance matters. Besides such a table, however, tables will be constructed showing the mortality as to sex and residence.

The officers of this commission are men of high standing in the fraternal insurance world, the president being Lee W. Squier, of Philadelphia, past president of the Associated Fraternities of America and for six years chairman of the committee on jurisprudence and legislation of that body. He is the compiler of the Fraternal Law Chart and has had many years' experience in insurance work. The vice president of the commission is J. L. Rose, of Waterloo, Ia., for some nine years chairman of the Associated Fraternities of America's committee on statistics; while the secretary-treasurer of the commission is Capt. C. H. Robinson, of Washington, D. C., also a past president of the Associated Fraternities of America and for some years the efficient secretary-treasurer of that organization.

Miles M. Dawson, F. I. A., of New York, will be the ~~actuary in charge~~ of the detail work, and William Francis Barnard, of Syracuse, N. Y.; Abh Landis, of Nashville, Tenn., and other well-known gentlemen eminent in the actu-

arial profession will constitute the board of advisory actuaries.

Every fraternal society in the United States and Canada whose experience covers a sufficient length of time and number of lives to make it of value will be asked to contribute its data for this table; and no pains or expense will be spared on the part of the commission to make this new mortality table the most reliable, up-to-date, scientific table extant.

It is only when we compare the accident mortality with battlefield carnage that we realize something of the significance of such a comparison. For example, it is a sanguinary conflict that leaves 30,000 dead upon a battlefield. Less than 3,000 fell at Gettysburg, but according to The Bureau of Labor from 30,000 to 35,000 American wage-earners meet death from accidents every year. It almost looks as if the hazard of work was greater than the hazard of battle.

It has been well said that it is the unexpected that always happens. This is true in all departments of life, and it is likewise true in the insurance field. Few men would regard a derby hat as an accident hazard, but, strange as it may seem, nevertheless, 'tis true that one Alfred Parlow, who was found dead by the wayside in North Raynham, Mass., recently, came to his death thru the agency of his hat. At any rate the man's death certificate was endorsed: "Fell into his hat and suffocated." The theory, derived from the position of the body when found, was that, while on his way home, Mr. Parlow tripped and fell. As he fell his derby hat was forced down over his eyes and his face was driven into it. The fall stunned the man, who could otherwise have recovered himself. As it was, however, he failed to recover sufficiently to extricate himself, and death by suffocation overtook him. The story is a sad one and may well serve to suggest the uncertainty of life as well as the fact that death comes by bypaths as well as along the highway.

The Independent

VOL. LXVI NEW YORK, THURSDAY, JANUARY 21, 1909 No. 3138

Survey of the World

The Tillman Charges

Mr. Tillman made a long speech in the Senate, on the 11th, in reply to the charges set forth in the President's letter to Senator Hale. The galleries were crowded. He admitted that the letters published were genuine, but contended that he had been guilty of no falsehood when he said, on February 19th, 1908, that he had not "undertaken" to buy any land in the West. By "undertaken" he had meant "contracted." He had contemplated the purchase of some of the land, but he had made no agreement, nor had he paid any fees. While talking with Attorney-General Bonaparte about the resolution for a Government suit, he had spoken of his desire to buy a part of the land. He had a right to buy land, and he had not deceived anybody, had told no lies, had broken no laws. Much of his speech was an attack upon the President, who, he said, had been guilty of a gross breach of propriety in publishing the letter before the committee had had an opportunity to examine it. Mr. Roosevelt was a skilful advertiser and realized the importance of getting in the first blow, even if it was below the belt; he cared nothing for courtesy, custom or decency; had used his great influence to blacken his (Tillman's) name; was moved by personal malice and sought revenge because he had denounced his invasion of the rights of Congress and his brutal and cruel treatment of Mrs. Morris. "Theodore Roosevelt enjoys to the limit the feeling of getting even with Ben Tillman, and lays on the big stick with the keenest relish, doubtless believing that the pitchfork has gone out of busi-

ness." The President had made "a false declaration" and had attacked a man whose integrity had never before been questioned. In the course of the address he narrated the history of his correspondence and negotiations with the firm in Oregon, asserting that in his attack upon Dorr, the advertising land speculator, he had exposed a swindler. If he had obtained the land in question, there would have been only 1,440 acres, but the President's "dear friend Harriman" was holding unlawfully 2,000,000 acres. He demanded an investigation by the Senate, and promised in additional speeches to show the people the real character of "the man they have bowed down to."—On the following day, in a published statement, Attorney-General Bonaparte denied that Mr. Tillman had spoken to him of his desire to buy a part of the land. "He never told me a word of any connection on his part with an arrangement to acquire some part of these lands, nor that he intended, expected, or even desired at that time to make any such purchase." Mr. Tillman, he added, had asserted that he was acting only in the public interest. Whereupon the Senator remarked that he was willing to set his oath against the Attorney-General's.—Mr. Tillman made another speech on the 14th, attacking the Attorney-General and the Postmaster-General, whom he called "bootlicks." All the Cabinet officers, he said, were in league to ruin him. "I know the character of the men I am dealing with. They would not hesitate at anything, even assassination."—Altho Mr. Tillman insists, the Senate is not inclined to make the investigation which he demands, and his friends argue that

such an inquiry is not needed for his defense.

✱

Mr. Foraker Assails the President

Senator Foraker attacked the President on the 12th in

a long speech about the dismissed negro soldiers. He asserted that the \$15,000 paid to the two detectives who obtained the confession recently made public had been improperly taken from the emergency war fund of \$3,000,000 created in 1899, and that the employment of private detectives was in flat violation of a statutory prohibition. The President, he said, had tried to bolster up his case in this way after asserting repeatedly that the evidence against the dismissed soldiers was "conclusive and overwhelming." Speaking of this use of detectives, he said:

"It is atrocious, revolting, shocking to every sense of fairness, justice and even common decency. No language can completely describe such a shameful performance, and I do not exempt anybody from that remark who has been connected with it, from the highest to the lowest."

The President had even committed the serious offense of holding out to the soldiers a reward for their testimony:

"It does not lessen the gravity of his offense that it appears to be imperceptible to him, or, if not so, that he has become utterly oblivious to all the restraints of law, decency and propriety in his mad pursuit of these helpless victims of his ill-considered action. No precedent for anything so shocking can be found in all the history of American criminal jurisprudence."

He sought to show by affidavits that the detectives had been guilty of perjury and subornation of perjury. Speaking of his own letter to one of the soldiers, he said he had doubtless written some letters needing explanation, but never since leaving his mother's knee had he written one of which he was ashamed or that needed to be explained by lying. Mr. Lodge pointed out that the employment of the two detectives was not in violation of the statute, because they were not "employees of the Pinkerton Detective Agency or a similar agency."

✱

Water Power Bill Vetoed

one Standish

In a special message, on the 15th, the President vetoed a bill authorizing to build a dam across the

James River, in Missouri, for the purpose of generating electric power. He insists, as in his veto of the Rainy River bill, upon a license fee which may be increased in the future, and a definite term for the privilege, with other safeguards and limitations in the interest of the public. He would also provide for a forfeiture of the license whenever the holder of it joins any unlawful combination in restraint of trade. Reports of the Bureau of Corporations are cited to show that at least 1,046,000 horse power, or more than 19 per cent., of the water power (5,300,000 horse power) now in use by power plants in the United States, is held by "thirteen large concerns, of which the General Electric Company and the Westinghouse Electric and Manufacturing Company are the most important." Moreover, there is some evidence that these concerns really control 33 per cent. A marked concentration of control has taken place in the last five years:

"The people of the country are threatened by a monopoly far more powerful, because in far closer touch with their domestic and industrial life, than anything known to our experience. A single generation will see the exhaustion of our natural resources of oil and gas and such a rise in the price of coal as will make the price of electrically transmitted water power a controlling factor in transportation, in manufacturing and household lighting and heating. Our water power alone if fully developed and wisely used is probably sufficient for our present transportation, industrial, municipal and domestic needs. Most of it is undeveloped and is still in national or State control.

"To give away without conditions this, one of the greatest of our resources, would be an act of folly. If we are guilty of it our children will be forced to pay an annual return upon a capitalization based upon the highest prices which the 'traffic will bear.' They will find themselves face to face with powerful interests entrenched behind the doctrine of 'vested rights' and strengthened by every defense which money can buy and the ingenuity of able corporation lawyers can devise. Long before that time they may, and very probably will, have become a consolidated interest controlled from the great financial centers dictating the terms upon which the citizen can conduct his business or earn his livelihood and not amenable to the wholesome check of local opinion.

"I esteem it my duty to use every endeavor to prevent this growing monopoly, the most threatening which has ever appeared, from being fastened upon the people of this nation."

Panama Canal Topics

Senator Hopkins, a member of the Senate's Canal Committee, has introduced a bill increasing from \$135,000,000 to \$500,000,000 the authorized issue of bonds for the construction of the Panama Canal. This is generally regarded as indicating the committee's conviction that the cost of the work will largely exceed the original estimates, and possibly as pointing to a forthcoming decision in favor of the sea-level plan.—Members of the House committee who returned from the Isthmus last week say the present canal administration is "vigorous, efficient and worthy of public confidence," and predict that, under the direction of the present authorities, "if they are left undisturbed," the canal will be completed in 1915.—A settlement of disputes relating to the secession of Panama has been reached by treaties which were signed last week by Colombia, Panama and the United States. Colombia recognizes Panama's independence. Panama agrees to assume a part of Colombia's national debt and to pay \$2,500,000, as her share, in ten annual instalments. The money is to be furnished by the United States, in accordance with the provisions of an existing treaty.—Steps were taken on the 16th by the Government at Washington in a libel suit against the *New York World* and the *Indianapolis News* for publishing the charges of corruption (relating to the purchase of the Panama Canal Company's property) to which Mr. Roosevelt referred in his letter of December 1st to William Dudley Foulke and in his special message of December 15th. Correspondents of the *World*, the *News* and the *New York Sun* at Washington were summoned to testify there before a Federal grand jury in the case of the United States vs. the Press Publishing Company (the corporation that publishes the *World*); the correspondent of the *Brooklyn Eagle* was summoned to testify before a Federal grand jury in New York, together with a *World* editor and the *World* company's secretary; and four persons connected with the *News* were required to testify in Indianapolis. A suit of this kind, in which the Government is the complainant, is said to be

without precedent. Some lawyers assert that it cannot be maintained.

San Francisco Bribery Cases

Patrick Calhoun, president of the street railway company in San Francisco, is now on trial there before Judge Lawlor, who recently sentenced Abraham Ruef. The charge is that he offered a bribe to a supervisor. There are seventeen indictments against Calhoun, all relating to the overhead trolley franchise, for which it is said that \$250,000 was paid. He is a director in several large Eastern corporations. Mr. Heney has charge of the prosecution, and is continually guarded by several policemen. The courtroom is the one in which Heney was shot by Haas.—During his recent visit to the East, Mr. Heney made an address at a luncheon of the City Club in Philadelphia, in the course of which he said:

"The causes of corruption are the same in all cities. In San Francisco we found two elements at work. Coming from one source was the public service corporation and from another were the saloons and dives, while behind our backs these forces joined hands. In this unholy alliance the boss was the connecting link, but he was simply the agent of the real boss—the big business man who wanted to exploit the public service corporation. The political boss was really the small duck in the pond. Behind him was the public service corporation and the Southern Pacific Railroad. According to my deduction, the head of the legal department of the Southern Pacific Railroad, W. E. Herrin, was the boss behind the apparent boss. But I am convinced that Herrin was after all the tool of the actual boss—Harriman. We must reason from cause to effect. The corruption of the city life in San Francisco was not found in the deals made by Ruef, but was due to the fact that Harriman wanted to use certain men. Our real boss sits in New York City and reaches across the country in working out his schemes."

—At Pittsburg, on the 12th, Charles S. Cameron, president of the Tube City Street Railroad Company, was found guilty of attempting to bribe Pittsburg councilmen to vote for a franchise he desired. One of the witnesses against him was William A. Martin, who, as a councilman, undertook for \$70,000 to procure the legislation, and who is now serving a term in the penitentiary for his corrupt action. Martin carefully avoided giving any testimony injurious to the seven councilmen recently indicted.

An Agreement with Venezuela

Official announcement is made that an agreement with Venezuela has been reached by Special Commissioner Buchanan. Altho no definite statement is published, it is understood that the five

4th. The world knows now, he says, that he did not leave Venezuela to evade responsibilities. He adds that he intends to return as soon as his health will permit, but that he will live in Venezuela as a private citizen. He is confined to his

A SHATTERED DWELLING AT MESSINA.

pending claims or causes of controversy will be referred to The Hague tribunal, and that a new treaty will provide for a settlement of all future disputes by arbitration. Dr. Paul, whom President Gomez sent to Europe, is engaged in adjusting the dispute with the French Cable Company (upon which a fine of \$5,000,000 was imposed), and he predicts that friendly relations with all European Powers will soon be resumed. Castro, he says, will be treated as an outlaw if he returns to Venezuela, and any armed ship in which he may sail will be regarded as a piratical craft. In Berlin, Castro is recovering from a severe and dangerous surgical operation, performed on the

bed, and the surgeons say a month must elapse before he will be able to travel.

Bills Hostile to Japanese Several bills recently introduced in the California Legislature by Grove L. Johnson, of Sacramento, a prominent lawyer, have excited much hostile comment in the Japanese press. One of these bills empowers municipalities to segregate and control Japanese and Chinese residents, and is designed to enable the San Francisco authorities to confine the Japanese of that city within the limits of Chinatown. It also empowers other towns to establish Oriental quarters for Japanese and Chinese. Another bill ex-

cludes Japanese from the public schools. The third says that no Japanese shall be a director of a corporation. This, it is admitted, is aimed at the business of the Japanese, who are accustomed to use the corporate form in the management of their business affairs. Another bill provides that no alien shall own land. Mr. Johnson is an influential member of the Legislature, and there are indications that he has considerable support in San Francisco and elsewhere in the State. Japanese newspapers express surprise and some indignation. Those which represent the Opposition attack the Government, saying that it has been deceived and has accepted with too much haste the advances and promises of the United States. Reports from Japan say that American residents are greatly em-

Roosevelt regards the introduction of the bills as a violation of the understanding reached two years ago, when it was agreed that the questions involved should be left to our national Government. Official reports show that for the twelve months ending with November, 6,017 Japanese came to this country and 5,832 went out of it. The net increase of only 185 is said to indicate that Japan is faithfully observing the agreement concerning immigration.

The Messina Earthquake

One of the most astonishing things about the earthquake is the length of time after the disaster that living persons continued to be found among the ruins. More than once the search for survivors

THE EFFECTS OF THE MESSINA EARTHQUAKE

barrassed, as the bills tend to remove the good impressions caused by the visit of the battleship fleet and the new peace agreement. It is said that President

was abandoned, to be again renewed when by chance another was found. Until the nineteenth day the rescues continued, the last being an aged and decrepit

woman, unconscious, but still breathing. Most of those found late were, however, children, for they withstood the shock, fright and anxiety better than their elders. A five-year-old boy was found alive and well in the ruins of Reggio two weeks after the earthquake. Two girls and a boy were entombed for eighteen days in a pile of ruins near the Church of the Apostles in Messina. They had a sufficient supply of oil, wine, onions and water to keep them from starvation, and they had dug themselves out far enough for their cries to be heard by passing soldiers. A man who had been caught across the waist by the fall of his house and had watched his wife and four children die without being able to help them, was rescued on the fourteenth day. The bodies of Arthur S. Cheney and his wife, the only native Americans to perish in the earthquake, were dug out of the ruins of the Consulate, after many days of labor, by the bluejackets of the "Illinois." Consul Cheney was a Yale graduate of the class of '88, and was appointed to Messina two years ago. In the débris of the orange and lemon stores the bodies of nearly a hundred employees were found together. The stormy weather that has prevailed during the past week has added to the difficulty of rescue and to the misery of the refugees. Slight earthquake shocks continue in southern Italy, and on the morning of the 13th a shock in the northern part excited great alarm among the inhabitants of Lombardy, Piedmont, Tuscany and Venice, altho it did little damage, and there is no reason to suppose it was connected with the Messina earthquake. Temporary towns of wooden buildings are being erected near the ruined cities, and they will probably be rebuilt under governmental regulations as to construction. Many of the survivors refuse to leave their native towns on any conditions. Water and lights have been restored in Messina, and the shipping of oranges and lemons has recommenced.

*

Turkey Accepts an Indemnity

The Turkish Government has agreed to withdraw its objections to the annexation by Austria-Hungary of Bosnia and Herzegovina in consideration

of an indemnity of about \$11,000,000. In addition to the pecuniary compensation to Turkey, Austria abandons her rights in Novi-Bazar; consents to an increase in the customs up to 15 per cent.; admits certain monopolies; and agrees to the suppression of Austrian post offices in Turkish territory where no other foreign post offices exist, should the Porte desire it, and to the abrogation of certain old privileges over Albanian Catholics. This amount of cash will be of very great service to the newly established Government in this crisis. The boycott against Austrian steamers in Turkish ports, however, will not be called off until the affair is completely settled. The acceptance by Turkey of Austria's offer removes the chief question which would have to come before the proposed International Conference of the Powers signatory to the Berlin Treaty. Austria, as well as Germany, is anxious to have the Powers agree about the necessary modifications of the treaty without holding a conference. It is uncertain yet whether England will consent to this. The settlement of this question reduces the chances that Serbia and Montenegro will be able to secure satisfaction for the infringement of their rights, or, rather, the disappointment of their hopes, by the annexation of the two provinces by Austria. They continue their warlike preparations, and the Servian Cabinet has for the third time tendered its resignation to King Peter. The financial announcements of the program of the new Turkish Government was made before the Parliament on January 13th by the Grand Vizier Kiamil Pasha. He reviewed the history of the events that had led to the formation of a constitutional government and expressed the hope of soon seeing Turkey on a level with other great European nations. A British expert would aid in the reorganization of the customs service and British, German and French capitalists would come to the aid of the government in the reform of the finances. Military reforms would be under the German instructors and the naval matters under British. Kiamil Pasha said that the protecting Powers would not assent to the annexation of Crete to Greece, and the matter would be arranged on the

basis of a retention of Turkish sovereignty.

In spite of the refusal of the representatives of other foreign governments to join with them in some form of a protest against the dismissal of Yuan Shi-kai, the British and American ministers, Sir John Jordan and W. W. Rockhill, called together upon Prince Ching, president of the Foreign Board, to inquire whether the dismissal indicated any intention of abandoning the progressive policy. Prince Ching, who has been on terms of personal friendship with the two ministers, received them kindly and assured them that the action did not indicate any change in policy on the part of China. It is semi-officially explained that the ministers took this step not

"with any view to interference in China's internal affairs but because of the existence of special circumstances in which it was feared British and American interests in China might be prejudicially affected by the change and it was felt that the Chinese Government ought to have taken these special circumstances into account."

Japan did not act with her ally, Great Britain, in this matter, but held with the other Powers that it was an impropriety to inquire into the internal affairs of another nation. It is understood that Tang Shao-yi, who has been in Washington on a friendly mission to this country, will not be at once recalled, but will be permitted to continue his tour of the world, spending a fortnight in each country he visits, and reaching Peking about April. The appointment of Liang Ten-yun to succeed Yuan Shi-kai in one of his offices also indicates that the reactionary policy is not dominant, for Liang is a Yale graduate and a supporter of Yuan. The Peking correspondent of the *London Times* gives the following interesting details of the changes that have recently been made in the Chinese capital:

"Macadamized roads, improved drainage, streets kept clean, the side stalls moved into roomy bazaars or markets, traffic handled by trained police in uniform, modern public buildings with the stately pile of the new Foreign Office at their head, electric light, carriages and broughams in place of chairs or carts, improved schools with students in uniform, who play games, are daily given physical drill, and have annual sports, public reading rooms and

lecture halls, and an intercourse with foreigners never before known, daily newspapers with topical illustrations, zoological gardens and botanical gardens, beautifully laid out, where even the highest Chinese do not disdain to drive with their wives and children—all these are changes as striking as the growth of female education and the crusade against opium. Chinese exclusiveness is being profoundly modified by these changes. The highest princes in the land, the brothers and cousins of the Emperor, now drive along macadamized roads in foreign carriages or motors to dine in foreign style at foreign hotels in the common room with the cosmopolitan guests."

Foreign Notes Admiral Rojestvensky died on the 14th at St. Petersburg of neuralgia of the heart. He was in charge of the Russian fleet which left Libau on October 16th, 1904, for Vladivostok, and was destroyed by the Japanese at Tsushima. He was tried by a court-martial for cowardice in surrendering his flagship, but was acquitted.—The Socialists of Dresden made a demonstration in favor of electoral reform, and in attempting to force their way into the palace of the King they came into conflict with the police and a number of them were seriously injured.—In the port-wine growing regions of Portugal the depression in the trade has culminated in rioting. At Regoa a mob fired upon the troops, who in turn charged it with bayonets.—The American battleships on their tour around the world are being received with great cordiality and popular interest at Malta, Athens, Villefranche, Nice and Marseilles, altho care is being taken to preserve the unofficial character of the visit. Rear-Admiral Sperry, in command of the fleet, was given the honor of private audience by King Victor Emmanuel at the Quirinal. The King expressed his deep appreciation of the services that had been rendered by the fleet in the earthquake disaster and his gratitude for the financial assistance of the American people.—The decline of the birth rate in France, which has for many years caused serious alarm for the future of the country, seems to have been checked. The official figures for the first six months on 1908 show that the births exceed the deaths by 11,000. In the corresponding period of last year the deaths exceeded the births by 55,000.

Harvard's New President

BY EDWARD HENRY CLEMENT

LATELY EDITOR-IN-CHIEF OF THE *BOSTON TRIBUNE*

IF Henry Cabot Lodge was, as they say, stamped "U. S. S." in his cradle, "H. U." must have appeared on the brow of A. Lawrence Lowell at the same tender age. The names of the two great cotton manufacturing towns of Massachusetts form the nomen and cognomen of this Boston patrician of the American Republic. If there ever was an aristocracy in the world based on service and earning in its keep, maintaining itself by force of character, quality of brains, and energy in its activities, it is that which won and held for Massachusetts, handicapped as she is by the New England climate and soil in the agriculture of a great agricultural country, her early pre-eminence in manufactures. The mercantile princes of Boston, who took up the fight in trade and politics, who maintained their statesmen at Washington (of whom Daniel Webster was one) to see to it that King Cotton be left a free hand in the South to supply them with their raw material, are represented in the new Harvard president's prenomen, Abbot Lawrence.

Born thus in the purple, the future head of Harvard University was, nevertheless, as rigorously trained and disciplined and exercised in the science and art of lucrative law practice, of investment and speculation, as tho he had had his own way to make in the world. And all the while that "the main chance" has been steadily and successfully kept in view, the higher ambitions of the intellectual life have been as sedulously cultivated. Twenty years of law practice and keen, conservative investment of capital and trust funds in his keeping synchronize with twenty years of literary work of the most solid kind, essays on government, employing the modern scientific methods of comparative study of representative nationalities.

The earliest of these sinewy, austere essays on government commanded attention and gave their author place as a standard authority. His works were at once received into the curriculum of colleges. The latest has been crowned with

a genuine international triumph, acclaimed in England itself, of whose political institutions it treats, as brilliantly as exhaustively, a work better than England itself has yet produced on the subject. If Professor A. Lawrence Lowell were a Frenchman, "The Government of England" would make him a Member of the Institute. It is hardly possible to exaggerate the merits of this powerful, as well as massive, work, at once painstakingly accurate, judicial, profound, yet readable, graphic, and "up to date." General principles and concrete details are treated with equal facility and sure-handedness. Both the philosophy and the external phenomena of British political conditions, both the rules and the exceptions, both the historical relations and precedents and the present practice, are set forth with keen insight, weighed with judicial acumen and judicial candor, temper and justness. To be sure, the "modern movement," the new and extraordinary social drift, finding expression of late in general old-age pensions and in the agitation for assessing land valuation and collecting of landholders the unearned increment for the public treasury, and the taking over, in large numbers of cities, of the public utilities to be run for and by the public, are not dealt with; but this may well be attributed (as indeed is suggested in one place by the author) to their being as yet in the controversial stage; tho, again, this is questioned by so sound and well informed a critic as Mr. Edward Porritt, whose book on "The England of Today" has recently brought him a lectureship at Harvard, and who insists that no phase of politics is today less in the region of controversy than municipal control of public utilities, to which indeed he attributes the model municipal governments of Great Britain. Barring this avoidance of what the author regards as moot questions, "The Government of England" is a very encyclopedia of British politics. Mr. Bryce, who has been consulted at many stages of its preparation; Mr. Dicey, most captious of critics, per-

haps the very highest contemporary English authorities, have pronounced it unequaled as a compendium of such matters—a treatise on English institutions without its peer in the language.

It was for this marked and peculiar talent (of tracing political institutions and movements to their sources), developed by Mr. Lawrence Lowell, that the professorship at Harvard, which he has filled for nearly ten years past, was, indeed, established in the first place. This lectureship is maintained out of the funds bequeathed by the distinguished political reformer, Dorman B. Eaton, to found a chair of "The Science of Government." Under Mr. Lowell it has turned out to be one of the most popular of the university courses, altho the professor has taken care that it should become no "snap" for idlers. He has required rigorous collateral reading on assigned subjects, and has relentlessly tested his students in weekly conferences. Nevertheless, the number of undergraduates taking the lectures have averaged 400 per year, and their interest and enthusiasm have made Professor Lowell one of the best known and most popular of the Harvard faculty with the undergraduate body.

For some years, then, this representative of the very quintessence of Boston's Back Bay wealth, cultivation and social authority, has been within a single step of the chair certain to be vacated in the order of Nature at no distant day. Never was there a more perfect exhibition of the adaptation of means to ends than in the training and preparation of Abbott Lawrence Lowell for the great post he was destined to fill. It had all begun even in the cradle with the dower of per-

fect physical health; if all the "luck" of the fortunate in the world were as forehandedly thought out and prepared for as the Lowells's there would have been no such word as luck in the language. All the kinds of work that Professor Lawrence Lowell has kept in hand during the past twenty years, his books and his business, his dips into politics and school committee, and civic work, his service as a member of the faculty of the Institute of Technology, as well as of the faculty of Harvard, his recent grand

strategy for the union of these two great institutions in a "merger" (which many believe only postponed)—all these would have been impossible to one less broadly grounded in the physical basis of bodily strength and health. Athletics he pursued at college no less strenuously than those who have no other interest, tho, as a matter of fact, he always stood among the first of his class. At twenty-one he was the winner in a mile run with a record that looks well for professional sprinting today. He was

also a leader in the students' society fun-going, and a member of the Hasty Pudding and even of the naughty "Institute." His genuine love of sport in a sportsmanlike spirit makes him an enthusiastic yachtsman, and his feats in the daring management of sailing boats at his Cape Cod summer home are wont to excite the wonder and envy of mere landmen on vacation at the Cotuit hotels. A broad, columnar neck and throat, usually drest with a low collar, as if demanding plenty of room and air, tells at once of the perfect physical condition of the man at fifty-two, with his crisp chestnut hair and mus-

A. LAWRENCE LOWELL,
President of Harvard.

tache and healthy bronze complexion. The latest field in which his honors have been won, the scene of the crucial tests that finally secured his practically unopposed election, was in the faculty meetings at Harvard. Here he showed himself, as he had done while a member of the Boston School Board, a positive, constructive, sane and practical promoter of progress and efficiency. It is claimed today by some of his supporters that every essential feature of his forward policy as a school committee man, tho baffled then, has, after many days, become in turn embodied in the practice of our public education.

As illustrating the forceful originality and fertility of Mr. Lowell's mind working upon problems of education, take the Lowell Institute "School for Industrial Foremen," now in its fifth year. It is in effect "university extension" of the benefits of the Massachusetts Institute of Technology, the "evening school," so to speak, of that great and severe engineering college for the benefit of wage workers busy thru the day. It is no charity fare, this course, so far as quality is concerned, as may be judged by the fact that calculus is required in mathematics the first year. (Professor Lowell was always taking highest honors in mathematics in his own college course.) The object is to train the fittest thru natural gifts, tested by the process of selection in this rather severe course, for positions of industrial superintendence. Mr. Lowell has always agreed with Kipling's notion that the strength of an army may lie, after all, not so much in the staff and regimental commanders as in the non-commissioned officers; and this entirely original scheme of Mr. Lowell's was "framed up" to supply the non-commissioned officers of industry, the sergeants and corporals, that is to say, the foremen of shops with any number of men from 3 or 30 or 300 under them. The professors of the Institute of Technology give the instruction, and the examinations are the same for the same courses as those prescribed for the diploma of the institute, and the certificate of the School for Foremen has proved as valuable as the former in the market for industry. Over fifty a year graduate from this school. The other "concrete case"

of Mr. Lowell's progressive and democratic enterprise in the educational field is his Lowell Institute "evening school" with Harvard professors pledged to give the classes the same quality in character of instruction as they give at Cambridge. There are three great democratic Boston classes on this foundation, deriving its support, of course, from the trustee (Mr. Lawrence Lowell) and the funds of the Lowell Institute. The classes have to assemble in various halls about the city, as the institute has no real estate of its own. There is a class in English, another in philosophy, and a third in Professor Lowell's own specialty, "The Science of Government." He did not call on his fellow-members of the Harvard faculty to give more of themselves than he offered of himself; his lectures are the same as those to his classes at Cambridge, and he addresses at each session of this extension school about 100 students. The class in philosophy has 200 enrolled students and that in English 700. There is besides—and perhaps they were the inspiration of Mr. Lawrence Lowell's generous "university extension"—the teaching of science at the Natural History Museum founded by his grandfather, and the lectureship on theology employing the professors of the Harvard Divinity School.

The new president of Harvard will be the sixth generation of his family of distinguished graduates of Harvard, and the fifth generation to have a hand in the inner directing management and control of the corporation. During seventy years out of the past one hundred and twenty-five some member of his family has been a Fellow, beginning with the John Lowell, of Newbury, whose democratic declaration, anticipating and surpassing in sweeping faith that of Jefferson's, was embodied in the Massachusetts Bill of Rights in the eighteenth century, as above noted. The Republic will take no harm from an aristocracy founded in that spirit and expressing itself in its latest generation in the "School for Foremen" at "Tech," and the great democratic classes of school teachers and clerks in English and philosophy and government taught in the regular Harvard curriculum by Harvard professors.

BOSTON, MASS.

SUI SIN FAR.

Leaves from the Mental Portfolio of an Eurasian

BY SUI SIN FAR

WHEN I look back over the years I see myself, a little child of scarcely four years of age, walking in front of my nurse, in a green English lane, and listening to her tell another of her kind that my mother is Chinese. "Oh, Lord!" exclaims the informed. She turns me around and scans me curiously from head to foot. Then the two women whisper together. Tho the word "Chinese" conveys very little meaning to my mind, I feel that they are talking about my father and mother and my heart swells with indignation. When we reach home I rush to my mother and try to tell her what I have heard. I am a young child. I fail to make myself in-

telligible. My mother does not understand, and when the nurse declares to her, "Little Miss Sui is a story-teller," my mother slaps me.

Many a long year has past over my head since that day—the day on which I first learned that I was something different and apart from other children; but tho my mother has forgotten it, I have not.

I see myself again, a few years older. I am playing with another child in a garden. A girl passes by outside the gate. "Mamie," she cries to my companion. "I wouldn't speak to Sui if I were you. Her mamma is Chinese."

"I don't care," answers the little one

beside me. And then to me, "Even if your mamma is Chinese, I like you better than I like Annie."

"But I don't like you," I answer, turning my back on her. It is my first conscious lie.

I am at a children's party, given by the wife of an Indian officer whose children were schoolfellows of mine. I am only six years of age, but have attended a private school for over a year, and have already learned that China is a heathen country, being civilized by England. However, for the time being, I am a merry romping child. There are quite a number of grown people present. One, a white haired old man, has his attention called to me by the hostess. He adjusts his eyeglasses and surveys me critically. "Ah, indeed!" he exclaims, "Who would have thought it at first glance. Yet now I see the difference between her and other children. What a peculiar coloring! Her mother's eyes and hair and her father's features, I presume. Very interesting little creature!"

I had been called from my play for the purpose of inspection. I do not return to it. For the rest of the evening I hide myself behind a hall door and refuse to show myself until it is time to go home.

My parents have come to America. We are in Hudson City, N. Y., and we are very poor. I am out with my brother, who is ten months older than myself. We pass a Chinese store, the door of which is open. "Look!" says Charlie, "Those men in there are Chinese!" Eagerly I gaze into the long low room. With the exception of my mother, who is English bred with English ways and manner of dress, I have never seen a Chinese person. The two men within the store are uncouth specimens of their race, drest in working blouses and pantaloons with queues hanging down their backs. I recoil with a sense of shock.

"Oh, Charlie," I cry, "Are we like that?"

"Well, we're Chinese, and they're Chinese, too, so we must be!" returns my seven-year-old brother.

"Of course you are," puts in a boy who has followed us down the street, and who lives near us and has seen my mother: "Chinky, Chinky, Chinaman,

yellow-face, pig-tail, rat-eater." A number of other boys and several little girls join in with him.

"Better than you," shouts my brother, facing the crowd. He is younger and smaller than any there, and I am even more insignificant than he; but my spirit revives.

"I'd rather be Chinese than anything else in the world," I scream.

They pull my hair, they tear my clothes, they scratch my face, and all but lame my brother; but the white blood in our veins fights valiantly for the Chinese half of us. When it is all over, exhausted and bedraggled, we crawl home, and report to our mother that we have "won the battle."

"Are you sure?" asks my mother doubtfully.

"Of course. They ran from us. They were frightened," returns my brother.

My mother smiles with satisfaction.

"Do you hear?" she asks my father.

"Unm," he observes, raising his eyes from his paper for an instant. My childish instinct, however, tells me that he is more interested than he appears to be.

It is tea time, but I cannot eat. Unobserved I crawl away. I do not sleep that night. I am too excited and I ache all over. Our opponents had been so very much stronger and bigger than we. Toward morning, however, I fall into a doze from which I awake myself, shouting:

"Sound the battle cry;
See the foe is nigh."

My mother believes in sending us to Sunday school. She has been brought up in a Presbyterian college.

The scene of my life shifts to Eastern Canada. The sleigh which has carried us from the station stops in front of a little French Canadian hotel. Immediately we are surrounded by a number of villagers, who stare curiously at my mother as my father assists her to alight from the sleigh. Their curiosity, however, is tempered with kindness, as they watch, one after another, the little black heads of my brothers and sisters and myself emerge out of the buffalo robe, which is part of the sleigh's outfit. There are six of us, four girls and two boys; the eldest, my brother, being only seven years of age. My father and mother are

still in their twenties. "Les pauvres enfants," the inhabitants murmur, as they help to carry us into the hotel. Then in lower tones: "Chinoise, Chinoise."

For some time after our arrival, whenever we children are sent for a walk, our footsteps are dogged by a number of young French and English Canadians, who amuse themselves with speculations as to whether, we being Chinese, are susceptible to pinches and hair pulling, while older persons pause and gaze upon us, very much in the same way that I have seen people gaze upon strange animals in a menagerie. Now and then we are stopt and plied with questions as to what we eat and drink, how we go to sleep, if my mother understands what my father says to her, if we sit on chairs or squat on floors, etc., etc., etc.

There are many pitched battles, of course, and we seldom leave the house without being armed for conflict. My mother takes a great interest in our battles, and usually cheers us on, tho I doubt whether she understands the depth of the troubled waters thru which her little children wade. As to my father, peace is his motto, and he deems it wisest to be blind and deaf to many things.

School days are short, but memorable. I am in the same class with my brother, my sister next to me in the class below. The little girl whose desk my sister shares shrinks close against the wall as my sister takes her place. In a little while she raises her hand.

"Please, teacher!"

"Yes, Annie."

"May I change my seat?"

"No, you may not!"

The little girl sobs. "Why should she have to sit beside a——"

Happily my sister does not seem to hear, and before long the two little girls become great friends. I have many such experiences.

My brother is remarkably bright; my sister next to me has a wonderful head for figures, and when only eight years of age helps my father with his night work accounts. My parents compare her with me. She is of sturdier build than I, and, as my father says, "Always has her wits about her." He thinks her more like my mother, who is very bright

and interested in every little detail of practical life. My father tells me that I will never make half the woman that my mother is or that my sister will be. I am not as strong as my sisters, which makes me feel somewhat ashamed, for I am the eldest little girl, and more is expected of me. I have no organic disease, but the strength of my feelings seems to take from me the strength of my body. I am prostrated at times with attacks of nervous sickness. The doctor says that my heart is unusually large; but in the light of the present I know that the cross of the Eurasian bore too heavily upon my childish shoulders. I usually hide my weakness from the family until I cannot stand. I do not understand myself, and I have an idea that the others will despise me for not being as strong as they. Therefore, I like to wander away alone, either by the river or in the bush. The green fields and flowing water have a charm for me. At the age of seven, as it is today, a bird on the wing is my emblem of happiness.

I have come from a race on my mother's side which is said to be the most stolid and insensible to feeling of all races, yet I look back over the years and see myself so keenly alive to every shade of sorrow and suffering that it is almost a pain to live.

If there is any trouble in the house in the way of a difference between my father and mother, or if any child is punished, how I suffer! And when harmony is restored, heaven seems to be around me. I can be sad, but I can also be glad. My mother's screams of agony when a baby is born almost drive me wild, and long after her pangs have subsided I feel them in my own body. Sometimes it is a week before I can get to sleep after such an experience.

A debt owing by my father fills me with shame. I feel like a criminal when I pass the creditor's door. I am only ten years old. And all the while the question of nationality perplexes my little brain. Why are we what we are? I and my brothers and sisters. Why did God make us to be hooted and stared at? Papa is English, mamma is Chinese. Why couldn't we have been either one thing or the other? Why is my mother's race despised? I look into the faces of

my father and mother. Is she not every bit as dear and good as he? Why? Why? She sings us the songs she learned at her English school. She tells us tales of China. Tho a child when she left her native land she remembers it well, and I am never tired of listening to the story of how she was stolen from her home. She tells us over and over again of her meeting with my father in Shanghai and the romance of their marriage. Why? Why?

I do not confide in my father and mother. They would not understand. How could they? He is English, she is Chinese. I am different to both of them—a stranger, tho their own child. "What are we?" I ask my brother. "It doesn't matter, sissy," he responds. But it does. I love poetry, particularly heroic pieces. I also love fairy tales. Stories of everyday life do not appeal to me. I dream dreams of being great and noble; my sisters and brothers also. I glory in the idea of dying at the stake and a great genie arising from the flames and declaring to those who have scorned us: "Behold, how great and glorious and noble are the Chinese people!"

My sisters are apprenticed to a dress-maker; my brother is entered in an office. I tramp around and sell my father's pictures, also some lace which I make myself. My nationality, if I had only known it at that time, helps to make sales. The ladies who are my customers call me "The Little Chinese Lace Girl." But it is a dangerous life for a very young girl. I come near to "mysteriously disappearing" many a time. The greatest temptation was in the thought of getting far away from where I was known, to where no mocking cries of "Chinese!" "Chinese!" could reach.

Whenever I have the opportunity I steal away to the library and read every book I can find on China and the Chinese. I learn that China is the oldest civilized nation on the face of the earth and a few other things. At eighteen years of age what troubles me is not that I am what I am, but that others are ignorant of my superiority. I am small, but my feelings are big—and great is my vanity.

My sisters attend dancing classes, for which they pay their own fees. In spite of covert smiles and sneers, they are glad

to meet and mingle with other young folk. They are not sensitive in the sense that I am. And yet they understand. One of them tells me that she overheard a young man say to another that he would rather marry a pig than a girl with Chinese blood in her veins.

In course of time I too learn shorthand and take a position in an office. Like my sister, I teach myself, but, unlike my sister, I have neither the perseverance nor the ability to perfect myself. Besides, to a temperament like mine, it is torture to spend the hours in transcribing other people's thoughts. Therefore, altho I can always earn a moderately good salary, I do not distinguish myself in the business world as does she.

When I have been working for some years I open an office of my own. The local papers patronize me and give me a number of assignments, including most of the local Chinese reporting. I meet many Chinese persons, and when they get into trouble am often called upon to fight their battles in the papers. This I enjoy. My heart leaps for joy when I read one day an article signed by a New York Chinese in which he declares "The Chinese in America owe an everlasting debt of gratitude to Sui Sin Far for the bold stand she has taken in their defense."

The Chinaman who wrote the article seeks me out and calls upon me. He is a clever and witty man, a graduate of one of the American colleges and as well a Chinese scholar. I learn that he has an American wife and several children. I am very much interested in these children, and when I meet them my heart throbs in sympathetic tune with the tales they relate of their experiences as Eurasians. "Why did papa and mamma born us?" asks one. Why?

I also meet other Chinese men who compare favorably with the white men of my acquaintance in mind and heart qualities. Some of them are quite handsome. They have not as finely cut noses and as well developed chins as the white men, but they have smoother skins and their expression is more serene; their hands are better shaped and their voices softer.

Some little Chinese women whom I interview are very anxious to know whether I would marry a Chinaman. I

do not answer No. They clap their hands delightedly, and assure me that the Chinese are much the finest and best of all men. They are, however, a little doubtful as to whether one could be persuaded to care for me, full-blooded Chinese people having a prejudice against the half white.

Fundamentally, I muse, all people are the same. My mother's race is as prejudiced as my father's. Only when the whole world becomes as one family will human beings be able to see clearly and hear distinctly. I believe that some day a great part of the world will be Eurasian. I cheer myself with the thought that I am but a pioneer. A pioneer should glory in suffering.

"You were walking with a Chinaman yesterday," accuses an acquaintance.

"Yes, what of it?"

"You ought not to. It isn't right."

"Not right to walk with one of my own mother's people? Oh, indeed!"

I cannot reconcile his notion of righteousness with my own.

I am living in a little town away off on the north shore of a big lake. Next to me at the dinner table is the man for whom I work as a stenographer. There are also a couple of business men, a young girl and her mother.

Some one makes a remark about the cars full of Chinamen that past that morning. A transcontinental railway runs thru the town.

My employer shakes his rugged head. "Somehow or other," says he, "I cannot reconcile myself to the thought that the Chinese are humans like ourselves. They may have immortal souls, but their faces seem to be so utterly devoid of expression that I cannot help but doubt."

"Souls," echoes the town clerk. "Their bodies are enough for me. A Chinaman is, in my eyes, more repulsive than a nigger."

"They always give me such a creepy feeling," puts in the young girl with a laugh.

"I wouldn't have one in my house," declares my landlady.

"Now, the Japanese are different altogether. There is something bright and likeable about those men," continues Mr. K.

A miserable, cowardly feeling keeps me silent. I am in a Middle West town. If I declare what I am, every person in the place will hear about it the next day. The population is in the main made up of working folks with strong prejudices against my mother's countrymen. The prospect before me is not an enviable one—if I speak. I have no longer an ambition to die at the stake for the sake of demonstrating the greatness and nobleness of the Chinese people.

Mr. K. turns to me with a kindly smile.

"What makes Miss Far so quiet?" he asks.

"I don't suppose she finds the 'washee washee men' particularly interesting subjects of conversation," volunteers the young manager of the local bank.

With a great effort I raise my eyes from my plate. "Mr. K.," I say, addressing my employer, "the Chinese people may have no souls, no expression on their faces, be altogether beyond the pale of civilization, but whatever they are, I want you to understand that I am—I am a Chinese."

There is silence in the room for a few minutes. Then Mr. K. pushes back his plate and standing up beside me, says:

"I should not have spoken as I did. I know nothing whatever about the Chinese. It was pure prejudice. Forgive me!"

I admire Mr. K.'s moral courage in apologizing to me; he is a conscientious Christian man, but I do not remain much longer in the little town.

I am under a tropic sky, meeting frequently and conversing with persons who are almost as high up in the world as birth, education and money can set them. The environment is peculiar, for I am also surrounded by a race of people, the reputed descendants of Ham, the son of Noah, whose offspring, it was prophesied, should be the servants of the sons of Shem and Japheth. As I am a descendant, according to the Bible, of both Shem and Japheth, I have a perfect right to set my heel upon the Ham people; but tho I see others around me following out the Bible suggestion, it is not in my nature to be arrogant to any but those who seek to impress me with their superiority.

which the poor black maid who has been assigned to me by the hotel certainly does not. My employer's wife takes me to task for this. "It is unnecessary," she says, "to thank a black person for a service."

The novelty of life in the West Indian island is not without its charm. The surroundings, people, manner of living, are so entirely different from what I have been accustomed to up North that I feel as if I were "born again." Mixing with people of fashion, and yet not of them, I am not of sufficient importance to create comment or curiosity. I am busy nearly all day and often well into the night. It is not monotonous work, but it is certainly strenuous. The planters and business men of the island take me as a matter of course and treat me with kindly courtesy. Occasionally an Englishman will warn me against the "brown boys" of the island, little dreaming that I too am of the "brown people" of the earth.

When it begins to be whispered about the place that I am not all white, some of the "sporty" people seek my acquaintance. I am small and look much younger than my years. When, however, they discover that I am a very serious and sober-minded spinster indeed, they retire quite gracefully, leaving me a few amusing reflections.

One evening a card is brought to my room. It bears the name of some naval officer. I go down to my visitor, thinking he is probably some one who, having been told that I am a reporter for the local paper, has brought me an item of news. I find him lounging in an easy chair on the veranda of the hotel—a big, blond, handsome fellow, several years younger than I.

"You are Lieutenant ——?" I inquire.

He bows and laughs a little. The laugh doesn't suit him somehow—and it doesn't suit me, either.

"If you have anything to tell me, please tell it quickly, because I'm very busy."

"Oh, you don't really mean that," he answers, with another silly and offensive laugh. "There's always plenty of time for good times. That's what I am here for. I saw you at the races the other

day and twice at King's House. My ship will be here for —— weeks."

"Do you wish that noted?" I ask.

"Oh, no! Why—I came just because I had an idea that you might like to know me. I would like to know you. You look such a nice little body. Say, wouldn't you like to go out for a sail this lovely night? I will tell you all about the sweet little Chinese girls I met when we were at Hong Kong. They're not so shy!"

I leave Eastern Canada for the Far West, so reduced by another attack of rheumatic fever that I only weigh eighty-four pounds. I travel on an advertising contract. It is presumed by the railway company that in some way or other I will give them full value for their transportation across the continent. I have been ordered beyond the Rockies by the doctor, who declares that I will never regain my strength in the East. Nevertheless, I am but two days in San Francisco when I start out in search of work. It is the first time that I have sought work as a stranger in a strange town. Both of the other positions away from home were secured for me by home influence. I am quite surprised to find that there is no demand for my services in San Francisco and that no one is particularly interested in me. The best I can do is to accept an offer from a railway agency to typewrite their correspondence for \$5 a month. I stipulate, however, that I shall have the privilege of taking in outside work and that my hours shall be light. I am hopeful that the sale of a story or newspaper article may add to my income, and I console myself with the reflection that, considering that I still limp and bear traces of sickness, I am fortunate to secure any work at all.

The proprietor of one of the San Francisco papers, to whom I have a letter of introduction, suggests that I obtain some subscriptions from the people of Chinatown, that district of the city having never been canvassed. This suggestion I carry out with enthusiasm, though I find that the Chinese merchants and people generally are inclined to regard me with suspicion. They have been imposed upon so many times by unscrupu-

lous white people. Another drawback—save for a few phrases, I am unacquainted with my mother tongue. How, then, can I expect these people to accept me as their own countrywoman? The Americanized Chinamen actually laugh in my face when I tell them that I am of their race. However, they are not all “doubting Thomases.” Some little women discover that I have Chinese hair, color of eyes and complexion, also that I love rice and tea. This settles the matter for them—and for their husbands.

My Chinese instincts develop. I am no longer the little girl who shrunk against my brother at the first sight of a Chinaman. Many and many a time, when alone in a strange place, has the appearance of even an humble laundryman given me a sense of protection and made me feel quite at home. This fact of itself proves to me that prejudice can be eradicated by association.

I meet a half Chinese, half white girl. Her face is plastered with a thick white coat of paint and her eyelids and eyebrows are blackened so that the shape of her eyes and the whole expression of her face is changed. She was born in the East, and at the age of eighteen came West in answer to an advertisement. Living for many years among the working class, she had heard little but abuse of the Chinese. It is not difficult, in a land like California, for a half Chinese, half white girl to pass as one of Spanish or Mexican origin. This the poor child does, tho she lives in nervous dread of being “discovered.” She becomes engaged to a young man, but fears to tell him what she is, and only does so when compelled by a fearless American girl friend. This girl, who knows her origin, realizing that the truth sooner or later must be told, and better soon than late, advises the Eurasian to confide in the young man, assuring her that he loves her well enough not to allow her nationality to stand, a bar sinister, between them. But the Eurasian prefers to keep her secret, and only reveals it to the man who is to be her husband when driven to bay by the American girl, who declares that if the half-breed will not tell the truth she will. When the young man hears that the girl he is engaged to has Chinese blood in her

veins, he exclaims: “Oh, what will my folks say?” But that is all. Love is stronger than prejudice with him, and neither he nor she deems it necessary to inform his “folks.”

The Americans, having for many years manifested a much higher regard for the Japanese than for the Chinese, several half Chinese young men and women, thinking to advance themselves, both in a social and business sense, pass as Japanese. They continue to be known as Eurasians; but a Japanese Eurasian does not appear in the same light as a Chinese Eurasian. The unfortunate Chinese Eurasians! Are not those who compel them to thus cringe more to be blamed than they?

People, however, are not all alike. I meet white men, and women, too, who are proud to mate with those who have Chinese blood in their veins, and think it a great honor to be distinguished by the friendship of such. There are also Eurasians and Eurasians. I know of one who allowed herself to become engaged to a white man after refusing him nine times. She had discouraged him in every way possible, had warned him that she was half Chinese; that her people were poor, that every week or month she sent home a certain amount of her earnings, and that the man she married would have to do as much, if not more; also, most uncompromising truth of all, that she did not love him and never would. But the resolute and undaunted lover swore that it was a matter of indifference to him whether she was a Chinese or a Hottentot, that it would be his pleasure and privilege to allow her relations double what it was in her power to bestow, and as to not loving him—that did not matter at all. He loved her. So, because the young woman had a married mother and married sisters, who were always picking at her and gossiping over her independent manner of living, she finally consented to marry him, recording the agreement in her diary thus:

“I have promised to become the wife of ——— on ————. 189 , because the world is so cruel and sneering to a single woman—and for no other reason.”

Everything went smoothly until one day. The young man was driving a pair

of beautiful horses and she was seated by his side, trying very hard to imagine herself in love with him, when a Chinese vegetable gardener's cart came rumbling along. The Chinaman was a jolly-looking individual in blue cotton blouse and pantaloons, his rakish looking hat being kept in place by a long queue which was pulled upward from his neck and wound around it. The young woman was suddenly possessed with the spirit of mischief. "Look!" she cried, indicating the Chinaman, "there's my brother. Why don't you salute him?"

The man's face fell a little. He sank into a pensive mood. The wicked one by his side read him like an open book.

"When we are married," said she, "I intend to give a Chinese party every month."

No answer.

"As there are very few aristocratic Chinese in this city, I shall fill up with the laundrymen and vegetable farmers. I don't believe in being exclusive in democratic America, do you?"

He hadn't a grain of humor in his composition, but a sickly smile contorted his features as he replied:

"You shall do just as you please, my darling. But—but—consider a moment. Wouldn't it be just a little pleasanter for us if, after we are married, we allowed it to be presumed that you were—er—Japanese? So many of my friends have inquired of me if that is not your nationality. They would be so charmed to meet a little Japanese lady."

"Hadn't you better oblige them by finding one?"

"Why—er—what do you mean?"

"Nothing much in particular. Only—I am getting a little tired of this," taking off his ring.

"You don't mean what you say! Oh, put it back, dearest! You know I would not hurt your feelings for the world!"

"You haven't. I'm more than pleased. But I do mean what I say."

That evening the "ungrateful" Chinese Eurasian diaried, among other things, the following:

"Joy, oh, joy! I'm free once more. Never again shall I be untrue to my own heart. Never again will I allow any one to 'hound' or 'sneer' me into matrimony."

I secure transportation to many California points. I meet some literary people, chief among whom is the editor of the magazine who took my first Chinese stories. He and his wife give me a warm welcome to their ranch. They are broad-minded people, whose interest in me is sincere and intelligent, not affected and vulgar. I also meet some funny people who advise me to "trade" upon my nationality. They tell me that if I wish to succeed in literature in America I should dress in Chinese costume, carry a fan in my hand, wear a pair of scarlet beaded slippers, live in New York, and come of high birth. Instead of making myself familiar with the Chinese-Americans around me, I should discourse on my spirit acquaintance with Chinese ancestors and quote in between the "Good mornings" and "How d'ye dos" of editors,

"Confucius, Confucius, how great is Confucius, Before Confucius, there never was Confucius, After Confucius, there never came Confucius," etc., etc., etc.,

or something like that, both illuminating and obscuring, don't you know. They forget, or perhaps they are not aware that the old Chinese sage taught "The way of sincerity is the way of heaven."

My experiences as an Eurasian never cease; but people are not now as prejudiced as they have been. In the West, too, my friends are more advanced in all lines of thought than those whom I know in Eastern Canada—more genuine, more sincere, with less of the form of religion, but more of its spirit.

So I roam backward and forward across the continent. When I am East, my heart is West. When I am West, my heart is East. Before long I hope to be in China. As my life began in my father's country it may end in my mother's.

After all I have no nationality and am not anxious to claim any. Individuality is more than nationality. "You are you and I am I," says Confucius. I give my right hand to the Occidentals and my left to the Orientals, hoping that between them they will not utterly destroy the insignificant "connecting link." And that's all.

College Entrance Requirements in Theory and Practice

BY JOHN G. BOWMAN

[One of the first difficulties encountered by the Carnegie Foundation for the Advancement of Teaching in standardizing American universities was the impossibility of obtaining from their catalogs alone a correct idea of the actual conditions prevailing in the universities. In some colleges the catalog seems to represent, not the actual practice, but an ideal, if not unrealizable, at least unrealized. The forthcoming report of the Foundation will contain a comparative study of the admission requirements of American colleges and of the rigidity of their enforcement. In the following article Mr. Bowman, secretary of the Foundation, shows how much the admission of conditioned and special students may modify the official stipulations.—EDITOR.]

THE progress toward uniformity in college requirements for admission has been so far successful that practically all colleges and universities of adequate financial resources have either adopted a minimum standard resting upon the four-year high school, or are making toward it as rapidly as local and institutional conditions will permit. Meanwhile, the existence of irregularities in the admission of conditioned and of special students must be regarded as an anomaly that tends to make the uniformity nominal rather than actual. I venture to question the wisdom of the varying treatment of an educational standard already agreed upon and announced.

Admission with conditions is intended, in theory at least, to render unnecessary the loss of a year to students who fail by a small margin to fulfill the regular requirements for admission. Such practice a generation ago had far more justification than at the present time. When high schools were comparatively few in number and courses in them meager, the colleges supplemented the work in these schools and permitted students to enter courses for which they had not opportunity for complete preparation. There was no idea of competition between the high schools and colleges for students, and under such conditions no one would doubt the value of discretion on the part of a college faculty in admitting deficient students. But since that time the development of secondary schools has rapidly changed the relations between colleges and schools. A concession designed for narrow application has been so widely extended in practice that a large part of the

incoming class of a college is frequently conditioned; and leniency, theoretically justifiable if involving one or two slight conditions, has developed into indiscriminate charity. Such practice tends to defeat a real coöperation between the schools and colleges.

Uniformity of entrance requirements disappears when a large part of the student body may gain admission, not by meeting the stated requirements, but on terms which vary from one institution to another. At Amherst, for example, application for conditional admission is "considered on its merits"; at Cornell the decision rests with the faculty concerned; at Johns Hopkins with a committee; Drake University waives two units; Marietta College concedes three units; Trinity College four; and the catalogs of New York University, Hobart, Lehigh, Princeton, Smith, Pennsylvania, Vassar and the University of California, and others, give no information as to how the matter is handled.

College catalogs usually state definitely the requirements for regular admission, and when no reference is made to a provision for conditioned students there may be some implication that no such provision exists. But the fact is that practically all colleges accept conditioned students and the omission is not serious or misleading. The objection has been made to a full statement of the requirements in the catalog that this would tend to endanger a thoroly honest stand in the admission of students; that it is wiser to admit a bright, strong student with two or three conditions than to admit another who may have only one condition, but

who is reported as slow, or careless, or not physically strong; and further, that it is difficult, if not impossible, to formulate regulations which will indicate definitely the working of a wise and flexible discretion of a faculty.

These objections are not without force, and probably account for the fact that in so many instances no reference is made to the provision. But in my judgment the time has come when the entire question should be reconsidered by college authorities, with a view to their best interests and the interests of the secondary schools. A few instances of the results of the present practice may be helpful.

Out of 697 students admitted directly from the secondary schools into the freshman class at Yale University this year, 391 were conditioned. In other words, 57 per cent. of the incoming class at Yale did not meet the stated requirement of 14.5 units.* At Columbia, 145 men were admitted by examination into the *college* of the university. Seventy of these 145 freshmen met fully the requirements of 14.5 units. Of the 75 freshmen who did not present the full standard the deficiencies ranged from half a unit to seven units. Nineteen men were deficient in four units or more, that is, in at least one full year's work. In addition to this, ten boys, from seventeen to nineteen years of age, who succeeded in passing in the examinations only 3.5 to 8.5 units, were admitted as "non-matriculated students." At Harvard, 58 per cent. of the class of 607 freshmen in 1907 presented less than the full requirements. The conditions were not restricted to any one subject or to any particular group of subjects. Similarly, at Amherst, in 1908, 49 out of 165 were admitted with conditions. Twelve of the 49 students were deficient three or more units. At the University of Illinois, 218 students were conditioned out of a total of 482; at Wellesley, 88 out of 383; at Cornell, 153 out of 862; at Princeton, 201 out of 360. At New York University, 36 men out of 41 were admitted with deficiencies into the university *college*. In the above instances students admitted from other colleges and those admitted as special students are not taken into consideration. In some in-

stances, as at Cornell and the University of Illinois, the number of conditioned students includes those whose academic work, while not satisfying in full the prescribed entrance requirements, provides surplus entrance credit in other subjects. Such students are, of course, only technically deficient.

These figures, while they represent the practice at each institution named, do not readily lend themselves as a means of comparing the practice at institutions which admit by examination only with institutions which accept certificates for admission. Thus, at Columbia, students are admitted only upon examination. The great proportion of students who are conditioned at Columbia have studied the various subjects. At New York University, on the other hand, students are admitted with certificates. Under this plan, when a student is conditioned, it means, generally, that he has not studied at all the subjects in which he is deficient. There is evidently less justification for a conditioned enrollment in the latter than in the former.

The data given, however, indicate with sufficient clearness that there is a wide margin between the announced standards of entrance and the actual bases of admission. In this twilight zone of irresponsibility there is a full field for the exercise not only of wise discretion, but also of indiscriminate excuse for unfaithful work, and above all an opportunity for the sharp-witted boy to play the college against the high school, at the expense of both. Many of the boys admitted with heavy conditions even in the stronger institutions come from first-class high schools and academies, to which they should have been returned until they were ready for college. Some who were not able to make creditable marks in high schools sought and obtained entrance to college after a half-completed course. In one case a candidate for admission as a special student frankly gave as a reason for his application the fact that he had failed to pass the entrance examinations. The sympathetic committee was unable to turn away from so ingenuous a plea. He was admitted.

Obviously, the adjustment between the college and the school is not perfect, but leniency on the part of the college does

*The unit is a course of five credits weekly throughout the academic year of the preparatory school.

not improve the situation. The difficulty arises from the lack of clearness as to just what the entrance requirements actually denote. The catalog statements represent them as indispensable: "A student who wishes to enter ——— College *must* pass" such and such examinations for admission. It is not stated just why the particular requirements are set up as thus fundamental, but one of two theories must be implied: the requirements embody an indispensable minimum of knowledge or they represent an indispensable minimum of training. In other words, an ordinary boy, in order to have a good chance of success in college, must either know the ground covered by the requirements, or he must at least have had the mental drill to be obtained thru their mastery.

In either event the college is illogical when, after thus setting up its minimum, it proceeds freely to make exceptions to it. The records show that a large part of the incoming class has conditions, varying from one unit to five or six, and sometimes more. In the face of such administration it is impossible to maintain that the entrance requirements are a real minimum; they are at best an ostensible minimum, any part of which is liable in most colleges to temporary suspension and occasionally to complete abrogation.

It would seem that, to bring order out of this chaotic situation, it is necessary, first, to decide what the minimum is actually meant to accomplish, and, second, what it must embody in order to achieve this purpose. So much being clear, it must be enforced as the *sine qua non*. Such a minimum would not be by itself the basis of college entrance, but an inevitable preliminary thereto. The student should unquestionably be required to do much more than this minimum before being admitted. In determining the content and extent of the additional studies, an entirely new set of considerations enters. The present arrangement fails to distinguish the general from the individual factor. In consequence, the entire situation is involved in confusion, the one sure result of which is to habituate young students to notions of promotion despite superficiality and failure.

The special student is on a somewhat different basis. This provision is more

in the nature of an equity proceeding, designed to supply a certain degree of elasticity to an otherwise rigid system of entrance examinations. It furnishes a way of meeting the needs of mature and serious persons who for one reason or another have not pursued the regular educational routine, and who, thru extraordinary effort, have won a second chance; their seriousness of purpose, their maturity in development, amply compensate a technical deficiency in entrance units. No sensible person would propose to exclude from academic privilege the student who, relatively late in life and after a sobering experience, thus gains access to collegiate opportunities.

An analysis of the special student enrollment, however, discloses the fact that, instead of being limited to the use just indicated, the classification in question has likewise become a means of reducing or of evading entirely the entrance requirements. Unsuccessful candidates for admission urge and the college agrees that a system of entrance examinations does injustice to certain individuals temperamentally unsuited to display their acquisitions thru written examinations. There is no doubt that this at times happens, tho by no means usually in the cases in which it is alleged to have occurred. But in any event the remedy fails. Further, it is urged that thru admission as special students college advantages may be extended to those who have had no access to adequate secondary schools. Whatever merit this contention may once have had, it has now lost most of its force. The enrollment of special students has increased, tho the cogency of the argument has steadily diminished.

The terms in which college catalogs usually handle this subject are so vague that one is prepared to encounter great laxity and inconsistency in the actual administration. Harvard required sixteen units for entrance, but it admits as specials, without examination, students who are fit "to pursue the particular courses they elect." Out of 2,277 undergraduates there are 231 specials. The Johns Hopkins University requires fifteen units for entrance; it admits with eight units those "qualified by age, character, attainments and habits of study." Out of 165 undergraduates, 23 are specials. The

University of Pennsylvania requires 14.5 units for entrance, but it admits specials on certificates covering requirements for desired courses only. Out of 299 students in liberal arts, 35 entered on these terms. Adelphi College requires 14.5 units, but it admits "specials" of mature age on "satisfactory evidence of proficiency"; and, in consequence, it has 52 unclassified students out of a total of 170.

It is clear that vague descriptions such as I have quoted will not bar out unfit, undeserving and incompetent applicants. If the regular procedure is in danger of being suspended in behalf of candidates who allege that they are mature and qualified, quoting the local clergyman and the family physician in support of the allegation, the college must create some effective machinery for intelligently and severely passing on such applications. A faculty committee, which, for administrative purposes, is liable to reduce itself to a secretary, acting on a few written documents submitted by the candidate himself, cannot avoid or effectively check abuse. In consequence, a measure designed to relieve mature workers of tests no longer important to them has become a back door for the admission of a miscellaneous collection of students of all ages and types, many of them boys of average freshman age, who did not realize the clumsiness or difficulty of admission requirements until they themselves had failed to meet them.

The facts recited above are suggestive. They may indicate any one of several things. For instance, the desire for numbers being keen, lax provisions for the admission of special and of conditioned students may mean that a rigidly enforced entrance standard would threaten seriously to cut down enrollment, and that extraordinary measures have been devised to offset their effect. If this view is correct, the college has embarked upon a dangerous course which threatens its sincerity and its efficiency. Or again, the facts may signify that there is no very close connection between fulfilled requirements and college performance, in which case it is held wise to admit deficient students of average age, or older, and to wipe out their deficiencies by some other method than thru the entrance machinery. If this be true, it is time, not to make exceptions that confuse all standards and demoralize students, but seriously to face the problem of organizing preparatory education on a basis that is really vital and indispensable, and of devising machinery capable of enforcing it. It is bad pedagogical procedure to tell the prospective candidate that entrance to college involves a specific previous achievement, and then to familiarize him with the spectacle of frequent cases in which he learns that the terms have been partly or wholly waived. The ethical and scholarly standards would be higher if a less pretentious requirement were unflinchingly enforced.

NEW YORK CITY

The Tariff and Matrimony

[Altho we did not request any replies to the article in our issue of December 3d by "A Young College Graduate," we received a surprisingly large number of letters and articles from our readers. Unfortunately we have been unable to give space to any of them, except the following, which expresses the general consensus of opinion and which the author desires publisht anonymously.—EDITOR.]

IN a recent number of THE INDEPENDENT appeared an article on "The Tariff and Matrimony." Even if the tariff were lowered and the necessities of life became cheaper (of which there is some doubt), it would seem, perhaps, after careful examination, that the fault of fewer marriages lies often within ourselves.

I was one of a family of four and my father earned \$60 per month. For the same grade of work I am now earning \$100 per month. When my father bought a suit of clothes the price he paid was \$15. As my monthly wages are 66⅔ per cent. above that of my father, this would warrant me in the purchase of a suit of clothes that would cost \$25, and without

a doubt this suit that I am able to purchase for \$25 is as good or even better than the suit that he purchased for his \$15. But no; the suit of clothes that I purchased cost \$45, or, in other words, I have paid \$20 to satisfy my taste or vanity, whichever you will.

Then in the matter of theaters. My father went to the theater three or four times a year; I go as many times in a month. In this respect my expenditures are twelve times as great as those of my father. When he smoked he smoked a pipe; I smoke cork-tipped cigarettes that cost a cent apiece.

As a young man, of his \$60 a month there was perhaps \$30 to pay for living expenses, leaving him \$30 which he might save or spend to satisfy his tastes or pleasure. Of my salary there is about \$50 that I pay for living expenses, and the balance of \$50 I may save or spend as I see fit. He saved most of his \$30 and I spend most of my \$50.

He had the foresight to save for a future day when he would need the money; I, like many others, have not the same foresight, and some day I shall rue it. Perhaps then I shall look for some outside cause to which to lay the blame, without examining myself at all. It is not easy to economize; and we of the present day find it hard to deny ourselves things that we want, and as we earn more money than our fathers we are very apt to give in to our temptations rather than to go thru the moral struggle to deny ourselves the things that our better judgment tells us we should. When the time of marriage came to our fathers they had trained themselves in the matter of economies, and when the extra expenses came, which are sure to come with matrimony, they were better able to meet them, as they had had this training.

As a pupil attending high school I became attached to a young woman, and when I left school and started out into the world it was my purpose to win a position that would enable me to make a suitable home for her. In the trend of the times she also went out into the world of work and for several years earned as much as I was earning. Dur-

ing this time her tastes became expensive; she was not contented with what satisfied her mother. It would have been hard for her to give up her independence for the home that I was then able to offer her; her mother did not have nearly as much to give up. Fortunately or unfortunately for me, she became tired of waiting and married some one a good deal older than herself. He had been long enough in the business world to have secured a place and a good salary.

I am now a little over thirty years of age and for the last ten years I have not been out of employment, and my salary during that time has been over \$1,000 a year. I have never married; not because I do not love home life, but rather because I do not care to run the risk. What risk? I am afraid that I would not be happy and God at least intended that his children should be happy. Then there is not only the risk that I would not be happy myself, but also the risk that the woman that I would marry would not be happy, and that would be the greatest risk of all.

Look about you among the young married people and what will you find? How many of the wives of today are doing their own housework? How many of our mothers had hired help? Many of the young husbands are not able to economize and manage the affairs of the family as their fathers have been able to do before them; both wives and husbands not having that religious horror of debt that their forefathers and mothers had; living beyond their means, purchasing things that they could easily do without, not knowing when they will be able to pay for them. It is well known that people are placing mortgages on their homes to buy automobiles. If the home was sold by foreclosure could we lay the blame to the protective tariff?

Let us be honest with ourselves. There are fewer marriages and fewer homes not because we are materially worse off than our fathers, but because we are not satisfied with what they were satisfied. Our tastes have grown out of proportion to our salaries, and he who dances should pay the fiddler and not complain.

Recent American Excavations in Crete

BY EDITH H. HALL, Ph.D.

[Miss Hall, after graduating at Smith College and taking postgraduate courses in archeology and Greek at Bryn Mawr, was from 1903 to 1905 a student at the American School at Athens, spending much of her time in Crete.—EDITOR.]

ALTHO the politics of Crete have come again into the foreground of the world's attention by reason of her recent appeal for annexation with Greece, the archeological discoveries which are being made in the island are not attracting either the notice they deserve or that which was accorded to the

ace consisted of a complex of rooms, public and private, grouped about a central court. Hardly less brilliant was the work of the Italian mission at Phaistos, where another palace, similar in extent and character, was discovered. The excavations at Knossos alone turned legend to history; we know now that King

earlier and more dramatic discoveries on Cretan soil. The most brilliant of these early excavations, it will be remembered, were made at Knossos, where Dr. Evans, of Oxford, uncovered a vast palace, extending over several acres and indicating a civilization far more advanced than any one would have dared to ascribe to the eighteenth century B. C. The pal-

Minos really lived and that his labyrinth was none other than the Knossos palace. But scholars were not satisfied with this delightful fact; they have set out to determine and characterize the successive stages of Cretan civilization from the neolithic age to the time of Solon. To this end the excavation of smaller sites is quite as important as the discovery of palaces,

FIG. 4.—THE ISLAND OF MOCHLOS, WHERE EXCAVATIONS WERE MADE LAST SPRING. To the right and left of the church are shown the houses which have been cleaned; on the west cliff may be seen the narrow pathway from which the chamber tombs opened. In the foreground are the excavators' tents.

and accordingly the work of the British School at Athens, at Zakro and Palaio-kastro, of the American archeologist, Mrs. Hawes, at Gourniá, and of the

Greek scholar, Mr. Xanthoudides, at Kommos, has thrown much light on the character and chronology of this prehistoric age.

Two more "Minoan" sites have recently been located and uncovered by the American School of Classical Studies at Athens. The results of these excavations have not yet been published, but Mr. Seager has kindly given permission that

This jar stands about three feet high. The decoration is applied in dark glaze with superadded white to the ground of the clay. In the upper zone of decoration the bulls' heads, with double axes and lilies between the horns, had religious significance.

American explorer, Mr. R. B. Seager. The first of these sites, on the island of Pseira, was excavated for the American Exploration Society of Philadelphia; the second, on the island of Mochlos, for the American School of Classical Studies at Athens. The results of these excava-

some preliminary account of them should be given here.

The island of Pseira lies a few miles from the mainland of Crete, just north of the modern village of Kavousi. Measuring scarcely two kilometers in length, and one in breadth, it is void both of wa-

ter and of any sizable vegetation, and sustains today no other population than an occasional flock of goats, which are rowed over for a winter's grazing. Mr. Seager's attention was first called to this island in 1903, when a Turkish boatman spread the news thruout the neighboring villages that ancient potsherds were to be found in abundance upon its rocky slopes. In 1906, after completing excavations at Basiliké, Mr. Seager moved a part of his force

FIG. 8. GOLD SIGNET RING.
Showing a goddess with the sacred tree in a boat.

of workmen across to Pseira, and made trial excavations which at once revealed a Minoan town of considerable importance. In 1907 this town site was further examined, and a cemetery of thirty-three graves was discovered and opened.

The island seems to have been a flourishing outpost of the sea power of Crete in the days of the Knossos palace, but when this maritime kingdom fell it was abandoned, and remained uninhabited until the Roman epoch,

FIG. 7. STONE VASES FROM THE MOCHLOS CEMETERY.

when again some kind of settlement was established there. From Roman times until today it has lain undisturbed. The importance of Pseira as an outpost of Minoan power is due to the good harbor, which lies on the east coast of the island, and which would have afforded ample shelter for sailing craft 2,000 years before Christ, as it does today for small boats beset by storms.

rooms uncovered important finds were forthcoming—finds which may seem insignificant compared with the statues and frescoes found within the houses of Pompeii, but which are yet of priceless value for those bent on wresting from the earth the secrets of early Ægean civilization.

Among the objects found, pottery, which is the most indestructible of all the works of men's hands, plays a conspicuous part. There were found not only large and handsome painted jars (Fig. 2), attesting the high degree of artistic skill attained in that far-away time, but also quantities of fragments of pottery packed here and there beneath the dirt

FIG. 3.—TERRA COTTA FIGURINES OF BULLS. They were found in the Pseira houses and were supposedly used in domestic shrines as a substitute for the actual proprietary offering of a live bull.

On the steep cliffs that flank this harbor was built the town (Fig. 1), intersected by narrow paved streets, which now skirt the hillside, and now rise in broad flights of stairs from the landing to the summit of the cliff. The houses, which were huddled close together as in a modern Cretan village, were built two stories high, of roughly drest slate or limestone blocks, quarried in the island. This massive material, when it fell in ruins, sadly damaged the vases and other small objects within the rooms; yet from the 150

floors. Such small deposits are of an earlier date than the vases found above the floors, and bear important evidence as to the earlier occupation of the town; in this case they show the town to have been inhabited in the third millennium B. C., in what is known as the early Minoan III period. Besides vases of clay there came to light a remarkable series of stone vases, surpass only by those found this year at Mochlos; some small terra-cotta figures of bulls (Fig. 3), ex-

celling in their modeling all terra-cotta statuettes hitherto found in Crete; and, lastly, some fragments of a painted *gesso duro* relief, which show the elegant appointments of the better class of houses even on this barren island.

The cemetery contained, as I said, thirty-three graves, dating from the early Minoan period (before 2000 B. C.) and the middle Minoan period (shortly after 2000 B. C.). Many of them were crammed with vases of clay and stone. The types of these graves were of great importance; some were of the "rock-shelter" type, in which the bodies were laid beneath a jutting shelf of rock, while others were of the cist type, in which a grave is lined with slabs and covered with a capping stone. The rock-shelter type has been found before in Crete, but the cist type is quite new, and forms an important link between the civilization of Crete and that of the Cyclades, where cist graves abound.

The island of Mochlos, where Mr. Seager has been digging this present year, is even smaller than Pseira (Fig. 4), and is separated from the mainland by so narrow a channel that it is most probable that in Minoan times it formed the end of a peninsula. On the slope of the island that faces the shore another town was located and uncovered, but the importance of this town is but little compared with the splendid series of chamber tombs discovered on the west face of the island. Here the steep face of the cliff is broken by a ledge wide enough for an easy pathway. The tombs which opened from this ledge (Fig. 5) were built against the face of the cliff. In some tombs as many as thirty skulls were found, some of which were literally covered with gold ornaments—diadems, bracelets, pins, chains with pendants, strips and plates of gold, constituting one of the most important gold finds, if not the most important, from prehistoric Ægean sites, since the days of Schliemann (Fig. 6). The greater part of these ornaments are made, like the gold ornaments from Mycenæ, of thin plates of beaten gold; some of them are decorated with human eyes done in repoussé work, and may have served, as Dr. Evans in a recent letter to the *London Times* suggests, as a covering for the

eyes of the dead. The gold chains show a skill of workmanship hitherto unsuspected in so early a period of Ægean civilization.

Hardly less lovely than these gold ornaments are the stone vases found in the Mochlos tombs (Fig. 7). Some of them are as small as a thimble, and almost as thin as eggshells, while others stand two feet high. Before Mr. Seager had excavated at Mochlos stone vases had been found only occasionally and in small quantities, and it had been supposed that the stone cutter's art reached the acme of its development in the late Minoan II period (c. 1800 B. C.), but now we must call the early Minoan III period the age of some vases *par excellence*. Nowhere, except in Egypt, so far as I am aware, have stone vases of similar beauty and workmanship been found, so that this series of vases will be a strong argument for trade relations and perhaps for racial connections between Crete and Egypt in this remote epoch.

The most remarkable of all the objects found on the little island of Mochlos is the gold signet ring shown in Fig. 8. It closely resembles the signet rings found by Schliemann at Mycenæ, but it is the first of its kind to be found on Cretan soil. It represents a goddess seated beside the sacred tree in a boat with a bow in the shape of a horse's head. On the shore is a shrine toward which the goddess seems to be beckoning.

It is just such objects as this which have enabled scholars to reconstitute in a fairly satisfactory way the religion of prehistoric Crete, just as, in general, it is the meager material described—vases of clay and stone, gold ornaments, frescos and the architectural forms of houses and tombs, which constitute for the archaeologist what written documents constitute for the historian. From such material scholars have already done much toward determining the chronology, the religion and art of prehistoric Crete. It is to be hoped that further excavations may, in the near future, settle the much vexed problem of who these Cretans were. The excavations of Mr. Seager at Pseira and Mochlos have been a step in this direction.

The Coming Lincoln Centennial

BY EDWIN D. MEAD

AUTHOR OF "THE PRINCIPLES OF THE FOUNDERS," "ORGANIZE THE WORLD," "THE INFLUENCE OF EMERSON," ETC.

THE approaching centennial of the birth of Lincoln has prompted many suggestions as to the worthiest permanent memorial. There will be many meetings, there will be much eloquence; but what shall be done, or what foundations laid, that shall abide and affect the future? The old Kentucky farm where Lincoln was born is to have proper honor and improvement. The Lincoln Memorial University, in the Cumberland Mountains, doing its noble work, under the presidency of General Howard, for the struggling young people of that Lincoln region, is to have its endowment raised. A memorial road from Washington to Gettysburg has been proposed, to be constructed, if not this year, then by and by. These are all fitting and admirable. But the country must for no moment forget the central fact and purpose of Lincoln's life, nor fail to make that the central consideration and commandment of this memorial time. Lincoln lived and died to emancipate and elevate an enslaved and down-trodden race; and he himself would approve or sanction the great celebration which we are preparing only so far as it is to be an occasion for renewed dedication to that unfinished work. Tho, on the 12th of February, we speak with the tongues of men and of angels, if we do not from this commemoration take increased devotion to that cause for which he gave the last full measure of devotion, we shall become as sounding brass or a tinkling cymbal.

By eloquent coincidence, Abraham Lincoln and Charles Darwin, the great teacher of the doctrine of evolution, were born on the same day, February 12th, 1809. We celebrate the centenaries together. The coincidence may usefully impress the lesson that the emancipation of the colored race in America is to be a long process of evolution. It was not something done once for all. Lincoln and his great associates began it. It is for us to carry it on.

Twenty years ago, when General Armstrong was first struck down and lay helpless on his bed at the Parker House, in Boston, worn by anxiety as to how the year's expenses of the Hampton Institute were to be met, there was held at the Old South Meeting House the most impressive and important meeting ever held within its walls since it was saved from destruction. Some of us went to the meeting direct from Armstrong's bedside. Had the old meeting house been saved just for that evening, said Mrs. Hemenway, who had done most to save it, as she came away, she would have felt amply repaid for her part in the saving. As a result of the meeting, \$20,000 was immediately raised in Boston, and Armstrong's mind was at rest. Dr. Hale presided at the meeting, and his stirring word was followed by many stirring words. The touching tribute to Armstrong and Hampton by Booker Washington was one of the most noteworthy early revelations of his eloquence and power. But the most memorable word there spoken was that of Phillips Brooks, enforcing precisely this truth, that an enslaved race is not freed simply by striking off its chains, but only when its mind is liberated and endowed, and it is uplifted to the full stature of citizenship and manhood. Lincoln had greatly begun the emancipation of the race. Armstrong, in his pioneering work of education, was greatly continuing Lincoln's work. It was for us to sustain and promote the higher advance of that emancipation.

Has the country been faithful to Lincoln's memory and task? Has the evolution of emancipation been pushed with proper persistence and earnestness? Are we ceasing our discrimination against men because they are black? It is not a question put by North to South. It is a question put to Springfield, Ill., the old home of Lincoln himself, as directly as to men in Maryland busy with their pitiful disfranchising chicanery. South and

North alike, had we been faithful to Lincoln's memory for these forty years, would be informed today by a spirit which would refuse hearing and toleration for talk like that of a United States Senator but yesterday, opposing the proposal for general compulsory education in his State on the ground that this would include the education of the negro, and the education of the negro would menace white supremacy. He is not a humorist and did not see the irony of this tribute to the negro's native capacity. Cowardly, indeed, is the arrogance of privilege toward lowliness, and mean-spirited, indeed, the man or the race that avoids a fair field and contest with a rival not kept maimed; but baser still is the amphitheater that can relish or will long endure the spectacle. To the still lingering cry of "Black men down!" this salutary commemoration rings back the "All men up!" whose echoes after the forty years were growing faint in too many American hearts.

Had they not grown faint in many, the recent word of Justice Harlan, so like Lincoln's own, upon the Berea College decision—confirming the Kentucky law that, however they themselves desire it, and even in private institutions, a black boy and a white boy may not study together the rule of three or the law of gravitation, the Golden Rule or the Emancipation Proclamation—would have aroused a vastly profounder and louder response:

"If the views of the highest court of Kentucky be sound, that Commonwealth may, without infringing on the Constitution of the United States, forbid the association in the same private school of pupils of the Anglo-Saxon and Latin races respectively, or pupils of the Christian and Jewish faiths respectively. Have we become so inoculated with prejudice of race that an American Government, professedly based on the principles of freedom, and charged with the protection of all citizens alike, can make distinction between such citizens in the matter of their voluntary meeting for innocent purposes, simply because of their respective races? If the court be right, then a State may make it a crime for white and colored persons to frequent the same market places at the same time, or appear in an assemblage of citizens convened to consider questions of a public or political nature in which all citizens, without regard to race, are equally interested; and other illustrations would show the mischievous, not to say cruel, character of the statute in question, and how inconsistent such legislation is with the great

principle of the equality of citizens before the law."

Never before in human history has a race advanced so rapidly in education and general civilization as the race which the act of Abraham Lincoln admitted to American citizenship has advanced in these forty years. Seldom or never has there been seen such magnificent endeavor and expenditure as by the American people in that period for the uplifting of undeveloped and downtrodden men. But it accuses us that along with this we have tolerated up to this commemorative year such gross injustices and hindrances as still persist.

It would be well if there could be laid in Washington, at least in purpose, in this Lincoln centennial year, the foundation of a Lincoln Institute, to be devoted to those studies and activities which shall most broadly and efficiently promote the knowledge, maintain the rights and inspire the duty and devotion of the colored race. It might be allied with Howard University or it might be independent. It should be endowed by the most generous gifts of American wealth and public spirit. It should enlist in its service the best scholarship and the best statesmanship of both races, and its management should be in the hands equally of men of the North and the South, who stand alike for those fundamental principles of justice, humanity and progress for which Lincoln stood and stands. It should represent no sectional sentiment; it should be a temple of national duty and national law, and upon the temple's front should be inscribed those great provisions of the Constitution which embody the results of Lincoln's life and work:

"All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

"The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude."

Such was the reduction to law of Lincoln's gospel and Lincoln's life. That law and gospel have just found forcible

and stirring iteration from Mr. Taft, who comes to Lincoln's place in this Lincoln centennial year. Every public utterance of Mr. Taft's since his election has shown a firmness and a wisdom which inspire high hope and confidence. But he has spoken no word more wise or wholesome or imperative than that recently address by him to the North Carolina Society in New York, and received by it so warmly in the earnest spirit which prompted it, declaring that in every part of the republic the provisions of the great amendments, defining and decreeing equal justice to every citizen, must henceforth be respected, and that only in such sincere observance, whatever social differences may persist, can there be peace and prosperity among our people. In the same spirit is his later word, stigmatizing the gross injustice and unmanliness of the present movement in Maryland against the clear constitutional rights of the colored voter in that State, as in every State in the Union.

This is the teaching, this the spirit, to which every American, North and South, should give new emphasis and new vitality in this sacred commemorative time. The South, the new and living South, knows well that Mr. Taft's words are the words of a friend. The North knows well that it has too long been indifferent on this momentous matter. Mr. Taft has sounded the needed keynote. We can none of us afford to trifle longer with the fundamental law of the land and with fundamental justice. Almost coincident with the word of Mr. Taft comes the thoughtful word of Hannis Taylor, himself a North Carolina man like the men whom Mr. Taft address, concurring with Mr. Taft at least in this, that the future policies of every section of the country must be in full recognition of the national Constitution. This is the granite cornerstone, and it is for the whole nation highly to resolve in this Lincoln time that all efforts to shake that cornerstone shall cease. All else must abide their trials; the law, which pronounces its solemn decrees as to political and civil rights, does not dictate our social behavior. But we

should also, North and South, highly resolve to approach these social issues in the spirit calculated to ease, and not to prolong, the trials. Each State may say if it pleases—altho it would be poor pleasure—that no man in its borders shall vote if he is not forty years old, if he is not worth a thousand dollars, and if he cannot read Greek and Latin; but it must say it in good faith to every man, and it must faithfully enforce the rights of every one who meets the conditions. We are all legally free, we mighty Caucasians, to get what pleasure any of us can in believing that no black man, however well endowed and trained, can ever equal the poorest of us; but Hampton and Tuskegee and Atlanta and Fisk have answered the question whether an educated black man is more useful than an ignorant one. That case cannot be reopened; and we have but to see that every class in the republic is helped to the best training the class is capable of, with no waste of anxiety or rhetoric over their relative capacities. We are legally free, in Boston and New York and New Orleans, to be courteous to whom we please, and to act like men and brothers to whom we please. But we are not morally free to forget that one high principle with gentlemen, if not indeed the highest, is *Noblesse oblige*; and we may well struggle to maintain and justify our traditional pride in advising foreigners, Asiatic and other, that the most prevalent and fashionable American religion is the Christian religion, with its well known definition of "the greatest among you."

That definition Abraham Lincoln never forgot. His life was its illustration. He saw that there is no place where men so easily forget it as in dealing with men of another race. He was called upon to make his memorable and mighty protest with reference to a single race. In our time the problem becomes vastly more complex and pressing. But however complex, there is but one way of solving it—the simple, Christian, fraternal way. It is well for us that the Lincoln centennial comes to say this to us persuasively and commandingly.

BOSTON, MASS.

Literature

Stories of the Darkness

THERE was the darkness of the Middle Ages and there is the darkness of our own age. We know more, we have achieved more, but somehow the darkness remains. The things we know do not affect it, the things we accomplish do not dispel it. And we still love it for the same reason—because our deeds are evil. Most of the fiction written is founded upon them, the evil deeds, because the novelists know that they must lay the scene of their drama in the dark, where we can see it, feel it, believe it, recognize it for our own. But now and then a man brings a torch in, flares it into our faces, and calls it a book. Usually it is not a well-written book, but the author shows us with awful distinctness what is in the darkness about us. And they are the writers rather than the masters of the finest expression in fiction who awaken conscience and bring about reforms. It is in some such spirit as this that Dr. Dawson has written out his advocacy of Church anarchy in his recent novel.¹ He obviously favors the dissolution of the Church as we know it. He charges her with all the crimes she has been guilty of in history, and with cowardice and formalism in the present. And if the doctor were the most advanced socialist, instead of being a minister with a reputation as a revivalist, he could not argue with more indignation and conviction against the present religious order as represented by the churches. Considered as a story, the book is a neat little doe-eyed failure, but it abounds in startling visions and situations relating to life and eternity that are likely to leave a lasting impression. Marie Corelli has also caught the moral fever for showing what lies in the dark, and, in her latest novel,² she dramatizes the effects of the curse of drink upon the middle and lower classes in

England. The treatment of the theme is artificial and strained, as if she had attempted to reduce real life into an egregious melodrama for persons of limited intelligence. But the facts she presents are incontestable—that is, all are except the sequel. In this the drunken, decadent young poet takes the beautiful scarlet lady (whom one gets to think of simply as another, differently shaped bottle of the same evil that is in the ordinary intoxicant) up in a balloon with him. They both get drunk and both commit suicide several thousand feet in the air. Miss Corelli has always found it easy to get off of the earth when she writes fiction—not that she has an ethereal imagination, but she is like the man Sir Gilbert Parker tells of, who was always "devilizing the stars." To devil the stars is one of her peculiarities as a novelist. Another is to be always in a quarrel about her books. There is a preface to this volume address to her American readers in which she claims that we have misunderstood her because we take the London newspaper man's representation. She forgets that her books circulate freely in this country and that we have always been able to understand the worst English fiction without the aid of London reporters.

A novel signed by Giovanni Cena, translated by Olivia Agresti Rossetti, and with a preface by Mrs. Humphry Ward, should be a story of some significance.³ And so it is. It is the autobiography of a compositor in Turin named Stanga. The author claims to have found it written on the back of a bundle of proofs. And it bears the marks of reality rather than of fiction. There is a breathless incoherence about the narrative toward the last, after the writer has determined to cast himself before the king's motor car with the manuscript on his body. Thus he hopes to attract attention to the wretchedness of his class—the artisan class in Italy. It

¹ *A STATE OF FUTURE*. By H. J. Dawson. New York: Doubleday, Page & Co. \$1.50.
² *THE CURSE*. By Marie Corelli. New York: Frederick A. Stokes Co. \$1.50.

³ *THE FURNACES*. By Giovanni Cena. New York: Doubleday, Page & Co. \$1.50.

is a chronicle of misery and hardships unspeakable, and could not be more poignant if the scenes were laid in saddest Russia and Stanga had been an anarchist. That is the difference—he is not an anarchist, there is no resistance in him. He belongs to the martyr spirits who desire to offer life as a sacrifice upon the altar. And whether the story is true or fiction, it at least gives an idea of existence among the artisans of Italy which we have not had before.

René Bazin's story of the wood-cutters in France⁴ has more literary merit, but is less significant. Gilbert Cloquet is merely the artist's model for hunger and misery made dim in the shadows of the great trees. We do not quite realize that it is a picture of modern life in rural France and that it is the eternal protest there against the life-usury practised by the rich or the powerful upon the poor and helpless. It is too well written. The author has idealized his poor man, lifted him into the realm of art, and made his grievance a part of literature rather than of life.

Beatrice Sands in her late novel⁵ offers some shocking revelations concerning what happens in the infants' refuges in New York. She declares that all the incidents recorded are absolutely true, and there is a statement signed by Bishop Potter at the beginning of the volume certifying to his confidence in the truthfulness and trustworthiness of the author. The women employed to care for these infants, she claims, have nearly always failed at something else because of a lack of character, courtesy, or self-control. The cruelties they inflict by way of discipline upon their young charges are almost beyond belief. Dickens never described a more frightful state of affairs in "Oliver Twist." The result, she points out, is that the institution children make the criminal class for the next generation. In one State the record of 1898 showed that 94 per cent. of its criminals had been children trained in its orphans' homes and infants' refuges.

Eastern Wisdom

THIS *Wisdom of the East Series*,^{*} in handy little volumes, is a good thing. It is always a good thing to help along the mutual comprehension of diverse races, and that is what the editors say they intend. The better you know a man or a race the better you like him, and to understand something of the mental and social attitudes of other races, their aspirations and their religious emotions, always makes for this good end. Therefore our thanks to the editors, who bring a little closer the dream of a war-less world. Naturally the series has ups and downs, the selections and the men chosen to write introductions to them are not equally good, more's the pity, for some are excellent. There is "The Instruction of Ptah-Hotep and the Instruction of Ke'Gemni: the Oldest Books in the World," written about 3550 and 3998 B. C., respectively, and a most interesting commentary upon the high grade of civilization, the social wisdom and the sense of justice in ancient Egypt. "The Duties of the Heart," by Bachye, a Jewish rabbi of Spain, and "The Wisdom of Israel," being extracts from the Babylonian Talmud and Midrash Rabbah, are amplifications and illustrations of Jewish teaching of an impressive sort. There is a volume of selections from the Koran, with an introduction outlining the principles of Moslem faith, but the volumes on Sa'di and Abu'l-Ala are far more interesting. Sa'di's "Scroll of Wisdom" is a collection of moral essays illuminating the Persian sentiments of the period, but much more pithy is the "Rose Garden of Sa'di," which holds many such keen penetrations thru the husk to the kernel as when he cries to the derwishes of his day:

"Thou hast no need to wear the cowl of pelt;
Be thou true Derwish in a Tartar pelt."

Sa'di was born at the close of the twelfth century, but two centuries earlier, and forty years before the birth of the famous Omar Khayyam, there was born the Syrian philosopher and—what shall we call him?—agnostic, Abu'l-Ala. Hen-

⁴THE COMING HARVEST. By René Bazin. New York: Charles Scribner's Sons. \$1.50.

⁵WEEPERS IN PLAYTIME. By Beatrice Sands. New York: John Lane Co. \$1.50.

^{*}THE WISDOM OF THE EAST SERIES. Edited by L. Cranmer-Ryng and Dr. S. A. Kapadia. New York: E. P. Dutton & Co. 40 cents net per volume.

ry Baerlein has turned his quatrains into English with a singular success that inevitably challenges comparison with the work of Fitzgerald, and by no means always suffers. He has given us, too, a most suggestive analysis of the poet's attitude toward the inscrutable problems of life. Here are some of the quatrains:

Lo! there are many ways and many traps
And many guides, and which of them is
lord?

For verily Mahomet has the sword,
And he may have the truth—perhaps! perhaps!

Now this religion happens to prevail
Until by that one it is overthrown—
Because men dare not live with men alone,
But always with another fairy-tale.

There is profound wisdom in that reflection on religion's part in society. How strikingly the dreary sorrow of life is caught in the lines:

My faith it is that all the wanton pack
Of living shall be—hush, poor heart!—withdrawn,

As even to the camel comes a dawn
Without a burden for his wounded back.

And finally the burden of making heaven or hell is thrust back on the individual when he cries:

"There is no God save Allah!"—that is true,
Nor is there any prophet save in mind
Of man who wanders through the dark to find

The Paradise that is in me or you.

There is a volume giving the classical book of instruction for Japanese women, that manual of utter self-abnegation that not only works such strange results in the mothers and wives of Nippon, but finds its fruitage, too, in the willing sacrifice of the whole people to the Mikado's call. As for China, no study of the empire can be worth while that does not begin and end in a careful familiarity with the spirit of Confucius and the immeasurable influence of his social philosophy. Unfortunately, the volume called "The Conduct of Life" is too condensed for the best service. Less directly influential, but loftier, it may be, in significance are the teachings of the ancient mystic, Lao Tse, and in their idealistic philosophy, in their broad charity and their moral intensity they place themselves beside the finest thought of Greece. The volume has an excellent introduction. To put into handy form the words of these two men, conservors of the most stable em-

pire the world knows today, is a work for which the editors of the series are to be thanked. It is a pity that more people of the West cannot familiarize themselves with these representative teachings of the Orient until the pettiness of racial antipathies fall away in the consciousness of the unity of human aspiration.

Roman Life and Manners Under the Early Empire. By Ludwig Friedlander. Authorized Translation of the Seventh Enlarged and Revised Edition of the *Sitten-geschichte Roms* by Leonard A. Magnus. Pp. xxviii; 1-428. New York: E. P. Dutton & Co. \$1.50.

The appearance of the seventh edition of this book is proof that it has earned its reputation. The parallel chronological tables of fifteen pages are extremely useful. The first column gives events, the second notices of contemporary literature and authors. Rome was loved as the "city of the soul," and men thought that heaven could show nothing fairer. Abundant water had been introduced, even private houses having it. The city was, however, terribly crowded, and people were constantly crushed to death, sometimes in masses; but no Roman wished to turn away from it. But the Rome of the Emperors was far from being the Rome of the Republic. Not only had the Orontes already begun to "flow into the Tiber," but all Asia had precipitated itself upon Rome. It was also not alone Asiatics who corrupted. Germans, Dacians, Egyptians and others contributed to swell the tide. Martial, who is perhaps soured, speaks of the crowd of newcomers in terms which we can hardly use. The houses were so bad, even in the pictured rooms of the great palaces, that if a crackling was heard a panic occurred. "Even in the latter days of the Republic collapses as well as fires were the daily fare of Rome." Tiberius after one of these fires made the damage partially good by a gift of \$5,000,000. Heavy rains caused almost equal damage. For days whole districts were knee deep in water. Sometimes only the higher stories emerged. Plague and famine ensued. The freedmen, many of whom were Greeks, became by their gains richer than the emperor himself. One of them, Narcissus,

amassed \$20,000,000, and was literally as rich as Croesus. Such men were hated and loathed by the aristocracy, but they were nearly all-controlling. They married even daughters of imperial families when the pride of ancient lineage was at its height. Cleander, a physician, brought to Rome as a slave and a porter, sold in open market, entered the palace and rose to be a chamberlain. Money was the be all and the end all. Chastity was rare in both sexes. Not only Vespasian, but the good Marcus Aurelius was not free from taint. One of the baser emperors, Elagabalos, used to lock up his friends when they were drunk, and send among them wild beasts who had their teeth drawn—a capital joke—but many died of fright. One peculiarity of the Roman was the constant search for a family without children, in hopes that the seeker might get adopted into a rich family, which has suggested that Romans were nearly, if not altogether, incapable of a heartfelt friendship. It is possible that the middle class, of which we hear less, redeemed somewhat the nation, if Rome could be called a nation. There was comparative safety all over realm, even if corruption stalked in broad daylight. The style of the book is choppy, not in good impressive paragraphs. Twenty periods to a page is not uncommon. The author has a monopoly of the phrase "Little Asia."

State and Local Taxation. First National Conference, Columbus, Ohio, Nov. 12 to 15, 1908. New York: The Macmillan Co. \$4.00.

In November, 1907, the First National Conference of the National Tax Association was held at Columbus, Ohio. It was attended by men intimate with the workings of the tax systems of this country and Canada. Thirty-three States were represented and three Canadian provinces. Thirty-one universities sent delegates. Forty-eight papers were presented to the conference, covering from practical and theoretical standpoints nearly every phase and mode of taxation. Free discussion followed most of these papers. The unanimously adopted resolutions of the conference impeach in greater or less degree, we understand, the tax laws of

every State of the Union. The full verbatim report of this conference makes a considerable volume, and it is probably the most important book on the subject that has ever been published in America. It is fairly the American practical textbook on taxation.

The Religion of Babylonia and Assyria, Especially in its Relations to Israel. Five Lectures delivered at Harvard University. By Robert William Rogers. 12mo, pp. xiv, 235. New York: Eaton & Mains. \$2.00.

Professor Rogers, of Drew Theological Seminary, is a competent scholar, and his present work is trustworthy and valuable. To be sure, it is not a work of original research, but rather a useful compilation, and could hardly have been written without the advantage of Professor Jastrow's larger work on the same subject and almost identical title, which is now passing thru a German enlarged translation. Sixteen of the twenty-one plates are of tablets, which will make the unlearned gasp, and we would have preferred to see the bas-reliefs and other designs which would illustrate the myths. To the uninitiated one tablet looks much like another. An introductory lecture gives the history of excavations and discoveries; and there follow chapters on the pantheon, the cosmologies, the charms and omens, and the myths and epics. We are particularly pleased that Professor Rogers has no patience with Winckler's extraordinary notion of the Babylonian theory of the universe, by which there is a pattern in heaven of all lands and history of earth, carried by his followers to fantastic limits in Israelite history. At the same time our author has no fear of seeing the origin of the Genesis Creation and Deluge stories in Babylonia. He fully accepts the knowledge of the name of Yāhwe in Babylonia from a period of 2000 to 1400 B. C., as argued by Sayce, Pinches, Hommel and Clay, and so previous to the time of Moses; but this does not discount the immeasurably superior Hebrew thought of monotheism; but we wish that in transliterating the Babylonian theophorous name, Yaum-ilu, "Yāhwe is God," he had not spelt it with the German J. We heartily commend this volume to those who do not care to give study to the fuller work of Jastrow, particularly in the German edition.

Literary Notes

....Dr. Lyman Abbott is happy in the title he has chosen for his sketch of ideal womanhood. *The Home Builder* pictures her in the several stages of her life from daughter to grandmother, but in the home and its interests her heart abides faithfully. (Boston: Houghton, Mifflin Co. \$0.75).

....The last volume received of the series "The Bible for Home and School" is the *Epistles to the Hebrews*, by Prof. Edgar J. Goodspeed, of the University of Chicago (The Macmillan Co.), 50 cents. It has a careful introduction, and the full Revised text with satisfactory brief notes at the bottom of each page. It is to be commended for the purpose designed.

....Those who are accustomed to think of Karl Marx as an arid economist, useful as a weapon or a target but quite unreadable and unhuman, will have to change their view when the biography by John Spargo is published, for it gives special attention to his poetry and quotes from his love letters. Mr. Spargo is one of the most popular of the Socialist writers in this country and well qualified to produce an enlivening and illuminating biography.

....The Rev. R. J. Campbell, leader of the "New Theology" movement in Great Britain, each Thursday morning preaches to large and interesting congregations, including many who attend no other religious services. There is consequently a freedom and informality about the discourses published under the title, "Thursday Mornings in the City Temple." (New York: The Macmillan Company), which one does not often meet. Religious questions recently under debate are discussed freely. The book is modern, both in method and doctrine, and is superior to the author's "New Theology Sermons," since they are less distinctly theological.

....*The Sunday School Times* celebrates its fiftieth anniversary with fifty photographs of its editors, publishers and contributors. While John S. Hart, LL. D., Henry Clay Trumbull, D. D., and John D. Wattles are given their deserved primacy as those who gave this journal its distinction, most of the photographs are of the later or present collaborators. We recall that thru editorial transfers the relation between *The Sunday School Times* and THE INDEPENDENT has been close and cordial. Apart from its special purpose as an admirable teacher of the International Lessons, we have valued it for its interest, somewhat larger in Dr. Trumbull's time, in Biblical archæology.

....In these days when our city dailies are so generally syndicated and neutralized the weeklies are coming to be of more importance as the organs of personal leadership. Mr. Bryan's *Commoner* has become a power in the land and now Senator La Follette has started a weekly of similar character, published at Madison. The first number of La Follette's contains as its special feature an article by Lincoln Steffens on "The Mind of the State"

and the list of contributors includes William Allen White, Jane Addams, Edward A. Ross, Charles Zueblin, John R. Commons and others prominent in The New Politics. We give the new weekly a hearty welcome, for we are confident that it will in the main be found fighting on the same side as THE INDEPENDENT and its influence will be felt for good beyond the boundaries of Wisconsin.

Pebbles

HE—Do you approve of dancing?

SHE—no.

"Why not?"

"Why, it's mere hugging set to music."

"Well, what is there about that you don't like?"

"The music."—*Princeton Tiger*.

IN Darkest Africa he stands

Upon a mountain peak—

A wondrous view his eye commands,

As fine as man could seek.

A mighty forest stretches far

As his keen sight can reach.

Would you know now what his thoughts are?

Hark! Pregnant is his speech:

"Bully!"

—*New York Sun*.

A LARGE touring automobile containing a man and his wife met a load of hay in a very narrow road. The woman declared that the farmer must back out, but her husband contended that she was unreasonable.

"But you can't back the automobile so far," she said, "and I don't intend to move for anybody. Besides, he should have seen us."

The husband pointed out that this was impossible, owing to an abrupt turn in the road.

"I don't care," she insisted. "I won't move if I have to stay here all night."

Her husband was starting to argue the matter, when the farmer who had been sitting quietly on the hay interrupted:

"Never mind, sir!" he exclaimed with a shrug. "I'll try to back out. I've got one just like her at home."—*The Ingleside*.

STRANGE, INDEED.

THE other day an ingenuous looking person called with the message to the housewife that her husband had sent him for his dress suit, which was to be pressed and redone by the tailor.

"Dear me," said the housewife; "he said nothing to me about it. Did he look quite well?"

"Yes, mum; he wuz in good health and spirits."

And he seemed quite as if he knew what he was about?"

"He did that, mum."

"And did he look as if he were quite content with things about him?"

"He was all that, mum."

"Well," said the lady, "it seems strange that he should only think of that dress suit now, because it's ten years since he's dead and buried, and I've often wondered how he's been getting on."—*Chicago News*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat blunders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

President Lowell

THERE were two elections pending last fall to replace Harvard men, and in certain circles East and West more talk was heard about the successor of President Eliot than of President Roosevelt. In all such discussion the name of Professor Lowell was usually the first to be mentioned, and was always recognized, even by those who favored some other, as "the logical candidate." Of no other of the men mentioned could it be claimed that he possess in so great a degree the peculiar attributes which the country has come to look upon as essential to a Harvard president. The corporation had no more difficulty in recognizing his fitness for the position than the lamas of Tibet in picking out among the new born babies of the land the one marked as the reincarnation of Buddha. Almost any man would look small in Mr. Eliot's place. Mr. Lowell will not.

In *THE INDEPENDENT* of November 5th President Jordan, of Stanford, argued the impossibility of any man's filling the position of president of an American university. He would have to be many different kinds of a man. Professor Lowell is many different kinds of a man.

He has demonstrated his ability as an administrator, a scholar and a teacher. By descent, birthplace, training and character he is pre-eminently qualified for the position. He is a Bostonian, a descendant of the Lawrences and Lowells, and graduate of Harvard College in the class of '77 and later of the Law School. His brother, Percival Lowell, is well known as an astronomical agriculturist, having been for many years engaged in developing the irrigation system of Mars.

The chief objection we have heard urged against Professor Lowell was that he is too perfectly fitted for the position, that he will not revolutionize Harvard as President Eliot did forty years ago. But Harvard is not in need of a revolution as it was then. It has in the last year been very radically transformed, as was pointed out in our Harvard number of two weeks ago. It must now be developed along the new lines in which it has just entered, and in these Professor Lowell has shown a special interest. As a business man and financier he will be able to make the new School of Business Administration thoro and practical. From his experience as a trustee of the Massachusetts Institute of Technology and a member of the committee which negotiated the MIT merger, he will know how to spend the McKay millions in building up a graduate technological school in Harvard. As a trustee of the Lowell Institute he has extended the opportunities of true university work to the people of Boston, and this is also a line along which Harvard has needed to be developed. He is favorably disposed toward the new international movement in education. His best student one year was a young Chinese from Tientsin, who presented a thesis in admirable English on the police system of England in the nineteenth century. On account of his intimate knowledge of English life he may be assumed to be interested in the experiment about to be tried at Harvard of building collegiate residence halls, somewhat on the Oxford system.

Professor Lowell has been foremost in the recent reform in methods of instruction in Harvard. He believes in large lecture classes, because of the stimulating influence of numbers, but he believes also in dividing up the students into

smaller groups every week for written quizzes and personal teaching under competent instructors. His course in Government I is one of the most popular in the university, elected by about 400 students, mostly Freshmen, yet it is thoroughly organized and drilled, on methods similar to the preceptorial system. We may assume that his inauguration will mark the end at Harvard of the *laissez faire* lectures and of unrestricted election of studies.

But the forecasting of an administration is a profitless employment. We have intended merely to indicate the reasons why we are pleased with the action of the corporation and overseers and why we are confident of the prosperity and progress of Harvard under its new leader.

Social Conditions in Pittsburg

THE issue of *Charities and the Commons* for January 2d contains a notable series of articles on social conditions in Pittsburg. These articles are the result of an invasion of the Smoky City more than a year ago by a trained force of social workers in the employ of the Charities Publication Committee, funds for the enterprise having been advanced by the Russell Sage Foundation. The working people, their habits, their health, their homes, their wages, the accidents that befall them, have all been studied with intelligence and care, and the first installment of the reports is now given to the world. No summary can do justice to these papers. They should be read in their entirety by every thoughtful citizen.

The ethnic divisions of Pittsburg's population are graphically illustrated in a couple of charts. Only 33 per cent. of the people are native whites of native parentage, 39 per cent. being natives of foreign parentage and 27 per cent. foreign. The composition of the industrial towns in the neighborhood is much the same. In the industrial population proper, the foreign element overwhelmingly predominates. With the collapse of the trade unions the English-speaking workers have been supplanted, in large measure by Slavs, Slovaks, Poles and Croatians. In the Carnegie Steel Company's labor force are 10,421 workers from

Austria-Hungary, 2,577 from Russia, 2,010 from the British Isles, 287 from Sweden, 58 from Bulgaria, 52 from France, 26 from European Turkey, and 24 from Rumania. The mid-European peoples work for low wages, they are on the whole docile and obedient, and they have been eagerly sought by the mill owners of Pittsburg.

They are used to hard conditions and mean fare. Generally they keep to their former standard of living, at least for a term of years after arriving in America. As a result there is much overcrowding, wretched sanitation and widespread disease. One physician estimates that "as high as 50 per cent. of all young foreigners who come to Pittsburg contract typhoid fever within two years of their coming." Another physician says that "in four years no less than 100 Croatians in the neighborhood of Smallman street had come down with the fever, and that most of them died." Instances of crowding are told that are almost incredible. "Among the Russians of Tustine street," writes Mr. Peter Roberts, "I found thirty-three persons living in one house in six rooms and an attic." He also "repeatedly found cases where beds were being worked double shift—night and day." Their food is generally meager in the extreme. "Give them rye bread, a herring and beer," said a foreman, "and they are all right." Wages are from \$1.35 to \$1.65 a day for the unskilled and from \$1.75 to \$2.25 for the semi-skilled. Yet a common laborer, unmarried, will save from \$10 to \$15 a month and a semi-skilled worker from \$20 to \$25. Thousands of dollars are sent back to Europe, either to pay passage or to help families left behind.

Between 70,000 and 80,000 workers are employed in the steel industry in Allegheny County. The work is hazardous and the number of accidents is appalling. Nowhere in America is human life so cheaply held as in Pittsburg. We believe that no adequate figures of the killed and maimed in Pittsburg industries have even been compiled, tho from time to time estimates sufficiently ghastly are put forth. Yet the maiming of bodies and the taking of life go on incessantly day by day. "Flinn is fifty-two years old," writes Mr. John Andrews Fitch. "The

men who went to work with him as young men are nearly all dead, and today he is one of the oldest men in his mill." Yet there is generally found a pathetic jauntiness among the workers in their attitude toward accidents. Familiarity with death, often in its most horrible forms, robs it of its terrors. "An old steel worker," writes Miss Crystal Eastman, "whom I questioned about his injuries, answered, 'I never got hurt any to speak of.' After persistent inquiry, however, he recalled that he had once fractured his skull, that a few years later he had lost half of a finger, and that only three years ago he was laid up for nine weeks with a crushed foot. Troubles like these are the common lot; they are not treasured up and remembered against fate."

Miss Eastman has a valuable paper on the reaction upon the home life of the daily casualties. She has gone to the homes of those whose bread-winners have been killed or permanently disabled to learn what has followed. It is a tragic story of pitiful shifts of every imaginable sort to keep the wolf from the door. Not the least of the tragedy is the fact that often so hard is the struggle for bread, so all-absorbing are the strife and care to get food and shelter for the living that there is small thought for the dead. There is often no room for grief, for the spirit is too numbed with suffering to feel the pain of loss.

There will be two further collections of these papers. A high standard has been set, but we have no doubt it will be kept to in the remainder. The papers so far published cannot be too widely known.

The Coming Religious Census

THE statement from the Roman correspondent of *The Freeman's Journal*, that the Archbishop of St. Louis is about to report to the Pope that he has collected the statistics of the Roman Catholic Church for the Bureau of the Census, and finds that there are about 15,000,000 members of that Church, reminds us that the full report will doubtless be forthcoming at no distant date.

In some respects the report on religious bodies is probably one of the most difficult to prepare of all the censuses

taken in the course of each decade by the bureau. Readers of *THE INDEPENDENT* will remember that the last report was prepared by Dr. Henry K. Carroll, one of the associate editors of *THE INDEPENDENT*, and not a few of the various perplexities attending the collection and arrangement of the data then became manifest. The present staff have had certain advantages, but no facilities of office arrangements can quite make up for the incongruous conditions in many of the denominations. Take that heterogeneous collection of Baptists—Primitive, United, Separate, Free Will, Original Free Will, and that relic of medieval theology, the Old Two-seed-in-the-spirit Predestinarian Baptists; or the uncialized Methodists—M. E., M. E. South, A. M. E., A. M. E. Z., C. M. E., Zion Union Apostolic, Evangelist Missionary, etc.; or the representatives of the great Oriental churches—Greek, Armenian, Russian, Syrian, etc.

It will be interesting to know just what have survived the developments of the past fifteen years, since the last report was published; what new denominations have appeared, what divisions have been healed. Many questions will arise. What is the ratio of church membership to the total population? Has it kept pace with the nation's growth? Where is the center of gravity of church power? Are there any possibilities suggested by the facts for more complete co-operation between denominations, especially in over-churched and under-churched communities? How about the supply of ministers and what about the salaries paid? These are but some of the many questions which arise in the minds of those interested in the outward manifestations of church life as well as in its inner quality, and from which it is hoped that this report may throw some light.

Special interest will doubtless attach to the presentation of the activities of the churches, to which, we understand, special attention has been given. The foreign missionary work of the various denominations has been pretty fully set forth, but while there have been several attempts to collate home missionary figures, and the educational, philanthropic and other departments of work, they have not met with much success. With

the staff at the disposal of the bureau, it would be possible to accomplish this, at least so far as the peculiar conditions in the different denominations will permit. Where there is such a variety of methods, absolute uniformity of presentation is scarcely possible, yet it may be that one result of the report will be to facilitate the adoption of at least comparable methods. Already another division of the Census Bureau has worked almost a revolution in the methods of municipal accounting, and if the division in charge of this report can secure some sort of co-ordination in the presentation of church facts and figures, it will have rendered a great service.

The great service, however, which such a report can render is in relation to the co-operation of the denominations already referred to as one of the insistent questions. To what degree is organic union of denominations possible? Where and to what degree is co-operation possible? The experiences of the past years have shown that historical development, doctrinal statement, ecclesiastical organization are facts deep rooted in the lives of most religious bodies. Approach to each other must be along the lines of least resistance. What are those lines? The plan of this report includes a fuller statement of the history, doctrine and polity of the different denominations than has as yet been attempted in any one publication. It should furnish the material for careful study and result in improved methods.

Patronage and Bargaining

THE doctrine which in his inaugural address Governor Hughes defines as to the double constitutional duty of the Governor of New York we have had occasion more than once to defend as applied to the President of the United States. Governor Hughes says:

"The executive power is vested in the Governor, but he is not an independent part of the lawmaking power of the State. This is thru his power of veto . . . The Governor is also to recommend to the Legislature such 'matters as he shall judge expedient.' It is not his constitutional function to attempt to, one of patronage or by bargaining with respect to bills to secure the passage of measures he approves. It is his prerogative to recommend and to state the reasons for his recommenda-

tion; and, in common with all representative officers, it is his privilege to justify his position to the people to whom he is accountable. The more closely he confines himself to his province and discharges his responsibility within the limits assigned to him the less confusion will there be in the working of our system and the more potent will be the sway of intelligent public opinion over those charged in their various offices with the duties of representation."

The purpose of the Governor is to insist that it is no part of his duty to try to secure legislation by patronage and bargaining; and to explain why, instead of employing these political methods, which have been in almost uniform use, he has appealed directly to the people. This appeal to the people at large, he says, it is his privilege to make, "in common with all representative officers." Equally, as we have had occasion to say, the President of the United States combines legislative and executive functions. He has the right of veto, and he has the right to make recommendations to Congress. Beyond that, he has all the right which any citizen has, and even more, from his high office, to urge by speech or letter any policy which he regards it as important that Congress should accept. He is not to be blamed for anything except as relates to the validity and courtesy of his arguments.

Governor Hughes was severely criticised by the professional politicians because he went to the people, and in speech after speech attacked the gamblers and their defenders in the Legislature. They thought that was dictation—was outside the rules of the political game. It would have been all right, they thought, if he had made bargains and used patronage for his purpose. They might have made something out of that sort of compromise. He did the unheard of thing of offering rewards to no friends and punishing no foes. He told the Legislature what he thought it ought to do, and when it refused he denounced them to the people. He kept to the front nothing but the bare ethical question, the question the politicians wished to keep hidden; and the people heard him gladly and followed him. He has set an example of a high theory of Gubernatorial responsibility and right which we trust will not be forgotten. The theory is, No bargaining, but appeal to the people if the Legislature fails of its duty.

Edgar Allan Poe

TUESDAY of this week is the one hundredth anniversary of the birth of the poet who has the name of being the most gifted and most unhappy of American men of letters. It is impossible to treat of him solely as a literary man, as we would treat of Washington Irving or Henry W. Longfellow, for his personal character has been the subject of no little debate, growing out of the kindly desire of those who will forgive any fault in a genius to cover up and conceal his demerits.

Poe's literary product is not large. His fame rests on half a dozen poems, and chiefly on two that have supreme excellence for declamation, but make no appeal to the soul. In all there are but thirty-one of them gathered in his collected "Works," only fifty pages, and eleven more added as "Written in Youth." Any one who reads "The Raven" or "The Bells," and adds to them "Lenore" and "Ulalume" has read all that is worth while of his poetical remains—the rest are commonplace. And one should read also his short tales once, for they set the current for their sort. Some of them will be remembered, unless one is surfeited with detective stories.

But Poe's two poems, "The Raven" and "The Bells," have had and deserve immense favor. To be sure, they are as purely mechanical, tho of a far higher mechanism, as Southey's "How the Water Came Down at Lodore," for they have no heart, and are mere *tours de force* in the mosaic of words. Poe tells in one essay how he wrote his "Raven," and it has generally been declared that the essay was another illustration of his imaginative inveracity, but we see no reason why it should not be substantially true. He constructed the poem about the word *Lenore*, much as a modern high building is constructed about the well of an elevator. Then he planned his refrain, altered a bit for each verse, and his alliterations and other vocal touches making all a sinking scale of deepening sadness over lost love. The whole is done with exquisite art, with repetitious variety of expression, and with a musical art unsurpassed and unequalled, unless it be in "The Bells." But it is the veneer and

not the substance order of poetry. It is address wholly to the ear, brushing against, but never entering within, the deeper emotions.

Supreme artist of words as he might have been, and twice was, and one of our earliest teachers of literary criticism, his failure came from his moral lack, which made him in so great a degree a literary faker and failure. In the long and bitter quarrel over his character we stand, mostly, with Mr. Griswold. That belief we have inherited from the writers of *THE INDEPENDENT*, who were his intimate associates while he was living in New York, from Charles F. Briggs, Thomas

THE POE MEDALLION.

Designed by Edith W. Burroughs, and issued this week by the Grolier Club of New York. The original is seven inches in diameter, and was cast by the *cire perdue* process. The medal is based upon a number of contemporary daguerreotypes.

Dunn English, and Horace Greeley. When Mr. Greeley was asked for an autograph of Poe he offered to give it for the amount of the note to which the poet's name was signed. Mr. Briggs joined with Poe in starting *The Broadway Journal*, but had to leave him, and shortly after the publisher suspended its issue because Poe went on a debauch and could not provide copy. Drink was his demon, and notwithstanding denials he died from exposure while drunk. It is a false piety for the dead which condones and apologizes and excuses and denies the historic facts. Because Poe lacked the ethical sense, his biographical apologists have put him into the com-

pany of the Greek gods, innocently lawless in appetite and love. But the Greek gods are all dead, Leda's Jove and the lions of Bacchus, and Hermes with his lies. Let those that hanker after their liberty bid Poe soar like Ganymede to find place as cupbearer in the vanished Elysium. We admire his craftsmanship twice displayed, but on the evidence of two poems of a hundred lines each we decline to lift him to the summit of our Parnassus. Dryden would not have gained his rank if he had written only "Alexander's Feast" and "Saint Cecilia."

The Courting Parlor

RECENTLY a minister in St. Louis opened a Sunday afternoon reception room in his church for the young people of his congregation. He claimed that, since many of them did not belong to that social class which can afford drawing-rooms and the leisure for parties and balls where unmarried men and women are thrown together constantly, he thus provided for them the right environment for making and pursuing acquaintance under less questionable conditions than the parks and other public resorts offer. A universal guffaw went up from the world, and especially from the newspapers. The Rev. Mr. So-and-So's "courting parlor" was facetiously advertised in the Sunday editions. This doubtless forestalled the success of his experiment. For when young people of this class, who have not had their sensibilities blunted by too many matinees and novels, come to the "courting stage" in life, they arrive there privately, and they resent the fact being proclaimed as a social problem; and so they are not likely to be found brazenly in a place that hangs a "courting parlor" sign to the public. Nevertheless, this minister with a too naïve frankness was attempting to solve a far more important problem than the feeding and clothing of the poor.

Now, men and women who live in celibacy's advantages, and therefore are considerably wealthier, are better in society than they do in matrimony. They are bred to the parlor, the theater, the club rather than to the more reserved departments of the home. And one reason why

is because too many matinee women and restaurant-fed men get into it. Meanwhile, little or no provision is made in the present social order for the men and women most worthy to enter and to maintain the marital relation. They are awkward people, what is known as "sticks" if by chance one of them actually wades into real society. The women do not know how to dress or to be "fascinating," and the men do not know what to "say." They are people who have been circumscribed more by a simple, stupid, old-fashioned training in morals than by their limited means. Their courtship is ludicrously obvious and awkward, because they do not know how to "make love." The one thing they know better than any other class of men and women in this world is how to take each other for better or for worse in marriage and to stick to the bargain.

It will not be nearly so difficult to induce a "society woman" to devote much of her time and means to the improvement of social conditions for factory girls as it would to induce her to take some notice of her perfectly respectable and financially comfortable neighbors on the back street, because, mark you, the chasm is so wide between her and the factory girl she wins a halo without danger of social embarrassment. The factory girl must take her as a philanthropist, and it's a grand feeling to be an adored philanthropist. But the nice quiet woman on the back street who is not in need of philanthropy will not receive her upon this insolent basis. Yet, of the two, she needs quite as much. The loneliest people in every community, town or city, are the men and women who are in good circumstances, but who have no social affiliations. The church no longer affords them. A prominent woman-worker in a fashionable city church recently remarked that she despised to make "church calls" because such "persons" were so apt to "presume" afterward. Thus it happens also that there is a very large class of respectable girls, as far removed as possible from factory or shop girls, who live at home according to the old rules of religion and domesticity, prim, stiff, white-muslin-spirited creatures, many of whom are really never born at all into the joy of life. Certainly, they have no social

life. They never meet men of their own class, honest, close fisted, hard working fellows who have not the money or the mind for cheap amusements.

To be sure, such people are not "attractive," but they are durable, and their social helplessness is therefore a matter that should be taken into consideration and provided for. Their worth is to be measured in cubits of character, not in lines and curves of fashion. And they are in exactly the opposite predicament of other people who are unfortunate socially. For we know that one horrid peculiarity of the desperately poor is their social intimacy; they gang together because of mutual feebleness. The sacredness of personality, the decencies and delicacies of life, are some of the things they must learn before the social economist may hope to break the low herd instinct in them. They know each other too quickly, marry without reflection, and live without enough sensibility. This is why they show the same disregard for marriage that is to be observed in the desperately rich. One class has been imbruted by poverty, the other by wealth. One seeks self-gratification because they have acquired the habit from starving so often; the other, because they have acquired the same habit from a system of indulgence. They are really the same kind of people, exercising the same traits under different conditions. One class represents the sediment of society; the other represents the scum—and neither is fit to propagate its kind.

Meanwhile, the chief objection to the class for whom the preacher provided a "courting parlor" is that they are not eligible socially. They make good fathers and devoted mothers. They are honorable and by far the proudest, most exclusive people in this country; but the men would never understand the esoteric life of a club, or the art of tossing off a toast, or making an after-dinner speech, or leading a cotillion. And the women just cannot look stylish, or learn how to play bridge, or preside gracefully at a female convention, or gloss life with little flattering social lies. They are born with too many elbows to their spirits, just as their counterpart males are born with a stiffness in those joints whose genuflections express courtesy and gallantry.

About the only thing either of them is fit for is to marry and bring up healthy, intelligent children according to two or three of the Ten Commandments. But this fitness alone makes them the most valuable people in the land.

And we are in favor of their being brought together. We believe that the results in home life will amply repay every effort of the social economists in this direction, and that it is one of the profoundest, most important problems of our times. For, if enough of these people can be persuaded into the "courting parlor" and from there married to one another, many of our disgraces and depravities as a nation will pass, as health is maintained in the human body by the leucocyte in the blood which devours the germs of disease.

The President at Bay Now that the House of Representatives has asserted its dignity by laying the President's messages on the table and refusing to reply to them, the field has been open to individual Senators; and Senators Tillman and Foraker have plied the pitchfork and wielded the club, with no special injury to Mr. Roosevelt. Senator Tillman's defense shows that he has actually broken no law, but he did all that President Roosevelt charged him with—he sought to secure legislation by which he would enrich himself in the purchase of railroad lands at bottom prices as soon as they could be put on the market. He has to admit that his denial was "disingenuous," but he declares that he did not really lie. It is not the question of his lying, but of his eagerness to buy lands which would not be in the market until he had secured legislation, and allowing his confidential agent to promise for him that he would crowd the matter in Congress until he got the bill past. He has had the reputation of an honest man, but in this case he has damaged it badly. We recall how Vice-President Schuyler Colfax was caught in a denial of his part in the Credit Mobilier corruption, and it clouded the last of his life; while Senator Henry Wilson frankly owned that he had accepted shares from his friend, Oakes Ames, and every one believed he was honest and innocent. It will be strange if Senator Tillman

quite outlives this exposure. As to Senator Foraker's speeches, we hope he may succeed in proving that the negro soldiers, or most of them, were innocent. As to the use of the Secret Service, he appears to be inspired more by illwill toward the President than zeal for pure administration. Whether there have been some errors or even abuses is not the question, but how detective work can best be provided for, and that is something for expert knowledge to settle, and not journalistic omniscience. Meanwhile the President stands quietly at bay and listens to the baying.

Should we, in our
"The Three First" Sixtieth Anniversary
 Number, have spoken
 of the *three first* editors of THE INDEPENDENT, or of the *first three*? We said "the three first," and some hasty critics have found fault and repeated the old argument that there can be but one first. But we could not have spoken of the first three editors, for there was no second three. They did not come in triplets after the first triumvirate. But it is all nonsense and contrary to the usage of all languages to say that there can be but one first or one last. The word *first* is no more always an ordinal numeral than is the word *last*, but the inexpert grammaticasters do not know it. The word *primus* can be plural in Latin—"in primis pugnantes," says Sallust; "*juvenum primi*," says Virgil. Similarly in Greek we meet *protoi*, plural, meaning first, a thousand times. In the Bible we have "first tables," "first horns," "first fruits," "first inhabitants," "first and last acts," "first ways," "first principles," etc. As far back as 1851, when the State of Massachusetts printed Gould Brown's "Grammar of English Grammars," that distinguished author discuss this question, calling attention to the fact that a painter's "first pictures" will not bring the price of his "last pictures," and a series of English scholars ever since have hammered the heads of the small critics, but with no success, for the latter do not read the arguments. To say "the first two" or "the first three" is proper if the objects come in pairs or triplets; but if we are speaking simply of order of precedence it is better to say the two or three first.

To say "the first three" is absurd when there happen to be only four or five in all.

Improving Washington

Mr. James B. Reynolds has rendered a conspicuous service to the country in his investigations of the city of Washington, D. C., and his recommendations to the President as to how conditions there can be improved. These the President has indorsed and sent to Congress for action. Briefly, Mr. Reynolds recommends the substitution of a single head or Governor of the District of Columbia in the place of the present three commissioners, the establishment of district or municipal departments appointed by the Governor instead of the existing bureaus, and the creation of a new department known as that of Housing or Labor. Despite the growth of the Galveston or Des Moines plan of city government by a board of business men, we incline to believe a single executive head for the District of Columbia would, as the President says, "increase efficiency, determine responsibility and eliminate delays," and the municipal departments headed by single commissioners would yield the same advantage. The creation of the new Housing Department, however, would be the most important reform of all, for at present bad houses, bad sanitation and unwholesome methods of living and working are all too prevalent in Washington, while pawnshops, loan and industrial insurance companies, and employment bureaus and other agencies engaged in exploiting the poor have altogether too free a hand, and should be brought under the direct control of a competent department. Washington should be the model American city, and, as it has already planned out a far reaching scheme for its future material and architectural development, so it should similarly adopt measures looking to its present and future political and social well-being.

Here is a curious
The Night-Riders paragraph from a
 private letter from
 the South, written to George Foster Peabody shortly before the conviction of the Tennessee night-riders:

Let me call your attention to the fact that

this "Night Rider" business is essentially a hopeful development. It is the first fruits of the mob spirit reaching higher with its lawless hand. I have no doubt but that the two prominent lawyers in Tennessee who have just suffered horribly at the hands of a mob, have many a time shrugged their shoulders nonchalantly over the lynching of negroes. When the mob spirit begins, as it is beginning, to hoist the engineer with his own petar the dominating forces of public opinion are going to see what some of us have been pointing out all the time, that the mob that lynched the negro for the *unnamable* crime is father to the mob that lynched him for *other* crimes and grandfather to the mob that now lynches him for *no* crime, and great-grandfather to the mob that lynches the white man and burns his property.

That is, things will get worse before they get better.

More Apology Needed Mr. Erving Winslow, Secretary of the Anti-Imperialist League of Boston, has issued a little pamphlet which he calls "Apologia Pro Sua Vita," an apology for its existence. We read it with some amusement until we came to this passage, which begins a classification of the opponents of the League:

"The first class, the altruists, are, of course, sincere. They believe that roads and bridges, sewers and docks, schools and missions, are vital benefits which make the demand for independence superfluous and vain. Why liberty when you have bread and circuses?"

THE INDEPENDENT has all along been an opponent of the Anti-Imperialist League, and always on the altruist basis, and we declare this characterization an insulting travesty. There are no such altruists as are described. THE INDEPENDENT has always asked for the speediest giving to the Philippines as much independence as Arizona has, and later, under the same judicious conditions which we require here, as much independent self-government as we have lately, after years of preparation, given to Oklahoma. Mr. Winslow closes his description of this altruist class by saying that "no foreign civilization was ever successfully imposed upon a people," a ridiculous contradiction of all history. It has been done over and over again. Greece did it; Rome did it; England has done it; and the latest example is that of Japan, which is being followed by China. That is the business of civilization, to impose itself on peoples.

Several weeks ago a crime **Not Infidels** was perpetrated in one of the suburbs of Constantinople, which, at the time, aroused a great deal of racial antagonism. Regarding it, the Sheikh-ul-Islam, the religious head of Islam, has lately issued the following remarkable declaration, which we translate from a Turkish paper:

"I confess that our people cannot yet be called civilized, and that our officials are not yet able to perform well their duties. This lawlessness is explained by some as an effervescence of religious feeling, in which they find an extenuating circumstance. In fact, however, this crime and its results show the ignorance of our people. There is no verse in the Koran which calls Christians infidels. The Koran gives this name to fire-worshippers, but toward the Christians, whom the Koran calls Nazarenes, it commands that Mohammedans should act as friends.

"For the application of the term 'infidel' to Christians, the Government has given occasion for political reasons. In times when war was to be proclaimed against certain Christian governments, such ideas were made use of. The Koran, however, had commanded the cherishing of friendly relations with the Christians, whom it calls Nazarenes, and therefore the people were to refrain from making war against them.

"Thus the Mohammedans many times, instead of defending their religion, have in ignorance undertaken what was directly contrary to it. Unfortunately, the conduct of the Christians also has not been different from that of the Mohammedans, and they have met Mohammedan bigotry with bigotry on their own part."

Primitive Religion To one fact in relation to the discovery by two French priests in a cave in the Corrèze of portions of the cranium and skeleton of a primeval man we would call attention, or at least we would raise a question. These remains belong to the end of the Tertiary period, when man first appeared, so far as we know, on the earth, and when his structure, while definitely human, was of a very low order. The body had apparently been buried. That implies some respect for the body of the dead. Why so? Further, there was found near the body part of the hind leg of an animal of the ox family, altho otherwise this portion of the cave was free from animal remains. Why was it put there? Was it as food for the dead?

Even so in early Egyptian, Babylonian and Hindu, and the law of an ancient is often associated with other food for the dead in funeral ceremonies. If this seems most probable, then must not these very earliest savages, whom we liken to the beasts they hunted, have had a religion, and belief in a future life? That seems surely to follow.

Doubtless the great majority of the people who have read the reports of the trial of J. Thornton Hains for the murder of Annis believe he deserves the full penalty of the law. The jury acquitted him on the ground that it was not conclusively proved that he had aided his brother before the deed; at least, they say so, and that the "unwritten law" did not influence their decision, altho the counsel made the most of it. It looks since this and the Thaw trial much as if we had come to the position in which no one can be convicted who kills a man that has wronged or seduced his wife or his friend's wife. In criminal affairs the defense has got the better of the prosecution, what with "unwritten law" and emotional insanity, another name for anger or jealousy. Thus private vengeance is protected by courts and juries and law becomes a farce.

Thus prohibition spreads. New Tennessee will become all dry, following Georgia, and South Carolina proposes to follow. But the most curious and telling recognition comes not even from the liquor dealers' associations, which are in affright, but from the cigar and cigaret makers, who complain that the closing of the saloons is followed by the reduction in the use of tobacco, and they propose to join the liquor dealers in opposing further prohibitory legislation. Possibly greater economy in tobacco expenditures might not be a loss to the country. Possibly corn and potatoes may prove quite as useful a crop as tobacco.

France, by the common consent of its people, returns to the guillotine. For years not a murderer had been executed, but now messieurs the murderers are in a panic, for four of them have been de-

capitated, and a hundred more are awaiting trial. Does the death penalty deter from crime? France now, after long experience of imprisonment, thinks so, for since the guillotine was put in storage horrible murders have greatly multiplied. They think that reformation is not the principal object in punishment, but protection of the community. In this country it is the courts and juries that save murderers from the noose or the electric chair.

No current American writer has been more loved than Edmund Clarence Stedman, the first anniversary of whose death was celebrated in this city last week by local men of letters. Particularly have we enjoyed the tribute from William Winter, a friend from his youth, who marked his passionate faith in the poetic art, his steadfast adherence to "the state-ly, lovely, ancient traditions of English poetry," and the undaunted and unconquerable spirit with which he met adversity as well as prosperity, ever devoted to the ministration of beauty.

What, a charity trust? But why not? The late Louis A. Heinsheimer left by his will a million dollars to the six chief Jewish charities of this city on condition that they either consolidate or federate for the systematic collection of funds; and they will do it. Thus modern methods invade benevolence as well as business, and no law will intervene to prevent competition. Mr. Heinsheimer was a distinguished New York banker of the firm of Kuhn, Loeb & Co.

There is one objection to raising the President's salary to \$100,000 which has not received consideration. It would increase the degree of prevarication in the common remark that certain lawyers, insurance officials and vaudeville artists "get twice the salary of the President."

The progress of civilization appears in the announcement that the Ameer of Afghanistan has introduced into his kingdom post cards with an elaborate border of flowers.

INSURANCE

More About the Washington Life

FURTHER details regarding the Washington Life and its reinsurance with the Pittsburg Life Insurance and Trust Company, to which we called attention in our issue of January 7th, show that the transaction was undertaken only after careful consultation with Miles M. Dawson and other eminent counsel, who agreed perfectly as to its absolute legality. The sensational accounts published regarding this company and its recent reinsurance of its business primarily arose because of a thoughtless disregard of proper publicity. The approval of the New York Insurance Department was not obtained in the matter of reinsurance, for the reason that under the insurance laws such approval is not required. The law also contains a plain provision authorizing reinsurance in companies not admitted to do business in New York. As an evidence of good faith and good intention, however, the Pittsburg Life and Trust Company arrived at an understanding with the Attorney-General of New York State, whereby the solvency of the company having been established to his satisfaction and the safety of policyholders having been assured, the company would apply for admission to do business in New York, but pending this the securities transferred to the Pittsburg concern were to be returned to New York, and the physical custody of them is now with the Washington Life, as was agreed. The New York Department examiners are now in the process of examining the securities and in checking the same.

Unnecessarily Restrictive

GIVING an account of his stewardship during the year 1908, President Kingsley, of the New York Life Insurance Company, points out to the members of that corporation a net loss of, approximately, 6,000 in their numbers, due to the restrictive provisions of existing laws governing the operations of life insurance companies in this State. For example, the company issued during 1908 new insurance under 63,000 policies, but it lost, thru various causes, existing in-

surance under 69,000 policies. In the face of this certain deficiency by the end of the year, some time prior to that date the management were compelled to "slow down the busy wheels or risk committing a misdemeanor."

There is something radically and inherently wrong with laws governing life insurance which prevent them making good, and more, the natural waste and loss which must occur during the year. A company not one-fourth the size of the New York Life, but domiciled in another State, issued \$309,000,000 of new business during 1908, while the New York Life, fearing to run too close to the statutory limit of \$150,000,000 allowed it, finished with less than \$140,000,000.

The results recorded would seem to indicate that to some extent section 96 of the insurance laws is injuriously interfering with the economics of the business, and that the arbitrary restriction of the amount of new business a company may write is an injury to the interests of company membership. That the matter should receive the careful and thoughtful consideration of Governor Hughes and the Legislature is too plain for argument. No business can permanently prosper that shows a net loss in volume every year.

HENRY MOIR, actuary of the Provident Savings Life Assurance Society of New York since 1901, resigned that position the first of this year to become associate actuary of the Home Life Insurance Company. He will, however, remain on the directorate of the Provident Savings, meanwhile, acting in an advisory capacity in the actuarial department. In his new position Mr. Moir will take on the detail work formerly done by William A. Marshall, who is both vice-president and actuary. Herbert N. Sheppard will continue as assistant actuary. Henry Moir is regarded as one of the leading actuaries in the country. He is vice-president of the Actuarial Society of America, a fellow in the Faculty of Actuaries of Scotland and the Institute of Actuaries of Scotland. He was born in Scotland in 1871 and came to this country in 1901 to associate with the Provident Savings.

FINANCIAL

John W. Castles

THE selection of John W. Castles as president of the Union Trust Company in place of the late Edward King is regarded among bankers as eminently wise. Mr. Castles came from New Orleans several years ago to become the head of the Guaranty Trust Company, and under his administration the institution has shown a remarkable degree of expansion and success. Before coming to New York he had estab-

JOHN W. CASTLES.

lished for himself a wide reputation throughout the South as a banker of great ability coupled with conservatism. Mr. Castles was one of the New York bankers to foresee trouble prior to last year's panic, and for months preceding the event had been husbanding the resources of his institution with a view to meeting just such a tax as was imposed on the whole financial structure. The result was that the company, of which Mr. Castles was president, also the storm broke, was in a position to extend very substantial aid to other institutions during the trying period which followed. Mr. Castles

also took a prominent part in the conferences between financiers, and was in the lead in the movement to relieve certain other trust companies from distress. Mr. Castles is the third president of the Union Trust Company, the other two having been Isaac H. Frothingham and Edward King. The capital of the company is \$1,000,000; the surplus, including all undivided profits, over \$8,250,000, and the total resources over \$65,400,000. The Union Trust was chartered in 1864, and for twenty-five years has carried a large reserve, altho the law requiring such reserve was only past a few years ago.

First National Bank

FRANCIS L. HINE, for ten years vice-president of the First National Bank, was last week elected president. Mr. Hine was born fifty years ago at New Milford, Conn., and began his career in this city as a clerk of the Nashawannuck Manufacturing Company, and afterward became its president. In 1891 he organized the Astor Place Bank and became its vice-president, but retired in 1896 to become cashier of the First National. Mr. Hine is a director of many companies, including the Rock Island Company, Chicago, Rock Island & Pacific, St. Louis & San Francisco, Chicago & Eastern Illinois, American Cotton Oil, Brooklyn Trust, Fidelity Fire Insurance Company, Home Life Insurance Company, National Biscuit, United Bank Note, United States Rubber, and William Cramp & Sons' Ship and Engine Building companies. He is also vice-president of the Review of the Reviews Company and a director of the Union Theological Seminary. The capital of the First National is \$10,000,000, its surplus over \$17,000,000, and its deposits over \$134,500,000.

... Frank A. Vanderlip, vice-president, was last week elected president of the National City Bank in place of James Stillman, retired. The capital of the National City is \$25,000,000, its surplus over \$25,500,000, and its average deposits almost \$100,000,000. An article about this bank, with a picture of Mr. Vanderlip, appeared in our issue of December 24th.

The Independent

VOL. LXVI NEW YORK, THURSDAY, JANUARY 28, 1909

No. 3139

Survey of the World

California and the Japanese

Mr. Roosevelt gave to the press on the 19th a telegram and a letter which he had sent, three days earlier, to Governor Gillett, of California. In the telegram he expressed an earnest hope that action upon the anti-Japanese bills pending in the California Legislature would be deferred, saying that his knowledge of the international situation satisfied him that the passage of the bills "would be of incalculable damage to the State of California as well as to the whole Union." In his letter he said:

"MY DEAR GOVERNOR—I am greatly concerned over the anti-Japanese bills which are apparently going thru or are on their way thru the California Legislature. They are in every sense most unfortunate. At last we have in first-class working order the arrangement with which much difficulty we succeeded in getting thru two years ago. The Japanese Government are obviously acting in entire good faith. During the six months ending October 31st last the total number of Japanese who have come to the mainland of the United States has been 2,074, and the total number who have left has been 3,281. In other words, the whole object nominally desired by those who wish to prevent the incoming of Japanese laborers has been achieved.

"More Japanese are leaving the country than are coming in, and by present indications in a very few years the number of Japanese here will be no greater than the number of Americans in Japan; that is, the movement will be as normal in one case as in the other, which is just what we desire. There is, therefore, no shadow of excuse for an action which will simply produce great irritation and may result in upsetting the present agreement and throwing open the whole situation again."

"These agitators," he added, hampered the national Government with respect to the immigration agreement reached thru the friendly initiative of Japan. Was it not possible, he asked, "to get the Legislature to realize the great unwisdom of

what is being done?" Governor Gillett replied by telegram on the 18th that he had "caused the bills to be held up" temporarily. The two providing that no alien shall be a director of a corporation, and forbidding Asiatic aliens to own land, had been reported favorably. On the night of the 19th Governor Gillett published a statement. After conferring with leading members of the Legislature, he said, he was convinced that no legislation directed against the Japanese would be enacted:

"I am satisfied that the people of California, and particularly the members of our Legislature, appreciate the efforts being made by the Federal Government and the representatives of Japan to stop emigration to this country of Japanese laborers, skilled and unskilled. There can be no doubt that the Japanese Government is acting absolutely in good faith in its endeavor to prevent its people from emigrating to our country, and in my judgment it would be a serious mistake while they are so doing to enact any laws against the Japanese people. This question is one in which the Federal Government is particularly interested, and its wishes should be carefully considered, and will be, I am sure, by the people of California."

It is understood that the Governor will veto any one or all of the bills if they come to him. On the 20th, consideration of them was deferred for one week, by a vote of 43 to 34. Ex-Congressman Johnson, the author of three of them, says that no attention should be paid to the President's requests, because nothing was done by the Federal Government two years ago, after similar bills had been withdrawn. He and other Californians question the accuracy of the Government's immigration figures, but Secretary Straus insists that they are absolutely correct. The prediction is now made that all of the bills will be defeated in the Legislature except, possibly,

the Government. The Government is asking that this will be made to apply to "all aliens." On the 23d Mr. Johnson introduced a resolution urging California's members of Congress to work for such an extension of the Chinese exclusion laws as will make them applicable to all Asiatics. The President regards the question as one of much importance, and is asking for a general expression of public sentiment against the bills. In Japan, the hostile and irritating comment has been made chiefly by the sensational *Hochi*, which is the organ of Count Okuma. This journal's course has been disapproved by prominent Japanese journals of the better class. These, saying that the bills indicate a purely local movement, express confidence in the American sense of justice.

Panama Canal Libel Case

Many witnesses were examined last week before Federal grand juries in Washington and New York, in proceedings relating to libel suits of the Government against the New York *World* and the Indianapolis *News*, for the publication of the charge that the purchase of the Panama Canal Company's property was attended by corruption yielding enormous profits to the President's brother-in-law and Judge Taft's brother. Authoritative information as to the nature of the proceedings and the statutes to be used was still withheld from the public. There is reason to believe, however, that in New York the Government relies upon a statute which provides that for offenses committed on a Government reservation (such as West Point or Governor's Island) the laws of the State which were in force in 1825 shall be available. This statute, enacted in 1825, was re-enacted in 1898, and it may be that recent libel laws of New York, as well as the very old ones, can be applied. Witnesses have been examined to prove the circulation of the *World* on a reservation. It is understood that in Washington the Government will rely upon either the libel law of the District or the common law and British statutes in force in Maryland in 1801, these having been taken over by the District code of 1902. Whether in New York or in Washington, the penalty may be imprisonment or fine, and that

the Government seeks the indictment of the *World* in both cities, and the indictment of the *News* in Washington. Among the persons testifying last week were Secretary Root, Senator Knox, Douglas Robinson, Charles P. Taft, William Nelson Cromwell, and many newspaper correspondents, reporters and clerks. Upon complaint of the *World*, the subpoenas originally issued in New York were pronounced defective and set aside by Judge Ward, of the Circuit Court. They did not name a defendant. Before this decision, another form, meeting the requirements of it, had been substituted by the Government. Owing to the secrecy observed and the unusual character of the proceeding, the matter has been much discussed in the press, and the assertion is still made by lawyers of prominence that prosecution by the United States Government for a libel against itself is not feasible. In the Senate, Mr. Rayner, asserting that the machinery of the courts was being abused, introduced a resolution directing the Attorney-General to report whether the grand jury inquiry had been ordered by the President, and, if so, under what statute and by what authority the process of the court was so employed. This gave rise to debate. By a vote of 44 to 24 the resolution was sent to the Judiciary Committee. Senator Tillman has published a statement, saying that the issue is a "momentous" one and that "no patriot can contemplate the possibility of the President's success in these suits without alarm." The public, he adds, should support the "efforts" of the newspapers in question "to expose corruption in high places."

For Two New Battleships

During the debate in the House, on the 22d, concerning the bill for new battleships and other naval vessels, reference was made to the Japanese. The bill called for two first-class battleships, which were to be larger and more formidable than any now on the seas. Speaking for an amendment excluding them, Mr. Tawney ridiculed the possibility of war with Japan. He was tired, he said, of this annual recurrence of war talk just at the critical moment when the fiscal bill was to be passed. Japan could

make no raids on our coast, and Hawaii would soon be impregnable. Mr. Burton and Mr. Bartholdt supported the amendment. On the other hand, Mr. Hepburn and Mr. Harrison urged the need of preparation for possible war, and Mr. Cockran indulged in speculation as to the effect of racial antagonism on our Pacific Coast, where some incident, the lynching of a Japanese, for example, might excite hostilities. The House voted for the two great battleships. The amendment was lost, 80 to 160, and another, for one ship instead of two, was rejected, 108 to 156.

—On the 21st there was published the report of the Army's General Staff, recommending an expenditure of \$3,655,000 for the fortification of San Pedro harbor in Southern California. One reason given was "the great potential strength as an enemy which a certain Oriental Power has recently acquired." The report says that this "certain Oriental Power," if there were no effective naval opposition, could easily take San Pedro, retain possession of it and use it as a military base.

Prohibition in Tennessee Tennessee has hardly ever known a greater political excitement than that during the past two weeks over the prohibition question. The Senate had past the bill for State-wide prohibition by 20 to 13, and the House by 62 to 36. In the latter case the women favoring the bill packed the galleries, so that those against prohibition could not get access. Last week Governor Patterson vetoed the bill. He said prohibition had been defied everywhere. He said:

"I will not approve a law by whatever name it may be called or whatever mistaken notions of morality may have influenced it, which will destroy property, reduce the revenue of the State, increase taxation, take the money of our people and send it abroad, foment discord instead of promoting peace, and impair the dignity of the Commonwealth. . . . I will not sanction a law that will foster hypocrisy and invite evasion and deceit in the people. . . . I do not approve a legislative guardianship which would make weaklings of men instead of leaving them unhampered and unfettered by onerous and sumptuary laws interfering with their personal rights and privileges. . . . I would forbid a law which would teach and set before youth daily lessons of duplicity and evasion. In the name of our women . . . I condemn any measure which will

bring even a part of them into the heated and poisoned atmosphere of political strife."

The Legislature has past the bill over the Governor's veto.

Political Events The following United States Senators have been elected:

Elihu Root, from New York, Republican; E. E. Chamberlain, Oregon, Democrat; Charles J. Hughes, Colorado, Democrat; and Wesley M. Jones, Washington, Republican. Also the following have been re-elected: W. J. Stone, Missouri; F. H. Brandegee, Connecticut; J. H. Gallinger, New Hampshire; B. Penrose, Pennsylvania; A. B. Cummins, Iowa; T. P. Gore, Oklahoma; J. P. Clarke, Arkansas; L. S. Overman, North Carolina; Reed Smoot, Utah.—With the co-operation of the American Institute of Architects the President has appointed a commission of architects, painters and landscape gardeners to advise as to public buildings in Washington. All plans for buildings are to be submitted to this council before being approved. There are twenty-one architects. The painters are Messrs. La Farge, Millet, Blashfield and Cox; the sculptors, French, Adams, MacNeil and Bitter; and the landscape architect, F. L. Olmsted, Jr.—Representative Willett, of New York, let it be known that he would make a speech in Congress last week bitterly assailing the President, and quite a crowd filled the galleries. His speech was of such a character that at last the House forbade him to proceed, but he had nearly finished his speech. The point on which he was called to order was on the passage in which he charged the President with "persistent defamation of Admiral Schley."—Governor Lilley, of Connecticut, by unanimous vote of the House of Representatives has been declared no longer a member of that body, and his name has been removed from the roll. He has not been in attendance at this session of Congress. He became Governor January 6th. He tendered his resignation as Representative December 11th, but Governor Woodruff declined to accept it. He took his allowances for clerk hire and stationery in December, and asked for mileage, altho he had not been in attendance. The report on his

and it was impossible for a man to hold the two offices at once.—The Supreme Court of the United States has unanimously approved the decree of the State Court of Texas, imposing a fine of \$1,623,000 on the Waters-Pierce Oil Company, of St. Louis, and ousting it from the State on the charge of violating the Texas anti-trust law.—President-elect Taft sailed on Monday for an inspection of the Panama Canal, taking with him a party of seven engineers. He will be absent less than three weeks, and will return by way of New Orleans. His stay of two days in Charleston was an ovation. Meanwhile he consulted with Messrs. Knox and Hitchcock as to the selection of the remaining members of his Cabinet, and the list is filled, but no further names will be given out till March 4th.—An anti-racetrack bill, identical with the New York act, has past the California House and is expected to pass the Senate.

Religious Statistics

While we are waiting for the more authoritative report of the Census on religious statistics we may learn something from the statistics gathered by Dr. Henry K. Carroll, who was in charge of the religious census of 1890, and who has just published his annual report in *The Christian Advocate*. He concludes that the church membership reported for the whole country is 34,282,543, a net gain of 720,647, which is 192,081 less than the average gain of the last six years. The Catholic membership is estimated at 12,394,731, which includes all adherents over twelve years old, and is a third of the total membership. There has been an increase of 1,874 churches and 2,835 ministers. Next to the Catholics come the Northern Methodists, with 3,112,448 members, and there follow the Southern Baptists with 2,054,301 members; Colored Baptists, 1,804,872; Southern Methodists, 1,740,890; Northern Presbyterians, 1,278,250; Disciples, 1,274,725; Northern Baptists, 1,187,356. Of the 155 denominations recognized, only 34 have 100,000 members. There are 24 various Lutheran sects, besides 83 independent congregations; 48 sects of Methodists; 12 of Baptists; 14 called Quakers, and 23 Presbyterian.

Dr. Wiley Reversed

The Referee Board of Consulting Scientific Experts appointed by President Roosevelt to revise the decisions on the administration of the pure food law has made a preliminary report, which is directly opposed to the conclusions rendered by Dr. Harvey W. Wiley, chief chemist of the Department of Agriculture, in regard to the effect of sodium benzoate used as a preservative in foods. Dr. Wiley's decision was published in Circular No. 39 and the full details of his experiments in Bulletin 84, part 4, of the Division of Chemistry, Department of Agriculture. He conducted at Washington a long series of experiments on a group of young men, the so-called "poison squad," and came to the conclusion that

"from a careful study of the data in individual cases and of the summaries of the results it is evident that the administration of benzoic acid, either as such or in the form of benzoate of soda, is highly objectionable and produces a very serious disturbance of the metabolic functions, attended with injury to digestion and health. . . .

"These injurious effects are evident in the medical and clinical data, which show grave disturbances of digestion, attended by phenomena which are clearly indicative of irritation, nausea, headache and in a few cases vomiting. . . .

"Coming to the final consideration of all these different phases of the subject there is only one conclusion to be drawn from the data which have been presented, and that is in the interests of health both benzoic acid and benzoate of soda should be excluded from food products."

The Referee Board investigated the same subject by similar experiments, carried on independently in three laboratories, by Prof. John H. Long, at the Medical School of the Northwestern University in Chicago; by Prof. Russell H. Chittenden, at the Sheffield Scientific School of Yale University, and Prof. Christian H. Herter, in Columbia University, New York City. The young men who formed the subjects of the experiments were kept on a diet of a known composition with and without benzoate for a period of four months, and the effect carefully studied from medical, chemical and bacteriological standpoints. These three independent investigations gave the same results and the board came unanimously to the following conclusions:

First—Sodium benzoate in small doses (under 0.5 gram per day) mixt with the food is not deleterious or poisonous and is not injurious to health.

Second—Sodium benzoate in large doses (up to 4 grams per day) mixt with the food has not been found to exert any deleterious effect on the health nor to act as a poison in the general acceptation of the term. In some directions there were slight modifications in certain physiological processes, the exact significance of which modifications is not known.

Third—The admixture of sodium benzoate with food in small or large doses has not been found injuriously to affect or impair the quality or nutritive value of such food.

The other members of the board besides the three named are Dr. Ira Remsen, president of Johns Hopkins University, and Alonzo E. Taylor, professor of pathology, University of California. The latter, being in Europe, did not take part in the consideration of the question.

A Commission for Liberia The little republic of Liberia, on the west coast of Africa, is having a hard time, and President Roosevelt has askt Congress for an appropriation of \$20,000 and the power to appoint a commission of three

"to examine into the situation, confer with the officers of the Liberian Government, and with the representatives of other governments actually present in Monrovia, and report recommendations as to the specific action on the part of the United States most apt to render effective relief to the Republic of Liberia under the present critical circumstances."

Last June Liberia sent three commissioners to the United States to ask for assistance, and the subject has been under consideration by the State Department ever since. France and Great Britain, which control the surrounding territory, have been consulted and both favor the active participation of the United States in the affairs of the republic. Secretary Root has reached the conclusion that it

"is quite clear that Liberia is very much in need of assistance, that the United States can help her substantially, and that it is our duty to help her.

"Notwithstanding the very kindly disposition on the part of Great Britain, and the similar disposition on the part of France, there is imminent danger that the republic, unless it receives outside assistance, will not be able to maintain itself very long."

Liberia was founded by the United States and has been to a certain extent

under our protection ever since. The settlement was started in 1822 by the National Colonization Society of America, and for over twenty years various philanthropic organizations, composed of those who believed that the presence of free negroes was a menace to the institution of slavery and of those who held that the colored race could best develop its own civilization as an independent state in its native land, were engaged in transporting freed slaves to Liberia, with the aid of the Government. In 1847 the republic was declared independent, but the United States has since regarded it as protected by a sort of "Monroe Doctrine," and has intervened in its behalf whenever a European monarchy has shown a disposition to absorb it. The colony has never prospered financially, and the few civilized negroes on the coast have had all they could do to prevent being swallowed up by the continental barbarism at their backs. There are now between 40,000 and 50,000 civilized inhabitants, and they are not able to control the million or two of uncivilized blacks in the Liberian territory of 43,000 square miles. This is why France and Great Britain desire the United States to take a hand in the government of the republic. The object of the proposed commission is to study the condition of affairs on the spot and recommend what action, if any, it would be advisable for our Government to take.

Cuba The annual report of Governor Magoon, just publisht, is probably his last word on Cuba, for Cuba is to be re-established today as a republic. The Governor says very little concerning the future of the new government, except that the patriotic attitude of the minorities in the recent municipal and presidential elections in peaceably accepting the results is "one of the most hopeful features of the Cuban political situation and a strong guarantee of the stability of the government about to be establisht." "Absolute order," the Governor says, "now completely prevails thruout Cuba and compares favorably to that in the best regulated towns in the United States." The Cuban finances are in good condition. There was a balance in the treas-

open in June, 1901, at a cost of \$2,000,000. The Governor believes that the provisional government will leave behind it some \$2,000,000 in the treasury. Governor Magoon praises very highly the work of the advisory commission done under the supervision of Col. E. H. Crowder. The chief duty of the advisory commission is to decide all matters concerning the provinces not within the jurisdiction of the state or the municipalities. The number of the state's superfluous employees had become notorious and all this was improved by Colonel Crowder. The Governor then reviews the economic conditions during his administration, and shows how great the recuperative powers of the island have been to recover from its many misfortunes. Major Frederick Foltz, United States Army, chief of office in the palace; Capt. J. A. Ryan, the Governor's aide; Judge Otto Schoenrich, member of the advisory commission, and Frank Steinhart, recently the American consul at Havana, are warmly praised for the work they have done, as well as many of the Americans in the provisional government who acted as supervisors of departments. Possibly the most interesting recommendations concern the wreck of the battleship "Maine" in the Havana harbor. The Governor says:

"The 'Maine' continues to lie in the mud and waters of Havana harbor. Its location is at the point where the harbor narrows and makes a sharp turn and expands into the harbor proper. The sunken battleship immediately became a serious menace to the shipping of the harbor, as it occupies a portion of the best anchorage. The obstruction has increased annually during the last ten years by causing a shoal. The moderate tides prevailing in the harbor are scarcely sufficient to prevent a gradual filling up, and the anchorage is constantly interfering with the action of the tides and therefore the entire harbor is rapidly filling. It will be necessary in a short time to begin dredging in order to provide proper anchorage for the large amount of shipping now entering the harbor unless the wreck is removed. The anchorage is also restricted by the wreck and the shoal, for ships are obliged to anchor at sufficient distance to prevent grounding in case they swing on their cables.

"The neglect to remove the wreck is attributed by many, especially the American people, to the fact that the United States Government has not been able to obtain the necessary funds to remove the wreck. It is a possible crime instead of an interior explosion; so generally known that it is not necessary to mention it.

from dealing with the wreck as an obstruction to the navigation of its coastal waters, and destroying it; however, it should be added that the Cuban authorities were also restrained by a belief that the United States would some time desire and attempt to remove and preserve the wreck as a whole instead of breaking it up and removing it in the more inexpensive manner. I earnestly recommend that the United States Government take immediate steps to accomplish the removal without further delay."

Disasters

On last Saturday morning, in a dense fog, the White Star steamer "Republic," bound for Italy, and with many passengers, was rammed by the Italian liner "Florida" off the Massachusetts coast. She sent wireless messages out for aid, and steamers in the neighborhood and at port were sent immediately to her assistance. The steel prow of the "Florida" bored into the side of the "Republic," and two of her passengers were killed and four of the sailors of the "Florida." The attempt was made to tow the "Republic" to port, but she was so damaged that she sunk Sunday night.—A horrible accident occurred January 20th in the burning of the intermediate crib established by a tunnel building company one and a half miles under Lake Michigan, near Chicago. The origin of the fire is uncertain. It came suddenly, while many men were asleep in their cots, and about seventy were burnt to death or drowned when they escaped from the fire to the cold lake.

German Affairs

Emperor William is carrying out his policy of retirement still further by abolishing the daily court circular, which has hitherto been distributed to the press. Instead of this a brief report of his official doings will be published in the *Reichs-Anzeiger* twice a week. Chancellor von Bülow, in addressing the Prussian Diet, on January 19th, said he had done everything possible to protect the Crown from misrepresentation. When the famous articles appeared in the *London Daily Telegraph* he had not hesitated to take the blame upon himself. It was his duty, the Chancellor said, to guard against a split between the wearer of the crown and his people. Every sincere monarchist must recognize the fact, he added, that in those

serious days he had acted as a royalist in agreement with the Government. The Chancellor, in the course of a long and eloquent defense of the Kaiser, recounted the latter's services to the empire. He said:

"He has fulfilled great ideals and, impelled by the wish to advance Germany, has achieved many peaceful enterprises, forwarded commerce and science and aided agriculture, built a fleet, maintained the army in a state of readiness and preserved the peace."

These remarks were called out especially by the revival of the criticism of the Kaiser because of the reports of his address to his commanding generals on the defense of the empire on New Year's day. It was later explained that the discussion by the Kaiser referred to purely military affairs, not to political policy. —The Chancellor, in advocating the increase of legacy duties, has aroused the opposition of his chief supporters, the Conservatives and Agrarians. Herr Rheinbaben, Minister of Finance, stated that the Prussian deficit for 1909 would probably amount to \$44,000,000. He declared that the hopes of seeing Germany rapidly emerge from the financial crisis from which it suffers had not been realized, and that financial situation, instead of improving, seemed to have become still worse.

Earthquakes at Messina and Elsewhere

A new town is springing up on a plateau a little to the north of the ruined city, composed of the wooden huts and canvas shelters of the survivors and the rescuers. This is likely to develop into the new Messina, for the efforts of the authorities to make the refugees leave their native place have been in vain. General Mazza, who is in command, at one time issued orders that no food was to be given to those who refused to go on board the ships for transportation, but the orders had to be rescinded. The food now being distributed is partly brought by steamship from Naples and Palermo, and partly supplied by five military bakeries. The central depot at Messina is giving out 6,500 rations a day, each consisting of bread, five ounces of macaroni, and a piece of pork fat. Part of the cargo of the American supply ship "Celtic," consisting of a hun-

dred tons of fresh beef, eggs, canned vegetables, butter, sugar, coffee and bread, was distributed among the refugees at Naples, under the direction of the municipality; the rest was taken to Messina and Reggio. The Italian Red Cross Society is being sharply criticised for its incompetency and mismanagement in the relief work. The vice-president, the Duke dell Arenella, challenged one of the newspaper critics to a duel. It was fought in Palermo and the Duke was wounded in the arm. Heavy storms of hail and even snow, a rare occurrence in Sicily, in the early part of the week caused much suffering among the poorly clad and sheltered people, and a fire swept over a large part of the ruins of Messina, consuming the bodies and valuables which had not been removed. On account of the lack of water pipes it was impossible to check it until it had run its course, altho the commanders of the foreign warships sent men from their crews to assist the Italian soldiers in the endeavor. Looting and robbing continue to be common, altho scores of the marauders have been shot by the guards. General Mazza reports that 4,000 bodies have been taken from the ruins of Messina and that 50,000 more are thought to be there. —Earthquake shocks, often of considerable severity, are felt at Reggio and Messina several times a day, and an unusually large number are reported from various parts of the world. At 3:55 on the morning of January 23d the seismographs of Europe recorded a long series of tremors, indicating a severe earthquake far to the eastward, and the observatories of America obtained similar records, almost as pronounced as those of the Messina earthquake. Up to the time of going to press the scene of the disturbance has not been located. It is thought to be in Central Asia, but the movement may have been deep in the interior of the earth without being particularly violent at any point on the surface. An earthquake near Smyrna, in Turkey, on the 19th, did considerable damage to several small towns, destroying 600 houses and killing eight persons. Eruptions are reported from volcanoes at Colima, Mexico, and San Casciano, Italy. The latter has been quiescent since 1661, when it destroyed the town.

The Japan of 1908

BY J. H. DE FOREST, D.D.

REPRINTED FROM THE JOURNAL OF THE AMERICAN SOCIETY OF THE HISTORY OF JAPAN

IT is mainly the story of the attitude of the world toward this empire. When the new year opened the public opinion of the world, as expressed in the various papers of the nations, was unfavorable. "Nobody likes Japan" was about the size of the universal verdict. *The Japan Mail* said:

"The Japanese cannot too clearly recognize that the high tide of their popularity has been ebbing for several months, and that the mood of the world at present cannot be called by any means sympathetic toward them."

One might expect this critical unfriendly attitude from Europe, but that it should have infected American sentiment as it did was unfortunate, to say the least. For whenever a nation for any reason becomes unpopular, the most absurd stories are started and boomed far and wide as positive truth.

Probably no more absolutely untrue statement ever got such wide credence in the States as the one that the Japanese are so tricky and dishonest among themselves as to necessitate their employment of Chinese in their banks to keep the accounts straight. From this insane statement to others equally baseless is an easy step. I met a seemingly responsible correspondent of a San Francisco paper who assured me that the Japanese were the worst people in the city, and that "the jails are full of them." Whereupon I went to the Mayor and the Chief of Police and asked for the exact facts. I was shown the records of arrest and conviction, and among pages of these the names of Japanese were so few as to be almost negligible. "There is no difficulty with Japanese in this office," said the Chief of Police.

On another occasion I was solemnly given to understand, as late as September, by one of my greatest admirers and with a countenance of profound reflection, that our Government had made full preparations for treachery to our fleet while in Japanese waters. On my return from the cruise I landed in Yokohama while our fleet was there, and saw a part of that magnificent welcome. Yet, on the

last night of the fleet's visit, I heard of one American who insisted that it was all put on. "The fleet will never leave this harbor. It will all be sunk tonight!"

On looking over the wreckage of these suspicious months, we find that Japan excited doubts by the sudden increase of her army from twelve to nineteen divisions, and by her plan to make as rapidly as possible a far more efficient navy; also by the rush of Japanese laborers in thousands to our shores, and the diplomatic difficulty of stopping them. Our sensational newspapers and a few political agitators used these doubts as their basis for all kinds of imaginary dangers, doing their best to arouse suspicions of Japan's designs. It is curious now to look over the files and see the big headlines: "Japan Means to Whip America," "War with Japan Certain." "All the navy and army men believe war has got to come," was a very common remark, and the dire prediction of one of our high judges: "There will be a conflict between the yellow race and the white race that will shake the earth," helped on the smell of brimstone.

But this is virtually ended now. What a fine record the two governments and also the two peoples have made in the face of this jingo spirit! The arbitration treaty; the invitation to our fleet; our substantial sympathy with the Japanese world's exposition; the stopping of Japanese laborers going to America; the trademarks convention; the welcome to the representatives of the five chambers of commerce on the Pacific Coast; the unprecedented welcome given to our fleet; and last of all, the *entente* as embodied in the official letters of the plenipotentiaries of the two governments; these eight manifestations of mutual good will ought to settle in every fair mind the sincerity of the friendship between the two governments and peoples and ought to postpone indefinitely any more predictions of the conflict that is to wiggle the earth.

I happened to be on the "Tenyo Maru," that took the honorary comm-

cial commissioners of the chambers of commerce on the Pacific Coast to Japan. I never met a more open-minded body of men anywhere. Among them were some from Seattle, where the opinion is that the people of Japan should not be treated "in any manner different from the treatment accorded to the people of any other civilized Powers." While the Californians could not all subscribe to that sentiment, they were all eager for information about the real spirit of Japan. They were somewhat surprised when I told them that they would get a welcome such as they had never dreamed of. "You will be taken as the guests of the chambers of commerce in Japan from the moment you land. You will not be permitted to pay any hotel bills, traveling bills, or any other bills. You will be furnished with everything to make your visit memorable. You will receive presents wherever you go. You will be shown everything you want to see. That's a part of what a Japanese welcome means."

They protested in vain: "We don't want any presents. We intend to pay our own bills." All the same, these men from the Pacific Coast, where Japanese have been rudely treated, where the papers and labor unions were clamoring for an exclusion act, where merchants were refusing to sell to Japanese—these men met with overwhelming welcomes everywhere. The exclusion movement on their coast was never referred to. They were provided with trolleys upholstered with richest silks. They were greeted with shouts of delight. Hundreds of children, lined up here and there, sang them our national hymn. They were given gifts until they amounted to boxes full. After their journey thru Japan was ended I met them at the imperial ball on the evening of the Emperor's birthday, November 3d, and they were enthusiastic over their visit. Several of them expressed themselves thus: "We shall go back as missionaries to our own people, and tell them what the real spirit of the Japanese is toward us."

While on this subject, some may like to know how Captain Hobson is regarded. A recent editorial spoke of him with regret that such a hero should have soiled his fair name by defaming a friendly nation. A statesman, to whom I men-

tioned his name, simply laughed, as though our representative were not worth discussing. But I think Dr. Jokichi Takamine gave true expression to the real Japanese feeling in saying: "O, I wish Captain Hobson would come over here! We'd give him such a welcome that he never again could say or even think such things about us. We would take him into our hearts. We would make him our friend."

This is at bottom the spirit of Japan. She had a right to show something of resentment after the year or more of jingo abuse from so large a section of our people. But all this was absolutely ignored by the entire nation when our fleet came. It was by no means merely a polite act on the part of the Government; it was a spontaneous expression from all parts of Japan of the good will Japan has increasingly felt toward us. Profound regret was common in the coast cities that they could not share in the privilege of welcoming our fleet. One of my army friends sent me a touching letter of disappointment that none of our fleet visited historic Shimoda, the place where Commodore Perry first cast anchor, where Harris signed the first treaty, and where some of our sailors were buried. The graves were decorated, and the traditional places were fittingly prepared, yet none of our officers could go seventy-five miles down the coast to this historic place, where the people were waiting, in the words of their invitation, "to show our heart of hearts to you and to welcome you to the shores of Japan." None the less, they sent to the officers of our fleet hundreds of packages of beautiful memorial cards of the Buddhist temple in which the first treaty was signed, of the graves of our dead sailors, and of the places where Perry and Harris had fished, and the mountains they climbed.

A few days after the fleet had gone it was my privilege to have an interview with the Premier, who spoke with the utmost sincerity not only his own mind, but the mind of his Government and people, with reference to the relations between our two lands: "Your nation has been our teacher and sympathetic friend for over half a century, and we want above all things to deepen and make perpetual the peace between us. I have

never had a doubt of the sincere friendship of the United States. . . . Here also both Government and people are absolutely one in their friendship for the United States and belief in your friendship for us. . . . I will guarantee (and he used that word twice) that my Government and people, in the years to come as in the past, will not only keep this great historic peace, but will do all that is possible to deepen and enrich this friendship. . . . No misunderstandings shall weaken this glorious friendship between our two nations."

This is enough for the foreign side of things. Turning now to internal affairs, I think a glance at the finances of the empire will give the best clue to the situation. Various papers and magazines in the States have had articles on the wretched poverty of the Japanese, on the failure of the banks, and on the exhausting taxes. Of course, when compared with the United States, this impression of impoverishment is true; but when taken in connection with the moral development of the nation, one gets a far truer impression of Japan's resources.

From early days it has been the teaching and practice of moralists here to live in a simple and inexpensive manner, and to cultivate the virtues of self-restraint and frugality, avoiding luxury and ostentation. But Japan has advanced in wealth by leaps and bounds since her contact with the world, and has won absolute victories in two great wars. Both of these causes tend to luxurious living, and against this the moral spirit is always on its guard. This careful guarding against the evils of luxury often gives the appearance of a poverty that does not exist. It is well worth while to notice how Japan keeps to the front this moral dislike of luxury and show. I will give two illustrations.

For years the life and teachings of Ninomiya Sontoku have been an increasing moral influence. He was born in a poor farmer's house, yet became one of the living moral forces of the nation at the time of Perry's visit. Great meetings are now held in various cities in order to promote his principles of frugal living in the spirit of his reverent and religious motto: *He who lives frugally gains strength after edition.* In this city was held

a few days ago a mass meeting of the heads of towns and villages and educators of this province, to catch the spirit of this moralist, who boldly taught:

"The moral path is known without learning it, it is felt without studying it. Without books, without teachers, it is self taught so that one never forgets it."

The other illustration comes from the Throne. In October the Emperor took the rare step of issuing a moral rescript in which are these significant words:

"We desire all classes of our people to be faithful to their callings, frugal in the management of their households, submissive to the dictates of conscience and calls of duty, frank and sincere in their manners, to abide by simplicity and avoid ostentation, and to inure themselves to arduous toils without yielding to any degree of indulgence."

There can be no doubt that this rescript is one of the very significant events of the year. It has been handed down to all the schools of the empire and to the army by their respective cabinet ministers, and is read in large meetings throughout the empire. It has already had a marked effect in checking extravagance. For the nation knows that the Emperor is "frugal in the management of his own household." The sum of 3,000,000 yen that was fixt decades ago for the annual use of the imperial court has not been increased, altho the imperial revenues have increased many fold.

This spirit of economy was doubtless a main cause of the resignation of the Saionji Cabinet and the incoming for the second time of the Katsura Cabinet. War taxes had not only continued, but there was even increase in some lines. The growing and powerful business public began to clamor for reduction of armaments and retrenchment here and there. To this demand the new Premier replied by giving the assurance that Government projects should be postponed and curtailed so as to save some 200,000,000 yen.

Thus it will be seen that, in spite of poverty, reckless speculations, failures of banks and financial alarms, the hereditary moral spirit of the nation is so high and strong that a poor farmer's teachings and the Emperor's rescript can in the same mass meetings appeal to it. There is no danger of a permanent slump where this spirit of the common people and of the Throne are one and the same.

Mr. Taft's Visit to the South

BY LOVICK P. WINTER

THE coming of President-elect Taft to Augusta, Ga., for a few weeks' stay this winter is a matter of more than passing interest. Other Presidents-elect and full-fledged Presidents have come this way occasionally, but usually their coming was in the way of rapid railway journeys, with more or less oratory by the way, or at most for a few days' tarrying at some winter resort. But Judge Taft has taken up his abode here for the time being, and has stayed long enough to make his neighbors feel that he really enjoys himself among them, a fact which is always very agreeable to hospitable Southern people. Of course, no intelligent, well-informed Southern man thinks for one moment that his visit has any political significance. The fact that such could not be the case has really added to the pleasure of our people that he has come among them. Just out of a strenuous campaign, soon to take the place of a most strenuous predecessor in the office of the Presidency, and facing an administration that is full of strenuous responsibilities, he certainly needed a little breathing spell, and a season of comparative quiet, away from importunate office-seekers, and away from the cold of the Northern winter: hence he turned his steps toward the southern sun and the section of our common country where the month of December just ended was milder than May in some parts of the land.

And Augusta was, for many reasons, a good place to come to. The climate, especially "on the Hill," where stands the Terrett Cottage, in which Judge Taft has made his home, is very fine during the

winter months generally, and has been exceptionally so the present season. Every day it has been so sunny and fine, with only a few exceptions, that it was possible for Judge Taft to be on the golf links, or out on the fine roads running out from the city in his automobile. The thermometer has touched the freezing point only a few times, and the cold that has come has only made the weather more bracing. With days full of warm, but not enervating sunshine, and nights deliciously cool, our future President and his family have had a good opportunity to rest and enjoy the luxuries of a winter season in the South.

And Augusta has attractions other than its climate. Its streets are broad and well shaded and well kept; and embosomed among its many trees are some

beautiful homes, wherein dwell people of refinement and of the best blood in the South. Greene street, with its double rows of oaks and its double driveway and mid-way park, is lovely, even in winter time, while Broad and Telfair and Walton Way and other streets are pleasant to drive upon or to stroll along in sunny days in December and January. And

there is something in the social and aerial atmosphere that is soothing and restful. The average Augustan is not usually in a hurry. He believes in the social amenities of life. He is never too busy to be polite, or to give you a piece of desired information. He takes great pleasure in courteous attentions to strangers, not for business considerations, but because he naturally loves to be sociable and hospitable. One of the facts that always impresses a newcomer to the city is

TERRETT COTTAGE,

The President-elect's winter home in Augusta, where the Taft Cabinet is being built.

the warm, cordial manner of the people, from the colored shoe polisher up to the railroad ticket agent.

Augusta is also interesting to stran-

gers back of it, and the city has been the home, first and last, of more than one distinguished Georgian. Richard Henry Wilde, the Irish-American poet, lived

MR. AND MRS. TAFT AND FAMILY IN AUGUSTA, GA.

gers by reason of the historic associations that cluster about the city. Here is the old Episcopal Academy, an institution that has a long and honorable career

here, and a monument to his memory stands on Greene street. James R. Randall, the author of "Maryland, My Maryland," lived here for many years of his

life, and closed his eyes for the last time here last year. Judge A. B. Longstreet, the author of "Georgia Scenes," was reared here, and Paul H. Hayne spent the last years of his life not many miles away.

Judge Taft has made many personal friends during his stay in Augusta. He is the sort of man to win friends. Most of us are attracted by large men, and Judge Taft is a man of unusually large proportions. He weighs nearly three hundred pounds, and his weight is not

airs of dignity and importance; there is none of that swelling self-consciousness which impresses itself upon the consciousness of other folk. He is so genial, so companionable, so gentlemanly, that one is apt to forget that he is the President-elect, and to think of him as a plain American citizen, and a man whom one is glad to count among his personal friends.

Just before the Christmas holidays Mr. W. W. Hack, who lives some miles out from Augusta, in an old-time

PRESIDENT-ELECT TAFT EATING THE BARBECUE DINNER AT THE BEACH ISLAND FARMERS' CLUB.

Copyright, 1909, by Underwood & Underwood, New York.

made up of surplus, cumbersome flesh. A lady speaking of him, said with a laugh, "He is large from the feet up." We naturally expect big men physically to be good humored, and Judge Taft more than meets this expectation. He not only has a smile that has been remarked upon by all who have met him; he has likewise a hearty, contagious laugh which comes unmistakably from a soul which is full of the best that is in human nature. He is, too, one of those delightfully unconventional men who put you at your ease at once. He wears no

Southern home, presented Judge Taft with a pretty holly tree, well mounted. This simple but timely gift led to a very pleasant friendship between the two gentlemen, and a few days later Judge Taft and his family dined at the home of Mr. Hack. This occasion, in accordance with the wishes of the guest, was an informal dinner, and, by special request, every dish of the meal was placed on the table at once, and not served in courses. And the relish of the President-to-be for Georgia corn bread and Georgia sausage and other Georgia eatables was a compli-

ment to the dinner which afforded infinite satisfaction to the host and hostess. On this trip he went fishing in a nearby mill pond, and while he caught no fish, his companions said he got a most comfortable doze while out in the boat.

"I am no politician," he said, laughing, on this occasion; "there"—pointing to his wife—"is the politician of the family. If she had only let me alone, I guess I should now be dozing on the Circuit Court bench."

This visit will take its place among the treasured traditions of the home and the community. After all, most of us who are natural have a human interest in men, and not in presidents and kings and members of Congress as such, but in their humanity, in their everyday life; for instinctively we know that herein is revealed the true character of those in high places. George Washington galloping over his farm and directing his affairs is to most of us more interesting than George Washington riding in state from one section of the country to another, and from city to city, after he became President.

Many and very cordial courtesies have been bestowed upon the distinguished visitor by the people of Augusta and of the State, and of other States. And these attentions have been free from toadyism on the one hand, and the importunate, sight-seeing spirit on the other. Everybody has been polite, but not many have been disagreeably cur-

ous to see the President-elect. The privacy of his home has been respected, and when he has gone abroad people have not lined the streets to look at him as tho he were a circus procession. Southern people have not yet forgotten to be hospitable, and their hospitality has abounded to Judge Taft. And one can well imagine that it has been a great relief to that gentleman to feel that every caller is not an office-seeker. Southern citizens are by no means averse to holding public office, but they recognize the fact that Southern men are not in great demand for places under the administration of Judge Taft. Besides, he is their guest, and they are too well bred to ask a personal favor of a gentleman while he is under their roof. One is disposed to think that Judge Taft has had something of the peace of mind

RUFUS W. HUNTINGTON

Rufus W. Huntington, of Augusta, the man who has been elected to the office of Governor of the State of Georgia.

that a soldier has when under a flag of truce in an enemy's country.

Judge Taft has been felicitous in his public speeches since he came to the South. While surrendering none of the principles for which he and his party have stood, he has nevertheless shown a tact in his utterances before gatherings large and small that has commanded and received the hearty respect of men who entertain different views from those he has voiced. His announcement that he did not come to the South to break up the solid South in the interest of the Republican party (made to a committee that waited upon him from Birmingham, Ala.), for the reason, he stated, that it was not to the interest of the Republican party to break up the South, was so candid and manly that its very sincerity commanded respect. He added, however, that he would like to see the solid South broken up in the interest of a broader patriotism, a wish which his coming to the South will surely help to bring to pass.

The effect of Judge Taft's visit to the South cannot be otherwise than good. It may not be known elsewhere in this country how earnestly Southern people have longed for a fuller recognition as a part of the citizenry of this great country, and a fuller reconciliation with their fellow citizens of other sections of our

common country. Their patriotism has doubtless been more sectional than national, but the Southern States were never so fully in the Union before in all our history as they are today. And the coming of Judge Taft among them; his friendly ways; his ability to recognize people on the shortest acquaintance; his enjoyment of Georgia barbecues; his evident good will for everybody; his downright honesty; his manliness and his magnetism; these and other good qualities have drawn the people among whom he sojourned this winter to him in a way that will soften many of the asperities of the past, and, mayhap, of the future also. Think as we may about it, the strongest asset of any official, from bailiff up to President, is the attachment people have for him personally. Whatever increases this personal regard strengthens the government for which the individual stands. President McKinley's visit to the South just after the Spanish-American war made for him friends who mourned as sincerely for him when he was slain by the assassin's bullet as any of his compatriots of other parts of the country.

Judge Taft has honored the South and done the nation real service by his visit to this part of the country, and by his stay among the people long enough to know them and for them to know him.

HEPHZIBAH, GA.

A Cosmopolitan Convention

BY LOUIS LOCHNER

FIRST PRESIDENT OF THE NATIONAL ASSOCIATION OF COSMOPOLITAN CLUBS.

ANN ARBOR, Mich., was the scene of a unique inter-university event on December 31st January 1st and 2d when representatives of twelve universities held the second annual convention of the Association of Cosmopolitan Clubs. Among the twenty-one voting delegates were men from twelve countries—a Mexican, an Englishman, two Japanese, a Hindu, four Filipinos, a Russian, two Greeks, a German, a Jamaican, an Hungarian, a Brazilian and five Americans. All were filled with one de-

sire: to let their actions and deliberations be guided by the motto of the association, "Above all nations is humanity."

The Association of Cosmopolitan Clubs is composed of international and cosmopolitan students' societies at sixteen leading American universities, all but four of which were represented at the convention. The total membership is about 1,500, and fifty countries are represented. The purpose of these clubs is to bring together college young men from different countries, to aid and

direct foreign students coming to America to learn the customs, viewpoints and characteristics of other nationalities, and to establish international friendships. The work accomplished at the second convention is a fair index of the character of this young organization.

One of the most significant events was the taking of initial steps toward an affiliation of the association with the International Federation of Students of Europe, better known as Corda Fratres. This organization, which has a membership of sixty-three chapters, or consulates, representing 15,000 students, aims to do for students at European universities what the Association of Cosmopolitan Clubs endeavors to accomplish in America. By the proposed affiliation the sixteen chapters of the Association of Cosmopolitan Clubs will join the sixty-three consulates of Corda Fratres, and the same rights and privileges that are now extended to members of the one organization will be extended to members of the other. The work will thus be on an international basis, and undoubtedly much more effective. Students coming from Europe will be received and aided by members of the association, and members going to Europe will be similarly aided and guided thru the consulates of Corda Fratres.

Recognizing the fact that the foreign student is usually at a loss as to what he may expect at American universities and what institution will be best suited to his special needs, the convention petitioned the Bureau of Education to issue a pamphlet of information regarding American universities, to be distributed among the foreign consuls and in whatever other way practicable. If this bulletin is issued—and from correspondence with the bureau it appears that the petition is likely to have the desired effect—it will contain a tabulation of such items as the cost of living, entrance requirements, tuition fees, opportunities for self-support, and special advantages of American universities.

In order further to disseminate information concerning the kind of their adaptation, the members of the association have been requested to write at least two articles each year for their native papers and

periodicals on American universities and American life, thus removing erroneous impressions which seem to be prevalent abroad concerning this country and its institutions of learning. American college men are prone to look down upon the foreigner as an undesirable member of the university community. They forget that the foreigner not only leaves considerable sums of money in America, but that he is at all times ready to sing the praises of our nation and its educational systems.

By its enrollment as an auxiliary of the American Peace Society and its recommendation to individual members to become correspondents of the Lake Mohonk Conference on International Arbitration the Association of Cosmopolitan Clubs took another great step in advance during the Ann Arbor convention. The members of the cosmopolitan clubs have at all times stood for the promotion of universal peace. Of the resolutions adopted the following deserve special mention: A resolution of sympathy for the sufferers from the Italian earthquake and the Hindus who lost 50,000 of their number in the recent flood, and a resolution of encouragement to the Russian people in their struggle for constitutional government.

Thus the Association of Cosmopolitan Clubs, at its second annual convention, clearly indicated the mission which it intends to fulfill. That this movement is not a passing feature of American university life may be seen from the phenomenal growth of the various clubs and of the national body. In 1903 there was but one international club in existence at an American university—the International Club of the University of Wisconsin, then having a membership of but nineteen students. A year ago, when the first annual convention was held at Madison, Wis., and a national organization perfected, eight clubs were represented by delegates. During the one year of united work the number of chapters has been doubled, and the prospects are the very brightest that soon every large institution of learning will count a cosmopolitan club among its valuable assets. The largest clubs have a membership of 150, while from fifty to seventy members

is a fair average for the rank and file of these societies. One chapter, the Illinois Cosmopolitan Club, has leased a clubhouse with dormitory; other chapters, among them the Wisconsin International Club, are maintaining a suite of rooms for the use of their members. Still others, among them the clubs at Harvard and Chicago universities, have had rooms in the university buildings set aside for their exclusive use. One chapter, the Cornell Cosmopolitan Club, has even bought real estate and will in the near future erect a \$15,000 clubhouse, in which the third convention of the association will be held during the next Christmas holidays. In the course of this year the Association of Cosmopolitan Clubs will publish a book of songs of all nations. These songs will be accompanied by both a transliteration and a translation of the original. The halls of the clubhouses will then resound with the strains of "America," "Rule Britannia," the "Wacht am Rhein," and other national airs.

The activities of the cosmopolitan clubs are numerous and varied. Lectures on international topics, informal discussions on subjects of foreign interest, receptions to the newly arrived foreigners at the beginning of the college year, musicales at which national songs are the *pièces de resistance*, and occasional social functions, are some of the forms which these activities take. But most conspicuous are the so-called "national nights." In these the members of one nation, if possible on the evening of their country's holiday, describe the history and institutions of their fatherland, play music by their native composers, project on the canvas pictures of their native land, and discuss the relations of their country to other countries. At times they also recite masterpieces of their country's literature, thus affording the members an opportunity of hearing many different languages. The place of meeting on such occasions is gayly decorated in the colors of the nationality giving the entertainment. In the course of these national nights the members get a

better insight into the mode of living, customs and viewpoints of people of different race than they can ever get from the colored accounts of travelers in foreign lands. This broadening influence has taught them to have sympathy with their fellow man's religion, however divergent from their own; with his political opinions, however contrary; with his social rank, however unequal; with his nationality, however different.

As the association grows, centers for foreign students will become necessary at strategic points in the East and West. Such points are the cities of New York, Chicago and San Francisco. As an example, take Chicago, with its tremendous foreign population, its hundreds of foreign students attending Chicago and Northwestern universities, Armour Institute, and certain departments of the University of Illinois, its score of foreign consuls and other dignitaries. There is little doubt but that, in the course of time, Chicago will have an international students' clubhouse, with a lecture hall, from whose platform correct information on international problems can be disseminated, with a library of foreign papers and periodicals, and works of international character, with dining and hotel accommodations for the hundreds of foreign students who pass thru Chicago on their way across the continent or to their respective universities.

As an agency for promoting the final establishment of permanent peace among the nations, there is nothing in the educational sphere likely to bear richer fruit. The foreign students for the most part come from the very best families. Many are sent by their governments. They will in many cases become leaders of public opinion and even of the political spirit and policies of their nation. In proportion as they can be brought in closer contact with their fellow student of different race or nationality, and learn that war and hostility are thoughts remote from the rising generation, will the hopes for the realization of world peace be increased.

MADISON, WIS.

Nemo Me Impune Lacessit

BY A. J. PORTENAR

THE spirit moves me to enter into disputation with Mr. Everett P. Wheeler, who, in *THE INDEPENDENT* of January 7th told us "What Organized Labor Ought to Have." In that article Mr. Wheeler says, in the second paragraph, that Mr. Gompers made a fundamental mistake, and further down he declares that the unfortunate Gompers made another fundamental mistake. Now, he who adopts a course of action based on fundamental mistakes shall hardly escape disaster; so with a fervent prayer that I am not making a fundamental mistake in measuring controversial powers with Mr. Wheeler, I will endeavor to show that his assumption that Mr. Gompers was guilty of wrongdoing was *his* fundamental mistake.

Mr. Gompers is editor of *The Federationist*. In that capacity he published a list headed "We Don't Patronize." The intent of that list was to inform those who read it that the product of certain manufacturers was made by non-union men. That was the head and front of his offending. Having made public this information, it was entirely a matter of free will with his readers as to how they would act upon it, if they acted at all.

In order to determine the nature and extent of Mr. Gompers's offense it is pertinent to inquire what effect his announcement in the "We Don't Patronize" list had; upon whom it had such effect, and why it had such effect.

When the list has any influence on the action of one who reads it, it can only have such influence if the reader is in sympathy with the object of the list. If he has that sympathy he will voluntarily discriminate against the products mentioned in that list. Surely it cannot be contended that he has not a right so to discriminate. Upon one who is indifferent or hostile to the trades union movement, the list will either have no effect at all, or else will cause him to act in a manner entirely contrary to the effect sought by Mr. Gompers in making the public announcement. In either case,

Mr. Gompers does not control and has not sought to control the actions of those persons who may read his list. If he has made no attempt to coerce any one into following a given line of action, then whatever offense he may be deemed guilty of must consist solely in the fact of the publication itself, regardless of whether anybody was influenced thereby or not.

At the risk of suit for damages in a civil action or prosecution for criminal libel, a newspaper may publish anything. Freely using this privilege, newspapers have published stories to influence stock market prices, without being ever scrupulous as to whether the stories were true; they have disseminated serious charges reflecting upon candidates for public office close to elections, so as to give no opportunity for denial or refutation, also without careful scrutiny of their truth, or even with positive knowledge of their falsity; they have spread scandalous tales concerning the private affairs of individuals, for malicious reasons or to make a racy story. All this may be borne with equanimity; but the limit is reached, the line of toleration is overstept, the "absolute" freedom of the press must be curtailed by the order of a court, when the editor of a labor paper informs his readers that a certain manufacturer discriminates against those very readers by employing non-union men. It is not claimed that the information is untrue. It cannot be claimed that union men must not be told this truth because they have no right to bestow their patronage where they please. It will not be claimed that they will please to bestow their patronage upon their avowed enemies.

But Mr. Wheeler indicates what he conceives to be Mr. Gompers's offense in the following:

"Again, Mr. Gompers declares: 'No man has a property right to the custom of any other man in business.' This is his second fundamental mistake. The good-will of a business is a property right, and often very valuable. It is constantly bought and sold. The good-will of a business is the interest of the owner in the custom of that business."

It is true that the good-will of a business is often bought and sold, and that it may be very valuable. But if a man sells to another the good-will of his business, together with the stock and appurtenances thereof, is he assured that he can make delivery of what he has sold? And if, for any reason or out of pure caprice, his former customers refuse their patronage to his successor, can the latter demand delivery of what he bought? Can he sue and recover the purchase price of the good-will in the same manner as he might if the stock was misrepresented as to quality or amount? He cannot; and hence it follows that while good-will might be called property in a certain sense, it is still true that no man can have a property right in the custom of any other man. If he had, the seller could deliver and the purchaser demand the patronage of the persons whose good-will was paid for, and those persons would be bound to spend their money with those who had a vested right to such patronage, and not wherever their inclinations might lead them.

I therefore fail to see what offense was committed by Mr. Gompers, either in the publication *per se*, or in the effect that might be attained upon others by the publication.

Now, a word as to the contempt for which Mr. Gompers was sentenced to imprisonment.

If the Constitution, without qualification, says that I may do a certain thing, and a judge in his wisdom orders me to desist from doing that thing, what should be my attitude? Must I surrender my constitutional rights upon his arbitrary order? True, if it is a judge of an inferior court who makes the order, I may appeal from his decision, but while my appeal drags its slow way thru the courts my rights are destroyed, and even should my appeal eventually be sustained, I have none the less been unjustly withheld from the exercise of my guaranteed privileges, and that without any hope of redress against the judge who so deprived me.

If I disobey, I am in contempt. Now, it is difficult to maintain the position that any man may disobey the order of a court when he feels that he is aggrieved thereby. Nevertheless, it would not be

difficult to find instances where men have disobeyed statutes and courts, and have been applauded therefor. That which is legal may still be unjust, and there is no wrong so hard to bear with fortitude as a wrong imposed by the forms of law. Obedience to the law and the courts is necessary as a rule of conduct, but it is conceivable that disobedience may at times be the more righteous attitude.

To illustrate, let us consider the fugitive slave law. Obedience required the citizen not to assist or harbor the fugitive slave, but to deliver him to his owner. No doubt a court would have issued any order necessary to enforce the law. What would be the comparative estimates of the "good" citizen who obeyed and the contumacious one who defied the law and the court?

But let us leave the case of Mr. Gompers and consider the boycott in a general way. In that connection I must refer to certain language used by Mr. Wheeler, from which I infer that he is laboring under a mistaken impression:

"So with a man's labor. It is his property, and a sacred and indispensable property. He is free to sell it or to refuse to sell. But once he contracts to give his labor, the person with whom the contract is made has property in its performance. . . . In the long run, the sacredness of contracts means more to the labor union than to the employer. What the honest workman wants is steady work on terms to which he has freely agreed, and the performance of which he can enforce."

Does Mr. Wheeler believe that the mechanic or laborer has contractual relations with his employer which he can enforce in the courts? Does he not know that the terms upon which he is employed are such as he can obtain in competition with his fellows, terminable at any moment, with or without good cause? Does he not know that the only restraint upon the employer's absolute domination is in the union for mutual protection or advancement of the employees? In theory, of course, the workman freely assents to the terms of his employment, and may leave it as readily as the employer may discharge him, but is it so in fact? Permit me to quote from an article in THE INDEPENDENT of October 24th, 1907:

"Freedom of contract presupposes the equality of the contracting parties. What sort of equality exists between the owner of land, machinery and capital on the one side, and the owner of nothing but a pair of hands on the

other? It has been forcibly said that most workmen have not a month's wages between themselves and the almshouse. Thus the 'freedom' of one of the parties is fatally circumscribed by the imperative character of his necessities. Now, if the position of the workman is still further prejudiced by the fact that three men are seeking one job, will it be contended that any other 'freedom' remains but that of taking what he can get—with the alternative of starving?

"The union confers with the employer as a representative of the individuals who compose it. All the questions surrounding employment in an industry are discussed, with the result that written contracts for a definite period of time are agreed upon, at living wages and for reasonable hours."

Such employers as Mr. Van Cleave, Mr. Post or Mr. Parry refuse to treat with a union as equal parties to a contract. They usually declare that they are going to run their own business without interference. But while they discriminate against union men, they are filled with virtuous indignation when union men retaliate by discriminating against them. It is quite proper for Mr. Van Cleave, as president of the Manufacturers' Association, to advise the collection of a fund of \$500,000 for the avowed purpose of fighting organized labor, but it is highly improper for union men to refuse to spend their money on Mr. Van Cleave's stoves, and thus furnish him with the munitions of war to be used against themselves. To summarize, Mr. Van Cleave may exercise his constitutional right to be a non-union employer and to injure the business of union men by an active campaign against them, but union men may on no account injure his business by an active campaign against him. Incidentally, I wonder if Judge Wright would issue an injunction against the Manufacturers' Association restraining them from giving money to the Typothetæ to enable them to make a fight against the eight-hour day asked for by the International Typographical Union. Injunctions have been issued restraining union men from paying assessments for the support of strikers. Can it be that it makes a difference whose ox is gored?

Again I quote Mr. Wheeler:

"It will be asked: What would you designate as illegal and? I answer: Interference with the personal rights of others, whether employers or employed. The blacklist ought to be illegal."

Ingenuous Mr. Wheeler! Yes, the blacklist ought to be illegal, but it is not, and the Supreme Court, in the Adair case, decided that a statute which forbade the discharge of a man because of his membership in a union was unconstitutional. So my only property—my ability to labor—may be interfered with if I desire to be a member of a union, but I and the other members of the union must respect the "property right" of him who injured us to sell us the goods he will not employ us to make.

Mr. Wheeler takes issue with Mr. Gompers because the latter said the labor union is not a trust:

"There again is the fundamental mistake that a combination is not a trust because it deals only with immaterial things. They are just as much the subject of property as material things."

To Mr. Wheeler's ideas on the labor union as a trust let me oppose the words of the Honorable John Morley, a member of the present British Government, and a man known thruout the civilized world for his humanitarianism:

"There is all the difference in the world between the selfishness of a capitalist and the so-called selfishness of a great trade society. The one means an increase of self-indulgent luxury for one man or a single family; the other means an increase of decency, increase of comfort, increase of self-respect; more ease for the aged, more schooling for the young, not of one family, but of a thousand, or ten thousand families. Others may call that selfishness, if they please; I call it humanity and civilization, and the furtherance of the commonwealth."

Now, look at this "other flaw" that Mr. Wheeler found, and how he meets it:

"One other flaw in Mr. Gompers's argument requires consideration. He maintains that an act lawful in the individual ought not to be unlawful to a combination. Let us see. If one man enters my house and behaves decently he is welcome. But if a thousand men come at once and fill it, they violate my right to use my own house."

It appears to me that there is a flaw in Mr. Wheeler's illustration. One man may be *welcome* in Mr. Wheeler's house, but he has no *right* there. One man can just as effectually violate his right to use his own home as a thousand, and neither the one nor the thousand may enter without Mr. Wheeler's permission. But one man may refuse to buy Mr. Van Cleave's stoves, and a thousand may do likewise, and each of them and all of them no

more lose their individual rights in such a case because they think alike and act alike than they would if they voted against Mr. Van Cleave for a public office because they think alike and act alike. They may request any man to boycott Mr. Van Cleave at the polls. Why may they not request any man to boycott Mr. Van Cleave in a hardware store?

The boycott has been harshly characterized of late years, as tho it were a new contrivance by the powers of darkness, used only by those sons of Belial, the members of labor unions. As a matter of fact, the boycott is as old as mankind. But it is only *anathema* when applied by the aforesaid offspring of Beelzebub. It is even a laudable and patriotic thing at other times. Some years ago the Philadelphia Councils contemplated a particularly outrageous raid on the people's property. Among other methods of convincing the City Fathers that they were about to do an evil thing a proposal was made to boycott the Councilmen and their families. No one was to speak to them, to do business with them, or have any human relation with them. Their children were to be shunned in the schools, and their wives to be ignored in the streets and shops. The plan was carried out and in a few days the obnoxious ordinance was abandoned. One Councilman admitted that the boycott on his family brought him to terms quicker than any other method could have done. Was anything cruel and un-American done there? If there was, neither the newspapers nor Mr. Wheeler said so. The people of Philadelphia were attacked and they defended themselves. But how the lightning flashes and the thunder roars when trades unions show that they will not submit to injury without retaliation!

The boycott when used by labor unions has been uniformly declared illegal by the courts, and continuously assailed with vituperative fury by the editors of newspapers, and by the sort of correspondent who signs himself "Justitia" or "Pro Bono Publico." Why? Because it is effective. And the reason it is effective is because those to whom such an appeal is made are in *natural* sympathy with those who make it. Remember the mot-

to of trades unionism: "The concern of one is the concern of all."

Trades unionism has never been handed anything. It has been compelled to fight for everything it got. The same violent outcry that is now raised against the boycott when applied by union men, was once directed against the idea of unionism itself. Laws and courts and eminent citizens of former days have been as harrowed in soul and as vociferously indignant in written and spoken language over the thought of any combination among workmen for any purpose as they are today over the boycott. But unionism is militant; mighty changes have been wrought in the past century, and the fighting spirit is in no wise quenched. Even as I write the following news reaches me:

Leipsic, December 24.—In a test case brought by a Mulhausen hotel-keeper against Herr Emmel and the executive committee of the Mulhausen Social Democratic party for instituting a boycott against his resort, the decision of the lower court (Colmarer Oberlandesgericht) was sustained by the Reichsgericht (Supreme Court of the German Empire). The lower court declared the defendants not guilty. The decision, which is final, establishes clearly the right to boycott.

I did not get that item from the cable news of any important molder of public opinion. In the press of important dispatches concerning the doings of Tommy Burns at the antipodes, or the facts about the latest cold in the head that disturbed Edward VII of England, this decision, the news of which would stiffen the backbones of union men here, was probably deemed too trivial to deserve space. Nevertheless, we can at least hope that the courts of the United States will some day reach the same conclusions.

Mr. Gompers may go to prison. I have an excellent chance of going to prison myself, for a certain pattern company located in New York is industriously trying to prove twenty-seven members of Typographical Union No. 6 guilty of a similar contempt, and if the judgment of the court is in line with that of Judge Wright I also may spend a year in retirement. But that will not make the rest of us buy non-union stoves or non-union patterns. Going to prison for a cause never injured the cause. *Nemo me impune lacessit.*

BROOKLYN, N. Y.

MUSIC ART AND DRAMA

Hammerstein's Operatic Plans

Mr. Oscar Hammerstein is probably the busiest and most enterprising operatic impresario the world has ever seen. To have one full-fledged grand opera house, with himself as sole manager and board of directors, would seem to any other man burden enough for one pair of shoulders; but he must needs go and build a second house, in Philadelphia;

Mme. MARINE ELEGY.

After winning the three New York theaters that have

and now comes the announcement that he intends to rejoice all the other large cities in the country—or most of them—not by building opera houses for them,

but by visiting them next winter with a specially selected company that will sing popular operas at popular prices in English and Italian. In other words, Mr. Hammerstein intends to become a competitor of Mr. Henry Savage, in addition to fighting the Metropolitan Opera House, with its Wall Street backing! His epitaph will surely read, "Here lies Oscar the Dauntless."

There is no doubt a great and growing eagerness to hear grand operas throughout the country, and if Mr. Hammerstein can gratify this desire he will get his reward. One need not take him too seriously when he talks about "educational" grand opera; he will give the public the operas it wants to hear and not those the hearing of which would educate it musically. But if he can supply cheap and good entertainment it will be sufficient; Americans need that more than "education" of any kind—so few know how to amuse themselves rationally.

Mr. Hammerstein's plan is to begin his season of cheap opera in New York on August 16th of this year, and continue it till the regular season begins. Tickets are to cost less than one-third the regular rates, and, of course, the singers will be less costly. But if he can employ such artists as the Irish tenor, John McCormack, who is already engaged, and William Hedmond, he may confidently look forward to reaping a good harvest.

"Otello" and "Salome"

Mme. Melba's engagement at the Manhattan was altogether too short this time, but she was in a hurry to join her family in Australia. The house was crowded every time she sang and there was the same enthusiasm as in former

seasons. Is her voice as good as it used to be? In some respects it is better—mellower in timbre and more emotional—and if her top notes, which used to electrify the public, are less sure of their effect, that is in a way a gain, for it prompts her to give her attention to rôles which do not require florid execution. The best of these rôles is Desdemona, in Verdi's "Otello," which she sang nine times in London last spring, and might have sung as often here had she remained long enough. It was the first time that this Verdi opera was a financial success in New York. She was supported by Zenatello as Otello and Sammarco as Iago, and the only cause for regret was that there was no opportunity to hear Renaud as Iago, a part in which he surpasses Sammarco as far as an actor as he does in the title rôle of "Rigoletto." Maurice Renaud is the greatest actor now on the operatic stage, besides being one of the best singers, and when he appears at the Manhattan the audiences are always not only large, but exceptionally distinguished in appearance.

Apart from "Otello," there has been no important novelty at the Manhattan since our last review. But tomorrow the first performance will take place of Richard Strauss's "Salome," which, it will be remembered, was withdrawn from the Metropolitan two years ago after a single performance because the press was almost unanimous in condemning it, not on musical, or even moral grounds, but for what might be called psychopathological objections. How it will fare in a French version, with Mary Garden doing not only the singing and the acting, but also the dance of Salome, remains to be seen.

Mr. Hammerstein has shown his usual managerial acumen in the choice of the date for this production—in the same week when Strauss's new opera, "Elektra," is to be staged in Dresden. For this Dresden première demands for seats have been received from all countries sufficient to fill the house ten times. The cables will be kept busy—and Dresden will be one of Hammerstein's advertising agents! Is it a wonder that this impresario is successful? As a matter of course he has secured the rights for "Elektra," too, and it is to be his first novelty next season, the second being

"Monna Vanna," which has just been produced successfully in Paris.

"La Wally" at the Metropolitan

Until Toscanini was engaged, the Metropolitan had no Italian conductor equaling Campanini at the rival house.

ENRICO CARUSO.

Portrait painted by Hugo Ballin.

Copyright, 1909, Hagelstein Bros., New York.

Since his advent some of the most popular operas, notably "Aïda," "Tosca" and "Madama Butterfly," have shone out with greater splendor than ever, and hidden treasures in them have been revealed. He has at the same time tried to enlarge the Italian repertory. His first attempt was not a success in any way; Puccini's early work, "Le Villi," did not interest the public, and while it was repeated several times, this was only because "I Pagliacci," with Caruso and Farrar, or Destinn, was given the same evening, thus ensuring large audiences.

One feels sorry to record that the second Italian novelty, "La Wally," also failed to win popular approval, altho the cast included Destinn, Martin, Amato

and Campanari. The composer of this opera was Alfredo Catalani, who died in 1893, after writing six operas, none of which had a success while he lived. After his death Toscanini revived his "La Wally" in Buenos Aires and won a triumph with it, which subsequently was duplicated in Milan and other Italian cities. The story of the opera is based on the popular Tyrolean novel, "Geyer-Wally," by Wilhelmine von Hillern. Wally is a robust but warm-hearted and impulsive Tyrolean maiden, who favors among her two suitors a mighty hunter named Hagenbach, but, on fancying that he is treating her lightly, turns to the other, whose name is Gellner, and promises him her hand if he will kill his rival. She still loves Hagenbach, however, and when he is pushed over a precipice at night by Gellner she herself comes to his rescue, only to be buried, with him, in the last act, by an avalanche.

Altho Catalani was by no means as great a composer as Puccini, "La Wally" is a riper and better work than "Le Villi." Yet there is not enough original or effective melody in it to offset his orchestral science, hence the opera fell thru, only \$300 being taken in at the third performance of it, apart from the subscription.

A Mozart Revival

Happier by far was the revival of Mozart's "Marriage of Figaro," at the Metropolitan, under the supervision of Mr. Dippel, and in accordance with the plans of Mr. Gustav Mahler, the great Mozart specialist. When Mahler was director of the Imperial Opera in Vienna, music lovers used to come from all over Austria and Germany to see and hear the Mozart performances under his direction. The "Figaro" he presented at the Metropolitan showed, as his "Don Giovanni" did last year, why this was so. As ordinarily given, there is much in "Figaro" that seems antiquated, notably in the recitatives, and the action of the comedy is often unintelligible. Mr. Mahler's object is to make of this comic musical comedy in the genuine sense of the word, and he succeeds wonderfully. A cast including Sembrich, Eames, Farrar, Scotti and Didur might have made much of this

opera even under ordinary guidance; but with Mahler at the helm the result was an ensemble the like of which has seldom been heard here. Four crowded audiences heard the opera, and the only cause for regret was that it could not have four more repetitions, because of the departure of Sembrich and Eames, both of whom are about to leave the operatic stage. The present generation will never again hear such Mozart singing, it is safe to assert. Luckily Geraldine Farrar remains, to carry on the traditions of Sembrich, Eames and Lilli Lehmann, her teacher.

Elgar's Symphony

Novelties in the concert hall do not usually attract as much attention as new operas or revivals. A striking exception is Elgar's first symphony, which has been the sensation of a month in England. Walter Damrosch had the privilege of first presenting it to an American audience, at one of the concerts of the New York Symphony Orchestra, and the Boston Orchestra also is now rehearsing it. In London it was given half a dozen times in as many weeks, and the newspapers gave it more attention than perhaps any symphonic work, domestic or imported, of the past.

Hearing this work at Carnegie Hall, where it was excellently rendered by Mr. Damrosch and his men, one got the impression that the great ado over it in England must be largely a matter of patriotism. Ever since the days of Purcell and Handel the English have sighed for a great composer of their own, and when Hans Richter and Richard Strauss lauded their Edward Elgar, their joy knew no bounds, and he at once became a Sir and a national hero. He wrote several oratorios, which were acclaimed with gladness; but why, the professionals asked, does he not write a symphony? At last he complied with their wishes, and the symphony was given to the expectant world. It proved to be a most respectable work, constructed with great skill and colored with remarkable deftness. Were its themes—that is, its ideas, its melodies—as good as its formal structure, it would be a great work. Lacking such ideas, its glory will prove ephemeral.

Two Other Novelties

While such virtuosos as Mischa Elman, Albert Spalding, Ossip Gabrilowitsch and other well-known artists have been earning laurels and dollars without making any fresh revelations of their powers or producing new works, the orchestral and chamber music organizations have presented a few novelties that must be mentioned. The most interesting of these was the posthumous string quartet of Grieg, which the Kneisel Quartet has played. Grieg was too ill during the last decade of his life to complete this cyclic work. The first two movements were ready for the printer when he died; for the others he left sketches which were subsequently elaborated by his friend, the eminent Dutch composer, Julius Roentgen, who did his work so well that even experts can hardly tell what is Grieg's and what his. The composition, while not equal to Grieg's first quartet, is nevertheless a valuable addition to the list of his works, original in melody and modulation.

The Boston Symphony Orchestra played at its last concert a piece called "Kaleidoskop," which has attracted a good deal of attention in Germany, partly on account of a suit brought against its publisher because Noren, the composer of it, had borrowed (with full acknowledgment), some thematic material from Strauss's "Heldenleben." The law does not allow the borrowing of melodies, but the court decided that the Strauss themes were *not* melodies. The piece itself, which is a set of variations, was hardly worth all this fuss. Admirably played as it was by the Bostonians, it made a pleasing impression; but it is neither deep nor important, the best thing about it being the kaleidoscopic orchestral coloring.

Exhibitions of the Month

At the galleries of Messrs. Bauer-Folsom we have had an opportunity of seeing some twenty pictures by Hugo Ballin, collected together and well hung. Mr. Ballin is probably one of the most talented of the very young painters, and he has distinguished himself by winning many prizes, so that he may feel encour-

aged to continue to paint more pictures such as those recently exhibited. There can be no doubt that this young artist is honestly painting the thing that he enjoys. The pictures mostly consist of little girls and young women, with babies, sitting around under trees. The young women are generally pretty and vague, and the girls sometimes vague, sometimes unaccountably emotional. Perhaps one may be seen floating around in the air with a baby occasionally, or, at the risk of her aimless little existence, she may float off in an impossible boat with an imaginary young man. It is always halcyon weather, and they enjoy a sweet-as-honey, harmless, imaginary existence out-of-doors. Mr. Ballin paints the young forms with love, there is no doubt about it—the young-lover love for tender forms of sweetness, and there is room for the young lover among our modern painters, but isn't it time for the hero with blood in his veins to appear on the scene and disclose to our anxious gaze that these creatures are capable of animation; yes, and even thoughts? There is barely a thought among all these pictures. Decoration? Certainly, but Burne-Jones sometimes gave us real beauty of form, tremendous skill in design, and had as a background great knowledge of many things; he also painted "The Knight Who Forgave His Enemy." Too much sweetness becomes nauseating; moreover, judging by Mr. Ballin's youth and the large number of pictures he has painted, this sort of thing must cost him very little effort, and continued indulgence saps strength, and, we cannot help fearing, might spoil the decided talent which should be developed to a fine maturity.

The three portraits in this exhibition, one of which, "Signor Caruso," we publish, give evidence of this artist's power of grasping and rendering character, and justify entirely our high belief in his future.

At the Knoedler Galleries, Henry Clews, Jr., is giving a small exhibition of sculpture. No. 5 is the rendering of the head of a man, a victim to absinthe. The head is bent downward and the eyelids lowered, so that we have no chance of looking for the lost soul of this wreck

of humanity. Do we want to look at a lost soul? No; we do not. Neither do we wish to look at a mass of wrinkled flesh on a skeleton. The only excuses for presenting such a thing to the public would be either a wonderful realization of manhood dethroned, which might point a moral; or else simply a technical study. If the latter is the reason for its presence in this exhibition, we think it would have been in better taste for the artist to show his skill in some less unpleasant form. Beauty of form is one of the essentials in sculpture, but this gentleman seems to delight in and shows a special talent for breaking up surfaces. There is very little beauty of any kind among these models.

At the Montross Galleries, Mr. Wil-

now on view in the lower hall at the Lenox Library. Included therein are a number of portraits of Poe, C. F. W. Mielats's etching of the cottage at Fordham, and half a dozen autograph letters from Poe to E. A. Duyckinck. In the print room, on the floor above, those interested can compare Manet's illustrations for "The Raven" with those by Doré, or can see Vallotton's conception of Poe. The exhibit fills only two cases, but admirably serves its purpose.

The National Arts Club has been exhibiting a collection of original drawings in black and white and in color prepared for use in connection with advertising. The advertising art is a growing cult, and the painters' art has now become an important handmaiden to advertising.

H. M. DOUGLASS AND WILSON LACKAYE.
In General Metcalf's new play, "The Eagle."

lard L. Metcalf has fourteen pictures. They have his beautiful color and crisp handling, but they bear the impress of locality, and do not, like the pictures of the greatest landscape artists, suggest the full beauty of the earth.

A commemorative Poe exhibition is

Something of this was vividly set forth at the National Arts Club showing.

The American Society of Miniature Painters opened its tenth annual exhibition of miniatures at the Knoedler Galleries on January 23d, to continue for two weeks.

German Pictures at the Metropolitan Museum

The collection of presumably representative German pictures shown here until the end of February, and then to travel to Boston and Chicago, is not likely to shake American art lovers' allegiance to France. As a phrenologist visitor exclaimed, wandering about with a pained look, "It's all explained by the German type of nose — no taste!" A few of the men whose fame has come to us without examples of their work are great disappointments to us. Menzel, for example, whose drawings are great works, but who suffers from the national absence of color sense in his paintings; while von Lenbach's vigorously realized portraits again have a greasy color and a most conventional arrangement. William Leible is much more likable for color and good, solid value-painting. Böcklin, who was, of course, a Swiss, tho not represented by any especially good example of his work, only strengthens one's feeling of the general ugliness of the works of the other men, thru his beautiful painting of the nude woman in the pool particularly. Franz von Stuck manages to be strongly horrible in his "Infernal Regions," but it is hard to understand his popularity in Germany from his pictures here. Arthur Kampf has painted the German Emperor especially for the exhibition, and what a bustlingly important little man he is! Even the imperial eagle on his little helmet on the table beside him seems bowing to him perforce. The portraits of Ruth St. Denis, the American dancer, and Geraldine Farrar, by Kaulbach, are strongly painted but unbeautiful. Landscape art is in a posterish stage in Ger-

many, apparently, while the sculptures shown are in no sense indicative of the existence of a great school in that art.

Drama

Power of motive and strength of development characterize "The Easiest

Way," Eugene Walter's latest drama; it tends in the right direction, however ugly its problem, however brutally true its situation. Mr. Belasco on several occasions has told us personally that the stage should face facts, that the dialog should sound fearlessly; he has found a vehicle for his ideas and an effective rôle for Miss Starr in "The Easiest Way."

The word "mistress" has fallen from its original high meaning; to some minds it is applied strictly to the French stage, and hence to French life. But Mr. Walter prefers to take Broadway and Riverside Drive in New York as his point of attack; instead of the conventional count and youthful innocence, he contents him-

self with a successful broker and a struggling actress, who, having gone wrong, strives in vain to live right in the face of a new-found love.

In the French drama there is no self-conscious wavering over the word "mistress"; it is an accepted idea, a common condition. Mr. Walter argues that in New York the condition exists, tho the idea may be wholly self-conscious. He takes his heroine West, where she meets with a clean man, who is just beginning a career, and is therefore poor in all save determination and strength. Mr. Walter's thesis is that this girl, having once come into the hold of an unscrupulous man, having been catered to, her every foible satisfied, is beyond the point of re-

JOHN E. KELLERD,
In "The Vampire."

turning to an existence of sacrifice and relinquishment. He drags his heroine down, not like Pinero, in "Iris," for the sake of seeing her down, but to prove something deeper. This woman is led thru the coils of lying here and there, she is goaded by poverty, she reaches the point where conditions will not allow of her reformation, even tho she would. When the curtain drops finally, the fouler instincts conquer; discarded by the lover out West in as ruthless a fashion as Iris is discarded, she gives herself over to the evil for the simple reason that there is no benefit to her in being good.

Behind the external substance of "The Vampire" there hovers the shadow of a big idea. Edgar Allan Woolf and George Sylvester Viereck, who are the youthful collaborators in this drama, attempting to be psychologic are naïvely sophomoric in their effort to portray the development of one of those absorptive souls men call geniuses. Paul Hartleigh sucks the life blood from the brains of others; subtle power is given him to abstract from the sculptor, the writer, whatever vigor there is in his own work after it is done. The power for good or evil rests in his hands.

Thruout the dialog of this play there is an air of strenuous creation; the main framework—the love story, the human interest—is thoroly stereotyped. Occasional poetic flashes, which evidently emanate from Mr. Viereck as his contribution (the whole motive is drawn from his novel, "The Vampire"), carry with them the glow of his youthful tastes; he lauds all of his pet heroes; he plays with morbidness, colored by a certain German sentimentalism—his jugglery with science becomes an abortion of psychic suggestion. In fact, both these young collaborators rush in where angels fear to tread; they work Art for all she is worth; their philosophy of life is as erratic as their conception of character or of the motives prompting character. Their vampire has not the advantage of external melodramatic pithiness, such as Du Maurier developed in Svengali; nor has he the atmospheric disagreeableness of such a type as one found in Owen Johnson's "The Comet" or Molner's "The Dead." Yet, despite the negativity of this play, it has certain qualities to commend; despite its puerile approach

toward the unconventional, and the bombast of such lines as "It's not my honor, but the welfare of your victim," and "My mission is to reach the heart of humanity," it possesses a poetic quality out of the ordinary. "I spoke in symbols to bring out the universal fact," exclaims the Vampire; the play is neither mysticism nor melodrama; it is simply immature.

Mr. William Faversham deserves the respect of theatergoers; his earnestness, his excellence, his spirit, are all three to be praised. The new drama which he has just mounted suffers comparison with "The World and His Wife." It is a costume vehicle by Edward Childs Carpenter, who is financial editor of a Philadelphia paper, and it is called "The Barber of New Orleans." In environment it is Creole, reflecting somewhat (tho not so vividly) the color of George Cable's stories. The plot is wholesome and avowedly romantic; the dialog flows toward situations and not from very big motives. There is sword-play and moonlight—thru all of which Mr. Faversham moves with ease and artistic grace.

There are three things about Mr. Cleveland Moffett's "The Battle" which point to its success: first, it is written by a man who possesses a definite social point of view; second, it is sprinkled with aphorisms; third, its interest is that of the newspaper. Primarily, however, Mr. Moffett is not a playwright by nature; his weak invention would show that; he speaks out by force of conviction; that is why sometimes he borders on the verge of preaching a social philosophy over the footlights. A millionaire goes into the slums to prove that from nothing he can work himself up to wealth and power. Cleanliness is next to godliness; he makes his home *clean*—here is the first arraignment of poverty; he organizes labor and adopts the methods of the trust to a bakery. His point is proven thru the exercise of *will*. His battle is prompted by motives upon which the minor story is hinged; during his fight and his comments regarding the struggle of class, we meet with such lines as "If a woman has twins in this tenement, they blame John J. Haggleton" (most palpably intended for Rockefeller); "Give the average American an auto and he'll

break the speed law"; "Why should I help those who don't help themselves?—God doesn't"

This is clever, and the final curtain cleverer, for the close of the play comes just as Haggleton is beginning to explain how he, with ten millions at his disposal, would go about improving conditions in New York. Wilton Lackaye plays the leading rôle with adequate understanding. "The Battle" is being advertised in a clever spirit of inviting controversy.

The chief interest in Miss Maxine Elliott's new play, "The Chaperon," lay in

applicable at all times. The scenes were acted with surprising evenness, and the whole piece was permeated with an artistic feeling that gains for the Yale Dramatic Association our respect and congratulations. Simultaneously with their production the students issued a noteworthy edition of the play.

Another performance which should not be past by unnoticed is "The Little Princess," as given at "The Educational Theater for Children and Young People." This enterprise deserves more lengthy consideration, but at present it is suffi-

SCENE FROM KATRINA TRASK'S "THE LITTLE TOWN OF BETHLEHEM."

This beautiful play of the Christmas season was produced last week at the German Theater by the Ben Greet Players.

the fact that it was given in a brand-new theater named after the actress, and carrying a most impressive white marble and stone front. Otherwise, there is not much to say for a thin story saved only thru the efforts of acting. The chaperon, left in charge of an Adirondacks girls' camp, meets with many adventures.

Every year the Yale students bring their "show" to New York; we remember with pleasure their performance of Ibsen's "The Pretenders," which they interpreted with dignity and fullness; now they have given Sheridan's "The Critic," one of those dashing, sparkling comedies

cient to say of a movement which has gained the hearty support of Mark Twain and others that it is doing a big work, and suggests much larger influence in the future. The cast was composed entirely of amateurs, trained to that perfection and intelligent grasp which is rarely seen on Broadway.

The healthy status of drama is not always marked by the bigness or the littleness of the play, but by the response, the demand which encourages the product. There is always room for improvement, not only in the drama, but in the public on which drama depends.

Disappointment

BY GEORGE NEWELL LOVEJOY

~~She came to me in such a way~~

I could but feel she must be Truth;
And this is what I heard her say,
With voice as sweet as honeyed youth:
"I've sought you out to bring you cheer today!"

Oh! how she in my bosom set
My heart fast beating! I forebore
To think I ever should regret
Her coming that day to my door
With words, each one sweet as a violet.

Yet, where she said: "There, waits Love's
rose!"

I found no flower, bud, or leaf;
Still, on the ground, lay winter's snows,
And moaned the cold winds as in grief,
While in me grew a sorrow, as God knows.

And, going back, weeping sad tears,
Cold Disappointment I beheld;
The veil of Truth removed, her years
Full of deceit, and crowned with eld,
Deep written on the face that never cheers.

In very pain, I sobbed: "Oh! why
Within me bud a bliss, so fair,
And then so cruelly let it die?"
"Man needs no heaven to win his care
If this world have no ill!" was her reply.

And she, who in me lodged the dart
Of wo, redonned, without delay,
The veil which did to her impart
Truth's likelihood, and turned away,
~~Seeking new scenes to try her mournful art~~
ROCHESTER, N. Y.

The Example of Haverhill

BY REV. DE MONT GOODYEAR, Ph.D.

MUNICIPAL reform has finally sprung up in New England. Seeds are germinating in many places, but the most striking results appear in Haverhill, Mass. The city for years was hopelessly in the hands of professional politicians and liquor dealers. Pavements and walks were poor. Sewers were inadequate. Law enforcement was lax. The annual deficit was increasing and the public debt rapidly approached the statutory limit. The city government confest inability to make ends meet even with these meager results. They suggested more saloons and a higher tax rate as the only possible remedies. The people, however, were skeptical about the efficiency of those remedies.

In September, 1907, the Roman Catholic clergymen took the initiative and opened fire upon the saloon. They were promptly followed by the Protestant pastors. A no-license league of citizens soon took form. These forces united, raised money, held rallies, printed pages of advertising, and carried the city by a majority of 774 for no license. This was a surprise to every one. Even then the people did not realize the political regeneration that was going on. It was considered a freak vote. "Politicians" were yet confident. Liquor dealers held

their saloon property over, expecting a return to old conditions. But the people were really anxious for better things.

President Eliot, of Harvard College, accepted an invitation to address the men's club of the Portland Street Baptist Church, in November, 1907, and spoke on "Municipal Government by Commission." He clearly set forth the proposition that a city is really a great corporation, and its affairs are almost entirely administrative. Therefore, party machinery, party affiliations and party principles are of no value in it. The people, like stockholders, should choose a small board of capable men to administer city affairs.

Men's clubs from other churches being present, the house was crowded. The time to act was ripe. These clubs were quickly formed into "The Haverhill Civic Association." Its sole purpose was to draft an amendment to the city charter embodying the principles of the Galveston—or, as it was more generally called, the Des Moines—plan, and secure its adoption.

Prominent lawyers became interested. A committee drafted the amendment with great care. It was discust and modified to meet serious objections, and sent to the Legislature seeking permission to

be considered and voted upon. There it met three enemies. First, city solicitors, sent by their respective city governments, opposed that part which, like the Iowa law, gave other cities permission to consider the same plan. That was stricken out. Second, the corporation lobbyist opposed the article requiring popular vote of the people upon all franchises. He declared he would kill the act unless that be dropt. It had to go—for the present. But the death knell is soon to sound for the lobbyist. Third, the Haverhill politician was there opposing the whole plan. The Mayor shrewdly presented a substitute. At length the Legislature past the act authorizing the special election, and it was held October 6th.

Despite the strenuous opposition of nearly all of the old city officials and the political forces back of them, also, strangely enough, of many Socialists, so numerous here, the vigorous campaign resulted in a majority of 826 votes for adoption.

The politicians then secured the right of way for its immediate consideration before the Supreme Court, where they hoped to see the charter killed by charges of unconstitutionality. Here they were disappointed. Their only remaining hope was to land the offices and the good salaries. There was a grand scramble, but it was fruitless. Men of high standing in the city appeared as candidates under the plan which in their opinion made good results possible, and the preliminary election weeded out all the professional office seekers except two. Men who had received large votes when designated "Republican" now received mere handfuls. All their forces united in a last desperate effort to elect these two men by using "plunker ballots" at the final election on December 12th, only to be crushed by final defeat.

On January 4th the old order of things past away into outer darkness, with weeping and gnashing of teeth. The new city government, consisting of a wholesale provision dealer, an ex-bank cashier, an ex-Socialist shoe worker, a civil engineer and a contracting builder, quietly entered City Hall and went to work.

The borrowing capacity had then been reached. the treasury was "strapped," and some bills remained unpaid. Space limitations forbid the telling of apparent im-

provements during the first week, as it seems to me more important to outline the salient features of the new plan. They are as follows:

1. *The Municipal Council*, which shall consist of a mayor and four aldermen, all elected at large. Tenure of office, two years. Salary, mayor, \$2,500; aldermen, \$1,800 each. But the school committee consists of the mayor and four elected members who serve without pay.

2. *Non-Partisan Ballots*. No party designation appears upon any ballot. The preliminary election (a sort of informal ballot) is free for all, but only the names of those candidates receiving the largest and second largest number of votes for each office at the preliminary election are printed upon the ballots used at the final election. Others may be written in or put on with "stickers" by the voter.

3. *Publicity*. All meetings of the council must be public, votes taken by ye and nay, and recorded. Every member must vote when present. Appropriations and contracts for \$2,000 or more must lie over one week before final action. A complete monthly statement of transactions must be published.

4. *The Recall*. At any time the voters may secure the removal of a member of the council by petitioning for a special election. The petition must, however, be signed by a number of voters equal to 25 per cent. of the votes cast for mayor at the last election, and the member may be a candidate for approval.

5. *The Referendum*. Upon petition of voters equal in number to 25 per cent. of the total vote cast for mayor at the last election, any proposed ordinance must be submitted to the people at a special election.

6. *The Initiative*. Upon petition of voters equal in number to 25 per cent. of the total vote for mayor at the last election, requesting the enactment of any ordinance desired by the people, the municipal council must pass it within twenty days, or call a special election allowing the people to pass the act. Upon petition of voters equal to 10 per cent. of the votes cast for mayor the proposed ordinance must be submitted to vote of the people at the next general election.

The Possibilities of Tradition

BY CASPAR RENÉ GREGORY, D.D., LL.D.

PROFESSOR OF NEW TESTAMENT CRITICISM IN THE UNIVERSITY OF LEIPSIK.

EVERY one knows with what scorn the enemies of the Christian records treat the early years of New Testament tradition. They speak as if ten days after anything had taken place there would be no one to say whether it had taken place so or so, or here or there. They take for granted that a book could have been written under the name of an apostle and the next year or a couple of years after his death have been handed over to his intimate friends as his work without their having a notion of the real state of the case or suspecting the forgery. To speak more exactly, the demands upon the men who pass along the knowledge of the first Christian preachers and teachers and of the books that they wrote, who in all simplicity and without thinking that they were doing something that would hereafter be treated as if it were an affidavit before court, spoke of what they had seen and known—the demands made upon these men and upon their testimony are of the most singular character. In the first place, it is demanded that they should live as other men do, from day to day, without trying to forecast the future and the wishes of the critics in the twentieth century, that they should not try to make the writings of their time appear to be anything but what they really were. This demand is reasonable, and the people in the early Church lived up to this demand in as fair a measure as the men of today. But then on the other hand the claim is in effect made that they

should have had in mind, day in, day out, that they, like Napoleon's soldiers in a reverse order, lived not in the sight of twenty centuries looking down upon them from the pyramids, but in the sight of twenty centuries looking up to them from the depths of unborn nations, that they should never have dared to let even the least event go by without putting it down in the minutes of the mass meeting that their lives were holding for the benefit of the future, that they should never have said grace before a meal without writing down where they drew it from, and why they said grace just so and not otherwise.

Since the Christians did not do all this, it is clear that they could not have known what they claim to know. In particular, if we pass over all lesser points, it is ever either openly or silently assumed that, for example, the letters of Paul, written in the fifties or sixties of the first century, and the Gospel of John, written say at the end of the first century, were in the year 100 and in the year 170 such uncertain things as to author and origin that the Christians of those years could not have the least right to pass them on to the later Christians as the writings of Paul and John respectively.

The question is, What can we look for in tradition? Is it to be expected that fifty or seventy years after the occurrence of an event there will still be people who can in sound health of mind tell about it? Now, there happened at Dresden, in Germany, the capital of Saxony,

the seat of art and science and history, on the 13th of April, 1899, something that is suited to give an answer to this question. On the 13th of April, 1849, the troops of the German Empire stormed an important position of the Danes, the Düppel heights, and Prince Albert of Saxony, then a week less than twenty-one years old, won his first laurels there. If we were to ask what the chances would be that there should be good witnesses of the events of that day at Dresden and in the year 1899, our critics would doubtless declare that it would be quite impossible to learn anything surely about it then. Maybe they would admit that some one or other could have a vague notion of it, could have been there, but be altogether too decrepit to give any rational account of the day, or that some one could have mixt up and loose notions about it that he had gotten from his father or grandfather. Very well. Now let us see what the facts in this case are. On the 12th of April, at Dresden, a sermon was preached in the Frauenkirche, and the veterans sat in the nave, while thousands of others sat in the rest of the church, as interested in the celebration. After the service—it was on Wednesday afternoon—the veterans dined together. At this dinner toasts were given by generals and other men of high position, but there was one speaker who had special reason for his toast to the King. It was the oldest known orderly sergeant in the army, a man of eighty-five years, and he had been the drillmaster of the King. This man had been thirty-five years old on the day of the battle. Here we have, then, at any rate, some witnesses for an event fifty years ago.

"But there were probably only a half dozen of them all told, so that it is not so strange, after all," says a critic. We shall see. On the next day, on the 13th of April, the old soldiers went out to the villa of the King at Strehlen, near Dresden. He received them in the garden. Odd, was it not, that he should not receive them in the parlor? The few men that the critics leave for us must have been quite lost in the garden. The

King came out then to see them. When he came, a gray-haired cavalry general address him for the rest in a little speech. He closed his remarks by saying:

"More than seven hundred veterans of the year 1849 are at this moment standing before your Majesty to congratulate him upon his first famous deed, and once more—for many probably for the last time—to see their beloved King face to face. We are all more than seventy years old, we have grown gray in manifold ways of life, and some of us are feeble in body, but we are bright and faithful in heart, and we cry out with enthusiasm, 'Long live the King!'"

That will do for the purposes of tradition, and in especial of Christian tradition. Seven hundred and more men able, after fifty, and many of them, of course, more years to celebrate such a festival. As if to make this statement still more pointed, at the same date, the word came of two women in Silesia who were over a hundred years old; one, a workwoman, Mrs. Penkalla, in the sand colony Schwientochlowitz, who was one hundred and three years old; and the other is Mrs. Rosina Nowack, the widow of an old soldier, living at Domnwitz, near Trebnitz, and was one hundred and seven years old. This Mrs. Nowack was still relatively vigorous in mind and body, and delighted to tell of events of her youth. Her husband took part in the war with Russia and in the wars with Napoleon.

The letters of Paul from the fifties and sixties of the first century would have had, according to this measure, clear testimony to their existence in the first years of the second century, or even up to the middle of that century; and the Gospel of John up to the year 150 or even 190. We do not know all about the origin of the writings contained in the New Testament, but we are ever learning more. One thing is clear, namely, that in Palestine, or in Asia Minor, or in Egypt, or in Greece, or in Italy, there may well have still lived in the second century a number of persons who had direct knowledge of the earlier Christian written tradition, of its authors, its publication, its first recipients, and its use in the churches, in public and private reading.

LEIPSIK, GERMANY.

Literature

A Babylonian Bronze

MR. C. H. W. JOHNS, of Queen's College, Cambridge, has followed up his useful catalog of J. Pierpont Morgan's collection of cuneiform tablets (which contains many valuable specimens) with an account of a splendid bronze statuet, recently acquired by Mr. Morgan, and dating from the reign of an ancient Babylonian ruler, Ur-Engur.* The statuet represents the king in the attitude of a "canephorus," *i. e.*, with a basket on his head as a symbol of a religious ceremony connected with the building of a sacred structure. The inscription—a duplicate of one occurring on a brick found many years ago and now in the British Museum—reads, "Ur-Engur, King of Ur, King of Sumer and Akkad, who built the Temple of Enlil."

The interest of the object is twofold. It is the only one of the kind bearing the name of this ruler, and it is the oldest canephorous statuet known to us. Like the brick referred to, the object comes from Nippur, the site of the extensive excavations conducted by Messrs. Peters and Haynes under the auspices of the University of Pennsylvania. From various sources we know that Ur-Engur was the founder of a dynasty controlling Southern Babylonia, with its center in the city of Ur, the five members of which ruled 117 years. The time of this dynasty can now be dated approximately at 2381-2265 B. C.—not in the fourth millennium, as Mr. Johns is inclined to believe. It is interesting to note that two other members of this dynasty are represented by bronze statuetts with baskets on their head—an indication of their devotion to the rearing of temples for the gods.

Mr. Johns has greatly added to the value of his monograph by good illustrations of thirteen of the twenty-six such statuetts (sixteen of the total number be-

ing duplicates) at present known and by a general discussion of the purpose of these votive offerings. Among the Greeks we encounter "canephoræ," frequently represented on monuments with baskets on their heads, which are supposed to contain garlands for the sacrificial rites. These canephoræ were always chosen from maidens of high birth and whose office of carrying the sacred baskets in festival processions was regarded as a great privilege. Mr. Johns adds some illustrations from Greek monuments. The antiquity of the "basket bearer" in the Greek ritual seems to be well vouched for, and while the possibility of foreign influence may be admitted, there is no evidence of any connection between the Greek and the Babylonian custom. The basket is clearly the workman's badge, in which he carries the material for building, and we fortunately have a passage in one of the inscriptions of Gudea from which it is safe to conclude that the basket actually contained bricks for the building under construction. The kings thus symbolically represented themselves as taking part in the building, and down to the latest days of the Assyrian Empire the custom was maintained of the king laying, as we would call it, the first brick or bricks of the foundation. The ceremony corresponds to the laying of the cornerstone in modern times. It should be added that the specimen which Mr. Morgan has acquired is also the largest of its kind as yet found, it being 33 centimeters, or 13 $\frac{3}{4}$ inches, high, and weighs over 16 pounds. The workmanship is unusually good. The king is represented as naked to the waist, after the fashion of workmen in ancient Babylonia, with a tunic hanging from the waist down. While the face is conventional, the modeling of the breast and arms is most graceful, as is also the pose. With the exception of the toes, which are broken off, the statuet is perfectly preserved, and its owner is to be congratulated upon the posses-

*UR-ENGUR, A RULER OF THE FOURTH MILLENNIUM, in the Library of J. Pierpont Morgan, by C. H. W. Johns. New York: Sherman.

sion of so excellent a specimen. Two hundred and fifty copies of this interesting monograph have been printed on heavy paper.

Women. Etc.

MR. GEORGE HARVEY is the author of one of the most remarkable volumes of essays of the season. If Bernard Shaw could have had a polite rather than an offensive manner, if he could have been more genially humorous, less vindictively cynical, he might have written the same things upon this subject. For Mr. Harvey's views upon the eternal character of women do not differ materially from those entertained by Mr. Shaw. He follows similar lines of reasoning and reaches similar conclusions. The distinction is in the manner of his arrival—with his hat off, so to speak, one hand upon his heart, and with the most engaging genuflections in almost every sentence toward the victims of his satire.

The book deserves to be bound in a smile and to become a classic for men only upon a difficult subject. For men only, because women are not likely to appreciate the author's delineation of feminine character. They really have the sense of humor which he denies that they possess, but it is focused anywhere rather than upon themselves. No woman has ever conceived of her own absurdities or recognized herself in caricature. And Mr. Harvey's interpretations are droll, having in them none of that dim sentimental seriousness with which women are accustomed to think well of themselves. Rather it is the distinctly masculine view of women set forth. He presents women, not in their passing phases of what is commonly called "development," but as they are and always will be.

Naturally one must not accept the author's observations too literally. The truth of the volume consists in its peculiarly masculine wit, not in the veracity of the author's deductions. For example, Mr. Harvey thinks that while "most women lie about one thing or another . . . their comparative clumsiness in the practice of that art is creditable, etc."

The truth is that when women lie at all they do it so easily, so naturally, and so convincingly that they themselves believe what they tell is the truth. They are the most truthful people in the world, not because they lie clumsily, but because they put all their temperamental veracity in the performance. So that it is doubtful if the angels in heaven know the difference between a woman's lie and her truth—much less Mr. Harvey. Meanwhile, his essay upon the stupidity of women in managing men is perhaps the only one in the book that will delight his feminine readers. They know so much more about it than he suspects that the arch simplicity of his advice is very diverting to the kind of secret sense of humor with which women are endowed when it comes to understanding men. On the other hand, one of the most exasperating features of the book for these same readers is the mischievous inferences the author occasionally draws from "statistics." For example, in 1900 there were 1,182,293 widowers in this country and 2,721,564 widows; from which he concludes that the "hazards of matrimony are vastly greater for men than for women"—seeing that, according to his deductions, so many more women survive it and become widows. A more probable explanation is that the great majority of widowers marry again and the majority of widows do not. A widower is only the temporarily detained husband of his second wife.

Narrative Lyrics. By Edward Lucas White. New York: G. P. Putnam's Sons. \$1.25.

Mr. White's book is rightly named—a book of *Narrative Lyrics*. He generally gives his thoughtful reader the matter of a strong drama, with choice bits of good dramatic force. The movement is easy and yet occasionally has strength and "go." He lacks the lightness of touch, relief and variety necessary to make an extended poem altogether pleasing. His themes are drawn largely from old Egypt, Israel, and the eastern Mediterranean, and when blank verse is employed, in which he is happiest, the poet's powers are at the best. In rimed verse he is less successful. The limping story goes on crutches, and in such specimens

*WOMEN, ETC. By George Harvey. New York: Harper Bros. \$1.00.

as the following the crutches are modern in their make. The story is of Kranaë—the "sunlit peaks of Kranaë," in the Ionian Sea—whose king has fallen in love with the fair daughter of a stranger, arrived on the island and now departed, leaving the royal lover in grief: "Not knowing why he was distressed." But he finds out, and follows the maid and the "hundred galleys" of her escort.

"He chose his crew, explained his goal;
All loved him, all were keen and staunch;
And then with an impatient soul
He urged them to prepare and launch.

Straight toward the sunset clouds they drove,
Each man alert, no oar pulled slack,
Then thru the dusk and night they clove
The shimmering moonglade's guiding track.

The relays, huddled, lay asleep;
The zealous rowers tugged and sang;
The king steered, leaning on the sweep;
His brain with pride and glory rang.

To think that all this wood and bronze,
Cordage and sail and sinewed skill,
This speed as graceful as a swan's
Existed but to work his will."

And so on. We need not go farther to see the difficulties of rimed verse. The gulf is wide between "Kranaë" and the author's really hopeful narrative lyrics—"Benaiah" and "The Last Bowstrings."

The Age of Mental Virility: An Inquiry Into the Records of Achievement of the World's Chief Workers and Thinkers.
By W. A. Newman Dorland. New York: The Century Co. \$1.00.

In a compact little volume of 229 pages, Dr. W. A. Newman Dorland finds space enough to give Dr. William Osler some hard rubs on his late semi-humorous dictum, that "without the work of the men above forty," the world "would practically be where it is today." His figures and lists are instructive, too, on such other questions as: What is the initial age of mental activity and what is the average duration of such activity? What is the evolution of the mind? Is precocity a sign of degeneracy? Precocity among artists, poets and others. Dr. Dorland has given three years of a frolicsome leisure to the collecting of data, with the result that he is able to place before us a tolerably long list of old men

very much alive in their advanced age. If he has taken some from the ranks of the young—men like Keats, Byron, Shelley, Chatterton—it serves only to show how much we have missed because of their early deaths. If life had been a time of comfortable expansion to them, what works worthy of everlasting fame we might have anticipated! Most men would wish a larger blossoming for Keats, a less stimulated growth for Byron, a longer period of splendid expansion for Shelley. If he could have walked arm in arm with Tennyson, each in the eighties, and discussed with the poet of the aristocracy the larger poems of a ripening democracy which Shelley would have written after the quieting forties, and both should happen to meet at a corner the younger laureate of the day, John Keats, with his *magnum opus* under his arm, what a trio it would have been! Wordsworth would have given them his blessing for being a happy trinity of idealists who have long since sown their wild oats, and the world would have given them all a place at the right hand of Shakespeare. The facts in this and other lines, as developed by Dr. Dorland's most curious and stimulating study of old men, seem to be conclusive as against Dr. Osler's theory, which lets us all off at forty, just when the fruit is beginning to yellow into ripeness. It is true that Adam saw his happiest days when he was young. But did he advance science? Moses worked hard in the grain fields of Egypt. But what discoveries did he make? Noah doubtless played football up to his fifth decade—and there was some pretty tough playing, we are told, in that old day—but what contribution had he made to marine architecture? There is no reason to think that Homer did much scanning of Alexandrine blank verse until he had past the limit of usefulness set by Dr. Osler. And so we might go on, as Dorland does, down thru the four hundred workers and thinkers of forty centuries. These early actors on the stage of life point the way—somewhat obscurely, perhaps—but the road becomes clearer as we accompany the author down the long galleries until we get into the Pennsylvania tunnel under the Hudson, and find what a compact little company of old

men are still "on the job." Surely, the opening of the great tunnel would be deferred for many a long day if the inventions of men in their mature years were withdrawn—if Bessemer, for instance, and Morse, Stephenson and Watt, Galvani, Faraday and Franklin, and with them a widening circle of foregone pioneers, had failed to mature.

The Tether. By Ezra S. Brudno. Philadelphia: Lippincott Co. \$1.50.

Ezra Brudno cannot write a story; his mind is too subjective, his genius is not constructive, it is personal and interpretative merely. So, he can interpret the Jew—not in his usury relations to society, but in his domestic and social relations to other Jews and to Gentiles. The publishers claim that this new book is a novel of "virile realism," "skilful delineation of character." There can be no question about the realism, but it is not virile. It is feverish, a nerve-depressing confession of the impotency of a great race. And the delineation of the young Jewish poet's character is more than "skilful"; it is faithful to the whole agonized temperament of the sensitive Jew. In fact, it is not an organized story at all, merely the inevitable annals of the heart of a Jew. The author confesses, dramatizes, but does not pardon the snobbish ambition of his people to move in Gentile society. There is no defense of any one in the book. It is simply an elegy of despair written by a highly sensitized member of a despised race.

The Spy. By Maxim Gorky. The Story of a Superfluous Man. Translated by Thomas Seltzer. New York: B. Huebach. \$1.50.

The Spy is a fetching title. It suggests a detective story, mysterious concealments and discoveries, imprisonments and flights. But the reader is warned this is nothing of the kind. It is a book with a purpose—to show what man has made of man, and to show how things might be different. Gorky, in this his latest work, resorts to no crude statement of the moral. The lesson is embodied in the artistic production itself and naturally evolves from it. *The Spy* relentlessly exposes, on the one hand, the terrible crimes perpetrated upon the

Russian people thru the governmental spy system, and incidentally the rottenness of the Russian bureaucracy in general; on the other hand, the utter depravity this system breeds in its own agents, the spies, the intimate facts of whose social and private life are laid quite bare. But it is well for the world to know these facts, and here we have no vain exhibition of ugly pictures, no frivolous retailing of salacious incidents, no silly and purposeless "Three Weeks" tantalizing the appetite. At the time when Gorky wrote "Mother," during his visit to this country, the Russian revolution was at its height. The revolutionists were sanguine of success, and not the least sanguine among them was Gorky himself. The ideals for which the most advanced of the Russian patriots were fighting permeated all of Gorky's writings of that period. As a result "Mother," tho intended to be a novel, is nothing more than an exposition of socialist propaganda. It was while in this mood during his work on "Mother" that Gorky said to the writer of the present review, with a glow of youthful enthusiasm: "I am trying to do for our revolutionary movement of today what Stephaniak did in his 'Underground Russia' for the early movement of the nihilists." But the preaching in "Mother" is so direct as seriously to mar its artistic value. In *The Spy* the *tendenz* is just as pronounced, but here the object is attained by a pure narrative of events absolutely unalloyed by sermonizing.

Miss Esperance and Mr. Wycherly. By L. Allen Harker. New York: Charles Scribner's Sons. \$1.50.

This is the story of the childhood and youth of two little Scotch boys living near Edinburgh. And when an elderly maiden lady, who speaks her English after the manner of Mr. Addison, and a scholarly old bachelor with antiquarian tastes, undertake to bring up things as new and modern as two boys, the account of their efforts is sure to be more or less diverting. There is no climax to the story, further than that afforded by the course of nature. The old people die and the young ones grow up. But the course of nature in both particulars is admirably interpreted by the author.

Literary Notes

The Congregationalist and Christian World, Boston, has in issue for January 16th a very pleasing character sketch of Dr. William Hayes Ward, editor of THE INDEPENDENT, entitled "A Little Study of a Large Man Still in the Harness."

....The 1908 volume of the McClure Library of Children's Classics, edited by Kate Douglas Wiggin and Nora Archibold Smith, is called *Tales of Laughter* and contains a delightful mixture of amusing fairy stories from three continents.

....Altho it was prepared as a handbook for British Bible classes, Dr. James Herron's *Short History of Puritanism* is fitted to be of interest and profit to many American students. The treatment is brief, but shows careful scholarship and good sense of proportion. (Imported by Charles Scribner's Sons. \$0.50 cents).

....Written especially for the managers of Sunday School conventions, but containing much practical wisdom for those who find themselves responsible for large gatherings of any sort, is "Conventions and How to Care for Them," by Eugene C. Foster (Philadelphia: The Sunday School Times Company). The work and management of committees is outlined with special care.

....*Art and Economy in Home Decoration* is the title of a book by Mabel Tuke Priestman that is issued through The John Lane Company. Some of the many problems that confront the house furnisher will be easily solved if the suggestions of the Priestman volume are even casually studied, and the home maker who reads it can avoid rocks upon which those who have not read it will be more than apt to split. Some of the topics given place in the book are Choosing a Color Scheme, How to Treat Walls Successfully, Points to Remember When Buying Carpets and Rugs, Arranging Flowers Artistically, Lamps and Candle Shades, Shelving, Pictures, etc., and What to Avoid in the Home. (\$1.50.)

....To this day mention of the burning of Royalton by the Indians in 1780 brings a shudder at Vermont borders. Zebulon Steele was captured by the savages on their return to Canada and sold with others at a half joe (eight and a half dollars) each into slavery. In 1818 he published, with much apology for lack of education, a vivid and appalling account of the massacre as he heard it from the survivors, together with the sequel in the sufferings and tortures of the captives among the Indians and British. His book is now republished at the rather extravagant price of \$2.50 by the R. H. Hunting Co., of Springfield, in their *Indian Captivities*, a series of reprints useful historically and as preserving stories of courage and endurance "that the world would not willingly let die."

....Eugene V. Brewster, the Brooklyn lawyer, real estate operator, prize amateur photographer, artist, operatic impresario, and author, has been devoting himself recently with

much ardor to the prose muse. In rapid succession he has produced *On Time*, a short story with a moral (your employees should have a copy), and *Hats Off*, being some remarks on courtesy, both of which are good, if they are not best sellers. Like Alexander, Mr. Brewster having conquered many worlds has lately wept for others to conquer. In such a spirit he has now established a periodical called *The Caldron*, a magazine of disdelusion, Vol. I, No. 1, of which, dated February, has just made its appearance. The versatile Mr. Brewster will doubtless presently find his magazine to have been happily named.

Pebbles

BARGAIN NOTICE.

"Our feather beds are marked down."—*Cor-nell Widow*.

"I THINK you have treated me mean," said an insurance agent to a competitor, "in taking three out of the four policies which I have a long time carried for Jones & Co."

"Pardon me, I did not know about the other policy."—*Glens Falls Now and Then*

A CERTAIN father who is fond of putting his boys thru natural history examinations is often surprised by their mental agility. He recently asked them to tell him, "What animal is satisfied with the least nourishment."

"The moth!" one of them shouted confidently. "It eats nothing but holes."—*Youth's Companion*.

THE proprietors of a Siamese newspaper have distributed the following notice:

"The news of English we tell the latest. Writ in perfectly style and most earliest. Do a murder git commit, we hear of and tell it. Do a mighty chief die, we publish it, and in borders of sombre. Staff has each one been college, and write like the Kipling and the Dickens. We circle every town and extortionate not for advertisements. Buy it. Buy it. Tell each of you its greatness for good. Ready on Friday. Number one.—*Bangkok Times*

THE TRUE STORY OF MAUD MULLER

MAUD MULLER in the hay field stood,

The rake her arm was propping.

The judge rode by upon his horse

With admiration stopping;

Then paused, considered, and went on

Without the question popping

Maud married then a farmer bronzed,

A bright existence knowing,

For Roosevelt made their daily life

With pleasures overflowing.

As balls and games replaced the work,

Her joy kept right on growing.

The judge went home and found his life

Was truly not elysian,

For every time he handed down

A learned, wise decision

The President denounced it loud

And heaped on it derision.—*Times*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

California and Japan

WE ask every reader of *THE INDEPENDENT* carefully to consider Dr. De Forest's article in this issue. It tells with simple truth the attitude of Japan to the United States during the past year. It shows how the American fleet was welcomed and how the California representatives were welcomed, and it makes it clear how sincere and positive have been the purpose and the efforts of the Japanese Government and the Japanese people to prove their good will toward our country. And yet there are actually members of the California Legislature who are desirous to stir up trouble and to risk a war in which California would be the chief sufferer. Such reckless and wanton provocation would be appalling if we believed that California were ruled by her criminals. We have had late evidence that she is not. The politicians represented by such a hateful policy are being sent to prison.

The President has spoken well. He has his eyes and ears open, and is not afraid to speak. He has given a solemn warning to California, and with a serious utterance befitting our Chief Magistrate he has assured its people that Japan is

trying to maintain peaceful relations and to keep her promises in restricting emigration to this country, promises, we will add, that ought never to have been asked of her. It might have seemed unusual if not unprecedented for the President of the United States thus to appeal to the Governor and Legislature of one of the States, but the interests of the country demanded it, and California will not take offense. Indeed has he not quite as much right to make his protest as has the editor of this journal? Under the Constitution he speaks with no more authority than we do; but he has the right of utterance to all or any of the people in time of danger, and his word has weight, and must be listened to.

We are glad to believe that he speaks to a different California from that of two years ago. California has been cleaning house, and clearing out her vermin. She has been considering her international relations. Her best citizens and business men have visited Japan. They are not as much afraid of the Japanese as they were, and not as much afraid of their own mischievous politicians. We accept the reports that the hostile bills will be rejected. And why should they not be? Is it decent to have a national law which forbids Japanese and Chinese to be made citizens, and then have a State enact a law that because they are not citizens they shall not own real estate and shall not be directors of corporations? Of all the nations of Europe only Russia retains such laws against the Jews. It is hateful that we have the national law forbidding Chinese and Japanese to be citizens; it ought to be repealed, and when we become as Christian as we are trying to make Japan become it will be. Doubtless the President feels a blush of shame when he asks California not to follow the example of Congress and not to enact Russian laws.

The friction between the two countries lately was caused by the action of school boards in refusing to allow Japanese children to attend the public schools with white pupils. Japan was angry that her little ones should be insulted. The Japanese are peaceful enough, but they have a proud spirit as well as we, and they know as well as we what is decent and when they are insulted. It would be

an insult to them to pass the proposed legislation. We are not speaking now of the interests of California herself, and the advantage from Japanese industry and capital, but of the human and Christian decencies that belong to this twentieth century. What says Oregon? That she finds no evil or danger in sending Mongolian and Caucasian children to the same public schools. Why should she? Humanity is all the same.

There was a fitful danger. It seemed as if mischief makers in Sacramento might embroil the whole country in international hatred, if not in war. The danger, we believe, is past. But let our whole people understand that we are living in the new century of peace between the nations, and that the reason for that peace is because the nations know and love each other better. The world is unified. To fight the people of another nation is like fighting our own. To hate others is to hate ourselves. Ill-will and injury to the Japanese is ill-will and injury to man, to our common humanity. Let those who would wrong our visitors from other nations, whether Japanese or Chinese, Italians or Germans, bear the obloquy if not the incarceration of Ruef. Let us have peace and good will with all the world.

The People's Problem

ANY one who has reached the age of seventy-five has noticed the disappearance of the small brooks where he played in his district school days, while larger ones have shrunk to summer threads, and rivers that filled their banks all the year are hardly more than rivulets in summer. Commissioner Whipple, of New York State, tells us that the upper Hudson, in August of 1907, had no more than two inches of water where it used to roll a heavy volume. There is substantial agreement that this change has been due to the denudation of our hills and valleys of the water-holding trees. It takes a century to grow such forests as we found covering the continent; it has taken half a century to destroy them. The American farmer has just waked up to the fact that, without a national system of forestry, not only is his industry exceedingly precarious, but large areas of the

United States are liable to become barren. The reported annual lumber production of the United States shows 37,550,000,000 feet. The forest area reported for 1907 was about 500,000,000 acres, and it does not need high skill in mathematics to determine that we are very rapidly approaching the total destruction of our forest wealth. The annual growth does not, according to the Government report, exceed the destruction for fuel alone.

The same authority puts it down that, on a very conservative estimate, the United States does not have at the present time a supply of fuel and lumber to exceed twenty-three years. The common estimate is about twenty years; that will carry us to about 1930. We have then to tally this fact with the other astounding but authenticated report, that our anthracite coal beds will not supply demands beyond about the same day. We have come with amazing speed to face the question of inadequate fuel and lumber supply. But what concerns us even more is the threatened extinction of agriculture. Not only are our streams drying up, but our temperature extremes are more pronounced. Twenty-two per cent. of our forests are now included in national reserves, and the question is how rapidly we can stop the axe of the lumberman by putting all the rest or nearly all under Government control. The forest area of the United States, if thus controlled, is still sufficient to produce enough timber to supply our annual needs. President Roosevelt has done some capital things for the American people of the future. His administration has had a far outlook; but in nothing has his administration been more wise than in increasing the number of national reserves and stopping the looting of national property. The Appalachian bill undertakes to protect the one area which, in the eastern part of the country, covers the largest amount of hard wood. This region is included in the States of Maine, New Hampshire, Vermont, Massachusetts, New York, Pennsylvania, Maryland, West Virginia, Virginia, North Carolina, South Carolina, Georgia and Alabama. In this region is over half of the country's present supply of hard timber. It is very late to take possession

of this region, for already vast areas have been wasted.

Forest reserve does not mean that the Government takes possession of these areas, to own or dispose of the timber. It is a lying twist of the tongue when our Congressmen speak of such a bill as "robbing the people." A forestry system simply places the forests under the protection of the united people. The National Forester will be provided with authority only to prevent robbery and waste. He will be at the head of a commission that will not only protect, but will plant. It will be the business of his department to prevent the burning of great areas, and we must not forget that during last year alone 1,100 fires were reported, burning over 115,000 acres. We have to add to this count also that from the sale of mature wood, that is, such as may be sold without detriment to the forest and future supply. The department is already self-supporting. Under Government control, we learn from Germany that the cut of timber has increased 55 per cent., while the forests have been absolutely held up from waste.

On the other hand the people of Ireland are paying \$5,000,000 a year for imported timber, its forests being almost entirely swept away. Twenty-three per cent. of the island is uncultivated, yet only $1\frac{1}{2}$ per cent. is in timber. The people objected to reforestation that it would offer less employment for labor. It has been shown, however, that a forest planted only fifty years ago, and on poor soil, has employed four times as much labor as has been employed on the best agricultural lands, at the same time returning heavier profits. THE INDEPENDENT believes strongly in individual effort. It believes, however, in Government oversight and Government advice. It would retain as much as possible of individual initiative, and it believes that a very important part of forestry can be conducted thru the agricultural colleges. These institutions are working very effectively to show that a balance between woodland and plowed land is as important to the owner as a sustained balance between stock and feed crops.

With all the rest there should be an immediate change in our tariff laws, to

allow and encourage liberal importation of timber from Canada. This neighbor has six times the amount of standing timber that is still in the possession of the United States. Michigan has been nearly denuded of its magnificent forests, under the laws that debar lumber from across the lakes and rivers, stimulating destructive home cutting. Other parts of the United States are suffering quite as badly from defective legislation. Georgia and the Carolinas are nearly stripped of yellow pine by the turpentine tappers, and it is estimated that inside seven years this magnificent lumber will be entirely destroyed in the State of Florida. The result on climate is protracted droughts, and the steady pushing of the frost line farther southward. The danger to orange orchards is increasing every year, and the production of pine-apples and other semi-tropicals is a vexed uncertainty. Florida alone should have 4,000,000 acres of forests. No lumbering operation of recent years more strongly illustrates the pinch in the timber supply already felt than a concession from the Russian Government to an Australian corporation to take 30,000,000 feet of timber a year from a forest in Siberia, 900 miles from Vladivostok, to be delivered in Melbourne, 8,000 miles away.

We believe that it is soundly held that the Constitution permits such action on the part of the nation as shall preserve the headwaters and watersheds of navigable streams, and otherwise shall protect the forests, so that the nation shall not be impoverished by the ignorance or recklessness of a few individual owners. Public safety in Rome was "the supreme law." Are we to believe that our Constitution, already amended fifteen times to adapt it to our growing needs, still leaves the people in a strait jacket and incapable of safeguarding their most fundamental material interests? Ambassador Jusserand, of France, has said, "If the Mississippi is the Father of Waters, the forest is the father of the Mississippi." An improved waterways system is very closely correlated to preservation of our forests. This is not a problem that concerns a few, but it strikes directly at the question of our national per-

petuity. Unconstitutionality must not be permitted to destroy the nation that the Constitution was devised to perpetuate.

How to Beat the Civil Service

CIVIL service as she is reformed might very properly be written over any account of the present civil service situation in Philadelphia. As a result of the 1905 upheaval a splendid civil service law was put upon the statute books. During Mayor Weaver's administration, thru the instrumentality of the board which he appointed, of which the Hon. Frank M. Riter was chairman, excellent results were achieved and a high standard of efficiency established. With the advent of the present administration it began an effort to circumvent the law, and while it is an encouraging feature of the situation that no suggestion has been made for the repeal of the law, still there have been numerous efforts made to undermine its operation and efficiency. For instance, one of the commissioners publicly stated that in an interview with one of the potential leaders of the city he had asked him for a set of the questions in advance, so that his applicants could study up and pass good examinations.

According to the secretary of the Civil Service Reform Association, the commission is composed of a president, who is either completely lacking in any understanding of and sympathy for the purpose to be obtained thru civil service reform, or who is grossly recreant to the trust imposed upon him; a secretary, who has been absent for many months because of illness; and a Democrat, who, by his recent abject yielding to the plans of the organization, apparently solely to save his own position, has forfeited the small share of public respect he had previously enjoyed. For upward of a year the mainstay of the situation was the chief examiner, one William D. Earnest, a man of high personal character, fine courage and public spirit, and of unquestioned capacity. For upward of a year he fought almost single-handed to prevent the lowering of the standards of the examinations and the raising of the ratings, but he has been sacrificed to save the official head of the Democratic member of the commis-

The secretary of the Civil Service Reform Association is further authority for the statement that the commissioners themselves have deliberately raised the marks of those taking the examination. Mr. Earnest marked three men—No. 5, with an average of 78.95; No. 17, with 77.59, and No. 12, with 75.80. The commissioners raised the marks of these persons to 81.9, 80.785 and 80.5, respectively. The other nineteen who took the examination the chief examiner "flunked." Among them were five provisional appointees, one who had gotten but 52.18, another 65.61, another 54.96, and the other two 61.31 and 62.28. Two of these the commissioners raised at once to 73.43 and 70.38. In the case of the other three a piece of paper was in each instance pasted over the marginal markings with recalculations prepared by the commissioners. In the case of No. 5 the Democratic commissioner wrote down a mark of 83, with this comment: "Too low to compare with marks of others.—H. D." As to No. 7, Mr. Drake's annotation was: "More liberal marks.—H. D.," and the commission's regrading was 85. No. 9, who had been marked 78 by the examiner, had his mark increased first to 85 and finally to 91. In the case of No. 13 the Democratic commissioner wrote: "Mark more liberally, entitled to a fair mark," and accordingly the mark was increased from 66 to 74.

Now that Chief Examiner Earnest has been relieved of his position, there will be less trouble in getting "proper" ratings, but the Civil Service Reform Association has not been slow in protecting the rights of the people and in enforcing the law, and it is quite likely that many of the efforts to beat the law will ultimately be defeated. In the meantime the Philadelphia commission is adding a new chapter to civil service reform history.

Royalist Troubles in France

THE Duke of Orleans is not allowed to live in France, as he is the pretender to the throne. During the autumn hunting season he had some hundred and more French Royalists as his guests at his home in England. It was a sort of Bourbon reception. Now from Brussels he directs his cohorts. A number

of youths have taken out licenses as news vendors and assumed the title of the king's newsmen—*Camelots du Roi*. They scatter in all directions Royalist pamphlets.

Thruout December on Wednesday afternoons they and other Royalists have gathered in the Sorbonne to prevent the free course of M. Thalamas, who lectures on the pedagogy of history. The first lecture they succeeded in breaking up. But the Government took the matter in hand, and for the first time in the long history of the great school sent the Republican Guard, with flags flying and carrying arms to the music of fife and drum, to prevent further interference. The result was that the mob, who pretend to have the honor of Joan of Arc at heart, carried the row all over Paris. Very many have been arrested and a few received summons to future trials. Every Wednesday the same scenes are repeated. The matter was brought up in the Senate by a Royalist Senator, to whom Clemenceau answered that he thought the Prefect of the Police had shown remarkable moderation.

We agree with the Prime Minister. We feel sure that if five or six hundred, or, as *La Gazette de France* states, as many as a thousand, attempted to invade Columbia University and stop a lecture the New York police would make short work of them. There the French police walk alongside the disturbers, listen to their cries: "Down with Thalamas," "Down with the Republic," "Long live the King," and so on, but never interfere except when the crowd violate some ordinance or refuse obedience. We are told that the mob is largely packed—that is, many are paid shouters, receiving up to five francs a day, of course from the Bourbon purse.

The Steinheil affair is a great handle to the Royalist and Clerical journals. They charge her with the murder of President Faure, with whom she was the last visitor on the day of his death. Again, the Deputy, Syvveton, who died by his own hand a year ago, after the exposure of a heavy defalcation, is always named as "murdered by order." The crime apparently is imputed to his widow. On the anniversary of his death

the *Camelots du Roi* and others to the number of five hundred or so gathered around his tomb in Mont Parnasse Cemetery, but the police scattered them. With this affair is brought up the Dreyfus affair, and always is the great sufferer called "the Jew traitor."

To crown all, a Royalist count has sent out an appeal to Catholics and Frenchmen to unite. His aim is to bring into one opposition group some sixteen different Clerical and Royalist societies. The *Action Liberale Populaire* is a political organization, Catholic, and favorable to the policy of Leo XIII. The *Ligue des Patriotes* is out-and-out Royalist. The *Action Française* is a Jesuit club, whose headquarters is at Rheims. It is, moreover, a curious fact that the great Royalist families, in many instances, are strangers; *metèques*, as the French say. Some of their names point this out: Binder, Archdeacon (English origin), Pugliesi-Conti, Copin-Albancelli-Del Sarte. The oldest paper—*La Gazette de France*, founded in 1631—is offensively Royalist, while *L'Action Française* is the special organ of the Duke of Orleans, whose specter is behind these childish attempts and whose legend it carries. The legend runs: "Everything national is ours." Quite modestly Bourbon.

Centralization in State Affairs

IN no respect has the actual operation of government in America undergone a more significant change since the Civil War than in the distribution of administrative activities between State governments and the minor civil divisions. When we recall the fierce passions that were awakened a generation ago by centralizing tendencies in the Federal Government, it is remarkable that comparatively little attention has been given to the far more thoroughgoing and actually more important centralization which has been going on in each State.

The voters are not yet old men whose first acquaintance with the workings of civil government was chiefly a knowledge of town or township or county administration, or of a kind of city government which now hardly exists. The New England town, for example, built

and cared for roads, bridges and school-houses, and maintained schools. It looked after the poor and the defectives who had become a public burden. It supervised weights and measures, incorporated boros and cities, discharged all these functions and provided police protection, fire protection and various public improvements. There was a certain similarity of policy and method in these matters thruout each of the great natural sections which made up the nation, namely, New England, the Middle States, the Southern Seaboard States, the Northwest, the Middle West, the Southern Mississippi Basin, and the Pacific Slope. Not one of these sections has altogether escaped the centralizing transformation, altho it has proceeded more slowly in the South than elsewhere.

The change began in most of the States with a recognition of the public duty to provide superior care for defectives and special classes of criminals. The mingling of the mildly insane and the feeble-minded, the blind and the crippled with aged paupers in town and county almshouses awakened protest; and thruout practically the entire North, since 1865, the establishment of special institutions by State governments has revolutionized the care of these classes of unfortunates. In like manner, the county jails have been relieved of the care of youthful misdemeanants supposed to be amenable to reformatory treatment.

The next important step was in education. The establishment of State boards of education with advisory powers was soon followed by the creation of State systems of superintendence. As late as 1875, in the State of Massachusetts, not only was each town almost absolutely independent of the State Government in school matters, but also many towns still clung to the district system, whereby each neighborhood built and owned its schoolhouse, hired its teachers, decided how many weeks school should be "kept," and thru its district committee regulated the scheme of study, attendance and discipline. Today, even Massachusetts has a rather centralized school administration, with a body of superintendents, each of whom looks after many schools, usually those of more than one town. And what is true of Massachu-

setts is true on a much larger scale of the Western States.

A dozen years ago the agitation for good roads, which was begun by the bicyclists, but was urged in the name of the long-suffering farmer, whose crops must be moved to market, opened a new avenue of centralization. The wheelmen wanted long stretches of smooth roadway and had no interest in township lines. Rural towns and townships were financially unable to meet the new demand. In legislatures everywhere bills were introduced for the making of State roads. The entire project, on its mechanical and on its financial side, was too new to the people in general and they were too ignorant of the best ways of dealing with it to leave any hope of wise decision. The bungling and wasteful plan, with its large possibilities of graft, nearly everywhere adopted, was that of State aid; the State government usually building a few miles of sample roadway and then paying a certain sum or building a certain further stretch of road for each additional mile built at township or county expense. In the nature of things this plan could not work well, and it has nowhere given satisfaction. The automobile is now making greater and more insistent demands than the bicycle made, and the people are everywhere beginning to see that the maintenance of main highways must inevitably become a State, instead of a local, function.

Thus far the centralization of police administration has made less headway, but it is plain that we are about to see great changes in this domain of government also. It is clear that the modern city is not a satisfactorily constituted unit for carrying on the collective control of personal life and social relations. It is heterogeneous to a degree, and therefore cannot easily be of one mind upon the detailed and specific problems which make up the actual activities of municipal government. At the same time, these specific problems become more pressing. The duties of a board of health, for example, of a tenement house department, of a building department, of a street cleaning department, become more multifarious and imperative in precise proportion as a population, becoming dense and heterogeneous, becomes less fit to think about

and deal collectively with its affairs. Under such circumstances it is idle to expect that the practical administrator's demand for centralized State control of many things hitherto left to town and municipal police authorities, will be successfully resisted. We shall see more, rather than fewer, experiments in the line of State police forces or constabularies, and perhaps in the actual State control of municipal police departments, like that of Massachusetts over the city of Boston.

Added to the foregoing considerations is one other fact making irresistibly toward State centralization. The real estate tax paid by local communities can no longer provide the necessary revenue for the increasing expenses entailed by the public improvements and the elaborate administrative action which modern civilization demands. The wherewithal must be obtained from those sources and accumulations of wealth the ownership of which is highly concentrated in the larger centers of population. These can be tapped only by the State governments.

Preventive Geology

GEOLOGY is following the other sciences, in passing from its observational and historical stage into a practical and predictive stage. As we have now preventive medicine so we have or will have eventually preventive geology, a sort of hygiene of the earth's crusts. The disaster of Messina, coming before that of San Francisco had had time to slip from the memory of the newspapers, has made the public demand of geologists that they put their science to practical use in foretelling when and where such earthquakes are likely to occur. This the geologists are not yet prepared to do. The first of the two questions, that of the time, has no immediate prospect of being answered. If there is any regularity of interval or rhythm in such disturbances it has not yet been determined with sufficient probability to enable their recurrence to be predicted. Nor can the premonitory symptoms be depended upon. Minor tremors always follow and usually precede a great shock, but more often, of course, they occur alone. And a strong shock does not confer immu-

ity on the locality for some time, as is popularly supposed, for in America it is soon followed about one time in eight by another as strong or stronger.

Prophecy of place is on a much surer foundation than that of time. The areas of the earth's surface which are subject to severe and frequent shocks are rather limited and well defined, and in these earthquake zones it is possible to specify certain localities which are most likely to be disturbed. Such dangerous localities or malloscismic areas are found along the faults or rifts where there has been recent shifting or on low and soft ground adjacent.

Unfortunately geologists do not have a chance to do what little they can toward defining the exact location of the unstable zones. Local interests rather impede than encourage their efforts. California people speak of "the San Francisco fire" rather than of "the San Francisco earthquake," justifying it by the fact that the fire did more damage than the earthquake that caused it. Those parts of the city which were specifically pointed out by the California Earthquake Commission as dangerous are being built up again and not in the safest way, either. The people of San Francisco are inclined to hold that loyalty to the city requires that any defects or disadvantages be concealed or palliated. They resented the charge that political corruption was dominant in the city until it was undeniably exposed with the assistance of outsiders. They concealed and denied the existence of cases of bubonic plague and tried to prevent by legal measures the investigation by Eastern experts which disclosed and eradicated, or at least suppressed, the disease. If it had not been for a threat to invoke the protection of the United States Army, the investigation might have been shut off altogether. In the face of such strong public feeling local physicians are powerless. The earthquake zones of California were quite clearly pointed out in 1868, but a scientific report of that date was suppressed because it was feared that it would hurt business. Fortunately the present California Earthquake Commission received support from the Carnegie Institution of Washington, which has re-

cently brought out its report in two large volumes deserving of a wider reading than they are likely to get.

It is largely the mystery attaching to earthquakes which is responsible for the exaggerated terror inspired by them in the common mind. Really the danger to life and property is comparatively slight, even in the earthquake regions, and much of this can be prevented in the future if the study of seismology is actively pursued and its lessons made known to the people. Dr. G. K. Gilbert, who delivered an admirable address on the subject before the American Association of Geographers at its Baltimore meeting on January 1st (published in *Science* January 22d), calculates the risk to property from earthquakes in California as comparable to that from fire and equally preventable. The danger to life is very much less, as the following calculations show:

"The annual premium on a policy for \$1,000, payable only in the event of death by earthquake, is computed at one cent and a half, plus the cost of doing the business and the profit of the company. The minuteness of the earthquake risk may be further indicated by saying that it is one-tenth of the risk of death by measles. If a timid citizen of California should emigrate in order to escape the peril from earthquake, he would incur, during his journey, a peril at least two hundred times as great, whether he traveled by steamship, sailing vessel, railway car, motor car, stage, private carriage, or saddle; and if in emigrating he removed from San Francisco to Washington City he would incur, by change of environment as regards typhoid fever, an increment of peril eighteen times as great as the earthquake peril he escaped."

Japan has led the world in seismology, in both the pure science and its applications, the regulation of the location and construction of buildings. In Italy also some good work has been done, but not so thoro or so practical as might reasonably be expected. It is now nearly a month since the earthquake at Messina, and yet we have not heard what happened there. The reporters have furnished us with an abundance of horrible details, but their casual references to the geographical effects of the catastrophe are incoherent and conflicting. It has been reported that the Strait of Messina was wider and more open and that it was narrower and obstructed with rocks; that it was deeper and that it was shallower. In this country we need detailed studies

of the geology of the earthquake areas, the establishment of seismographic observatories over the United States as we have meteorological stations, and the continuance of experimental work on the propagation of waves in earth and rock and on the methods of construction best adapted to resist shaking.

✱

The Benzoate Question

As we predicted in our issue of January 14, the Board of Referees has decided against Dr. Wiley and found no evidence to prove the harmfulness of benzoic acid, or sodium benzoate, used as a preservative in food. The four chemists who have been studying these questions since March are of the highest authority, but of course their conclusion does not derive its weight from their reputation, but from the report of the experiments they have conducted. These experiments were similar to those of Dr. Wiley, but more thoro and complete. Dr. Wiley concluded that sodium benzoate, even in minute quantities, produced noticeable injurious effects upon the health, and when he used as much as 2.5 grams of the preservative the effects were so deleterious as to necessitate in some cases the abandonment of the experiment. Professors Long, Herter and Chittenden in this new series of experiments administered nearly twice this large dose, as much as four grams a day, with no noticeable effect. This is, of course, an amount far greater than any person would be likely to get in his food. Sodium benzoate is used chiefly to the extent of one-tenth of 1 per cent. in such food as catsups and preserves, which after being opened are usually allowed to stand for some time before being eaten. The decision of the referee board to a certain extent discredits Dr. Wiley's conclusions in regard to the use of other preservatives, such as boric, salicylic and sulfurous acids and their salts; for, as we showed in our editorial on "Preservatives in Food," September 3d, Dr. Wiley's conclusions are sometimes vitiated by a manifest desire to make out a case against preservatives, and his experimental results do not in all cases substantiate his opinions. Nevertheless, we hope that Dr. Wiley will not feel impelled to resign be-

cause his judgment has been reversed on this point, any more than a judge whose verdict has not been confirmed by a court of appeals. If Dr. Wiley had been overzealous, it is in a good cause, and there should be room in Government departments for an honest difference of opinion on a very difficult question like this. The most important lesson to be drawn from all this by the newspapers and the public is that every charge brought against food manufactures is not to be implicitly believed and made the basis of an indiscriminate howl against the "poisoners of the people." It probably would be safe to say that more indigestion has been caused by "scare stories" in magazines and newspapers than by food preservatives.

The Farmer's Prosperity

We go into 1909 with nearly or quite eight billions to the credit of the farmer; this is one billion more than the crop value of five years ago. We are moving ahead at the rate of 10 to 20 per cent. gain each year. Our balance of trade in farm products, which began only about twelve years ago, has now reached a grand total of over seven billions. It almost transcends the power of human thought to estimate the values which our agricultural products have already reached. It is no longer a dream of visionaries that the United States can support a population of five hundred millions. The accelerated speed of gain has been due largely to the securing of foreign markets, succinctly expressed by McKinley as "the open door." We must also take into account the very rapidly increasing knowledge of the farmer as to scientific methods. Experiment stations and agricultural colleges are controlling farm life. Intensive farming is displacing extensive farming everywhere, even among the wheat lands of the Northwest. During the recent financial disturbance the farmer's prosperity was unbroken. What he still demands, and what he should have, is a simpler and better method of investing his surplus. He needs postal savings banks more than any other one thing nameable, and with these he needs parcels post to facilitate his intercourse with market, and to save his hours wasted in going to town.

Good Two Weeks

A severe criticism of the resolution of a large number of the young people of Cleveland to live like Jesus for two weeks contains these words:

"A two weeks' program as a principle of Christian conduct is more or less blasphemous. . . . Living two weeks as Jesus would live, or the announcement that they will try to do it, is of no avail; it is simply ridiculous. . . . Not one day, not two weeks, not for any other period of time, but thruout our lives."

But those 12,000 young people had already made the resolve and profession of the Christian life to continue till death. They recognized, however, that they had not come up to their ideal or their pledge. They now resolved that for the next two weeks they would take special pains to do so, and report at the end of that time. When the two weeks were ended they renewed their resolution thruout their lives. We see nothing but what is laudable in such resolutions. It helps a drunkard to take the pledge for a year, hoping that he will thus get strength to renew it for his lifetime. It is praiseworthy to make a fresh resolution in the morning to help one thru the day, and the resolution for a day or for two weeks may be included in the resolution for life. The more such resolutions the better.

A Straw Vote on Divorce

The play—"Un Divorcé"—of M. Paul Bourget, member of the French Academy and a well known Catholic, is a skit on this very modern question. It enjoyed a long, successful run in Paris. It was recently played for the first time in Lyons. The editor of the *Lyon Republicain* thought the occasion favorable for taking a referendum or straw vote on the subject itself. To the audience were given blank ballots, which they deposited in urns during the first intermission. The voting was done as seriously as if it were election day. The following table gives the results:

Subject voted upon.	Men. Women	
For divorce as now recognized in		
France	55	16
By mutual consent	73	48
By the consent of either party	60	3
Against divorce	139	3
In favor of free unions	341	150
Total	608	209

It is but fair to add that the 877 voters live in a city which has a strong Catholic body and about as equally strong anti-Catholic. The voting proves at least that the divorce question is very much alive in France, and that there is an alarming looseness on the subject.

Andover's Fugitive Slave

There is an amusing story incident to the Andover endorsement of Daniel Webster's defense of the Fugitive Slave Law which we did not tell when we lately spoke of that paper signed by Professors Stuart, Woods and Emerson, which so gratified Mr. Webster, but which Professors Park, Edwards and Phelps refused to sign. We are indebted for the story to Professor Park's son, William E. Park, D. D., and do not remember that it has ever been published. It was only shortly after the Stuart-Woods-Emerson endorsement was published that a negro appeared at Professor Stuart's house, claiming to be a fugitive slave, and asked protection. Professor Stuart told the man he could not harbor him, but whispered, "You can go over to Brother Emerson's." Over he went to Professor Emerson's house, and the good professor, who in his simplicity had a few days before, at the request of Professor Stuart, signed his approval of the Fugitive Slave Law, took the negro right into his house, kept him concealed in the garret almost a week, fed him well, gave him some clothes, and started him off for Canada via the underground railroad. Afterward it was sharply suspected and seemed almost proved that the Boston abolitionists had sent the negro to Professor Stuart, expecting that the Andover men would turn him away, in which case they would make a great noise over it; but the help he received allowed the story to remain untold. We do not vouch for the ruse, only for the protection given to the runaway slave, Daniel Webster notwithstanding.

It was hardly apprehended when wireless telegraphy was first invented that its most distinguished service would be in the saving of life at sea. Within a few minutes after the "Florida" was

rammed at night by the "Florida," every steamer within reach, whether on the ocean or in port, was on the way to help. They knew just where the wreck was, and they hurried to give assistance. To be sure, the "Florida" was able to take the survivors, but she might very well have been herself in danger, and had the passengers and crew been driven to the open boats they might all have been lost. Now the wireless telegraph, with the closed bulkheads, frees travel on the sea of most of the remaining terrors. Thus pure science proves its worth.

The Oregon Republican Legislature deserves praise for square honesty where faithlessness seemed to find excuse. By a majority at the direct primary election the people had registered their preference for the Democratic candidate, George E. Chamberlain; but the same people elected a Republican Legislature, which would, under other circumstances, have elected a Republican, but instead of that obeyed the people, and elected the man they did not wish. While this raises the question whether the direct primary may work well where the parties are somewhat evenly divided, it still more reminds the politicians that they must present candidates in whom the people can have confidence.

Prof. Charles H. Hitchcock, Professor Emeritus of Geology in Dartmouth College, and now studying volcanoes in Hawaii, writes us that THE INDEPENDENT has been in his father's family and his own from the first issue, and then stirs us to envy by adding that his father, President Hitchcock, of Amherst College, took the *American Journal of Science*, often called *Silliman's Journal*, from its first issue in 1818, and the succession in the family has been unbroken ever since.

In connection with the article by Dr. De Forest in this week's issue it may be mentioned that on his return to Japan a few weeks ago the Emperor bestowed upon him the fourth degree of the order of the Rising Sun for his service to the Empire in Manchuria and in the famine relief.

The New Insurance Commissioner

GOVERNOR HUGHES sent to the Senate on Thursday last the name of Frederick A. Wallis, of this city, as State Superintendent of Insurance, to succeed Otto Kelsey, whose resignation was announced in THE INDEPENDENT December 31st.

Mr. Wallis has not heretofore been a figure in political circles and was almost entirely unknown in the Senate as well as in Albany. Notwithstanding the speculation which has been current regarding the probable nominee, the name of Mr. Wallis has not previously been suggested as a possibility in connection with the office. He has been an active life insurance man for fourteen years, and his present office is that of general superintendent of agencies in the East for the Home Life Insurance Company, whose standing as a result of the insurance investigation by Governor Hughes was so eminently satisfactory.

Mr. Wallis was born in Kentucky, March 13, 1869. In 1895 he became connected as an agent with the Northwestern Mutual Life Insurance Company. After an experience with the company of twelve months he was promoted to the general agency department for the State of Kentucky, and continued in that capacity for some years. He then went to Baltimore and became an agency director for the New York Life Insurance

Company for Maryland. This position he held until five years ago, when he resigned to become manager of the Greater New York agencies of the Home Life Insurance Company. His occupancy of that position continued until May, 1908, when he became agency supervisor of the Home Life Insurance Company for eleven Eastern States, including New York and the New England States. He has held that position up to the present

time. In insurance circles the nomination meets with very general approval. Among those who have expressed themselves by way of endorsement of Mr. Wallis are Paul Morton, of the Equitable Life Assurance Society; Thomas H. Buckner, vice-president of the New York Life; Emory McClintock and George T. Dexter, vice-presidents of the Mutual Life Insurance Company.

Mr. Wallis is an elder of the Fifth Avenue Presbyterian Church and superintendent of the East Side Mission, which has a thou-

sand pupils. During the recent Presidential election he was secretary of the Taft organization of business men of the State of New York, of which Robert C. Ogden was president.

The Governor of the State is to be commended for this excellent appointment, and the people of the State as well as the insurance companies doing business with them are to be congratulated on this appointment of a practical man for an office heretofore considered in the nature of legitimate political spoils.

FREDERICK A. WALLIS,
Just Appointed Insurance Superintendent for the
State of New York by Governor Hughes.

Bank Superintendent's Report

MR. WILLIAMS, the New York Superintendent of Banks, in his annual report remarks that the remedial legislation of last year at Albany "was so thoro and far-reaching that, with the acts already on our statute books included, we have the most perfect body of banking laws to be found in any State." He recommends that, at the present session of the Legislature, "banking legislation be held at a minimum." It is true that the most valuable results of the panic, so far as legislation is concerned, are the new banking laws of this State. It is also true that the enactment of these laws was due in large measure to Superintendent Williams.

He expresses regret that nearly one-half of the banking power of New York City is not included in the Clearing House Association, and points to evidence furnished by the panic that union is of great value to the public in time of stress. If there had been an association of trust companies, within the Clearing House or distinct from it, in November, 1907, such action as was eventually taken by the trust companies' committee would have been taken at an earlier day, to the advantage of the institutions concerned. There is nothing more important in Mr. Williams's report than his suggestions with regard to this matter. There should be only one association, and all the prominent banking institutions should be members of it. The question should be considered now by the banks and the trust companies, with a view to reaching some agreement that will make the present association a truly comprehensive one.

....Edwin G. Merrill, of Bangor, Me., has been elected vice-president and Milton Ferguson secretary of the Central Trust Company of New York, of which James N. Wallace is president.

....A rigid examination has just been made of the Irving National Exchange

Bank by the certified public accountants, Marwick, Mitchell & Co., who report: "A careful inspection of the assets shows them to be of high grade and remarkably clean and liquid. The business is conducted economically and the system of accounting in the various departments is worthy of special commendation." The capital of the Irving National Exchange is \$2,000,000; the surplus and profits are \$1,380,948; the total deposits \$24,799,321, and the assets \$23,980,270.

....William A. Simonson, for ten years vice-president, was last week elected president of the Second National Bank. Mr. Simonson, born in Newark, N. J., in 1865, became when fifteen years of age an employee of the Second National Bank of Newark, and at seventeen became a clerk of the National City Bank of this city, of which he is now vice-president. Mr. Simonson is also vice-president of the Lincoln National Bank, trustee of the Fifth Avenue Safe Deposit Company, and director of the New Amsterdam Gas Company. The Second National was organized in 1863 and has a capital of \$1,000,000, surplus of \$1,750,000, and deposits of \$12,000,000.

....The statement just issued of the Lawyers Title Insurance and Trust Company shows a capital of \$4,000,000, a surplus of \$5,500,000, and undivided profits of \$223,258.21. The total assets which have been examined and certified by Haskins & Sell, Certified Public Accountants, amount to \$21,880,238.71, an increase in assets during the past year of \$6,415,461.57. On the second Monday in January a year ago the deposits were \$4,500,000. On the same day this year the deposits were \$11,500,000, a gain of \$7,000,000. During the panic a year ago the cash reserve in office was 7 39-100 per cent., altho only 5 per cent. was required, and in bank there was a reserve of 16 per cent., the law requiring only 10 per cent. During the past year the company has moved into its new building on Broadway, between Maiden lane and Liberty street.

Survey of the World

National Topics It was recently asserted that Judge Taft had written a letter favoring the appointment of a permanent tariff commission. Perceiving that this letter had been misconstrued, he sent another, as follows, to Chairman Payne, of the Ways and Means Committee:

"MY DEAR MR. PAYNE—I have your letter. A tariff commission would be harmful or useful as its functions were described in the bill. My own ideas have been that there ought to be a permanent commission of tariff experts to keep themselves advised by all the means possible of the cost of producing the articles named in the schedules in foreign countries and in this country. I think what we lack is evidence, and some such means might very well be used for the purpose of securing it.

"I should be the last to advocate a commission with any power to fix rates if that were constitutional, as it would not be, or with any function other than that of furnishing the evidence to Congress upon which from time to time it might act."

Two bills for a permanent commission have been introduced in Congress. Senator Beveridge's does not empower the proposed commission to fix rates; Representative Fowler's authorizes it to do this, but within the limits of a maximum and a minimum determined by Congress.

—An attempt to settle the Brownsville controversy has been made by submitting in the Senate a compromise bill which was accepted by Senator Foraker and is said to have been approved by the President. It provides for the appointment, by the Secretary of War, of a commission of five general officers, who shall consider all applications of the dismissed negro soldiers for re-enlistment, and then make recommendations, which are to be reviewed by the War Department. Senator Foraker's bill named the members of the commission and provided

that their decision should be final. The compromise will be opposed by prominent Democratic Senators from the South, and it is said that they will use all available parliamentary methods to prevent its passage.—The House voted, last week, for an appropriation of \$500,000 to be expended for war balloons and other aeronautical devices used by the Signal Service of the army.

—By an almost unanimous vote in the House, the speech of Mr. Willetts, of New York, criticising and attacking the President, was stricken from the permanent record, upon the report of a select committee that it was "not justified by any considerations of the constitutional duties of the House, transcended the proper limits of criticism in debate, and was destructive of that courtesy, respect and dignity which ought to be preserved."

—Secretary Root decided, last week, that the Russian Government's demand for the extradition of Christian Rudowitz should not be granted. The man was accused of murder and arson. It is held by the Secretary that the charges are of a political character.—Altho an agreement has been reached by our Government and the British Government that the old controversy about the fisheries shall be referred to The Hague tribunal, some objections made by Newfoundland have delayed the final signing of the treaty.—Joseph L. Bristow, Republican, of Kansas, was elected to the Senate, last week, as the successor of Chester I. Long. Senator Newlands was re-elected in Nevada. In his address to the Legislature, Mr. Bristow said that E. H. Harriman, George J. Gould, James Stillman and Mortimer L. Schiff ought to be imprisoned on account of

their profitable operations in connection with the finances of the Chicago & Alton Railroad Company. "It is my purpose," he added, "to use what talents I may have to bring about legislation that will establish the same rules of justice for these financial banditti that apply to the conduct of men in the ordinary walks of life."

California and the Japanese At the beginning of the present week, final action had not been taken upon any of the anti-Japanese bills pending in the California Legislature. On the 26th ult. Governor Gillett sent to the Legislature a message, urging that the bills be laid aside because such legislation would seriously embarrass the Washington Government in its dealings with Japan. He pointed out that even the bill forbidding aliens to own land (as to which there is the least objection) provided for discrimination against Japanese. He also suggested that an enumeration of Japanese residents be made by State authority. Mr. Drew was the author of the bill relating to land, and letters were sent to him by the President and the Governor. He at once consented to amend the measure, as suggested by Secretary Root, the purpose of the changes being to make it apply to all aliens by omitting words which restricted it to those "not eligible to citizenship." While the President prefers that this bill shall be laid aside with the others, the amendments make it fairly satisfactory to him. On the 27th further consideration of the bills was deferred for a week. Senator Anthony introduced a resolution declaring that the Japanese Consul-General at San Francisco should be recalled because he had, in an interview with the Governor, sought to interfere with the action of the Legislature. The Governor has exonerated the Consul-General, saying his conduct was entirely proper. The amended Drew bill does not affect present holdings of land, permits ownership by aliens for five years, and provides for the protection of their treaty rights.—On the 30th, there was an unfortunate incident on the grounds of the University of California, in Berkeley. *Sumi Hamako*, a Japanese student (graduate of the Imperial University of Tokio), while walking past a

group of Americans who had been discussing the anti-Japanese bills, was attacked by them, knocked down and beaten. It is asserted that the assault was unprovoked. The Japanese Association has asked the Consul-General to report the affair to the Washington authorities.—The Commissioner of the United States to the Japanese Exposition has given to the press the substance of several recent interviews with Marquis Katsura, Japan's Prime Minister, and Count Komura, Minister of Foreign Affairs. The latter said:

"In the matter of the emigration of Japanese laborers, we are doing our utmost to work in harmony with the Government of the United States and to meet its wishes. We are energetically discouraging emigration to the United States and elsewhere, except to Korea, Formosa and parts of Manchuria. It is now the definite policy of the Government of Japan to concentrate its surplus population—that part which is disposed to emigrate—in those parts of the Orient which I have mentioned. We desire to concentrate our people in the Orient and to consolidate our interests in this part of the world. We are doing our best to carry out this policy, but a governmental policy cannot always be made fully operative in a day or a year. I think there will be little complaint concerning the emigration of Japanese laborers in the future on the part of any Government in America."

The Prime Minister said his Government heartily desired peace with the whole world. It is pointed out that he is seeking to convert Japan from a military nation into one of trade and industry, feeling that his country's progress has not been symmetrical and that development along military lines ought not to be pursued further under existing conditions.

Anti-Trust Law Amendments Rejected Nearly a year ago there was introduced in Congress a bill, with quite notable support, for the amendment of the Sherman Anti-Trust law. It was known as the Civic Federation bill, and it had been approved by certain officers of the Government. In more than one of his messages the President has suggested amendments which were generally in accord with the provisions of this measure, which required combinations or corporations engaged in interstate business to register at Washington and to supply information as to their affairs. Under certain condi-

tions they were to be exempt from prosecution. On the 28th ult. the Senate's Committee on the Judiciary reported, by Mr. Nelson, of Minnesota, that this bill be indefinitely postponed. The report is a long one. The bill requires action to be taken in the case of common carriers by the Interstate Commerce Commission, and in the case of other corporations by the Commissioner of Corporations. As to the powers to be conferred, the report says:

"In the one case the power of giving a quasi, or qualified, immunity from criminal and civil prosecution is conferred on the Commissioner of Corporations, and in the other case on the Interstate Commerce Commission. The power of determining, without notice or hearing, whether a contract or combination in general restraint of trade is reasonable or not, a power which, as we have herein shown, the courts deny to themselves, is conferred on the mere head of a bureau, in one case, and on a special body in the other case, and by thus making civil and criminal prosecution hinge on the question of reasonableness or unreasonableness it destroys the provisions of the act as to criminal prosecutions, and opens the door wide to doubt and uncertainty as to civil prosecutions. The result is that, technically as to criminal prosecutions, and practically as to civil prosecutions, a dispensing power, a power of granting immunity, is in the one case conferred on a mere bureau head, and in the other on an administrative body, without notice or hearing and wholly *ex parte*—a course of procedure that would not be tolerated in any court of our country. Shall we confer upon the mere head of a bureau a power that the Parliament of England was unwilling to accord to the king? To do so would be a most serious departure from the fundamental principles of our Government, and would do violence to what we conceive to be due process of law."

To inject into the Sherman act the word "unreasonable" as applying to restraints of trade, the report continues, would make the act indefinite and uncertain as a penal statute, and would practically repeal the criminal part of it. With respect to civil prosecutions, it would lead to the greatest variableness and uncertainty in the enforcement of the law. "The defense of reasonable restraint would be made in every case, and there would be as many different rules of reasonableness as cases, courts and juries."

"To amend the Anti-Trust act as suggested by this bill would be to entirely emasculate it, and for all practical purposes render it nugatory as a remedial statute. Criminal prosecutions would not lie, and civil remedies would labor under the greatest doubt and uncertainty. The act as it exists is clear, comprehensive,

certain and highly remedial. It practically covers the field of Federal jurisdiction, and is in every respect a model law. To destroy or undermine that at the present juncture, when combinations are on the increase, and appear to be as oblivious as ever of the rights of the public, would be a calamity."

On the following day the House Committee on Commerce adopted resolutions declining to consider at the present session any bill for amending the Sherman act.

Public Land Questions Secretary Garfield asks Congress for an appropriation of \$1,000,000, to be used in detecting land frauds and recovering the public land that has been stolen. In a report to him, Commissioner Dennett, of the General Land Office, says:

"There is absolute necessity for such an appropriation, if the more than \$100,000,000 worth of national resources now claimed to have been fraudulently acquired by corporations and individuals, is to be promptly recovered."

Altho the sum needed, he added, is a large one, "yet, in the light of our present knowledge of lands unlawfully acquired, it is not 1 per cent. of the commercial value of that which the Government may hope to get back."—D. H. Hallock, a wealthy ranchman, was found guilty in the Federal Court at Guthrie, Okla., on the 30th, of subornation of perjury, the charge being that he induced residents of Kansas to procure land for him by "dummy" entries.—At Portland, Ore., last week, the Government filed thirty-five suits against the Oregon & California Railroad Company, the Southern Pacific Railroad Company, and more than one hundred individuals or private corporations, to recover 353,000 acres of land, valued at \$15,000,000, which, it is alleged, was wrongfully held by the railroad companies and was wrongfully sold by them to lumber companies and timber speculators.

The Panama Canal

In the case of the Government against the New York *World* and the Indianapolis *News* for criminal libel several witnesses were examined, last week, before the grand juries in Washington and New York. It is admitted that the Government seeks to use in New York the statute relating to offenses on reserva-

tions, with special reference to the military reservations at West Point and Governor's Island. There will also be a suit in the State courts. District Attorney Jerome sent to United States District Attorney Stimson a long letter, saying that the *World*, if its published assertions concerning the purchase of the canal property were untrue, had libeled Douglas Robinson and Charles P. Taft; that the offense was of a very serious character; that he was unwilling to ignore it and make no attempt to inflict punishment, and that he would begin an action if Mr. Robinson (a resident of the city) would make complaint, and if an agreement with the Attorney General to prevent an interference of Federal and State suits could be reached. Two days later Mr. Robinson formally made complaint, and it is expected that an indictment will soon be obtained.—In the House, at Washington, on the 25th ult., Mr. Rainey, Democrat, of Illinois, made a sensational speech in which he asserted that William Nelson Cromwell, Charles P. Taft, Roger L. Farnham and others had plotted to rob and defraud the republic of Panama by getting possession of its treasury funds and stealing its timber lands. President Obaldia, he remarked, was merely the corrupt tool of Mr. Cromwell, and his election had been forced by the threats of William H. Taft, then Secretary of War. This had been a part of the conspiracy. The substance of the speech was that President Roosevelt, Judge Taft, his brother, Cromwell, Obaldia and one or two others had undertaken by treaties, by control of the local government, and in other ways to plunder the little republic. Senator Lodge was accused of procuring the purchase, for more than \$1,000,000, of two ships which certain constituents of his desired to sell. At once there was a chorus of emphatic denials. Randolph G. Ward asserted that he alone had been responsible for what Mr. Rainey had called an "infamous railroad proposition," involving a land grant. He asserted that the proposition was a fair and honest one. C. P. Taft said he had never had any business association with Mr. Cromwell or any business interests on the Isthmus. Mr. Cromwell declared that his business interests there were confined to a few shares in an electric light company. Al-

most every assertion in the speech was met by these and other denials.—Judge Taft arrived at Colon on the 29th. Unofficial reports from the Isthmus say that after a careful inspection the engineers accompanying him have decided that the great Gatun dam and locks can be constructed with entire safety according to the present plans, and that a sea-level cut will not be required.

The Steamship Collision

The steamship "Baltic" arrived at New York on the 25th ult., bearing the 1,650 passengers taken from the "Republic" and the "Florida" after the collision of the 23d near Nantucket Shoals. The "Florida" was brought into port, with thirty feet of her bow smashed off, but the "Republic" lies in forty fathoms of water. We gave last week a brief account of the collision. The attention of the world has been directed by what took place to the great value of wireless telegraphy and the heroism of the wireless operators and of the "Republic's" officers. John R. Binns, operator on this ship, remained at his post after one side of his little metal cabin had been carried away by the "Florida's" prow, and with much difficulty sent the faint calls for help which were received on the mainland and by several steamships. Another hero was H. G. Tattersall, wireless operator on the "Baltic," who sat at his key for fifty-two hours sending and taking messages. Binns was praised in the House at Washington last week, and resolutions commending him and the steamship officers have been adopted by the New York Legislature. Captain Inman Sealby, in command of the "Republic," remained on board his ship, accompanied by Second Officer Williams, until she went down. As the ship began to sink he climbed up the foremast. With difficulty the two men were found and picked up by the revenue cutters that had been towing the steamship. Upon their arrival in New York they were cheered by crowds of people. The history of the whole affair, which has been fully told in the daily press, abounds in incidents highly creditable to passengers, officers and sailors. The owners of the "Republic" have sued the owners of the "Flor-

ida," claiming damages in \$2,000,000. Evidence thus far given to the public does not show which of the two steamships was at fault.

Cuba's New Government Jose Miguel Gomez, the new President of Cuba, was inaugurated on the 28th ult., and immediately afterward Governor Magoon and other American officers left the harbor of Havana on the battleship "Maine." This ship had entered the harbor on the 25th, which was the eleventh anniversary of the destruction of the original "Maine." Two days later the wreck of the latter was decorated by American sailors. From the fighting top, the summit of which is forty feet above the surface of the water, a flag was placed at half mast. President Roosevelt has sent to Congress a brief message, approving Governor Magoon's recommendation that the wreck be raised and removed. In an address delivered at the time of the inauguration, Governor Magoon said it was the understanding of the United States that all the executive and legislative decrees, regulations and rulings of the provisional government then in force should continue in force until legally revoked by Cuba; that the money obligations of the same government should be assumed by Cuba; and that the contracts for works of sanitation and for other purposes made by the outgoing government should be held inviolable and be faithfully executed. He also said:

"I am also directed by the President to declare that the United States considers that the second article of the appendix of the Constitution of Cuba forbids Cuba to assume or contract any public debt in excess of or in addition to the debt already contracted or authorized by now existing laws and now existing decrees of the provisional government, and that the United States will not recognize or concede to be a valid obligation of Cuba any bond or evidence of debt which may be issued in violation of this understanding. I am further directed by the President to declare that it is the final and conclusive determination and decision of the provisional government that all claims of the soldiers of the war of liberation have been fully satisfied and discharged by the execution of existing laws, and Cuba remains under no further obligation or indebtedness in respect thereof; and that the declaration hereinbefore contained in respect of the increase of the Cuban debt specifically and especially applies

to any attempt to create an indebtedness for the discharge of such alleged or pretended obligations."

In reply to this, President Gomez agreed to all the requirements, expressing the gratitude of the Cuban people to the American people, President Roosevelt and Governor Magoon. Messages of congratulation were received from the President, Judge Taft and many others.—On the following day, President Gomez removed Jose Jerez Varona, who for ten years had been chief of the secret police, and caused much disagreeable surprise by appointing in his place Ricardo Arnauto, who had been the editor of scurrilous newspapers and was condemned by General Ludlow in 1900 to be shot because of his libelous and foul articles concerning American women. In the same way he had also attacked the wife of Señor Zayas, now Vice-President. He escaped death only by making promises as to his future conduct, and these promises he has since broken. The appointment was greeted by a storm of protests, several of which came from Washington. It is understood that Vice-President Zayas and four members of the new Cabinet threatened to resign. Therefore, on the 30th, the appointment was revoked, and the place was given to Jose Ugarte.

Aeronautics Other aeronauts do not find it so easy as they expected to imitate the success of the Wright brothers. The Prince and Princess Henry of Prussia, Princess Victoria Louise and many other distinguished personages gathered at the Tempelhof field, near Berlin, to witness the flight of Armand Zippel and were disappointed because he was not able to rise from the ground. The aeronautical experts of the British army were hardly more successful. Their aeroplane rose, but after maintaining a wobbly flight for a quarter of a mile the lifting rudder broke and the machine fell from a height of 15 feet. The aeronaut, Col. S. F. Cody, an American, was not injured by his fall. The Russian Aero Club is raising funds for the defense of their country in the air and have decided to start their fleet with one of the Wright machines. The price

is said to be \$6,000. The Wrights will begin the manufacture of aeroplanes for Russia, France and other countries on a large scale. The municipality of Pau has provided a commodious building for their work. Orville Wright has joined his brother Wilbur and will devote himself to improving the design while his brother does the flying. He will return to the United States in time to make the tests required by the Government before June 28th. The International Aeronautic Federation which met at London in January authorized the establishment of an elaborate series of prizes for flying machines amounting to \$240,000. There will be seven gold cups worth \$10,000 each and the rest of the money will be distributed in cash prizes. The new apparatus for transmitting pictures was appropriately employed on January 31st, when the *Matin* at Paris published a photograph of Count Zeppelin in his airship. The picture had been transmitted from Berlin by a telephone wire within ten minutes by using the Korn process.

France The student riots in Paris have been quieted down by the energetic action of the Premier, Clemenceau, and the Chief of Police, M. Lépine. M. Thalamis, who on account of his rationalistic views of Joan of Arc was the object of attack by a mob of Clerical and Royalist students whenever he appeared at the Sorbonne, now continues his course of lectures undisturbed, tho under the protection of the police. The students who were arrested for the disorders at the Sorbonne were condemned to penalties varying from a fine of \$5 to a month's imprisonment. It is recognized that the students of medicine had some cause for their revolt against the methods of instruction and examination, and some reforms in the medical school are likely to result from the demonstration, particularly the introduction of more practical work in the place of lectures. —Two bills have been prepared by the Committee on Education in the French Chamber of Deputies in order to prevent the public school system from being interfered with by parents who object to the character of the instruction. The Catholic authorities have always been opposed to the national schools on the

ground that they were injurious to the morality of children and in violation of the liberty of conscience, and in some cases legal redress has been sought by bringing action in the courts against the teachers. The new bill aims to prevent this by transferring the responsibility for the character of instruction from the teacher to the State. In the case of any complaint on the part of the parent or guardian in regard to the acts or utterances of the teacher in the discharge of his or her official duties appeal must be made to the educational authorities, who are obliged to notify the teacher of the complaint and of their finding. A parent or guardian is debarred from taking action against the teacher, but may bring suit before a civil court against the prefect of the department. The second bill is aimed against the Catholics who withdraw their children from the public schools on account of certain objectional text books or methods of instruction. The bill provides that parents or guardians who shall prevent a child from attending school or from using in the school itself the prescribed text book or from participating in the instruction in obligatory subjects shall be liable to punishment under the penal code. Any public utterance, whether it be in a sermon, placard, or pastoral letter, inciting to a breach of this provision is liable to be punished by imprisonment for from three months to two years.—The re-establishment of the guillotine in France in response to public demands aroused by the increase in crime has given rise to disgraceful scenes from the morbid curiosity of the people. The four executions of the Pollet gang at Béthune on January 11th, and the execution of Remy Danvers at Carpentras, Provence, were made the occasion of public holidays and general rejoicings. The streets and the windows of the buildings commanding the place of execution could not accommodate the crowds who wished to witness the spectacle. In the latter case the spectators considered themselves defrauded of their privilege because the condemned man was beheaded within ten seconds after he appeared at the prison door. Danvers had murdered his employer and wife in order to rob them of \$25.—Benoit Constant Coquelin, the most distinguished of French actors in this generation, died on

January 27th at the Home for Retired Actors, which he founded at Port aux Dames, near Saint Germain. The little village was crowded with distinguished men and women of the theatrical and literary professions, and the Government was represented at the funeral by M. Duyardin-Beaumetz, Under Secretary of State for the Fine Arts. The most prominent mourner was M. Rostand, whose new play of "Chanticler" M. Coquelin was about to give. His son, Jean, will probably take the rôle. M. Coquelin created the part of Cyrano de Bergerac and appeared with Sarah Bernhardt in Rostand's other famous play, "L'Aiglon."

German Affairs Chancellor von Bülow's position is becoming more difficult, as the Conservatives have gone with the Catholics on account of the legacy duties in the Government tax reform project. These two parties also joined in opposing the suffrage proposals of the Liberal and Radical members. The Agrarians of the Conservative party are opposed to the Chancellor on the question of the Brazil treaty. A tentative arrangement for a commercial treaty was made last fall with the Brazilian Minister of War, who was the guest of the Kaiser in the army maneuvers, and it is understood that Germany, in order to prevent a proposed increase of 20 per cent. in the duties imposed on German goods, would consent to reduce the duty on Brazilian coffee and the abrogation of the Von der Heydt rescript restricting German emigration to Brazil. The Agrarians are opposed to any reduction of the tariff and the emigration of Germans to foreign countries. On the other hand, many prominent capitalists are interested in the development of commerce with Brazil and the prosperity of the German colonies in that country. — The Prussian Diet voted against all the proposals to reform the Prussian electoral law. These proposals provided for a direct ballot, a secret ballot and redistricting in order to get rid of the gerrymandering which cuts down the representation of the urban population. In both Hanover and Berlin street demonstrations of the unemployed were

organized by the Socialists. These were dispersed by the police, and in Hanover twenty or thirty persons were wounded in the conflict with the mob.

Turkish Troubles Of the two violations of the Treaty of Berlin which have recently threatened the peace of Europe, one has been settled by a monetary indemnity paid to Turkey, and the other seems likely to be soon arranged in the same way. In consideration of the payment of \$11,000,000 by Austria Turkey relinquishes her nominal sovereignty over Bosnia and Herzegovina, which Austria was by the Berlin Treaty of 1878 allowed to occupy and control. In consideration of the payment of \$20,000,000 by Bulgaria, Turkey is willing to relinquish its nominal sovereignty over Bulgaria, which by the same treaty was made a semi-independent principality. Turkey practically loses nothing that she really had by these two bargains and gains a substantial sum at a time when it is most needed in starting the new era of constitutional government. At present the bargaining in the second deal is still being carried on, after the manner of international negotiations, by a series of threats, protests, ultimatums, interventions and concessions. Bulgaria declares that she will never consent to pay more than \$16,400,000 at the most. Turkey replies that \$25,000,000 is the least that is acceptable, but if Bulgaria will consent to a "rectification of the frontier," Turkey is willing to consider the possibility of throwing off 20 per cent. The Bulgarian Premier declares that his parliament will never consent to the payment of \$20,000,000. The Grand Vizier retorts that he has a parliament too, which can be just as stubborn as any when it comes to making an impression on a foreign Power. Bulgaria, thereupon, mobilizes her reserves, and brings the Eighth Division on the Turkish frontier up to its full war strength of 25,000. Turkey counters by putting the Second Army Corps on a war footing and ordering the Third and Fourth Army Corps to be ready for action. But both parties are manifestly aware that they are held in leash by the Powers

which would not dare to risk a Balkan war and could not afford to allow any rectification of frontiers. Most of the boundary lines drawn at the Congress of Berlin were arbitrary and unnatural, having neither geographic nor ethnic justification. — The Austrian Parliament has been notified that Bosnia and Herzegovina will be a constitutional government, and that in accordance with the agreement with Turkey the Mohammedans in the annexed provinces will be granted equal political rights with the rest of the population. In the debate this act of justice was contrasted with England's refusal to give a vote to her Mohammedan subjects in India. — In the Turkish Parliament the Young Turks, or the Committee of Union and Progress, which was instrumental in bringing about the revolution, is assuming the attitude of an opposition party. The Grand Vizier, Kiamil Pasha, has been too successful in his foreign policy to be overthrown, but the Young Turks are dissatisfied with him because he shows too much deference to the opinions of the European Powers and does not favor their program of bringing all Mohammedans together under the leadership of the Kaliph at Constantinople. The supporters of Kiamil Pasha are forming a Liberal party, which claims to be not less patriotic than the other, but is opposed to the Pan-Islamic movement, holding that the Christians should have equal rights in all respects in the Ottoman Empire. Some of them would go so far as to abolish Mohammedanism as the state religion and put the Sheik-ul-Islam in the same position as the Christian Patriarchs. A Liberal secret society, composed of former exiles and political prisoners known as the Confederates, was suspected of reactionary designs by the Young Turks, and their headquarters and printing office in Constantinople was raided by the police. The leaders, including many prominent men, were arrested, and the propagandist literature seized is said to indicate that an extensive conspiracy exists, involving 20,000 members in various parts of the empire, for the purpose of overthrowing constitutional government. The Liberals claim that the incriminating documents are forged by their enemies.

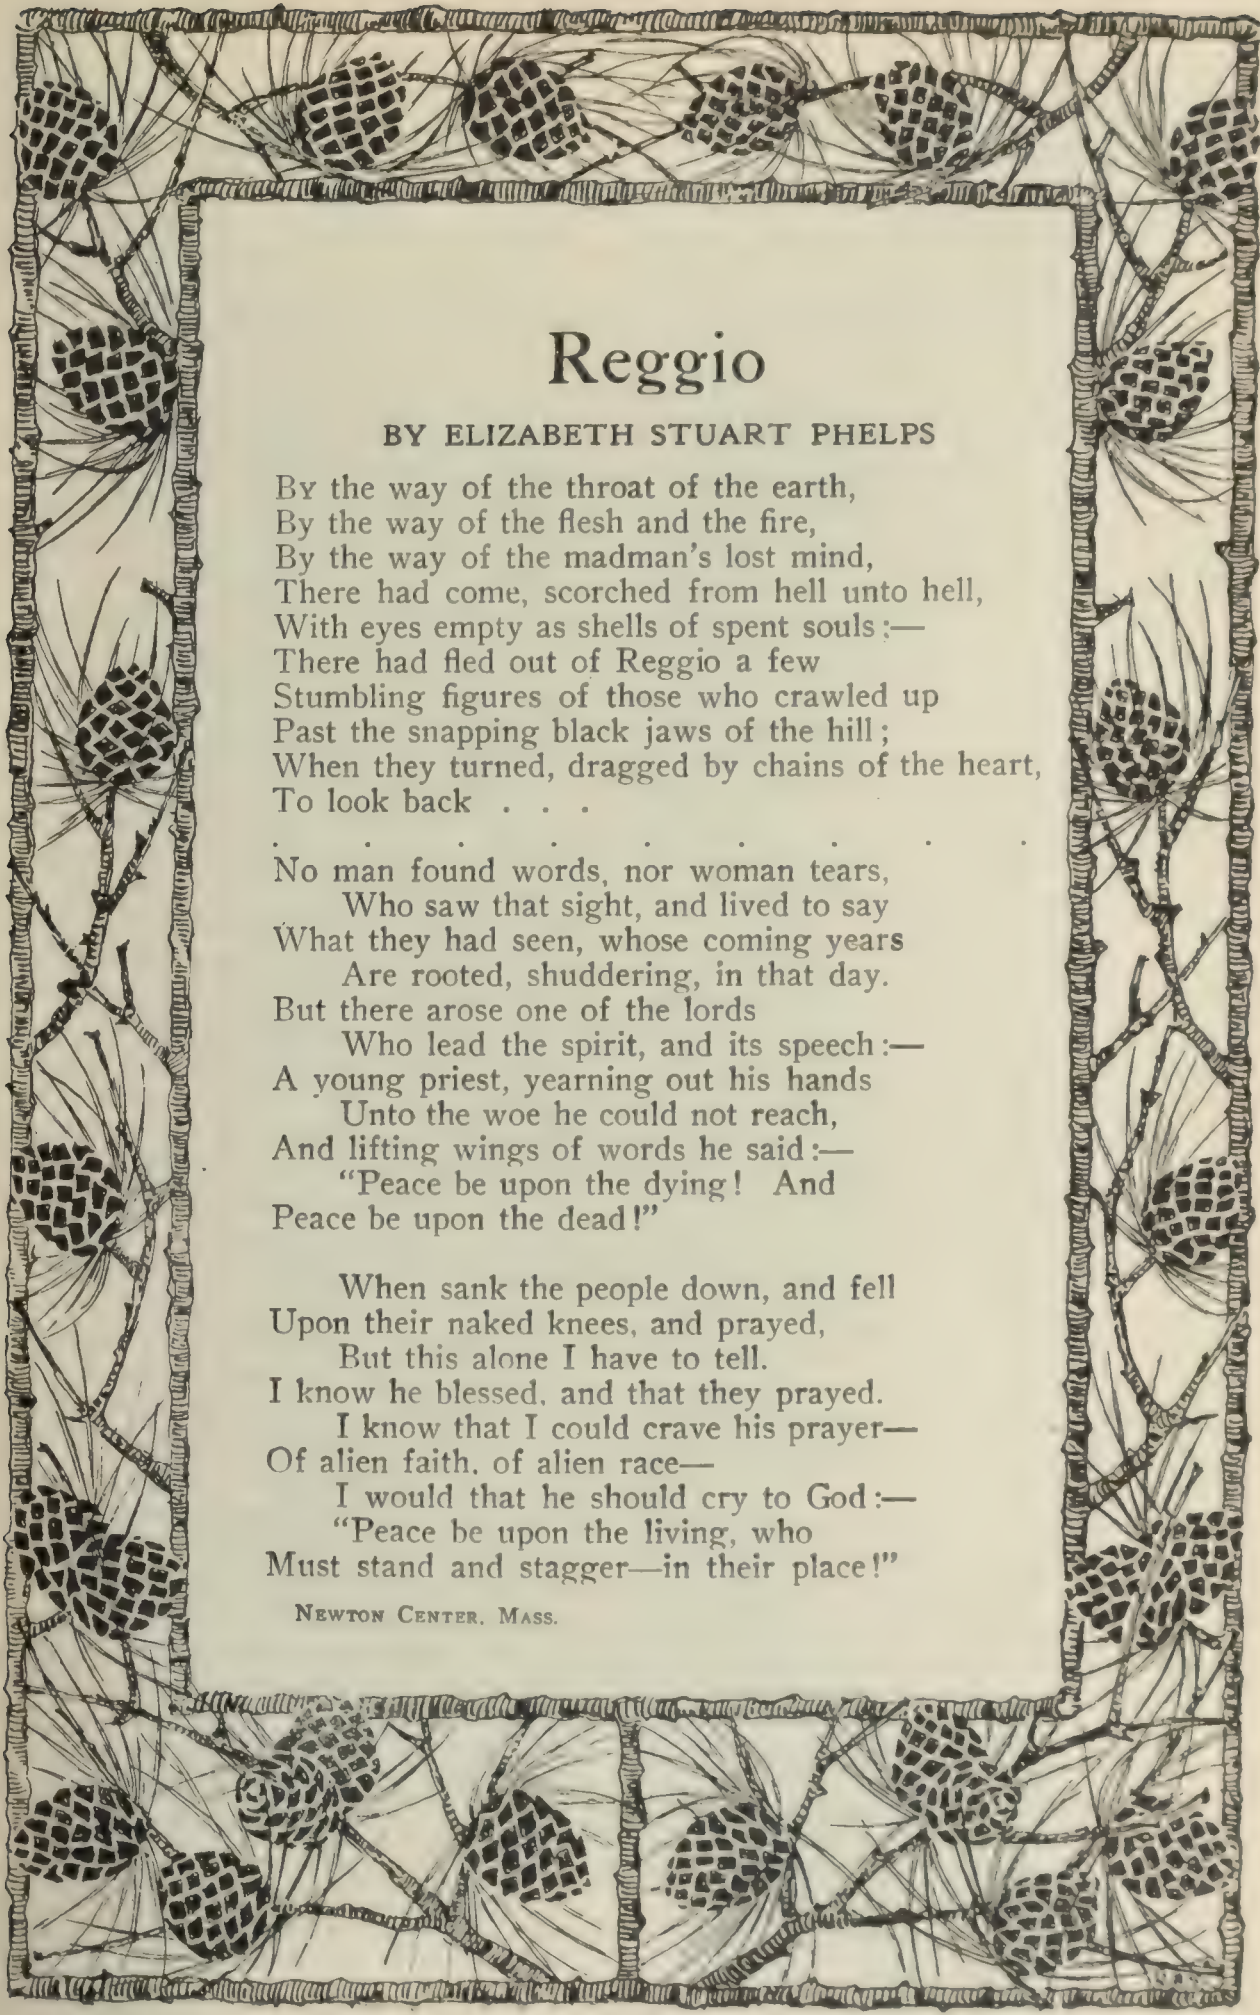

The Prohibition Movement in New Zealand According to the correspondent of the *London Times* the anti-saloon movement in New Zealand is constantly gaining in strength and likely in the near future to dominate the country. A majority of the total vote is already in favor of prohibition, but, according to the New Zealand law, a three-fifths majority is necessary. This point may be reached before long, so the liquor men and their supporters are trying to maintain the present local option law in order to prevent national prohibition, but under this they are constantly losing territory. There are now twelve prohibition districts in New Zealand, and in thirty-six others the majority of the votes are cast for no license, altho not the necessary three-fifths majority. At the recent election six new prohibition districts were added. The question is submitted on the same day as the general election for parliament in the following form:

1. That the number of licensed houses existing in the district shall continue.
2. That the number shall be reduced.
3. That no licenses whatever shall be granted.

The following table, giving the total number of votes for these three proposals, shows the rapid increase in the anti-saloon sentiment during the last twelve years:

	Con- tinuance.	Re- duction.	No- license.
1890	130,500	94,500	98,300
1899	142,400	107,700	118,500
1902	148,400	132,200	151,500
1905	182,800	151,000	198,700
1908	186,300	161,800	209,100

Women, of course vote on this, as on all other questions, on equal terms with men, and the women are exercising their privilege more freely and intelligently year by year. In 1902, 138,565 women, or 74.52 per cent. of those on the rolls, voted; in 1905, 175,046, or 82.23 per cent. of those on the rolls, voted. The greater interest taken by the women in political questions, as well as their increase in numbers, makes the feminine vote of increasing importance. In the early days of New Zealand the proportion of women was small, but now they are approaching a numerical equality. Thus, while in 1871 the proportion of females to males in the colony was only 70.52, in 1906 it was 88.65.

Reggio

BY ELIZABETH STUART PHELPS

By the way of the throat of the earth,
By the way of the flesh and the fire,
By the way of the madman's lost mind,
There had come, scorched from hell unto hell,
With eyes empty as shells of spent souls:—
There had fled out of Reggio a few
Stumbling figures of those who crawled up
Past the snapping black jaws of the hill;
When they turned, dragged by chains of the heart,
To look back

No man found words, nor woman tears,
Who saw that sight, and lived to say
What they had seen, whose coming years
Are rooted, shuddering, in that day.
But there arose one of the lords
Who lead the spirit, and its speech:—
A young priest, yearning out his hands
Unto the woe he could not reach,
And lifting wings of words he said:—
"Peace be upon the dying! And
Peace be upon the dead!"

When sank the people down, and fell
Upon their naked knees, and prayed,
But this alone I have to tell.
I know he blessed, and that they prayed.
I know that I could crave his prayer—
Of alien faith, of alien race—
I would that he should cry to God:—
"Peace be upon the living, who
Must stand and stagger—in their place!"

NEWTON CENTER, MASS.

"Peace at Any Price" Men

BY CHARLES E. JEFFERSON, D.D., LL.D.

[Dr. Jefferson is pastor of the Broadway Tabernacle Church of this city and has for a long time been an active worker in the peace ranks and a student of militarism. He is now chairman of the Executive Committee of the Peace Society of the City of New York. As the Navy Appropriation Bill is now before Congress this article is of extreme timeliness.

—EDITOR.]

THERE have never been many of them, but they have made no little stir in the world, partly because of the radical character of their belief and partly because of the vociferous denunciation which they have excited. Their theory has been that war is always unjustifiable, because there is always a better way of settling international disputes. They have contended that killing men is not so good a way of deciding important questions as bringing these questions to the arbitrament of reason. According to their philosophy reason is stronger than force, and justice is more to be desired than might. They have never troubled themselves so much about national "honor" as about the righteousness of the national cause. But their tribe has always been small. Their ideas, however beautiful, have never commended themselves to the hard sense of the world's leaders, and no nation has ventured thus far to follow them. Their chief function seems to have been to furnish a target for the ridicule of men who know better what sort of a world we are living in, and how its problems may be most successfully met.

But just now a new philosophy is coming into vogue, and a novel type of peace-at-any-price man holds the center of the stage, shoving his meek-eyed predecessor completely into the shadow. The newcomer is not timid in the promulgation of his doctrine and boldly demands the right to dominate the policy of the world. He stands at the elbow of statesmen and waits at the door of kings. His theory is a simple one and as plausible as it is simple. Its fundamental proposition is that peace is the supreme blessing of the world. Nothing is so destructive and barbaric to the human race. War is not only hell, it is inconvenient. It interferes with commerce and throws the world's life into chaos. It is the one scourge to

be dreaded, the one curse to be avoided. At all hazards and at any cost war must be rendered impossible. If you ask this new peacemaker how war can be escaped, his reply is "only by colossal armies and gigantic navies." Lyddite shells and twelve inch guns are the only guarantees of peace. If nations are not armed they are certain to fight, but if properly equipped with deadly weapons they think only of peace. Nations not cased in armor inevitably fly at one another's throats, but when dressed in steel plate they coo like doves. Every battleship therefore is a nail in the coffin of war. Twenty-six thousand ton battleships are spikes, and no spike can be too long when you are trying to box up the devil. Cruisers and torpedo boats are messengers and tokens of good will. A naval cruise cements nations together wonderfully. Men fall in love when they look at one another thru the bore of a gun. Nations are never so friendly as when they sit down in the midst of explosives. The old idea that guns are to fight with is obsolete, they are emblems of amity and work twenty-four hours a day for peace. Torpedo boat destroyers destroy nothing but the last vestige of a desire to fight. Lyddite shells annihilate nothing but foolish notions of waging war. Men spend years at target practice not for the purpose of taking life, but with the sole intention of saving it. It is for peace therefore that all military and naval appropriations are granted. The President, when he asks for new battleships, is aglow with enthusiasm for peace. Every Congressman who votes additional millions for cruisers and torpedoes does so in the conviction that in this way he is sounding the death knell of war.

Of course, this way of preserving the peace is somewhat expensive, but what of it? Is not peace preferable to war? Is not war hell, and is any price too great

to pay for deliverance from hell? Think what war means! It means graves and widows and orphans and mangled and mutilated men! What is money compared with blood? Peace is a blessing of such immeasurable dimensions that it is cheap at any price. So runs the doctrine which is now the accepted creed of Christendom.

It is an interesting fact that the most ardent champions of the new theory are army and naval officials. There are no peace men now living who will compare in enthusiastic devotion to the cause of good will with the men who compose the military and naval boards, unless it be the firms which construct battleships at ten million dollars apiece. They have but one ambition and that is to keep the nations from fighting. The time once was when professional soldiers liked to fight. The time has gone. Professional soldiers nowadays abhor war with an abhorrence which even the Quakers never knew. For Quakers, when unduly provoked, have been known to fight. The naval experts of the world are determined to leave no possible opportunity for fighting. Now and then some evil-minded person insinuates that wars might be provoked by military men to promote their own advantage, but the fury with which all such insinuations are spurned is proof that they are unjust. Military men are in the service solely for the purpose of preserving the peace. It has been suggested that it would be only human if naval officers should have occasionally a lurking desire to experiment in actual battle with the complicated and enormously expensive machinery of which they have been placed in charge, but the suggestion is hooted at so vehemently by every officer of the navy that there is nothing to do but conclude that all such suggestions emanate from the devil. The men who devote their lives to mastering the science of hitting and sinking battleships have only one ambition, and that is never to have the opportunity of putting their skill into practice. Naval commanders live and move and have their being in the realm of peace. Without them the oceans would all be red with blood.

And so it has come about that the peace-at-any-price men are today all drest

in uniform, supported at Governmental expense. So long as the peace-at-any-price men were only a few Quakers and sundry other like-minded individuals, there was no occasion for alarm because their influence was negligible, but now that the doctrine so long hated by the practical men of the world has been adopted by men of high position and large influence, it is high time that the world was taking notice. Never before in history has the doctrine been so forcefully expounded that peace is cheap at any price. Germany in an era of remarkable prosperity is running ever deeper into debt, all because of her desire to keep the peace. Great Britain cannot make the two ends meet, all because she is determined not to fight. Our own Government has a deficit this year of \$125,000,000 and a prospective deficit still larger for next year, all because of our devotion to peace. But these deficits do not tell the extent of the price which the world is paying to ward off war. Thousands of Europeans are ill-fed because their food goes to the army. Constructive legislation is held back in every leading country of Christendom, and internal development is crippled and checked because so large a part of the proceeds of industry is confiscated by this policy of maintaining the peace at any price. Our own country, the richest of all nations, is today suffering in a dozen departments because of the repeated raids made on our treasury by men who have an abnormal horror of war.

This, however, is just the beginning. The peace-at-any-price men have only fairly begun to work. Congress is still stiff-necked and niggardly, and gives only a paltry \$130,000,000 this year for the navy. When Admiral Evans lectured the other evening in Carnegie Hall he punctuated his racy account of the cruise of the battleships with sharp thrusts at the parsimonious policy of Congress, and the most fiery paragraph in his lecture was the one in which he extolled the work of the Navy League and exhorted his hearers to compel Congressmen to vote the way they wanted them to vote. This Navy League is an organization in regard to which every American citizen ought to be informed. Without such information the legislation of the last few

years cannot be understood. Various events which to many have been inexplicable become intelligible when read in the light of this league. It is a body of 4,500 men and women banded together "to aid, improve and develop the efficiency of the navy." Its aim is "to crystallize and give effect to a widespread public sentiment in favor of a strong navy." It is going "to educate the public" by special publications and thru the press at large, thru lectures and by building up a league of at least a million members. Its inspiration to do this comes from England, which has a Navy League of 20,000, and from Germany, whose league has a membership of 911,293. Our league is not going to take part in politics "except when the forwarding of the naval program is at issue," in which case it will go with the party which supports that program. It will do this because that is the way the thing is done in Germany. In the elections of 1907 the German league "threw its tremendous influence into the balance" with the most gratifying results. In order to stimulate the enrollment of recruits the league repeats at every meeting the statement of a far-sighted Congressman who has discovered that "there are twenty million American citizens who can be shot down at home from the water."

Many persons have wondered more than once within the last few years why our nation is getting so tremendously interested in naval affairs, and why the launching of a battleship has been made a national event, more heralded sometimes than the inauguration of a President, and why the battleships and cruisers have been kept dancing up and down the Atlantic seaboard, their every movement being chronicled in the daily papers with a fulness given only to events of international significance, and why certain volumes have appeared at times most opportune for the influencing of certain votes in Congress, and why certain magazine articles and editorials came out just in the nick of time, and why the managers of the Jamestown Exposition flooded the country with such announcements as: "The greatest gathering of warships in the history of the world," "The grandest military and naval celebration ever attempted in any age by any nation," "A

great living picture of war, with all its enticing splendors," and why the program for the Hudson and Fulton celebration is so weighted down with battleships and cruisers, and why the fleet was sent on a voyage around the world. It is an arduous undertaking to dethrone the ideal of a nation, and the United States must be "educated" to appreciate the beauty and worth of guns as safeguards of the peace. The work is going on quite nicely, and the Navy League deserves congratulations. I notice that a religious editor, who dined one day at the White House, has just recorded in his paper that the cruise of our battleships is "an event which in future years will stand among the most notable in the history of the United States." When one thinks of how rare it is that a ship crosses the sea without sinking, one wonders why the editor did not rank this cruise among the most notable events of the entire history of the human race. Forty-five hundred men and women determined to have peace at any price and toiling unceasingly with the energy of Apostles can so work upon the imagination of a nation that quite incredible things become possible. When a Congressman was recently asked why it is that Congress surrenders every year to the demands of the men who are urging an ever bigger navy, the reply was: "You have no conception of the tremendous and constant pressure to which Congress is subjected by naval officers, active and retired, and their influential friends."

Probably the most curious feature of the naval program is the regularity with which the sky clouds over as the day for the consideration of naval appropriations approaches. Year after year, after a long spell of pleasant weather, all at once storm clouds have drifted across the heavens, international relations have become suddenly strained, and the whole land has lain in the shadow of an impending conflict. Fortunately the storm blows over as soon as the votes are counted, and in the beautiful sunlight which follows the storm, workmen are seen constructing additional battleships. Suspicious persons have occasionally imagined they saw a connection between the international weather and the Navy League, but their suspicions ought not to

be accepted without proof. The coincidence, however, is interesting, and as it happens also in Germany, the phenomenon is deserving of scientific investigation. It was a member of the Navy League stopping temporarily at the White House who startled the world the other day by shrieking at the top of his voice for peace societies to come to his assistance in warding off war with Japan. Fortunately the Naval Appropriation Bill came up the very next day in the House, so that the desired help was granted.

In their desire for peace our military and naval authorities do not hesitate to get ideas and plans from the Old World. The desire is to imitate Europe as closely as possible. It was once counted an unworthy procedure to bow down to European standards and to ape Old World customs, but the Navy League is willing to pay even this price for peace. The editor of a military journal recently publishes an article in which he represents the military strength of the nations by figures of men, a huge giant representing Russia standing at one end of the line and a little pigmy representing the United States standing at the other. It is evidently the

regret of this editor that the United States cannot be more like Russia. If we only had an army as large as Russia there is no doubt our points of resemblance would be increased.

History shows that there are only two scourges which humanity has any reason to fear. One is priestcraft, the other is militarism. No other demons have so tormented and blasted the life of nations as these. They both steal upon their victims with gradual and almost imperceptible approaches, but the end in both cases is death. Against both of them the founders of our republic set their faces like flint, and they trained their children to fear and hate them also. The power of priestcraft has been broken. Church and State are separated in America and are not likely to be united. But militarism in the attractive garb of the Angel of Peace is making advances which no informed patriot can witness without alarm. Now that the Navy League has told us what it proposes to do, it is time for the churches and the labor unions to act. The Federal Council at Philadelphia has already blown the trumpet, and the time has come to prepare for battle.

NEW YORK CITY.

Elihu Root

BY JAMES BROWN SCOTT

[Probably no one is better qualified to write of Mr. Root's pre-eminent services to the cause of internationalism than the present author, who now holds the position of Solicitor of the Department of State. Mr. Scott is the author of numerous books and articles on international law, is editor of *The American Journal of International Law*, which has no superior in the field of American scholarship, and has held various chairs in the law schools of American universities. Perhaps his most conspicuous achievement so far has been his work as Technical Delegate and Expert in international law of the United States to the Second Peace Conference at The Hague, and he is now bringing out a volume on the Conference which will attempt to indicate its place in history and explain the part it has played and will play in the evolution of the world toward universal peace.—EDITOR.]

ELIHU ROOT is a striking illustration of the fact that "One man in his time plays many parts," for, in the course of a career which is not yet ended, he has not only succeeded as a lawyer but has led the bar; as Secretary of War he reorganized the War Department and the Army, making them worthy of the respect and admiration of the

country, and as Secretary of State he infused a spirit and vigor into the foreign relations of the United States which will not only survive his Secretaryship but will undoubtedly mark an era in the diplomatic history of our country.

Upon his resignation from the Department of State the political world lay, as it were, before him. The legal profes-

sion desired to see him Chief Justice of the United States. The incoming Administration urged him to remain at the head of the Cabinet, and, without any intimation, official or personal, much less a request on his part, the State of New York insisted that he represent it in the United States Senate. The ties which bind him to his native State were stronger than the allurements of position, however exalted, and on January 20th, 1909, Mr. Root was elected United States Senator from the State of New York.

On the 4th of March he will, therefore, enter the Senate, and, as a member of the Committee on Foreign Relations, he will be in a position as legislator to carry out the plans which as an executive he suggested and devised. Lawyers will regret his decision not to accept judicial position; diplomats will regret his absence from the Department of State; but the country will rejoice that he has not retired to private life but is to devote his services not merely to the State which he has the honor to represent, nor to the Senate, in which he will be an honored and influential member, but to the country at large, whereof he is the most distinguished citizen.

Mr. Root is pre-eminently a lawyer, and to the various offices he has filled with credit to himself and with advantage to his country he brought a mind trained by years of experience at the bar and accustomed to unravel the intricacies of any questions and decide them in the light of principle. Hence his success in the War Department, and his even greater success in the Department of State, where he has considered questions of policy not merely in the light of precedent, but in the clear dry light of principle. Keenly analytical, he is no less constructive, and a policy shapes itself under his hands just as clearly and surely as clay in the hands of the sculptor is molded into definite and beautiful form.

With the language of diplomacy he was naturally familiar; of the principle of give and take resulting in compromise, which is the essence of diplomacy, he was equally familiar; but he has never allowed a high-sounding word or a well-turned phrase to interfere with a principle and he has never sacrificed substance to form. A lawyer by training and

experience, and by preference as well, he has examined all questions presented to him in public life as a judge would examine and decide a question referred to him. The qualities of the Bar and the Bench made him pre-eminently a great Secretary of War, a model Secretary of State, and the combination of these qualities in almost equal proportion have made the statesman.

As Secretary of State, Mr. Root saw the necessity of reorganizing the department, just as he had previously noted the need of reorganizing the War Department. He recognized the fact that the executive was dependent upon the legislative, and he rapidly restored, if indeed he did not create, the good relations which should and must exist between Congress and the Department of State if each is to perform its mission in the fullest measure. He felt, as his predecessors have felt, the necessity of reforming the diplomatic and consular service, but unlike them he succeeded in requiring examinations to test the efficiency of the applicants in order that promotions may be made from within the service. In this way the foundations have been laid for a trained diplomatic and consular service, and if diplomacy and the consular service offer a career in the future, this will be due in no small measure to the initiative and reforms of Secretary Root.

Great as have been Mr. Root's services in the reformation of the diplomatic and consular service, his contributions to international peace are even more marked and striking. His services to this great cause are based upon the fundamental conception that peace cannot be permanent unless it be based upon justice, and that, in order to bring nations to an acceptance of the principles of justice, it is essential that international conflicts of an acute nature as well as their causes be eliminated; otherwise, national feeling may assume such proportions as to prevent the peaceful settlement of international controversies. Mr. Root brought to the State Department a training of forty years at the Bar, and his experience at the Bar in discussing and bringing to judicial settlement questions between litigants led him to the belief that controversies between nations might easily and peaceably be settled in the same manner

as between individuals. Therefore, in an address delivered before the Peace Conference in New York, in April, 1907, Mr. Root showed conclusively that mere arbitration is not, as at present understood and practised, a proper means for settling international controversies, because nations often appoint as arbitrators diplo-

in whose service he ordinarily is. As arbitrator he carries to the arbitration court the qualities and defects of the diplomat. Mr. Root therefore proposed that arbitration tribunals, in order to perform the international services expected of them, should be composed of judges acting under a sense of judicial responsibility, and

ELIHU ROOT.

mats who act upon the principle of give and take and who do not merely ascertain and apply a principle, but compromise the question at issue. The diplomat naturally looks to orders from his home Government and subordinates the settlement of the case to the interests of the country

that from such tribunals representatives of the litigant nations should be excluded.

In his instructions to the delegates to the Second Peace Conference, Mr. Root insisted upon the conclusion of an arbitration treaty to be signed by the delegates to the Conference and to become

binding upon the States there represented. At the same time, he directed the American delegation to present a plan for the organization of an international court of justice, composed of jurists representing the various systems of jurisprudence and the various languages, in order that this high court of justice, the creature of the nations, might interpret finally and authoritatively any and all controversies, whether arising out of the interpretation of the arbitration treaty to be concluded at the Conference or arising out of other international instruments, and settle any controversies between members of the family of nations submitted to the court. Thru the initiative of Mr. Root, the question of contract debts was submitted to the Pan-American Conference held at Rio de Janeiro in 1906, and likewise thru his initiative the question of contract debts was submitted to the Second Hague Peace Conference in 1907. As the result of his twofold initiative, the convention for the limitation of force in the collection of contract debts was adopted by the Second Hague Conference.

The failure of the Conference to negotiate a general treaty of arbitration was a great disappointment to Mr. Root; therefore, since the adjournment of the Conference he has entered into negotiations with the nations which accepted the principle of compulsory arbitration at The Hague, and has concluded or is negotiating treaties with the adherents of arbitration in Europe, America and Asia. For example, the Secretary has already concluded treaties of arbitration with France, Great Britain, Norway, Sweden, Denmark, Holland, Spain, Portugal, Switzerland, Italy and Austria-Hungary. He has under negotiation arbitration treaties with the various Latin-American States, which treaties have either been signed or will be signed in the course of the present spring. The number already signed is twenty-four—the greatest number signed by any one nation. He has already concluded a treaty of arbitration with Japan, thereby eliminating the danger of a conflict between Japan and the United States, because both countries agree, by virtue of the treaty, to submit their international controversies to The Hague tribunal. The declaration of policy of Japan and the United States re-

garding the open door in China and the territorial integrity of China was signed by Mr. Root and Baron Takahira on the 30th day of November, 1908. By this expedient, as simple as it is comprehensive, the two nations declare their friendship, community of interest and desire for the pacific settlement of any differences of opinion, and by so doing eliminate a possible cause of controversy. The Secretary of State has the great honor of concluding the first arbitration treaty with China upon the plane of exact equality. The draft arbitration convention of The Hague Conferences as originally proposed to the first commission of the recent Conference excluded extraterritorial questions from arbitration. The United States delegation moved to amend the exclusion of such questions and was supported by various Powers. Mr. Root has recently negotiated an arbitration treaty with China in the exact terms of all the other arbitration treaties in which there is no mention made of extraterritorial rights or their exclusion, thus introducing China to the field of arbitration just as American statesmen half a century ago introduced China to the civilized world.

Mr. Root has enlarged the conception of America so as to include the Latin as well as the Anglo-Saxon, and insists that they be treated on the plane of equality, so that, being admitted into full membership of the family of nations, they may be led insensibly to accept the requirements and principles of international law as practised by the older nations of Europe. His trip to Latin America was in the interest of peace, because, by explaining in person the aims and purposes of the United States, he disarmed fear by showing that the aims and policies of the United States were in no measure antagonistic to South America, and that the distrust of the United States resulted from misconception produced by lack of intercourse and a frank exchange of views. The message which Mr. Root conveyed did not fall upon unwilling ears, and the result is that Latin America at present looks to the United States in a way it never did before, and by his co-operation and encouragement the sister Republics are day by day entering into arbitration treaties by which internation-

al controversies may be settled peaceably. In the next place, the Secretary of State has sought by good offices and mediation to prevent the outbreak of wars in Central America, and when such wars have unfortunately broken out he has endeavored successfully to terminate them on just and equitable principles. In furtherance of this policy, a conference was held of the representatives of the Central American States in Washington in November and December, 1907, at which conference a Mexican and American representative were present in order to assist the delegates in the performance of their peaceful mission. As a result of negotiations extending over a period of two months, a Central American Court of Justice was organized, the first truly international tribunal in the world. It was formally opened in June, 1908, and within a month after its opening prevented a war in Central America. The court took the initiative in suggesting that the controversy be presented to it for settlement. Honduras, on the one hand, and Guatemala and Salvador on the other, appeared as plaintiff and defendant before the court, thus presenting an unwonted spectacle in the past and of good augury for the future that nations as private litigants may safely and properly appear before the courts of justice for the settlement of their disputes. The court has rendered its first decision, the first decision of an international tribunal, composed of judges acting under a sense of judicial responsibility.

The Secretary of State has devoted a large portion of his time to the examination and consideration of the outstanding controversies between Great Britain and the United States, and bringing to their solution the trained mind of the law-

yer, he has discovered that they are all capable of settlement either in the form of treaty or of submission to arbitration. in order that the rights and, therefore, the duties of the two countries may be ascertained by judicial means. A controversy coexistent with the independence of the United States, namely, the Newfoundland fisheries, is to be submitted to the arbitration of The Hague tribunal, and the treaty of 1818, the measure of the rights and the duties of the respective countries, will be interpreted by this august tribunal. He has likewise provided by treaty that existing and future disputes between Canada and the United States shall be settled by a permanent commission.

Finally, it should not be forgotten that the treaty of Portsmouth, putting an end to the Russo-Japanese War, was concluded while Mr. Root was Secretary of State, altho before he had entered upon the active performance of his duties.

While Mr. Root is not a profest pacifist, and while he is not in favor of disarmament as an independent proposition, he knows and believes that wars between nations will cease when the causes have been removed, and when nations settle their disputes in accordance with the principles of justice. Therefore, instead of making disarmament a condition precedent, he has viewed it as a consequence of the settlement of international controversies according to the principles of justice. In view, therefore, of the various measures which he has proposed and carried to completion, it is no exaggeration to say that Mr. Root as Secretary of State has contributed more than any single man to the cause of international justice, and, therefore, of peace.

WASHINGTON, D. C.

The Republic

BY CLINTON SCOLLARD

THIRTY fathoms deep she lies
Off the end of No Man's Land,
With the long Atlantic swell
Surging o'er her for a knell,
And the lonely sea bird's cries,
And the wind with requiem grand!

Gallant ship and gallant crew,
Gallant captain, here's a hail!
Tho the knightly days be fled,
Heroism is not dead;
Souls are valiant, hearts are true,
And the brave shall still prevail!

ATLANTIC CITY.

GREAT AMERICAN UNIVERSITIES II

YALE UNIVERSITY *by* EDWIN E. SLOSSON

ALL State universities look alike to the average Eastern man. The average Western man couples Yale and Harvard in the same phrase as inevitably as he does the words Scylla and Charybdis, hearth and home, or free and equal. He does not see how a color-blind man can tell them apart. But when he comes to visit Yale and Harvard and to associate with their people he perceives not only the difference in their architectural physiognomy, but also something of the difference in the college spirit which is so strongly felt by the alumni of the two institutions.

This difference in spirit seems to me most clearly exprest by two books that appeared about a year ago, "Pragmatism," by Professor James, of Harvard, and "Folkways," by Professor Sumner, of Yale. "Pragmatism" is the Harvard elective system applied to the universe. "Folkways" makes the Yale system of social control the fundamental principle of all morals and manners. The former book preaches a defiant individualism that would free itself even from the bonds of its own past, that would shatter this sorry scheme of things and then remold it nearer to the heart's desire. The latter book shows how completely we are ruled by custom and tradition and how righteousness and conform-

ity come to mean the same thing. It would be hard to imagine "Pragmatism" proceeding from New Haven or "Folkways" being written in Cambridge.

When I first went to Yale I was timid in my inquiries about customs and traditions, for I did not want to make myself any more offensive than my profession required. In my school days at the University of Kansas there was only one persistent custom, that was for each class to

braska had ventured to hint that the University of Kansas had traditions there would have ensued a physical infraction of intercollegiate amity.

But I discovered that Yale not only had traditions, but was proud of them, advertised them, capitalized them as part of the productive funds, used them to draw students, made them do much of the educational and nearly all of the disciplinary work of the institution. It was

ARTHUR TWINING HADLEY,
President of Yale University.

disregard the customs which the preceding class had attempted to establish. And if a visitor from the University of Ne-

when I was talking with the man who is the finest embodiment of the genius of the place, who is most alive with Yale

spirit and eloquent in its praise, it was, as I have said, when I was talking with Secretary Stokes that I began to realize the value of these intangible assets. He had referred so many times to the Yale traditions in answer to my questions, that I became a trifle annoyed, just as I get annoyed in talking with my spiritualistic friends when they persist in dragging ghosts into the conversation, for I do not believe in the existence of ghosts either. Finally I burst out with: "But aren't there some traditions that you want to get rid of? Are all the Yale traditions good?" Mr. Stokes replied with a gentle patience: "We think they are." I wanted to upset his calm confidence by bringing up some bad Yale traditions, but I could not think of any on the spur of the moment. Nor have I been able to since, at least none that are sufficiently discreditable to confound Mr. Stokes or even to satisfy my own traditional prejudice against traditions. So I set it down here at the beginning, in black and white, that Yale University has traditions, that they are on the whole good ones and undeniably useful, and that if a university has to have traditions—I am not quite ready to admit that yet—no other university in the country has a better lot than Yale. This may appear very trite and obvious to the reader. To me it was an astonishing and disconcerting discovery.

It embarrassed me because I had determined to disregard entirely the history of the colleges I visited and confine my attention to their present condition and future prospects. But every one I talked with at Yale brought up the past for my admiration. So I had to take it into consideration, for the past is not really past at Yale. It is part of the present.

It is different in the Western universities. There I found men reticent about the past and not over-enthusiastic about the present, but when they began to talk of the future their eyes shone and their tongues were loosed. Another striking difference is in their way of explaining things. Ask half a dozen men in a Western university why certain things exist and they will all give you reasons, often very different reasons and sometimes incompatible, but all indicative of a kindly intention of satisfying the curiosity of a stranger. Ask a Yale man for the rea-

son for anything and he will give you its origin and he thinks he has answered your question. The pages of my notebook read like the record of a game we used to play, Mismatched Questions and Answers.

"Why do all the dormitory windows have those big water bottles in them?"

"Because the city water was bad a few years ago."

"Isn't it all right now?"

"Oh, yes."

"Why do the college students have to attend chapel every morning?"

"They always have."

"Do not the scientific students need religious exercises also or are they past praying for?"

"Chapel attendance has never been compulsory in Sheffield."

"Why do they close the front gates of the campus at night while all the other entrances are open?"

"They always close them at night."

"Do you think that Old South Middle harmonizes with the architectural scheme of the campus?"

"It was built in 1750."

"Don't you think that the *Lit* would sell better if it had a new cover?"

"You don't understand. That is the original cover and it has never been changed in the seventy-three years of its history."

Now I presume that there are reasons, very likely good ones, for all these things, and that I should have learned them if I had happened to have asked the right persons, but those I did ask usually gave me origins instead of explanations. Naturally I came to the conclusion that at Yale the origin usually was the explanation.

The fault of Yale is, in my opinion, not its traditions but its traditionalism. It may be all right for a university to be conservative, but when it gets to taking pride in its conservatism it is in a dangerous state. The belief in the unchangeableness of Yale has prevented the university from benefiting as much as it should by the initiative of its members. When one of them was seized with a new idea, saw an opportunity for the sudden expansion of his department into untrod-den fields, his colleagues were inclined to look upon it as a personal fad which

might be interesting in its way but ought not to be allowed to interfere with the college. Yale has been kept so carefully pruned that its growth has been checked. The standing orders of the gardener seem to have been:

"Go thou, and like an executioner,
Cut off the heads of too fast growing sprays,
That look too lofty for our commonwealth."

Consequently we find all thru the United States Yale men who have found

the paleontological museums. Yale's chief rivals are her own offspring. I do not mean to undervalue Yale's present greatness, but it is difficult not to, because I involuntarily compare it with what Yale might have been.

Western universities run to the opposite extreme, to neophilism. If a professor conceives a new idea or a fraction of one the others crowd in to congratulate him on it; at the next faculty meeting the

in other institutions the opportunity for the development of their powers and the expansion of their ideas. In reading over the history of the university I am astonished to see how many things Yale has started and let slip. The stones that her builders rejected have become the cornerstones of other institutions. Johns Hopkins University is built on a Yale idea, also the agricultural colleges, the short courses for farmers, the experiment stations, the technological schools, and

curriculum is rearranged to accommodate it; the Legislature is asked for a new building to house it, and the president gets out an advertisement, disguised as a "departmental program," in which it is modestly alluded to as "perhaps the greatest educational advance of the twentieth century."

I have undertaken to leave out history in discussing these universities, but I must make an exception here in order to give one example of Yale's lost opportunities

and to explain one of the anomalies in which she takes most pride, the Sheffield Scientific School. In the catalog of 1847 occurs this item:

"Professors Silliman and Norton have opened a laboratory on the college grounds for the purpose of practical instruction in the applications of science to the arts and agriculture."

This is the event which President Gilman, of Johns Hopkins, called the beginning of true university work in America. It was the first public recognition that the college accorded to an enterprise that had been carried on for five years at their own expense. Norton was allowed to become Professor of Agricultural Chemistry on condition that he should draw no salary. It may be mentioned here that Willard Gibbs, the greatest scientific genius that America has produced, was permitted to work in Yale for some years under the same conditions.

The new scientific school was felt to be

a disturbing element. It did not fit into the perfected plan of collegiate education. At first it was a graduate school of technology, and if this plan had been adhered to Yale would have been sixty years ahead of Harvard, for this is the arrangement to which Harvard has now come. But Yale lost this chance of priority by shifting it to an undergraduate course.

Another chance was lost in not cordially receiving the new sciences into the College. Harvard had no advantage in point of time. In fact the new departure has the same date in the rival colleges, for in 1847 Agassiz was appointed, and Horsford, a pupil of Liebig's, opened his chemical laboratory. But Harvard, under President Eliot, boldly staked her reputation on the elective system, untried and revolutionary as it was, and she won out. Yale admitted the sciences to equal competition with the traditional studies for entrance and graduation slowly, reluctantly and incompletely. It is this half-

hearted and inconsistent policy which has given some point to the Harvard gibe: "Yale was founded fifty years after Harvard and has kept the same distance behind ever since."

Until 1860 the engineering school was lodged in the chapel attic. But then the fairy god-mother came to the rescue of this neglected step-child. The school gained a name and a fortune together, and three years later received a richer dower from the national Government in the land grant fund. No institution deserved it more, for it was the success of Professor Porter's short course in agriculture, bringing together at New Haven five hundred farmers for scientific instruction,* which inspired Senator Morrill to prepare the bill to which the agricultural colleges and experiment stations in every State owe their existence.

*As the seed from which so large a tree has grown, the original arrangement was with lectures from the summer of 1856. "It is intended to furnish a course of 50 or more Lectures on Agriculture and kindred subjects, to be delivered by gentlemen chiefly from abroad, in the large hall of this building [the new Sheffield] in February. The charge for the whole course will be \$10."

CAMPUS SCENE AT THE WEST OF CONNECTICUT HALL.

But after thirty years this income was lost to Yale and the College of Agriculture and the Mechanic Arts of Connecticut disappeared from New Haven. Yale alumni are numerous, rich and influential. Nobody ever accused them of lack of loyalty. Nobody ever assumed that they were incompetent in politics. It would be absurd to suppose that they could not handle a little State like Connecticut when we see what a few young graduates can do with a Western Legislature. I suspect that the Yale people as a whole did not care much what become of it, and were rather inclined to think the college was well rid of this entangling alliance with the State. I am confirmed in this suspicion by the fact that some of them think so yet. They seem to think that if this

obstreperous department had not been cut off Yale would have sunk to the level of Wisconsin or Cornell. Nevertheless if the agricultural income had been retained it would have now been the equivalent of a \$2,000,000 endowment fund. And where Sheffield would be in numbers may be surmised by following out the curve in the direction it was going before the drop in 1894.

The fourth of what I call Yale's lost chances I discovered in a box of odd pamphlets on the history of the university. It was a most fascinating theory of education written by James D. Dana, entitled "The Yale University Scheme," and published in 1870. It provided for an academic college and a scientific college, equal and co-ordinate. Scientific courses were taught also in the Academic College, but in a different way from the Scientific College, for culture, not for specialization. In the Academic College no electives were "allowed in the departments of natural, chemical and physical science, as these subjects are admitted to the college only so far as is necessary to

PHELPS HALL—FROM THE CAMPUS.

give the breadth and depth to education which every graduate should have." Conversely, literary and historical subjects were put into the curriculum of the Scientific College "in order to give a thoro and well-rounded education," but not taught as to Academic students. Here is a consistent and logical plan, somewhat too rigid and artificial doubtless but based, it seems to me, on sounder pedagogy than President Eliot's theory that studies should be taught in the same way to all students no matter what they want them for. My personal opinion is that if this policy had been adopted and developed Yale would not only have been in advance of any other university of 1870, but in advance of any other of the present time, altho some are now verging toward it. But Dana was hardly justified in calling it "The Yale University Scheme," for it was far from representing the actual structure of the university at that time. It was more an ideal like the Cyropedia. And it is hopelessly lost in the present confusion of functions between the Sheffield Scientific

School and the Academical Department. A student in the latter can get his Ph. D. for research work in analytical chemistry and a student in the former can get the same degree in history. An Academical student who devotes himself to philosophy gets the degree of Bachelor of Arts, altho he may be perfectly artless, and a Sheffield student, confining himself strictly to the practical arts and deprived of the opportunity of philosophizing, gets the degree of Bachelor of Philosophy. French Phonetics is put down among the technological branches of Sheffield. This classification, tho unconventional, seems to me to give it a much more suitable place than among the humanities, but then why is not Latin Paleography also moved over to Sheffield?

I do not assert that the four ways I have mentioned by which Yale might have met the new technical sciences—putting them into a graduate school, admitting them freely to the College, supporting them by State and national funds, and forming them into an independent educational system—are the only ways or the best, but it seems evident that if any one of the four had been consistently developed and persistently adhered to, Yale University would now have gained in size, wealth, power and prestige.

It is easy and altogether useless to pick out possible mistakes in the past and to assume that another course might have been better. My only object in this backward glance is to show the disadvantage resulting from a vacillating and half-hearted policy, because it seems to me that Yale is still suffering from this disadvantage. The very point in question is

not settled. The relation of Sheffield to the College is still as anomalous and inconvenient as it ever was. And other examples can be taken from the present, for instance the summer school.

President Harper, in starting the summer work at Chicago in 1894, showed the same boldness and determination as President Eliot in introducing the elective system at Harvard. He made it the full equivalent of the other quarters, with instructors of the highest standing and full university credit for the work done. It was an astonishing success from the start and is one of the most profitable features of the University of Chicago in every sense of the word. The work done in the summer is in general both more thoro and more advanced than that of the winter quarters, and the university has extended its influence all over the South and West by means of it. Other universities have imitated the plan more or less completely and with similar success. Yale's rivals on either hand, Harvard and Columbia, respectively had 1,349 and 1,532 students in attendance last summer. Why then was Yale's summer school a failure? Various reasons are given, doubtless valid in some degree, such as the low salaries of Connecticut teachers, the exclusion of women from the regular undergraduate work and the location of the university in a small city. The summer school was opened July 6th, 1905, and ran for three seasons, in which the number of students were 269, 207 and 139. The expense to the university for the first two years was \$2,000 and \$9,000. In my opinion the fundamental cause of its failure was the

half-hearted spirit in which it was undertaken. It was attached to, not incorporated in, the university. It was regarded by some of the Yale men as an unpromising, if not dangerous, innovation, and full university credits were refused to the summer students. This lack of confidence in the work creates a bad impression. I remember that a friend of mine, a professor in a small college, wrote for admission to a summer school conducted on this plan, but learning from the university authorities that no credit was given for work done in the summer courses, he wrote back that he supposed they knew the value of their courses better than he did and, if that was what they thought of them he did not want them at any price.

The summer school will doubtless come eventually at Yale, probably first in Sheffield thru the gradual development of engineering, mining and forestry work in vacation. But in the meantime Yale is losing the popularity and influence that a large summer school would give.

I have taken too many illustrations of Yale's opportunities from the past. Let me take one from the future. Yale has just now got the lead in forestry, whether thru the foresight of the administration or thru individual initiative, it does not matter. The only important question is whether Yale will still be in the lead fifty years from now. That depends, it seems to me, on how Yale men, at New Haven and elsewhere, welcome the innovation. Professor Pinchot is now more conspicuously identified in the public mind with the forestry movement than any other man, and as Chief Forester of the United States and chairman of the National Conservation Commission, he occupies a unique position of authority. This is a crisis moment, when the whole Continent of North America is aroused to the necessity of systematic forest preservation and cultivation. A learned profession, new to this country, is being created. New methods of training for it are to be worked out within the next few years, to provide men for the State, national and international commissions and all other branches of the service.

The agricultural colleges were early in the field and might have held it if they had been more enterprising and prophetic,

but halfback Pinchot has got thru the line with the ball and now is the time for snappy team play by the faculty and officials at Yale. Give the rooters the signal and let the yell of "Rah-rah-rah Pinchot!" ring out all along the line of the blue bleachers from Maine to California. Keep your eye on the cheer leader. This is no time for "Rah-rah-rah Wright!" What's the matter with Wright? Nothing; he's a good player, too, but he is not running with the ball. Yale has got to make her ten yards now or lose it. Then it will be picked up by a Harvard man, or, still worse, go over to California, Michigan, Minnesota or some other university quite outside the Eastern athletic association.

Yale has no reason to be downcast because other universities have got ahead of her in a few things, for no faculty is

THE NUMBER OF STUDENTS IN YALE UNIVERSITY FOR THE LAST TWENTY YEARS.

more fertile of original and progressive ideas which, if taken up and developed, would make it the foremost university of America in many lines. I was at first puzzled why Yale men gave me so different an idea of the institution. Some were inclined to be pessimistic about its future; others were optimistic and full of enthusiasm. They were so far apart in their statements about life and work and aims that one would have supposed that they were talking about different institutions, as indeed they were, for I discovered that some when they said "Yale" meant College," and others when they said "Yale" meant "University." The students and alumni seem to have more College spirit than University spirit and possibly this affects the faculty.

Columbia affords the most striking contrast to Yale in this respect, but I may mention some others. It was a professor of political economy at Minneapolis who took me over to the agricultural college a mile or two away and showed me ears of their latest pedigreed corn. When I was introduced to a cryptogamist in the University of California the first thing he said was: "You should have been here to see one of our Greek or Sanskrit plays. But come with me this evening to the Greek Theater anyway and hear some music." This spirit is not confined to the State universities, altho it is most noticeable there. At Harvard I found the same. The professor of physics did not show me his own laboratory, but instead took me thru miles or more of subterranean passages in the basements of the zoölogical museum and, diving into evil-smelling barrels, held up for my admiration the finny monsters of the brine. The botanist at Harvard took me to the stadium and to Radcliffe.

At Yale it was different. I was treated everywhere with as much courtesy and consideration as an itinerant journalist could expect, but it seemed to be regarded as bad form for a man to show any marked interest in what was going on outside his own and allied departments. They are scrupulous in their adherence to the good old rule of "Mind your own business."

This state of things may be due to extreme specialization and absorption in individual research, as it is with certain

men in every institution; but I fear that at Yale it indicates rather a lack of co-ordination and co-operation. That is, Yale University as a whole is lacking in the quality that has made it eminent in athletics, team-play. The professors should take a lesson in this from the students.

In talking with men in other universities, some of them Yale graduates, I heard repeatedly such expressions as these: "The atmosphere at New Haven is not conducive to research. Life there is too comfortable. The Graduates' Club is too pleasant. There is no pressure brought upon the instructors to force them to produce. They do not have the zeal and enthusiasm that men at Johns Hopkins, Chicago and Harvard have for pure science or the men at the State universities have for applied science. Yale supports fewer scholarly journals than other universities of its standing and its faculty do not contribute so much to science as men of less ability and opportunity elsewhere."

When I visited Yale I brought up this matter in several conversations and heard the other side of it, which, if I interpret it fairly, is this: Scientific discoveries cannot be made to order. Scholarly researches of the highest grade must not be forced or hurried. They must be spontaneous. The impulse to creative activity must come from within the man. A large proportion of the research literature now being turned out so abundantly is trash, diffuse, inadequate and undigested. It impedes rather than promotes science. Men in research institutions, experiment stations and the graduate schools of some universities have to publish a certain amount of "original matter" every year or they suffer in reputation and perhaps jeopardize their positions. The best work is done by men who have secure positions, congenial surroundings and abundant leisure. Under these circumstances, unharassed and unworried, the scholar can devote his spare time and energy for a series of years to the most difficult and important problems, instead of being driven, as many a man is, to take up an easy and trivial investigation because he is sure to "get results" from it in time for his next paper.

This is certainly an attractive theory.

In how far the conditions prevailing at Yale correspond with this ideal can only be told by Yale men. In how far the contributions to knowledge emanating from Yale prove the validity of the theory and superiority of the conditions can only be told by their contemporaries elsewhere. I will here only call attention to the fact that this is not the way Yale goes at athletics, and in athletics the supremacy of Yale is less disputed than in productive scholarship. The Yale boys do not play football just when they

else to it, while the Yale professors, or such of them as hold the theory I have given above, regard research as a by-product of their occupation, as a superior sort of recreation. Their first business is to teach.

This should be reversed, it seems to me. For in sport the process not the end is the important thing, while in science the end is the important thing, not the process. The ostensible aim of a game, the kicking of a pigskin over a pole, is entirely insignificant. It does not mat-

INTERIOR OF HAMMOND METALLURGICAL LABORATORY.

feel like it and stop when they get tired. They are urged by other impulses than the pure joy of bodily activity. That is, the professional spirit prevails in Yale athletics and the amateur spirit prevails in Yale scholarship. I would not be understood as using these two words in their offensive senses. I do not mean to imply that improper methods are employed in Yale athletics or that Yale scholarship is dilettante. I mean merely that the football men make it the supreme business to win the game and will sacrifice themselves and almost everything

ter in the least which side does it so long as the game is well played. But a scientific discovery is so important in itself that almost any means are justified in attaining it. It does not matter in comparison whether the scientist himself is comfortable in his life and happy in his work or whether he is a laboratory drudge, prodded into productivity by an ambitious president. The only question is how can the best results be obtained, and this, as I have said, I shall not attempt to answer. But as an educational experiment I should like to see Walter

Camp put at the head of the Yale research work. Possibly he would infuse into it something of the "Yale spirit"; possibly then research work would be carried on

"As it were almost 'foot-ball,' as it were even your play,
Weighed and pondered and worshipped and practised day and day."

The question of whether the most and the best scientific investigation can be carried on by men primarily engaged in teaching or by men who devote themselves more or less exclusively to research work is coming to be of great importance on account of the establishment of independent institutions for the advancement of science, some of them with a revenue equal to that of a college. I have in mind particularly the Rockefeller Institute for Medical Research, the Carnegie Institution with its five or six research laboratories, the great museums and the Government departments devoted to experimentation in physics, chemistry, geology, meteorology, botany, zoölogy, etc. Will these withdraw from our faculties the men with the genius for discovery leaving in the colleges men who are only teachers? Will this increasing segregation produce a greater differentiation than at present prevails between productive and educative scholars?

I shall have to recur to this question later in the series, but I bring it up here because Yale stands authoritatively committed to the theory "that investigation must be associated with teaching if it is to produce its most effective results."¹ This derives some support in Yale's honor roll of productive scholars and great teachers of the past generation and also in the fact that in the last few years when increased emphasis has been laid on class room duties at Yale the scholarly output has also increased. According to the bibliography of the two academic years of 1902-3 and 1903-4, an average of 63 of the officers of the university published books and articles in each of these years. In the bibliography for the year 1907 there are given 123 names of authors out of a faculty of about 400.² The 1907 bibliography includes new

books and reprints, papers read before university and national societies, articles in magazines and newspapers, book reviews, and addresses and sermons, published and unpublished. So far as I can judge by the titles 64, or about half of these men, published papers or books which could be classed, regardless of their value, as "contributions to knowledge," that is, about 16 per cent. of the faculty gave evidence, by publication, of being engaged in research. About two-thirds of these were working in the physical and natural sciences. I fail to find in the list any original poems, dramas, novels, short stories, or other distinctly literary works except perhaps some of the essays.

The Linonian and Brothers Library stands on the campus as a monument to remind the present generation of the time when students took a more active part in their own education than they do now that they have so many other things to attend to. Fifty years ago these two undergraduate literary and debating societies had their own libraries, numbering 25,000 volumes, a close rival to the library of the college with its 33,000. In those days the *Yale Literary Magazine* was more popular among the students than it is today. But Yale is fortunate in maintaining two literary magazines of good standing, the *Lit.* and the *Courant*. In the universities of the Middle West I found the purely literary periodicals mostly dead or dying. I was informed by a Yale undergraduate that "a great many fellows you would never suspect of it" were addicted to the reading of good literature on the sly and I can readily believe it. The literary tastes of the students, as given in the Senior questionnaire, is safe and sane altho academic. The "Elegy in a Country Churchyard" and "Crossing the Bar" run neck and neck for the post of "favorite poem," and the "Ballad of Reading Gaol" is not in the race. The teaching of Professor Phelps differs from what is commonly found in English class rooms in that many of his students like poetry even after they have studied it. He started a course in the modern novel a few years ago that might have had a similar effect upon their taste in fiction, but the course threatened to become popular so he was

¹ President's Report, 1907, p. 4.

² *Yale Alumni Record*, August, 1904, and March 4, 1908.

shut off. The "balance of power" is as important in Yale University as in Europe.

The students in all other branches of odds of choosing new members of the in the College, that is, the Academical Department. The Sheffield students generally do about as much work in their three years as the College students do in their four. But the classwork in the College has been greatly improved of late in many ways. The students are separated into smaller groups for drill. Stricter attendance on classes is required. An honor or advanced division is made in December and March of students who have attained high standing in the preceding term. To prevent the election of easy and scattered studies the "A. B. C. system" has been established.* Most of the elementary courses are classified as A; those of intermediate grade as B; the C courses are more advanced, and the D courses are the most difficult of the studies ordinarily opened to undergraduates. These letters indicate the sequence of the courses and students are restricted in the number of A courses they may take at one time. There is also a greater amount of personal intercourse at Yale between the students and professors than there used to be. President Hadley sets a good example to his faculty in this. He is much more approachable than President Eliot.

I find in university circles a general dissatisfaction with the prevailing methods of choosing new members of the faculty. Since there is nothing more important than this selection, I think attention should be called to the custom of Yale. When there is a chair to be filled the choice is not left to the president or to the head of the department alone, but a committee of the faculty is appointed to find the right man. This committee ordinarily consists of two members of the department concerned, one from an allied department and two from two other distinct departments of the college. The last two are presumably not qualified to pass upon the special attainments of a candidate, but judge him more by his general reputation, personality and teaching ability. There are some obvious

merits in this method, and I have heard of only one objection to it—and this will not be regarded by all as very objectionable—that it is more likely to get men who will be agreeable and harmonious additions to the faculty circle than men of markt originality and enterprise, who are sometimes very hard to get along with.

The university extension work in New Haven, which was started in 1905, was dropt in 1908, but the evening technical classes for mechanics by the Sheffield Scientific School are continued. There is a great opportunity in this line if Yale cares to take it. The University of Wisconsin is starting work in shops and factories on an extensive scale and it is likely to be as beneficial to the community and as profitable to the university as its work in agriculture. Connecticut offers a better field for this novel form of university extension than Wisconsin. The welcome given by the public to the opening of the Peabody Museum and Art Gallery on Sunday afternoon and success of the concert work of the Music School ought to encourage the university to adopt an open-door policy.

President Hadley occupies a position like that of Francis Joseph, Emperor-King of Austria-Hungary. Yale is a dual monarchy; the person of the sovereign being the bond between the College and Sheffield. Like their European analogs, the Magyars of the Scientific School have of late been getting punctilious about their autonomy and inclined to question the incidence of taxation for imperial expenditures. There was a time when the scientific men would have been glad to be admitted to the College on equal terms but that time is past. I do not know that the Academical faculty and alumni are any more disposed than they used to be to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare and secure the blessings of liberty, but if they are they would find the Sheffield faculty and alumni more reluctant. The latter would in fact regard such a proposition in much the same way as the Massachusetts Institution of Technology did the proposed merger with Harvard, as checking their normal development, loading them with

*For an account of this system and its workings see President's Report, 1908, pp. 73-77.

alien traditions and spoiling the industrious and practical spirit of their students. In numbers Sheffield is likely to pass the Academical Department if it continues to grow at the present rate. But it is not likely to continue at the present rate. It is likely to grow much faster if it has a fair chance, partly because of the drift toward technological education, partly because raising the standard from three years to five will keep students there longer. This step is inevitable in the near future if the reputation of the school is to be maintained. The theory of the Yale authorities has been that if a man were going into an industrial occupation he should take a three years' course in general science as a foundation and then go directly into the shop or field where alone he could get practical training. Then he could return to the university and obtain his engineer's degree largely on his professional practice. As a matter of fact few did so. The average number of M. E.'s and C. E.'s conferred each year in the last twenty has been less than two. But other institutions have demonstrated that thoro and practical training can be given in the technical school even better than in the industries, and that it pays, even in the narrowest sense of the word, to spend five years at it. The technological courses in Harvard now require seven years' work, and surely five is not too high for Yale. It seems to me that all the courses in the Sheffield Scientific School should be definitely and emphatically outlined as five-year courses. Then, if desired, a footnote could be put in stating that at the end of three years' work anybody who wanted it could get the degree of Ph. B. or something of the sort, just as an encouragement to persevere.

Another impediment to the Scientific School is the requirement of Latin for admission, in which respect it differs not only from other technological schools but from most colleges. For example, a graduate of Harvard College of Arts and Sciences might not be admitted to the Freshman class of the Sheffield Scientific School. A student entering Sheffield does not continue his Latin, in fact, he cannot. It is therefore not required as a specific preparatory study, so the only theory on which the requirement is justi-

fiable is that it is impossible to get the necessary cultural foundation except thru the Latin language. The applicant may have received otherwise the broadest possible education. He may be able to read Greek and even Latin with the fluency of an alumnus of Yale College, but if he has not read the first two books of Cæsar he cannot become a mining engineer or electrician in Yale.*

The work in Sheffield is practically all prescribed, but students at entrance choose between two groups for the first year and then elect one of the thirteen courses offered as follows:

The Engineering Science Group, preparatory to the courses in

- Civil Engineering
- Mechanical Engineering
- Municipal and Sanitary Engineering
- Electrical Engineering
- Engineering preparatory to Mining
- Mathematics, Pure and Applied.

The Natural Science Group, preparatory to the courses in

- Chemistry preparatory to Metallurgy
- Biology preparatory to Medical Studies
- Zoology and Botany
- Mineralogy and other Studies preparatory to Geology
- Selected Studies in Language, Literature, History, and the Natural and Social Sciences
- Studies preparatory to the Study of Forestry.

There are many progressive and interesting features in this work which I should like to describe but I have only space to mention five: first, the development of biological research, which has hitherto been Yale's weakest point; second, the increase in the number of joint classes and similar co-operation between the various schools, thus saving the expense of duplicated instruction and strengthening the feeling of unity; third, the practical training in mining and metallurgy for which the new Hammond Laboratory provides good opportunity; fourth, the investigations under Professor Chittenden on the borderland of the sciences of chemistry and physiology, and, fifth, the select course. This last is a movement that educators would do well to watch, for it promises to be of great importance. It is an attempt to break away from the bonds of collegiate traditionalism and provide the sort of liberal education that, in the language of the catalog,

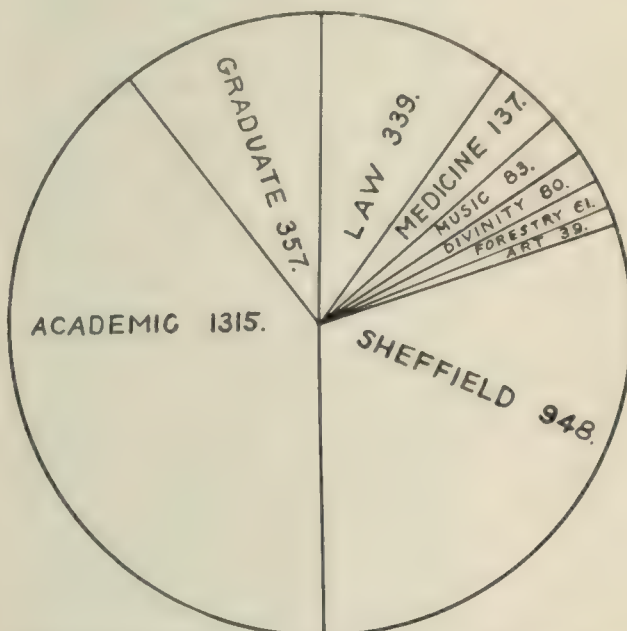

"is adapted to the needs of men who expect to engage in business, manufacturing, and banking, to enter professions like law and journalism, or to seek administrative positions in corporations or the public service."

The select course comprises in literary studies, English, German and French (or Spanish); in scientific studies, mathematics, physics, chemistry, biology, organic evolution, physical and commercial geography and public hygiene, and in social studies, history, government, economics, anthropology, social evolution, business administration and commercial ethics. A new building, the beautiful Leet Oliver Memorial, has been provided especially for this course. It seems to me that here is an opportunity to do something that no other university is yet doing well, and no other university can do so well as Yale. I mean provide a suitable education for the destitute classes, the unorganized professions mentioned in the quotation from the catalog. To accomplish this, the select course should be made more elastic in its entrance requirements, extended to four or five years with a jumping-off place for other professions at the end of the second or third, and arranged to provide freer election, tho keeping most of the work in carefully correlated groups.

My object in discussing these fourteen universities in a comparative way in these articles is to bring out the distinctive features, especially the peculiar excellences, of each, but I do not mean to imply that these should be adopted by the others. On the contrary I think our American universities are altogether too much alike or pretend to be. They are really not so much alike as their catalogs, but there ought to be a greater diversity, originality and specialization. Since there are nearly a thousand institutions in the United States calling themselves colleges and universities, one might expect to find among them examples of all kinds of educational processes. But as a matter of fact there are only three or four different types and these are not very distinct or consistent. Educators are ready enough to advocate the most extreme and revolutionary theories in private conversation or faculty debates, but when they get into positions of responsibility they compromise and imitate, either because they lack confidence

in their ideas or because their colleagues and supporters do.

Now that traveling is cheap and easy the time has come for a greater differentiation especially in professional, technological and graduate work where the increasing opportunities and demands of the age are not yet adequately met anywhere. Each of these fourteen great universities ought to have at least one department in which its pre-eminence is so manifest as to be acknowledged by all its rivals. Then it may devote itself to bringing up the other departments to the same standard. Each university should determine on the kind of education which it can give best on account of its history,

DISTRIBUTION OF YALE STUDENTS, 1907-'08.

environment, equipment and personnel, and should cultivate that in preference.

I make this explanation in order to induce the reader to take a lenient view of my presumption in suggesting for each university what I regard as its most profitable line of development.

My interest in Yale lies in that it has maintained to an unusual degree the classical training; it has developed a vigorous scientific school; it has between these departments a group of new studies, belonging strictly to neither, the modern social, political and administrative sciences; it has schools of art, music, law, medicine and divinity; it has the tradition and reputation of public service and political success; it has the evangelical spirit. Now all these assets, tangible and

intangible, can be combined without conflicting on just one thing, the development of the type of man that, in my opinion, the world most needs now, the cultured citizen in command of scientific methods.

The moral failing of humanism is its tendency to become selfish. Self-culture comes to be regarded as the ultimate aim. We need an education, it seems to me, which shall transform the humanist into the humanitarian without losing in the change any of his former virtues. Humanism is likely to be self-centered, aristocratic and quietistic. Humanitarianism is altruistic, democratic and dynamic.

In the first place, there is at Yale the religious atmosphere. This is a reality that has to be reckoned with even by those who would repudiate it. The influence of two hundred years of devout learning and Christian aspiration cannot be shaken off at once. There is a kind of karma carried over from one college generation to the next which molds it in the likeness of its predecessors. It makes the students in all old universities do silly things that they would not think of doing by themselves. They are often as much puzzled as their parents at being caught in some act of rowdyism quite foreign to their natural instincts. It is the spirit of rowdyism of their collegiate ancestors working in them. But karma transmits good impulses as well as evil, fortunately for Yale, where karma is strong. This is why all the boys of Yale College turn out to chapel at 8:10 every morning. It is not because they are individually more devout or less sleepy than other college boys. It is not because the faculty insists upon it, for the faculty is not unanimously or very strongly in favor of it. But each successive senior class votes by a large majority for the continuance of compulsory daily chapel and Sunday church attendance. They proffer no reason for it, tho if prest they will obligingly invent one or more, obviously inadequate, such as "it makes us get up early," "it begins the day right" or "it gives a feeling of solidarity."

Each class elects its four class deacons of the College Church, and the office is in good repute. In no other university

that I have visited does the Y. M. C. A. stand so high in the student body or exert so much influence in social and political affairs. There are students who sneer at the "Dwight Hall ring," but they do not despise or ignore it. A capable religious leader is almost as likely to be elected to one of the senior societies as an athletic leader. There is doubtless some ground for the charge that Christian activities have in certain cases been taken up as a means of political advancement. This more than anything illustrates the striking difference between Yale and most other universities in the student estimation of religious work.

But tho the religious impulse is still powerful it takes a new form here as elsewhere. The fondness for theological disputation has died out and the taste for devotional exercises of the prayer-meeting type has declined. The pulpit and the mission field no longer attract as formerly. The old zeal seeks new channels in practical altruism, such as settlement work, organized charity, philanthropic institutions, civic improvement, and the advocacy of more or less radical social reforms. These are gaining in efficiency thru the increased utilization of the methods of modern science.

The practical Christian spirit, in taking the form of systematic social betterment, becomes in accordance with present tendencies somewhat political and therefore falls in line with another of Yale's characteristics, the tradition of public service in nation and State. This is one of the strongest and best of the intangible assets of the university, having a double value because it encourages the Yale graduate and disheartens his opponents. When the men with Y on their sweaters run onto the field the game is half won. The argument in favor of the truth of the legend of Yale's team-play in politics would have as its major premise a list of dignitaries too long for publication in a magazine, including, for example, twenty of the fifty-nine Governors of Connecticut and for its minor premise the improbability that such a general recognition of individual excellence by the public was purely spontaneous. There are 12,744 living Yale graduates, probably more closely bound together by common training, a

feeling of loyalty toward their Alma Mater and mutual acquaintance than any other large body of alumni in America, and inevitably exerting a powerful influence over public affairs. Yale men have the very useful reputation for "getting there." A distinguisht alumnus of Harvard, when askt why he sent his son to Yale, replied: "I used to think that Harvard gave the better training, but at my time of life I find that all the Harvard men are working for Yale men."

The Yale student is by his environment drawn naturally toward the opportunities of public life, but in order to prevent this from degenerating into mere office-seeking it needs to be closely allied to the altruistic movement of which I have spoken. The college should also recognize the legitimacy of the profession of publicist and provide more specific training for it. Yale ought to have the strongest department of history and social sciences in the country, but it has not. Its students ought to excel in public speaking and debating, but they do not. Of eighteen debates with Harvard, Yale has won four. The faculty is blamed for it because more training is not provided, but this is not the reason, altho the complaint may be justified. The reason is that student enthusiasm is not directed into this channel. The students do not wait for the faculty to coach them in rowing, singing or dramatics. I attended a Yale-Harvard debate in Woolsey Hall last spring. There was a very tepid audience, mostly women and townspeople. Harvard won, but nobody seemed to care. It called to my mind the last contest of the kind I had attended in the University of Kansas, when we chartered a train, somewhat informally, packt it to the bell-rope with students and invaded Topeka. The representatives of the colleges spoke in the State capitol, where some of them have spoken since, and then we celebrated our victory by a big bonfire on Commonwealth avenue, and when a policeman remonstrated we made him dance a solo to the tune of college songs. Altogether it was a very reprehensible proceeding, as the papers remarked at the time, but I think if it were averaged up with that Yale-Harvard debate the happy medium would be

struck. How the Eastern college men used to make fun of us in those days because we expended our enthusiasm over oratorical contests instead of football. Oratory, they said, is a primitive art, out of place in a civilized community, as antiquated a weapon as the bow and arrows. The gentleman and scholar is distinguisht on the platform by his air of embarrassment, by the way he hesitates and mumbles his words. They may have been right, but I notice that many of the younger Western politicians who have forced a recognition from the reluctant East have been trained in these despised oratorical contests and their success has been largely due to this training; such men as Bryan, of Nebraska; La Follette, of Wisconsin; Beveridge, of Indiana; Finley, of New York; Hadley, of Missouri, and others whom I might name if I had time to look them up. The spoken word has not yet lost its power, if it is fitly spoken.

The official explanation of the essential difference between Sheffield and the College is that the former contains students who have decided upon their profession, and wish to enter immediately upon preparation for it, and the latter students who have not decided upon their profession or wish to postpone their professional training. This classification fails to recognize the fact that a large proportion of the men in the College have already chosen their life work, but the university fails to provide them with specific training for it. That is, the College contains the unorganized professions. Let me take the class of 1896 as an example. At the end of its first decade its 238 members were distributed as follows: Law, 32 per cent.; business administration (finance, commerce and manufacturing), 30 per cent.; education, 18 per cent.; medicine, 6 per cent.; ministry, 4 per cent.; literature (including for convenience, journalism), 2 per cent.; the rest scattering. To show the changes that are taking place in the distribution of occupation let us compare with the above the triennial report of the class of '05: Business administration, 40 per cent.; law, 19 per cent.; education, 13 per cent.; technical industries (engineering, forestry, farming), 10 per cent.; minis-

try, 3 per cent.; medicine, 3 per cent.; literature, 2 per cent.*

Now of these, law covers a multitude of occupations for which the ordinary legal course is not a perfectly adapted preparation. It is a makeshift, because nothing better is provided for them. For of specific education of the group of business men, Yale does nothing in a definite, systematic way. Harvard has started a Graduate School of Business Administration. Pennsylvania has the undergraduate Wharton School of Finance. Most of the other universities are adding similar courses. Yale will have to come to it some day, because the proportion of men needing such training is increasing and it is being demonstrated that it can be made effective. For education and for literature as professions Yale also fails to provide specific courses. That is, over half the men then in the college did not have the opportunity to get professional training, altho probably many of them would have preferred it. This is what some call "saving the college," not giving the students a chance to do anything else. Whether it saves the college or not remains to be seen. At present the College is declining and the professional schools gaining. How Harvard is attempting to "save the college" by placing all professional schools on top of it, instead of allowing them to compete with it as at Yale, I explained in last month's article, and what other universities are doing to solve this problem will be shown later.

It would be well to have these undiscovered professions of public and private administration developed at Yale because there they would be kept from being narrow by the tradition of culture and from being selfish by the tradition of service. President Hadley, as one of the foremost authorities on commerce, is eminently fitted to lead in a movement which shall provide both the cultural and the professional education demanded by the conditions of modern life.

*It is interesting also to compare the occupational statistics for the smaller part of Yale's history as given in the *Yale Register*, June, 1907. The Yale graduates of the period 1901-10 were distributed as follows: Ministry, 10 per cent.; law, 10 per cent.; medicine, 11 per cent.; business, 13 per cent.; education, 3 per cent. That is, 64 per cent. of the graduates of the nineteenth century were in the three traditional learned professions.

It happens that Yale has also a group of men who are opening out a new field of research of great promise. Professor Chittenden is raising dietetics from an observational to an experimental science. The dietary standards of Voit and Atwater were essentially averages, based upon the implicit assumption that the general practice of mankind was the optimum. They showed how much men did eat. Chittenden shows how little men need eat, and whether his theory of the benefits of a diet low in proteids is confirmed or not, his results are of value. Professor Fisher, a mathematician turned sociologist, is also bringing scientific methods to bear on vital human problems and is developing a national health movement thru the Committee of One Hundred.

I regard these tendencies as important because they seem to be bringing to the social sciences what they have sorely needed, the methods and discipline of the exact sciences. If there is anything in the idea I have suggested above, that an anthropocentric scientific education may be developed, having great utility as well as a unique cultural value, it will naturally be done by those who occupy the middle ground and hold the balance of power between the warring wings of the faculty, the classicists and the scientists. This field is now filled with a group of chaotic studies with ill-defined boundary lines. Their names are scattered along the alphabet from Anthropology to Sociology, and they are not yet prepared to become the main trunk of a system of education, for they do not afford the mental training of either the classics or the sciences. But this may be done and I have indicated some of the reasons why I think Yale could do it.

Yale was the first university to incorporate schools of the fine arts and of music, and tho small they have made good records. Most of the students are not candidates for a degree, but one or two B. F. A.'s and B. M.'s are given every year to students who have taken the required literary and other college work, and also presented an original composition of an approved character. Yale has an art collection unequalled by any other university, the Jarves Gal-

lery of 122 Italian paintings dating from the eleventh to the seventeenth century, and the Trumbull Gallery of 54 historical portraits and other works. The work of the Art School might be advantageously extended into architecture and the applied arts, by which it would be brought into close alliance with certain departments of Sheffield. I was disappointed in finding that the art and music schools do not influence the life of the whole university as much as I had expected, for this is authoritatively announced as their main function.* But the students I talked with knew and cared little about them, and the undergraduate artistic and musical activities, which are considerable, seem to have developed quite independently of the departments that would naturally be supposed to foster them.

The music, art and graduate departments are the only ones at Yale which admit women. In music, as regular students, there are this year 57 women and 38 men; in the fine arts 26 women and 21 men. In the Graduate School about one-tenth are women—34 this year. They are well treated by the professors and respectfully ignored by the students, which is all they have a right to demand. They are admitted to work for Ph. D., but not for M. A., lest in the latter case some of the undergraduate classes be contaminated by their presence. The university is anxious to provide dormitories, dining halls, etc., for all its men students, but the women students are left to look out after themselves. This is a good plan, for it tends to promote independence and self-reliance, in which the sex is apt to be deficient.

The Law and Medical schools have not had an equal share in the general reputation of Yale University. Even the graduates of college in spite of their loyalty to Yale have in many cases preferred to go to Harvard and Columbia for their professional work. Now, however, the standards of both are being raised by the requirement of at least two years of collegiate work for admission, on the plan of the combined course which has been practically adopted everywhere except at Harvard in the last few years.

The Law School has gained 95 stu-

dents, or 28 per cent., since last year. This remarkable increase is doubtless due in part to the growing reputation of the school and in part to the prospective raising of the admission requirement. Probably also the financial stringency had something to do with it here as elsewhere. During hard times in the East the professional schools gain at the expense of the colleges. In the West under such circumstances high schools and universities both grow because jobs are scarce and education is about the only thing that is free. The Medical School is hampered by its old and inconvenient buildings and by not being in a large city. The latter objection may not be insuperable. The University of Michigan has built up a very popular medical school in a still smaller place than New Haven, and the University of Wisconsin is attempting to do the same. The rapid transit facilities are making New Haven a suburb of New York City, as the students of Yale without Saturday classes have found out.

A stranger who tries to see Yale will be disappointed because so much of it and the best of it is invisible. I felt on the campus as I do in the dynamo room of a great power house. I knew that I was in the presence of forces obviously powerful but imperceptible to my senses. There is not enough tangible machinery about Yale to account for the work it is doing. The Yale undergraduates seem to train, control and discipline themselves, leaving little for the official authorities to do in this way. In fact President Hadley has explicitly recognized this in saying that "if the chairman of the *Yale News* Board is a man of the right type—and he almost always is—he is the most efficient disciplinary officer of the university.

However strained the relations between the officers of the university and the student body might become the *News* would never attack the President so bitterly as did the Harvard *Crimson* President Eliot or the Stanford *Sequoia* President Jordan last year. The *Record* never prints malicious jokes on the professors, as do so many "college comics." The Yale men who have patiently endeavored to explain to me the influences which mold the undergraduate into the Yale

*President's Report, 1907, p. 7.

type have laid great stress on the common dormitory life and the effect of the senior societies. There are three secret societies, Skull and Bones, Scroll and Keys, and Wolf's Head, and it is the ambition of every normal College man to get into one of them. Toward this all his efforts are directed from his freshman year, and Tap Day marks for him the success or failure of his college career. As one graduate said to me: "I would willingly have sacrificed a year of my life if it had been necessary in order to make Bones."

Since the ideals of the senior societies

are merely negatively eligible thru conformity with established ideals of manners and conduct. A man must have done something, particularly something that has brought glory upon the college; he must be a leader among his mates in college activities, such as athletics, journalism, college politics, or religious work.

These criteria are on the whole good ones, at least very similar to those that measure a man's success in the outside world, but some questions would arise as to their interpretation. Youth is naturally intolerant and exclusive, even, or perhaps especially, college youth, and

THE NEW CAMPUS.

Yale Commons in left; Wood and Woodbridge Halls on right.

set the standard for the college it is important to know what are regarded as the qualifications for selection. In so far as I have been able to ascertain them from talking with Yale alumni these qualifications may be formulated as two, one passive and one active: First, conformity; second, achievement. The first requirement of eligibility is that the student "be a gentleman" according to the prevailing definition of that word; that he be clubbable; that he conform to Yale customs and violate none of its traditions. The second distinguishes the few men of prominence from the crowd of those who

probably too rigid a conformity is insisted upon and too narrow a definition given to the word "gentleman." Then, too, the activities in which prominence is rewarded are rather apart from the purposes for which the university exists, and devotion to some of these activities may easily become so absorbing as to give rise to a general sentiment that high grades are indicative of a narrow mind. The societies should in my opinion add scholarship to their list of undergraduate activities in which a student may legitimately attain distinction, and should take cognizance of the fact that a man

who presents an original thesis, who discovers a new species of plant or writes a genuine poem, may be said in a sense to have brought glory upon his university as well as a man who has won a game.

That scholarship has very little weight in the question of eligibility to the senior societies was shown by Mr. Maurice F. Parmelee in the *Yale Courant* of December, 1906, from which I obtain the following figures:

TABLES OF GRADUATES FROM ACADEMIC DEPARTMENT, 1882-1905.

		Honor men.	%
Wolf's Head.....	308	19	6.1
Scroll and Keys.....	349	37	10.6
Skull and Bones.....	358	83	23.1
Total of Society Men...	1,015	139	13.6
Non-Society Men.....	3,984	967	24.2
Total	4,999	1,106	22.6

The "Honor Men" are those that have received the highest marks in their classes and are, according to tradition, placed upon the commencement program for Philosophical Orations, High Orations and Orations, altho these are not now given. These men also become members of the Phi Beta Kappa, a national non-secret honorary society. The figures show that only one of the three secret senior societies contains a higher percentage of honor men than the College as a whole, and even that society had a less percentage than the student body outside. That is, if a blindfolded man had entered the crowd assembled around the oak tree near Battell Chapel on the third Thursday in May and tapped forty-five men at random, the chances are that he would have obtained men of higher standing than those actually chosen, after the long and anxious deliberations of the secret conclaves. Or, in other words, after the forty-five happy men had gone to their rooms there was better picking in the crowd than there was before, so far as scholarship goes.

But the faculty estimate of a man's ability based on grades alone is as narrow as the student estimate based on activities which often interfere with the making of high grades. To get some light on this point, I asked seven Yale graduates in classes from 1872 to 1896, to mark in the directory of graduates the names of their classmates who had in some way distinguished themselves since

graduation. No instructions were given as to the degree of prominence or the proportion of the class to be indicated, but they checked on an average 24 per cent. of the names on their class rolls. On comparing these with the lists of living graduates in these classes who are members of the three senior societies and of Phi Beta Kappa (the latter being Honor Men), the following results were obtained:

38 per cent. of the Phi Beta Kappa men became prominent.

37 per cent. of the Society men became prominent.

19 per cent. of the men not in Phi Beta Kappa became prominent.

18 per cent. of the men not in the societies became prominent.

Of course the question of which men in these classes had shown special ability depended upon the personal judgment of the men marking the lists and their knowledge of their classmates and the examination was not extensive enough to give accurate figures.* No allowance can be made for the fact that the honors conferred upon an undergraduate give him thereafter a certain prominence in the eyes of his classmates and may directly contribute to his success in life. Still we should probably be justified in concluding that the senior societies and the Phi Beta Kappa, tho their standards of judgment are different, are equally successful in picking out the men of superior ability and that a student belonging to either of these groups has twice the chance of future prominence as one belonging to neither. There are several interpretations that might be given to these figures. One is that the importance attached to non-scholastic activities in Yale draws a large proportion of the ablest students away from their university duties.

Most conspicuous of the activities is, of course, athletics, which at Yale as in all the other American colleges, absorbs too much of the student's time, energy, and enthusiasm. By athletics I do not mean physical exercise or even sport, for these two desirable elements of student life have been so overshadowed by other features of the intercollegiate contest system as to be negligible in the consideration of the question. Whenever the

*But two men marking the same class gave practically the same figures.

number of spectators exceeds the number of players the limit of true sport has been past, and when the spectators outnumber the players a hundred to one, the game becomes merely an exhibition. If there were some way by which the strength and agility, or rather the health and symmetrical development of the entire student body of one university could be matched against those of another, some good might come of it, but under present conditions success in intercollegiate contests does not prove that the winning university is superior to its rival in these important qualities nor does it do much to promote them. Young men get excited enough over their games naturally without outside pressure, and when they know that in every city of the United States crowds are assembled to watch and bet on their feats the pressure is too great. Overstrain, physical and moral, necessarily results, as in the boat race of last June, when, with a President rooting on one side and a future President on the other, a Yale student collapsed and has since died and two Harvard men broke the rules of the university and were expelled.

I find that I am expected to say something about democracy in this article on Yale. I will therefore take this opportunity of explaining that I have not been able to find out much about democracy in American universities because it means different things or takes different forms in the different institutions I have visited. In Yale, for example, the students resent the introduction of valets and automobiles as a menace to democracy. In Princeton the authorities regard the use of Greek letters in the name of a club as too dangerous to be tolerated. In Wisconsin it is thought democracy will be lost if the tickets to the Junior Prom are raised from \$3 to \$5. In Michigan any system of marking grades except "passed" and "not passed" is considered undemocratic and it was only this year that that aristocratic institution, the Phi Beta Kappa, was allowed to be established. In Harvard the word "democracy" seems to mean "promiscuity" or else some spiritual condition altogether unaffected by external circumstances. When I started out on my quizzing tour I had at the head of the list of questions which I proposed to ask, in

one form or another, "Does the spirit of democracy prevail in this university?" But I soon dropped that question as unnecessary and fruitless, because it was answered everywhere before I asked it, and always in the same way. There were two things about which faculty, students and alumni of each university visited agreed, that is on the purity of their democracy and the beauty of their campus. In admitting deficiencies in other respects they were usually frank enough and on some points even effusive, but on these two they would acknowledge no superiors. Therefore as the net result of a hundred conversations bearing on this subject I have left in my memory a hazy composite something like this: "There are other universities that are richer or older than ours; some that have at present more students. Our president is not all that he should be. The trustees do not always do the right thing. The faculty might be improved by process of elimination and substitution. But nowhere will you find a prettier campus or a more democratic body of students." On the former point I was able to use my own eyes, and shall take the liberty of expressing my personal opinions, but on the latter I was obliged to rely on hearsay evidence. Having just given this evidence I shall dismiss the subject with the remark that in view of alarmist reports about the growth of luxury, narrowness and class distinction, it is distinctly encouraging to find that the democratic spirit is still regarded as a desirable thing to have in a university, even tho there may be a disposition to assume that it is already attained.

I have observed a curious difference between Eastern and Western colleges in regard to the influence of the alumni. In the West the alumni are always urging forward their Alma Mater into untried paths. Sometimes a State Alumni Association will take things into its own hands and, overruling president, trustees and faculty, will, by control of the legislature, force the university to take steps which it believes are necessary to bring it closer into touch with modern life. In the East on the contrary the alumni seem to be, as a whole, a conservative, even a reactionary influence, opposing almost any change, wise or unwise. I have asked many persons

the reason of this and tho they generally have agreed that it is so, they have not given any explanation which, in my opinion, satisfactorily accounts for it. The most plausible of the explanations suggested to me is that the Eastern alumni are older on the average. But are not the freshly graduated about as reluctant to have their Alma Mater changed as the older men? Whatever the cause it raises the question whether the present movement to give the alumni a larger representation on the governing boards of State universities may not ultimately result in impeding rather than accelerating these institutions.

Eastern alumni are generous in the matter of financial support and certain individuals initiate important changes thru specific gifts, but as a body they are inclined to regard their Alma Mater as a relic of happy schooldays and as such to keep it intact and unaltered, so that when they return they may find it as they remembered it. In 1888 several thousand of the Yale alumni signed a petition to the corporation remonstrating against the removal of an old fence that was in the way of one of the new buildings, and what is worse, they celebrated twenty years later the anniversary of "the fight that failed." It is the alumni, I believe, who are responsible for the preservation of Old South Middle, which makes Yale look like a full-grown rooster with a bit of the shell from which it was hatched stuck on its back. In important matters it is the same. If it were proposed to cut down the college course to three years or to raise the Sheffield course to four; to make the Sheffield boys go to chapel or to release the college boys from going; to abolish the senior societies or to have more of them, probably the majority of the alumni would oppose the change regardless of its advantages or disadvantages. I presume that Secretary

Stokes, altho I have never heard him say so, is more often called upon in local alumni associations to explain why some things have been changed than why more have not been changed.

The finest thing about Yale is the student body. I do not think this is true of all the universities in this country. In some laboratories and libraries I have visited the students appeared out of place, unworthy of their beautiful buildings. In some classrooms I have pitied the instructors because they were expending so much good teaching on such poor material. But I did not pity the instructors in Yale. If they could not do something worth while with the earnest, energetic, wide-awake, well-ordered young men in the seats before them, they could not anywhere. The Yale students as a rule are not *blasé*, cynical and prematurely aged, nor on the other hand are they awkward, unruly and obstreperous. They are not so studious and diligent as the average run of students in the State and city universities, but they come from more cultured homes and with more thoro preparation. After seeing the Yale boys in mass, I have come to think that the university gets more credit than it deserves for the achievements of its graduates. This educational machinery that we talk so much about is, after all, of minor importance. The product of the mill depends mostly on what kind of grain is poured into the hopper.

I liked the way a man would stroll across the campus in the evening, bare-headed and hand-pocketed, and call "Oh Billy Rogers!" to a four-story building, then hold a confidential conversation with the student who stuck his head out of one of the upper windows. I like the way they played diabolo and tops. I liked the way they heeled for the *News*. I liked the way they sang. Altogether they are a likable lot of fellows.

The Earthquake in Sicily and Calabria

BY SALVATORE CORTESI

THOSE whose fortune it has been to travel by sea from the beautiful Bay of Naples, and after passing the exquisite coast of Southern Italy, with its luxuriant vegetation, its orange and lemon groves skirting the water's edge, its numerous villages nestling among the hills, or bathed by the blue waters of the Tyrrhene Sea, and have gone thru the narrow Straits of Messina, where Etna, "the pillar of Heaven," the "Nourisher of the Snow," as Pindar calls it, sends up, perhaps, a slender column of smoke to the sapphire sky, will not soon forget the feast of beauty, the classic memories that they have enjoyed, and will not find it hard to understand how, from the earliest times, the fertile towns of these coasts, with their vines, oranges and olive trees, their central position for commerce, and their delicious climate, have been the desire of one nation after another, till from the earliest days of Cumæan pirates, Phenicians, Greeks, Romans, Saracens and Normans, have in turn possess them, and have left traces of their occupation, and memories of their art and religion, in stately temple and noble sculpture, in glorious cathedral and Oriental palace.

The island of Sicily is said to have been divided from the mainland by a volcanic eruption, and, from ancient days,

this lovely land has seemed to be the sport of Nature in her fiercer moods, and upon the cheerful industrious population have descended again and again tempests of ruin and desolation from which it has appeared a marvel that they should ever recover. From the twelfth to the nineteenth century more or less serious earthquakes devastated the fertile region, and decimated the unhappy population. In 1688 South Italy lost 20,000 inhabitants, and a few years later, in Sicily, the victims numbered 93,000; in 1783 60,000 Calabrians paid the toll of death to the volcanic forces of Nature, and in more modern days, at Casamicciola, in 1883, the earth literally yawned asunder, people and buildings alike being precipitated in a moment into the awful abyss. No convulsion of Nature in the past, however, can for a moment be compared, either in the suddenness and completeness of its destruction, or the horrors attendant upon it, with the earthquake which, on the morning of December 28th, only a few short days ago, overwhelmed the flourishing Southern Italian cities, situated on either side of the historic straits, Messina in Sicily, and Reggio Calabria in South Italy, and from Messina down to Acireale, from Reggio up to Catanzaro, reduced the smiling villages of shore and hillside to heaps of crumbling,

smoking ruins, beneath which it is calculated that 200,000 victims lie buried, while innumerable others were wounded, bereaved and deprived of everything that they possess in the world. No warning was vouchsafed to the unhappy inhabitants on whom this catastrophe fell; life in Messina and Reggio went on in its usual way, only distinguished by the rejoicings of Christmas and New Year, which had brought some natives of the fated provinces to spend the festive season with their families or friends. The stillness of night prevailed and the inhabitants of town and

RUINS OF FLOUR MILLS.

village were wrapt in slumber when, with awful, lightninglike suddenness, like the crack of doom, a violent, appalling earthquake occurred, at the same time upheaving the surface of the earth and shaking it violently, followed by a tidal wave of unparalleled swiftness and immensity, which first receded from the shore, then rushed inland with tempestuous fury, carrying all before it. The earthquake shock only lasted half a minute, but it sufficed to bring down almost every building in the zone of destruction as tho a fleet of war vessels had bombarded it, and amid the thundering sound of falling walls, the crash of broken glass, the hiss of torrential rain, went up to heaven the agonized shrieks of thousands of human beings upon whom death descended suddenly, or who, mad with terror, leapt from windows or precipitated themselves into the streets, rushing with blind, unreasoning terror they knew not whither. In Messina alone it is said that from 70,000 to 100,000 persons were killed, while the number of wounded was innumerable. What added to the horror of the situation was that many of those who escaped were absolutely naked, and when the gasometer exploded, starting fires in the ruined buildings all over the town, the lurid flames lighted up a scene that could only be likened to Dante's Inferno, as these ghastly figures climbed over the mountains of wreckage where there had once been streets, and from whence, together with broken furniture and shattered glass, stuck out piteous legs, arms and other human remains.

Mr. Stuart K. Lupton, the American Vice-Consul, who had only arrived in Messina four days before the disaster, was awakened, like others, by the first frightful shock. The house which he occupied was rocked to its foundations; indeed he afterward found that the room in which he was sleeping was the only one spared, all those beyond his being utterly destroyed. Slipping on his trousers, catching up in his hand a pair of shoes, and throwing an overcoat on his arm, he managed, tho he has now no remem-

brance of how he did it, to find his way into the street, or, rather, into what had once been the Via Garibaldi, but which now consisted of huge mounds and accumulations of débris, from 20 to 60 feet high, from which stuck out, in hideous confusion, blocks of masonry, shattered furniture and half dead human remains, while the deafening explosion of the gasometer seemed like the final trump and started fires all over the city that threw a lurid light over the awful scene, and completed the work of destruction that the earthquake had begun.

The air resounded with shrieks of horror and anguish, which rose above the thundering roar of innumerable avalanches of masonry. Climbing, he hardly knew how, over all these obstacles, while his brain reeled and only the blind instinct of self-preservation drove him on, Mr. Lupton reached at last the seashore, formerly about three minutes' walk from his hotel, but which it now took him the best part of an hour to find. Spectral

FUGITIVES AT REGGIO

figures flitted past him in the darkness, some screaming, praying, cursing, some fleeing in an intensity of silent terror as tho pursued by furies. On the quay Mr. Lupton met a lady and gentleman of his acquaintance, the man entirely nude, the lady dragging some scanty remains of her night attire around her trembling shoulders. It occurred to him that this was not as it should be, so he hastily wrapt the lady in the coat which still hung over his arm, and, looking down at

his own bare feet, which were bleeding profusely, he realized at last that the time had come to put on his boots, and thus protected, he stumbled along blindly until he found assistance in the fruitless quest of searching for the American Consul, Mr. Cheney, and his family, whose bodies alas! were proved to be buried under three floors of the house which was their home. Strong men who lived thru the terrible hours and days that followed say that it has left upon them a mark that will never be effaced. Railway and telegraphic lines were destroyed, so that there was no means of communication with the outer world: the gas and water pipes were all broken, and darkness at night and burning thirst were added to the torture they endured; 75

naval officer, from the fort of San Ranieri, robbed the wave of part of its prey, as he caught in his arms a little girl who was swept past him on the rushing water. Tho all the Italian ships in the harbor were seriously injured, and with but a handful of men on board—as the majority of them were absent on leave for the Christmas vacation—at a moment's notice all fires were lighted aboard, and all was ready for action. During the next few days the sailors of these ships, fortunately reinforced by the crews of a British and Russian squadron that happened to be in Sicilian waters, accomplished the greatest deeds of humanitarian heroism, which transformed these brave men, destined for warlike enterprises, into missionaries of peace and mercy.

On the other side of the straits another noble and equally ancient town, having in common with Messina its origin, the race of its founders, and twenty-seven centuries of history, even in this terrible moment shared the fate of the sister city. Reggio Calabria, in its destruction, was even more cruelly tried. For days, it seemed effaced from the map of the world; part of its coast had been washed away, and it was difficult for boats to approach, while the luxuriant verdant country behind, with no means of communication remaining, was transformed into a waste and howling wilderness.

No one knew that hardly one house had remained standing, that the population had been annihilated, and that for a radius of thirty miles villages and small towns, ancient castles and modern villas, had been involved in one common and appalling destruction. King Victor Emmanuel, who, following the traditions of the House of Savoy, and the impulses of a noble heart, rushed to the spot, accompanied by Queen Elena, was the first, thru the wireless telegraphy of his men of war, to announce to the astonished world, "The fate of Reggio is worse than that of Messina."

It would take volumes instead of a short article to simply enumerate the

RUINS OF HOTEL DE FRANCE

per cent. of the soldiers were killed under the ruins of their barracks, and, therefore, the few authorities surviving had no men at their disposal to keep order, or to initiate the work of rescue. For this reason all the first assistance obtainable depended on the few sailors who fortunately were to be found at the moment in the harbor. Whoever knows the configuration of the port of Messina will remember that it is formed by a sickle-shaped tongue of land which is in some parts a mile wide, and in others not more than 500 yards. Over this peninsula the tidal wave rushed with tremendous force, and in its withdrawal carried with it boats, barges and tugs, some loaded with tons of merchandise. A

acts of valor and the ghastly episodes, the sublime examples of charity and self-abnegation, and the occasions, fortunately few and far between, when calamity, instead of bringing out the best in human nature, revealed selfishness, ferocity and crime. Italy's terrible calamity aroused, not only on her own shores, but also among all nations of the world, a veritable enthusiasm of love and sympathy, and all vied with each other as to which could most generously and competently tend the wounded, care for the orphans, and supply the necessities of this stricken population. America has led the way with that practical commonsense for which her people are distinguished, chartering a vessel to go to and fro be-

tween the earthquake zone and other Italian ports, carrying doctors, nurses, medicine, food and clothing, to supply the necessities of the sufferers, and returning, loaded with sick and destitute, to the other Italian ports, where generous hearts and loving hands are ready and waiting to welcome and provide for them. Countless other agencies have poured out their assistance in goods, money and personal service, so that the dark cloud of this awful calamity has had its silver lining in the feeling of sympathy and brotherhood which it has called forth, proving that in the presence of such colossal sorrow, distress and anguish, divisions between nations cease to exist, and humanity is one.

ROME, ITALY.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Robert Bacon, Secretary of State

IT is no mean distinction to be premier of the United States, even for five weeks. Neither is it a trivial distinction to be Robert Bacon—for life. Once upon a time there was a man—he still is—who gave lavishly of time and energy and gold to the winning side in a presidential campaign, and then strenuously pleaded that in full compensation he be publicly offered the portfolio of State; which offer, he privately pledged himself to decline. Five weeks of the real thing goes that distinction several better. Neither has Robert Bacon made the slightest visible effort to secure the honor. Robert Bacon never made a visible effort to secure anything. Everything has plunged headlong at his feet, ever since he had the great good fortune to be born in Massachusetts, forty and more years ago.

Bacon took a roundabout road to the head of the State Department. The way he came caused a sinister smirk on the public lip, when his appointment as Assistant Secretary was announced; and the best indorsement of his three and a half years in the office is that the same lips are now saying it's a pity he has not

more than five weeks coming without the prefix.

Bacon was born a banker. His father was a banker before him, and it was thru this association that he secured his first appointment, on the cabinet of J. P. Morgan. It was because of that office, in which he had coaxed together from one to a dozen millions, that the lips smirked, at first—the lips which now say it was only an evidence of his rare good sense, when he had enough to know enough to quit, and go into something worth while, at a hundred dollars a week. A memory of the past tried to chase him, in the earthquake which shook up the insurance companies, and in the explosion of the Northern Securities, but if he was singed the burns have left no scars.

Yes, Bacon was born a banker. On the way he took in Harvard College and now he is—what he considers the proudest distinction of his life—a member of the board of overseers of Harvard. He is also a member of the Central Committee of the American National Red Cross. But he was not born a politician; for he is "dyed in the wool" with an inclination to say nothing but saw wood. He is an indefatigable worker. And, withal, he

ROBERT BACON.

is the kind of man you like to meet—cordial, democratic, courteous—and the kind of man you like to look at—a splendid specimen; tall, strong, remarkably handsome; a head where thinking machinery has no end of room, covered with short, thick, curling brown hair; large eyes and a beautifully modulated voice. With his natural instincts to build upon, Morgan's and the State Department have been ideal schools of diplomacy, for Bacon, and there are those who are thinking that when this short five weeks are over there ought to be an embassy waiting at his door. Perhaps there will be.

Eugene Hale, of Maine

Several important changes have recently taken place, back in the wings of the Senate, as the result of which Eugene Hale, of Maine, is as well worth watching as any man in the Upper House today. There has never been a time since years ago when, at the other end of the Capitol, they dubbed him "Bub Hale," that the senior Senator from Maine has not received keen attention.

But if then, emphatically now, when recent events have made him practically the controlling power of the Senate.

The death of Allison not only placed Hale at the head of the powerful Committee on Appropriations—to which all of the ten virgins must kneel for oil, if they would keep their lamps burning—but it made him chairman of the Republican caucus—upon which no end of influence hangs—and, most important of all, it gave him the chairmanship of the Committee on Committees, which builds the Senate Ship almost as autocratically as Papa Cannon constructs the House.

When all of this power is centered in one man, it is at least fortunate for the world that it is such a man as Hale of Maine, whose lifelong devotion to the service of his country is now completing the thirty-eighth year in Congress, without a blot to mar its record.

Senator Hale is a small but superbly constructed man, erect as an admiral, exuding dignity, gravity and autocracy from every pore. His hair is not so very gray—his close-cut, carefully pointed beard is grayer. His face is heavy and

EUGENE HALE.

solemn and stern. He is not over-cordial or a particularly agreeable man to meet, unless one comes in on strictly social lines, at some of the elaborate lunches, for instance, which he frequently gives in his committee room, to the glint of his superb silver service. The social side of Senator Hale is as different from the togal demonstration on public view as daylight from darkness. He radically objects to being asked questions or urged to any course—even the one which he is following. But however gloomy and foreboding his utterances may be, Senator Hale is, surely, one of the most intelligible and effective speakers in the Senate. He is rarely on his feet long at a time—except when presenting one of his ponderous appropriation bills—and he always speaks slowly, with grave deliberation and exact precision. But what he says means something. He handles every subject with facility. He is never at a loss for a word. He fairly scintillates in running debate—especially when the power and glory of artistic sarcasm is in order.

Congressman Mann, of Illinois

Speaking of changes which have recently turned the searchlight on the Senate, the House has also seen some, and James R. Mann, of Illinois—Chicago, in fact—has reached a position where he will be well watched by those who would prognosticate. He has been growing in power in the House for years—twelve of them—and is in for two more, with an overwhelming majority which indicates continuance. His career has not been meteoric. It has been so slow and steady, in truth, that his colleagues are only beginning to realize what a power he is. They are admitting, now, that it is doubtful if there is a member on the floor, through the next session, of more effective influence than Mann of Illinois.

He came into prominence at first as the great objector. His strong point, on the floor, is asking questions. He can ask more questions in the course of a debate—more pointed, more critical, more suggestive questions—and can interpolate more strenuous arguments into those innocent questions than any of his colleagues.

It is the result of an insistent habit of

studying every bill, whether it appeals to him or not, and many a bit of undesirable legislation owes its timely eradication to Mann's questions. But he did not adopt the method through ambition for notoriety. It is in him; a part of him. He has as little personal ambition as any man in politics; but there are few more conscientiously determined to give the best that is in them to the task at hand. It is the mental and physical makeup of the man. He is quick and strong—well put together to hold his own—with keen, clear eyes, iron-gray hair and beard, a hearty laugh, a cordial hand-clasp.

Mann is one of the best presiding offi-

REPRESENTATIVE J. R. MANN,
Of Illinois.

cers in the House and has piloted the Committee of the Whole through some delicate complications during the past weeks. At present he is chairman of the Committee on Elections, No. 1. With Hepburn's retirement, March 4, he will probably be at the head of the strong Committee on Interstate and Foreign Commerce, and it is more than probable, too, that he will follow Hepburn as chairman of the Republican caucus of the House—all of which means increasing influence.

WASHINGTON, D. C.

Literature

Mars as the Abode of Life

A DOZEN years have gone by since Mr. Percival Lowell published his first book on Mars. He had then just completed his first season's work at his new observatory on the Arizona plateau, and was full of the inspiration that comes from having followed a heavenly body through changing moods. Since then he has ob-

spite of much adverse criticism, he has adhered unswervingly to the doctrine which he espoused in the beginning, viz., that the conditions on Mars are favorable to the existence of beings similar to man, and that this planet is now the seat of intelligent life. The present volume is his latest word on this subject; it is also his best presentation of it. He here mar-

HEMISPHERE OF MARS, ACCORDING TO LOWELL.
Showing canals radiating from oases.

served Mars at every opposition, seven in all, following it with an assiduity worthy of emulation. Moreover, he has written much concerning it, not only in scientific journals and in the technical publications of his observatory, but also popularly, so that he has come to be the most widely known American for work on this subject. Thruout this period, in

shals the arguments in favor of his thesis and tempers them to the criticisms that have gone before.

According to Lowell,* Mars is very level, in an advanced stage of its development, with seas gone, water scarce, and deserts predominant. It is in an age

*MARS AS THE ABODE OF LIFE. By Percival Lowell. New York: The Macmillan Company. \$2.50.

of decrepitude, nearing the end of its existence as a life-supporting planet. The conditions of life there now are harsh, and the lines between nations must have disappeared, for world-wide coöperation with the highest intelligence must by common necessity prevail to prolong existence. The atmosphere is thin; clouds are infrequent; precipitation perhaps never occurs except in the form of snow about the poles. The one source of water supply, Mr. Lowell infers must, then, be from the melting of the polar caps in summer. He has mapped an elaborate network of faint markings on the surface of the planet, which, he is convinced, trace the courses of artificial channels constructed by the inhabitants to convey the water to lower latitudes. It is not the canals themselves that we see, but the resultant vegetation along their banks, and he believes that he has demonstrated that the apparently capricious evanescence and reappearance of individual canals, long noted by various observers, blends into a broad and sequent progression of virescence, counter-earthwise, from pole to and beyond the equator of the planet, with each alternating Martian spring. Mr. Lowell acknowledges that the control of a polar inundation and its conduct in orderly courses undeviatingly across continental plateaus and deprest sea-beds is a feat of stupendous magnitude; asserts it a victory of mind over matter; and makes it his chief argument toward the proof of the existence of life on Mars, and that life of the highest order of intelligence.

After so interesting a presentation, enriched by analogies from many and inspiring sources, skilfully selected and arranged, with an instinct for literary form and an intuitional felicity of phrase, the reviewer would prefer to put cold criticism on the shelf and recommend without comment a book which will prove to readers of intelligence more fascinating than any novel of the year.

But a score of objections to Mr. Lowell's several finalities arise in a mind of scientific habit. No one so well as the practical astronomer knows the difficulties and the elusiveness of observation in such fields as this; no one can so well appreciate the patient labor and the long-enduring enthusiasm of the investigator;

neither would any one be more ready to welcome actual advance, either in the acquisition of new facts or in the settlement of pending issues. This fascinating exposition, however, illustrates in its tone thruout the peril of the temperament which endeavors to explain all characteristics on a single principle, a constant reasoning by analogy where analogy may not exist, an evident mental bias seeking less for facts than for demonstrations. There has been for this reason a lack of responsiveness to his suggestions from the rank and file of working astronomers, which should not be imputed to them either as narrow mindedness or want of cordiality, but to a fundamental difference in cast of mind.

The existence of a network of faint markings on the disk of Mars is not questioned. Observers with modern powerful instruments under the best conditions have seen them in such profusion as to defy the brush to depict them. Mr. Lowell's basic assumption, however, that their geometric design absolutely precludes any interpretation except that of artificial origin is not so sure. His great predecessor, Schiaparelli, a man preëminently of the scientific type of mind, while neither affirming nor denying the artificial origin of the canals, with less fixt conviction that Nature's limitations are known, once pointed out many geometric activities in which she has indulged, and pertinently remarked: "The spheroids of the heavenly bodies and the rings of Saturn were not constructed in a turning lathe, and not with compasses has Iris described within the clouds her beautiful and regular arch."

Lincoln Literature, Old and New

THOMAS FULLER, in his "Church Worthies," speaks disparagingly of tall men—"such as are built four stories high, but oftentimes are observed to have very little in their cock-loft." Abraham Lincoln was above the four-story line, and, even after he became President, there were those who "observed" that he "had very little in his cock-loft." That sort of observation is now obsolescent, if not altogether obsolete. On all sides men hurry to the front, anxious to say

before they die that they once saw, even tho at a distance, that upper story built so high with such picturesque windows. Lincoln measured up against every tall man he happened to meet, and, tho surpassed by some in inches, he found none, in the judgment of the world of today, taller in intellect, or roomier in heart dimensions—all the heart dimensions. His mind was not a barren palace for kings, but rather a homely loft for all the sweet grains from the helpful pastures of human thought and feeling. His fist was a hammer; his muscles were steel; the grip of his arms was a thing to be avoided by professional wrestlers; and after Douglas and Seward had made their experiments, the most agile professional statesmen hesitated to come within the grip of his logic, when that logic, warmed by the heat of friction, rang upon the anvil. But with all this physical and intellectual power, glorious as it was in action, the world turns with greedy gladness to other traits which indicate the tender-hearted, right-thinking, prayerful man—the true *gentleman*—the first, greatest, and the humblest American. If he had a head four stories high, he had a heart four cellars deep. This has been illustrated in a thousand pictures of his ways with children—with young soldiers, whom he seemed to regard all as his children; children, at any rate, of his heart—and mothers; and all women were to him as mothers.

In a little book by M. L. Chittenden,¹ Register of the Treasury for four years under Lincoln—a small book of fifty-odd pages—one of the soldier stories is told—only one—the story of a young Vermonter, found sleeping on his post as sentinel, his only excuse being that he was so sleepy that he couldn't possibly keep awake. He was to be shot. The story is well told, and to all readers convincingly, as it was to Mr. Lincoln. Becoming interested, the President folded up his papers, went down to the critical point in our defensive outworks, talked half an hour with the soldier boy, and—pardoned him; and when he suggested, in that fatherly, quizzical manner of his, that possibly the President might send in

a bill for services, the innocent boy offered all the money he had, and thought that perhaps the folks at home would be willing to mortgage the farm for the rest. If the discipline of the army was hurt in any way by such a tenderness, the world at least will be a brighter orb for it, and will say so all night to the stars.

That he had a heart for woman's as well as mother's love, is told with pleasing effect by Mr. Denton J. Snider, in a style perhaps a little over-studied and over-conscious—a style of which Mr. Carlyle was the guilty inventor. The best chapter in Mr. Snider's book² is that which takes us to New Salem, where Lincoln first took up in earnest the study of grammar, combining it with law and love; for he found there the girl who remained longest in his heart. Tho he wrote in her school book only the fact that "Ann Rutledge is learning grammar," the reader of Mr. Lincoln's life knows that he and Ann studied grammar together. The beautiful Ann Rutledge died, and Lincoln acknowledges that for a time he "ran off the track." "I did really love her," he says. "I loved her dearly," and he kept on saying to himself all the rest of his life—"I loved her dearly." And we love her for his sake; and that kind of love will always be holy as long as Adam and Eve are remembered.

Such tales of his tenderness and tears are told by nearly every man of the hundreds who went up to Washington to find out what was in that four-story head and the four-cellar-deep heart beneath it. It takes all the tales to round out the sum of the good that was concealed in the man. Fourteen years ago, in a "Lincoln number," THE INDEPENDENT published the impressions of more than forty of these observers. They were too good to be lost in the files and have been brought out in book form by Crowell.³ Every side of the man is illuminated. The difficulties they had in throwing the searchlight thru the deep windows which let in all light but emitted only such as he pleased, is told by some. Some are a little dazzled

¹ ABRAHAM LINCOLN: AN INTERPRETATION IN BIOGRAPHY. By Denton J. Snider. St. Louis, Mo.: Smith, Pott & Co. \$1.50.

² ABRAHAM LINCOLN: TRIBUTES FROM HIS ASSOCIATES. With Introduction by the Rev. William Hayes Ward, D.D. New York: Thomas Y. Crowell & Co. 60 cents.

³ LINCOLN AND THE SOLDIER BOY. BY J. F. CHITTENDEN. New York: Harper & Bros. 40 cents.

by the curious frankness that occasionally flashed out, lighting up his homely features, even if it did not tell much of what was going on in the mind. But among them all his movements and the movements of his mind become pretty well fixt. Mr. Henry C. Bowen takes him to Beecher's church in Brooklyn, and afterward, finds on the platform of the Cooper Institute a greater than Mr. Beecher. Frederick W. Seward gets the new President to Washington, avoiding Baltimore and its treacherous roughs. Some little contradictions have to be reconciled by the historians still. For instance, Mr. Seward is sure that his father met the silent midnight party at the Washington station, and has his father's word for it; but Mr. E. B. Washburne, who was there, says: "I placed myself behind one of the great pillars in the Washington and Baltimore depot, where I could see and not be observed." Seward had not then appeared—"to my great disappointment." Nor did he appear; the train was late; the watcher still waiting, "with fear and trembling." Every car emptied, and no Mr. Lincoln. "I was well nigh in despair, and when about to leave I saw slowly emerge from the last sleeping car, three persons. I could not mistake the long, lank form of Mr. Lincoln, and my heart bounded with joy and gratitude. He had on a soft, low-crowned hat, a muffler round his neck, and a short bob-tailed overcoat." They got into a carriage—the four of them—drove to Willard's Hotel, and "had not been there two minutes before Governor Seward hurriedly entered, much out of breath and somewhat chagrined to think he had not been up in season to be at the depot on the arrival of the train." Such is history. These, however, are tangles for the historian; not for us, now.

Other men—twenty-one of them—contributed to a book⁴ publisht twenty-four years ago and now republisht with freshness of illustration, their recollections of Mr. Lincoln. The nation's hero had gone down twenty years earlier in such a crashing of two civilizations as has never been noted in the world's annals. The

air was still atremble with the hurry call of history to make up the record. Lincoln's place was already taken beside Washington, and the two sitting together were the marvel of the world. But what a contrast! We know the distinction of Washington, his dignity of bearing, his patrician manner. But the other? Here is a picture of him in the Court House in Springfield, Ill., in 1844—"sitting in a cane-bottom chair leaning up against the partition, his feet on a round of the chair, and surrounded by many listeners . . . his anecdotes were so droll, so original, so appropriate and so illustrative of passing incidents that one never wearied. He never repeated a story or an anecdote, nor vexed the dull ear of a drowsy man by thrice told tales." Three years later, when he was only thirty-six, but was already "Old Abe" to his neighbors, we have another picture of him—this grand man who was to sit beside Washington:—"Tall, angular, and awkward, he had on a short-waisted, thin swallow-tail coat, a short vest of same material, thin pantaloons, scarcely coming down to his ankles, a straw hat and a pair of brogans with woolen socks." He was not a proud man—this future hero of a nation, whose hair Mr. Beecher found one day "every-way for Sunday," looking like "an abandoned stubble-field," his vest "going free." One day he goes to the library of the Supreme Court, whose judges he was at a future time to appoint, "by and with the advice and consent of the Senate." He went there to get law books. Putting together what he wanted, he took "a large bandana handkerchief from his pocket, tied them up, and putting a stick which he had brought with him thru a knot he had made in his handkerchief, adjusting the package of books to his stick, he shouldered it and marched off from the library to his room." He never got over the habit of doing the thing he wanted to do, easily, if not always gracefully. When he went to Washington as president-elect, and the leaders of the Democratic party took it amiss that he should think of such a thing, the head of the army, Winfield Scott, without consulting Congress, applied to the "secret service" to help him find out who in Baltimore didn't like it, and why, and

⁴REMINISCENCES OF ABRAHAM LINCOLN.. By Distinguished Men of His Time. Collected and Edited by Allen Thorndike Rice. New and Revised Edition. New York: Harper & Bros. \$2.00.

what they proposed to do about it, anyway. When his detectives were equipt, they were "all good rebels; they had long beards and wore slouched hats and seedy coats; they chewed tobacco and smoked cheap cigars; damned the Yankees and drank bad whiskey." Thus they were successful, and Lincoln went into Washington the round-about way; and there his greater life really began—misunderstood for long, full of conflict in the Cabinet, tantalizing and worrying criticism in Congress. Lincoln sits beside Washington in the Temple of Fame, and the world "observes" no particular difference in the quantity or quality of the grain in the cock-loft.

Mr. Henry C. Whitney is known to many as the author of "Life on the Circuit with Lincoln." He was closely associated with Lincoln before his election to the presidency, and afterward was appointed paymaster in the army. His account of the great President⁶ is simple and straightforward, without literary merit; a careful collection of facts without throwing any new light upon his character or making any change in the accepted picture. The value of the work seems rather to be to corroborate the general idea by a vast accumulation of facts. There will be plenty of readers who will be glad to go over these facts and Mr. Whitney's arrangement is a good one to employ. For school use, especially from the fifth to the eighth grades, the brief and interesting life of Lincoln in the Riverside Literature Series⁷ can be recommended without reservation. The brochure on Lincoln's use of the Bible⁸ shows how the backwoodsman acquired prose style which touched the people and astonished scholars, a point worth emphasizing now the Bible is not the daily food of the masses. Mr. Brand Whitlock, Mayor of Toledo, and author of "The Turn of the Balance," gives us in one of the pocket volumes of the "Beacon Biographies" a remarkably complete and satisfactory sketch of Lin-

coln's life with references to the best sources of fuller information.⁹

The Illustrated Bible Dictionary. Edited by the Rev. William C. Piercy, M. A. With Colored Maps and 363 Illustrations. 8vo, pp. xvi, 974. New York: E. P. Dutton & Co. \$5.00 net.

We have here another compact, one-volume dictionary of the Bible, intended for those who cannot afford the Hastings or Cheyne dictionary of four volumes. Of course there is great compactness required in order to include the articles in the larger dictionaries, and to make room for illustrations which those dictionaries conspicuously lack. But the chief purpose is to supply a volume confessedly conservative in its theology, not simply more conservative than Cheyne's, but also than Hastings's. In this the editor has succeeded. This is seen in the prominence of Dr. James Orr as writer of the article about the "Pentateuch" and other articles touching on inspiration and the higher criticism. The miracle is not explained away in the story of Jonah, but partially in that of Balaam's ass. Equally Samson's exploits are historical, but with "Oriental exaggerations." We observe, however, that the Second Isaiah is recognized by Prof. James Robertson, who writes the article on the prophet; but this is rather an exception to the generally "safe" character of this dictionary. We must question the wisdom of depending so much on Col. C. R. Conder on such topics as "Writing" and "Semitic Languages." Colonel Conder appears to have been the special adviser or co-editor. The statement on p. 955 that all our alphabets go back to the Syrian Hittites is one of Conder's notions, and he does not even mention the usual reference to the Egyptian hieratic writing. American contributors are very few. We find in the list of a hundred writers only one American, Prof. George F. Wright, of Oberlin. The numerous illustrations are valuable, altho we hesitate to recognize the "tree of the knowledge of Good and Evil" on the famous "temptation seal" on p. 276. This compact volume will fill a useful service, as it is crammed with information, and the student will discover its purpose in the conflict against the school of higher critics.

⁶LINCOLN THE CIVILIAN AND LINCOLN THE PRESIDENT. NEW EDITION. By Henry C. Whitney. Ed. by Marion Mills Miller. New York: The Baker & Taylor Company. 16mo.

⁷THE LIFE OF ABRAHAM LINCOLN FOR BOYS AND GIRLS. By Charles H. Moore. Boston: Houghton Mifflin Company. 25 cents.

⁸LINCOLN'S USE OF THE BIBLE. By S. Trezona Jackson. New York: E. P. Dutton & Co. 15 cents.

⁹ABRAHAM LINCOLN. By Brand Whitlock. Boston: Small, Maynard & Company. 50 cents.

The Hermit and the Wild Woman. By Edith Wharton. New York: Charles Scribner's Sons. \$1.50.

The stories in this volume are written in Mrs. Wharton's usual literary style of elegance and excellence. In fact, the worse the story, the better she writes it. The moral consists always in how literally and delicately she can produce and interpret vice according to the best social standards. And even when she abandons the gilded stage of society life and chooses two saints of ancient times for the hero and heroine, as she does in the initial tale in this book, she casts about them a situation so scandalous in its significance that the reader naturally wonders how they remained sanctified. However, it is really the most significant of the series that make up the volume, the remainder being the usual social studies in temptation with which Mrs. Wharton usually deals. But the scene of this first one is laid upon a barren ledge of rocks somewhere in the early Catholic times. She has made an exhaustive and instructive study of the religious asceticism of this period, and has dramatized in the life of *The Hermit and the Wild Woman* some of the barbarous beliefs and customs of the pious in those days. The effect of the tale upon the reader is the same as that produced by her stories of social life—that of revulsion. There can be no doubt that Mrs. Wharton can write a fascinating story, but it would be a matter of interest to some who are interested in psychological phenomena to know whether she could conceive of a pleasant story that would attract as well as fascinate.

Amédée's Son. By Henry James Smith. New York: Houghton, Mifflin & Co. \$1.50.

There are places where the very earth seems to end in poetry—not a summer madrigal merely. Nature makes of her meadows and mountains a sonnet, a dirge of her barrens, a deep-sea verse of her sea—and it is put together so that it lasts year after year, age after age, like Homer's epic. In such a place as this Mr. Smith has laid the scene of his story of *Amédée's Son*, in a fisherman's village on Cape Breton, in sight of all weathers,

beneath the wings of an old religion, out of the arms of good women, companioned by the sea and by legends as old as the sea. And the story itself is of no great importance, only of a youth whose ambitious old grandfather hides him from himself, and who finds himself in a chance letter left by his own father, long since dead. But the way it is told amounts to a very great deal. There is the color in it of old doorways, dark and sober as honesty, the dash of wind and waves, the flavor of the salt, and there is a fineness in the author's friendliness to wisdom, like one who has been at home a very long time with good human hearts and knows all their beauties, superstitions, hopes and weaknesses. He is already well known as a short-story writer. Some day he will make a great book. This one is merely a character sketch of the earth and the man in a remote place, but even at that it is a notable piece of work.

The Great English Letter Writers, with introductory Essays and Notes by W. J. Dawson and C. W. Dawson. New York: Fleming H. Revell Co. \$1.00 each.

This anthology of English letters, well chosen and well classified, makes good reading and let us hope may be used largely as inspiration in the "Gentlest Art," as Mr. Lucas calls letter writing in his recently issued and finer selection. The present little books have been compiled with appreciation, as the list of authors and the running titles to the letters show. Omissions there surely are. The Autocrat is not here, nor is Dean Church, but the line had to be drawn. The indices—but let us illustrate: One title is "How Athens Taught Her Historians to Write." This is indexed under "How" and nowhere else. Really, it is almost as laughable as it is slovenly.

The Assassination of Abraham Lincoln and Its Expiation. By David Miller Dewitt. New York: The Macmillan Company. \$2.25.

Mr. Dewitt has studied the official records of the conspiracy trial, of the trial of John H. Surratt and of the impeachment investigation of 1867, and has sought to sift the actual incidents of the plot from the mass of myth and legend in which they have become in-

volved. The care and patience with which the work has been prosecuted are evident. Not so much can be said for its judicial temper; it is in parts extremely passionate and violent in statement; and its account of the conspiracy trial seems rather like an impassioned plea for the defense than a historical account of what happened there. Mr. Dewitt throws doubt upon the shooting of Booth by Boston Corbett. He draws a curious parallel between the death of the assassin and that of Robespierre, and if he does not plainly state that Booth committed suicide, at least leaves the reader to infer that his own judgment is in favor of the theory of suicide. The theory is a crotchet, with nothing to sustain it.

Literary Notes

....The William Belden Noble Lectures at Harvard for 1907 were by Bishop Charles H. Brent, of the Philippine Islands. His subject was *Leadership*, and he spoke on such themes as "The Power of the Single Motive," "The Power of the Human Will," "The Representative Leader of Men." The lectures are published by Longmans, Green & Co.

....All those who are interested in a fresh water aquarium—and that should include every boy and half the girls and grown ups—will find *The Fresh Water Aquarium and its Inhabitants*, by Otto Eggeling and Frederick Ehrenberg (Henry Holt Co.), amply adequate to meet all the requirements and emergencies of the amateur aquarist. The authors give a complete list of aquatic plants and fishes and the text is written in an interesting manner. The book, which is well illustrated, is the best practical guide to the aquarium we know.

....The theory that Paul's letter to the Ephesians was in reality an epistle to the church at Laodicea is not new, but the Rev. John Rutherford, of Renfrew, Scotland, introduces it in the title of his commentary, *St. Paul's Epistles to Colossae and Laodicea* (imported by Charles Scribner's Sons. \$2.25 net). Mr. Rutherford holds to the Pauline authorship of both letters, but contends that they were written at the same time and dispatched by the same messenger. A useful part of the commentary is the Greek text of the two letters in parallel columns, with the parallel expressions indicated in broad-faced type.

....Mrs. L. H. Harris wishes to express her regret at having made, in her article of November 19th, on "The Advance of Civilization in Fiction," the reference to Mr. Upton Sinclair which brought out his indignant "Protest" in our issue of January 9th. The story that Mr. Sinclair acted as butler in a fashionable New York household to secure material for his

"Metropolis" was widely circulated and the retraction, as usual, did not keep up with it, so Mrs. Harris was in no wise at fault in using it. Secret service sociology has become so common and popular nowadays that it is rare to find a reformer who regards it as in any way reprehensible.

Pebbles

"My pig has a red nose."

"Sort of a Harvard rooter, eh?"—*Yale Record*.

FIRST DANCER—She's a very attractive girl.

Second Sufferer—Yes, her father was a big steel magnate.—*Yale Record*.

FASTIDIOUS FRESH—I hired a dress suit and tore it. Should I pay for the damage?

Cynical Soph—No, you took it to rent, didn't you.—*Yale Record*.

"My poor man, how did you acquire such a thirst?"

"It wus dis-a-way, mister; when de doctor operated on me for appendicitis, he forgot an left a sponge inside o' me.—*Medical Record*.

GR-R-R!

Cheerful Idiot—What's the difference between a Bostonite and a cannibal?

Compassionate Friend—I suppose one lives in Mass., and the other lives en masse.

Cheerful Idiot—Oh, no. One eats Boston beans and the other eats human bein's.—*Columbia Jester*.

A SCHOOL teacher was endeavoring to convey the idea of pity to the members of his class. "Now, supposing," he said, "a man working on the river bank suddenly fell in. He could not swim and would be in danger of drowning. Picture the scene, boys and girls. The man's sudden fall, the cry for help. His wife knowing his peril and hearing his screams, rushes immediately to the bank. Why does she rush to the bank?"

After a pause, a small voice piped forth:

"Please, sir, to draw his insurance money."—*Home Herald*.

SEATED one day at the table,
I was stuffy and ill at ease,
And my fingers wandered idly
Over the nuts and cheese.

I know not what I had eaten,
Or what I was eating then,
But I struck a delicious flavor
That I'd like to taste again.

It linked all elusive savors
Into one perfect taste,
Then faded away on my palate
Without any undue haste.

I have sought, but I seek it vainly,
That one lost taste so fine.
That came from the head of the kitchen,
And entered into mine.

—*Carolyn Wells*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.
One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Senator Root on Direct Elections

DIRECT election of United States Senators and direct nominations are two different propositions. A State can nominate its Senators in any way it chooses, as that is a State affair, but it cannot elect them any way it chooses. The Constitution tells how they shall be elected, and no different way can be taken without a change in the United States Constitution. They must be elected by the members of the two Houses of the State legislatures. But the State legislatures can have candidates put forward for election in as many ways as they please. Newspapers can nominate them, or party caucuses of the legislature can nominate them, or there can be nominations by the people, direct or indirect, in a dozen different ways.

The usual way has been to leave the nominations to the parties in the legislatures; but as every one knows there has been perfect liberty of candidates to put forward their competing claims up to the very day of final decision. The people have had little to do with the result, for in the election of Senators the States have not followed the example of the nation in the choice of the President.

The Constitution provides a definite way for the election of a President. The States must choose electors, just as they choose members of the legislatures. These electors are supposed to use their wisest independent judgment in the choice of a President. But they do not, for there have been both an indirect and a direct nomination of President. The parties, unrecognized in the Constitution, have by their own machinery selected candidates. Then the people, by a direct nomination, tho not nominally such, vote for the candidate they choose, while on paper it is a vote for electors. The electors are pledged, tied, to vote, when they come together, to do just as they have been directed to do by the people. They have no choice. They are super-numerary and useless, and continue to meet solely because it is in the Constitution that they must. We have got around the Constitution, and the people choose instead of the electors.

Now this is what is proposed to do as to Senators, to make the election as popular as is the election of President. What is good for the higher office in the gift of the whole people is good, the reformers say, for the lower office in the gift of a single State.

Now there is no proposition, no campaign for the change in the election of Senators. No one is making an effort for a Sixteenth Amendment in that direction. All that is proposed is to change the way of nomination, so as to make it more popular, and so as to make the nomination equivalent to an election, just as the nomination of the President by the people is equivalent to an election. The people will then vote for members of the legislature, already pledged to a Senatorial candidate, just as electors are chosen pledged to a Presidential candidate.

Several States have by law adopted a plan of direct nomination of Senators. Governor Hughes recommends such a law for New York. In the last gubernatorial campaign, Mr. Chanler, the Democratic candidate, asked Governor Hughes if he favored the direct election of Senators, and he said he did, but that is not what he proposes, because he knows that would involve a change in the Constitution. All he proposes is the

direct nomination of Senators. Senator Root, who has just been elected by the State legislature, says he is opposed to the direct election of Senators, but he expressed himself earlier as in favor of the direct nomination. Perhaps he has changed his mind—we do not know; but thus far he has not uttered a word against the direct nomination favored by the Governor.

On the face of it the direct nomination is preferable. It is best always to come as near to the will of the people as possible. Even if the people make blunders, it is best to educate the people and let them correct their own mistakes. But the experiences of direct nomination in Oregon and Wisconsin give occasion for discussion of the question. In one State the people nominated a Democratic Senator, and a Republican legislature elected him. In Wisconsin the legislature repudiates the direct nomination, and Senator La Follette, father of the plan, leads the repudiation. It is well, therefore, to have some further study of the method, at least, of accomplishing the will of the people, and of assuming what it is. The law providing for direct nominations should be most carefully drawn. The presumption is strongly in favor of the closest appeal to the people, because it is the people, and not the bosses, that should rule. The presumption also is that there will be less chance for dicker-ing and corruption when the people choose than when the politicians choose, many of whom are in politics for a living. We will consider the objections, but we expect the verdict of the country will finally be in favor of the most complete democracy.

The Naval Program

WE ask our readers to ponder carefully the article in this week's issue on the men and motives behind the big-navy movement. Surely Dr. Jefferson's withering sarcasm is deserved, for militarism masquerading in the guise of peace bears no little resemblance to the fable of the wolf in sheep's clothing.

Now, when do we "peace at any price" men want? They want twice as much as they will get, but they expect an appropriation of \$125,000,000 for the ordinary

running expenses of the Navy and \$38,000,000 extra for new ships, great and small. This is heavier than England's naval budget and a third heavier than France's, Germany's or Japan's.

If this present rate of increase continues it will not be so very many years before we shall actually be competing with Great Britain for the naval supremacy of the world.

But what conceivable use can a titanic navy be to the United States? Two years ago President Roosevelt told the world:

"We are no longer enlarging our navy. We are simply keeping up its strength; for the addition of one battleship a year barely enables us to make good the units which become obsolete. The most practical step in diminishing the burden of expense caused by the increasing size of naval armaments would, I believe, be an agreement limiting the size of all ships hereafter to be built."

Now he wants four "Dreadnaughts" bigger than any others in the world and a host of lesser men of war. Why this sudden change? Does he know of any new reasons that now make war more likely than two years ago? Unless he does his present demands are infidelity to The Hague and Pan-American Conferences and to the twenty-four peace treaties negotiated by Secretary Root with our sister nations. Surely if we are to enter the mad scramble of militarism the burden of proof is on those who advocate the greater army and navy.

The whole question, however, comes down to this: The only use for a great navy is either to attack England, France, Germany, or Japan, or to repel their attacks on us. We can leave the other naval powers out of account, for manifestly a small navy can handle them whether in offense or defense.

But the English are our kinsmen. The time has gone by when we shall ever fight them again. The Venezuela incident and the sympathy they gave us in the Spanish war and we them in the Boer war demonstrates this. Blood is thicker than water. France has no territory near ours. Who can suggest any conceivable issue to break the ancient ties between the two greatest republics of the world? The Monroe Doctrine, which has at last been made a canon of international law, and the Porter proposition, preventing the use of force in col-

lecting debts, will prevent Germany seizing Latin-American territory. That, together with the peaceable partition of the Samoan Islands, leaves nothing to cause the slightest anxiety as to our relations with Germany. But Japan! We surely must prepare for Japan. Well, the recent treaty and agreement signed by Secretary Root and Baron Takahira taken together make war absolutely impossible between these two great Pacific nations as long as the treaty and agreement endure. And history, we rejoice to say, affords no instance yet of a nation breaking an arbitration award. Japan has clearly shown that nothing short of a studied insult will cause her to break the ancient friendship begun by the visit of the American fleet under Perry in 1857 and cemented by the visit of the American fleet under Sperry in 1908.

If we propose, however, to follow the ideals of Alexander, Cæsar and Napoleon and wage war on England, France, Germany or Japan, then by all means let us build the biggest fleet in the world. But is there a single statesman in America who will openly advocate such a policy? If, on the other hand, we only want to be ready to repel attacks and "preserve peace," then let us use a little common sense and try to think what any nation has got against us at the present moment to make them want to fight, or, assuming that they do want to fight, what can they hope to gain by fighting. The United States is invulnerable from enemies without. The genius of our people and our geographical position make this so certain that we could not be subjugated even if we had no navy at all. Let us at least give the wicked foreigners the credit of having sense enough to see this, even if we must suspect their acts and protestations of friendship and good will.

Both Hague Conferences called upon the nations to take up and study the question of the limitation of armaments. Last December the Federal Council of the Churches of Christ in America, representing 18,000,000 Christian communicants, called upon Congress to stop this wicked increase of armaments. The labor unions have always been most emphatic in protesting against war budgets, and now at last the boards

of trade and chambers of commerce are beginning to realize the economic waste of armaments, and to fall in line with the advocates of genuine peace.

The Senate is in a position to render the country and the world a great service by refusing concurrence with the action of the House in voting the addition of two battleships of a larger size than has ever yet been built by any nation. A small, compact and efficient navy is all we need—one new battleship a year, as President Roosevelt sagely suggested just after he had received the Nobel Peace Prize. Let the United States lead the world in the movement for the limitation of armaments.

Our Duty to Posterity

IN a notable passage in Cicero's "De Senectute" Cato describes the labors of aged husbandmen, who not only cultivated their annual gardens, but also planted orchards whose fruit they knew they would never eat, and who did it, they said, in obedience to the immortal gods, by whose bountiful providence these fields were received from their ancestors, and whose will it was that they should deliver them improved to their posterity.

The first duty to posterity is to have posterity, and to pass down an improved human race to the succeeding generations. This obligation is something other than love of the children which we happen to have, and the doing the best we can for them. It is what should come before it, the recognition of the broad duty of doing one's part in providing that there shall be a succeeding generation to take our place.

Humanity is the supreme product of nature, the noblest work of God. Without man the world would be vacant of value, for there would be nobody to value it; there would be no thought in it, no sense of beauty, no apprehension of right and wrong, no learning, no culture, no civilization ever growing higher, only the brute savagery of primitive forests, as in the days when

"A monstrous eft of old was the lord and master of earth."

The man and the woman who do nothing to secure the succession of the race put the world back, so far as they are con-

cerned, and for their part in the earth's history, to the rule of beasts, of tigers, bison, wolves and swine.

The value of humanity is in its totality of individuals, with its multitude of useful workers and its normal number of those of exceptional worth. Double the number and you double the sum of intelligence for useful service and progress. You also double the number of exceptional geniuses or of men of unusual talent, who will more than double the worthy product which lifts civilization. There is room for them in the world. It is but thinly populated, even in our own country. Ten times as many could be supported, even without their pushing out to overflow the world's vacant spaces.

The duty to supply posterity should rest with peculiar weight on those who recognize that they have inherited something more than the average of ability, and have received more than usual opportunities of culture. Their posterity will be above the average. It is a duty not only to have posterity, but that duty belongs peculiarly to those who may expect to have superior posterity. They ought to feel this obligation, to think of it in their young strength, and accept without flinching their special privileges and duty of, to, and for posterity, because the high quality of posterity depends on their doing their part. If the succeeding generation is to be supplied by the inferior, the ignorant, the unambitious and the vicious, the race will deteriorate. Its improvement depends on the birth rate of the competent. There is no higher obligation resting on them as a section of the community than to see that their sort predominates in the world.

In most of the world a full half of infants born die before reaching mature age; in more favored communities one-third die. If, then, all who reach the age of maturity, say twenty years for women and twenty-five for men, were to marry, and there were three children to each marriage, it would do nothing more than to maintain our present population. Those who do not marry, or who have less than three children, would to that extent reduce the population below its present numbers. It is desirable that a certain number of defectives or insane or vicious should not marry and perpetuate their

kind. Some who marry will die young; some will suffer from disease. If all marry who are fit to marry, they will then need to have more than three children to each marriage to keep the population from diminishing. But to maintain the present population is not the full duty of a generation. It should increase its numbers and its quality. The large families are the pride and nobility of a nation.

It has been often said that it was the weakness, the misfortune of Europe in the Middle Ages that its noblest, most intelligent and religious youth of both sexes were made celibates by their religion. If one would reckon this loss let him consider the multitude of our leading men in all walks of life who are children and grandchildren of clergymen. At present a similar misfortune threatens us in the army of our choicest young women, of the best education, who by a false condition of society become teachers when the world needs them as heads of families, or who in other ways become wage earners and remain their best years unmarried. They are doing their best with other people's children, to a great extent children whose abilities are less than their own would possess, children who will get a less education and will have a less hopeful future than their own would have.

Not only should intelligent and conscientious people accept the duty, but should also have an honest pride in such a considerable family of children as shall more than supply their place and shall benefit the world. Such a family is the most beautiful, the most noble, the most valuable asset one can have. There seems with many foolish people now to be a false sentiment on the subject, where it is not base cowardice. Children are hostages to fortune; they are a surety of diligence and character; they are a well-spring of anxious delight; and in old age they are a support and pride. And yet from lack of courage, or from a greed for pleasure or money, a herd of cowardly celibates threatens us with hastening ills where wealth accumulates and men decay. We would have parents teach their children, and help their children, to marry and bring their own children to the ancestral home—both to their pride and their country's pride.

If the sense of this obligation to posterity can come to us as it did to Cato's husbandmen, we may yet provide those sociological betterments which shall encourage instead of discouraging marriage, and shall teach again the old doctrine that marriage is honorable to all and that children are a heritage from the Lord. That will prove that our nation has a collective will to live. The soldier risks his life for his country. Every true man and woman will have the true soldier spirit, ready to toil or suffer for his country; and his country means the next generation.

A Court for Domestic Cases

THE establishment of special courts for the hearing of cases against children charged with misdemeanors has been a reform of much importance. A large proportion of all child offenses spring from thoughtlessness, bad example and bad environment. Young offenders not criminally minded can in many instances be set right and kept from falling into habitual misconduct, whereas the experience of many generations has demonstrated that they can surely be confirmed in criminal careers by bringing them into close association with hardened malefactors, as used to be the rule when, in almshouses and jails and in the ordinary criminal courts, they were herded with the criminal element of all ages and all degrees of toughness. The children's court and the parole system, supplementing the reform school, have largely multiplied the possibility of diminishing the class of habitual criminals.

Some of the reasons which were urged in support of the proposition to create children's courts hold good for the proposal, which is being urged by the Educational Alliance and other interests, that there be established special courts for the hearing of domestic complaints. There are yet other reasons, however, for this latter reform of a different character, and quite as cogent. They are similar to the reasons for the provision of matrons in police stations and jails. They spring from that sense of delicacy, not to say decency, which is one of the finest attainments of civilization.

Included in the class of domestic relations cases which come before the courts

is the multitude of complaints brought by deserted wives, left with little children to care for, without means of support. The observation of social workers and charitable agents who see much of this particular kind of misfortune warrants the assertion that thousands of the deserted wives are women of good character and refinement, to whom it is a torturing humiliation to appear in the ordinary courts and mingle there with pickpockets, drunkards and worse criminals, and, in their hearing, tell the story of their destitution and unhappiness. Every consideration of delicacy and sympathy calls for a proper amount of seclusion and courtesy in the hearing of such cases.

Certain difficulties in the proposed plan have been pointed out. Magistrate Barlow, for example, says that it would work great hardship if women from the most distant parts of this city were obliged to journey long distances to a central court. This objection can hardly be taken very seriously. Mr. Barlow seems to have overlooked the circumstance that even the most unfortunate of deserted wives would not have to make the necessary journey to the court from which she asked relief every day or every week, as a part of her normal existence, as the shopgirl journeys to and from her place of employment. It is unusual for the same victim of domestic infelicity to resort to the ameliorations of the law so often as to make the incidental travel burdensome. On the whole, we suspect that the women most concerned would prefer to take one or two subway journeys than to be obliged, as now, to appear in the ordinary courts.

To what extent a special court of this kind would be more successful than are the magistrates who deal with such cases now in amicably adjusting domestic difficulties that have not reached the stage of desertion, or of divorce proceedings, we shall not venture to predict. Mr. Barlow's opinion that "it would take a direct descendant of an angel to take entire charge of such a court and handle it right" does not impress us as more weighty than his view of the necessary going to and fro. As an *a priori* guess we should suppose that one magistrate, specializing in this class of cases, would become more adept in dealing with them than many magistrates taking them up along with scores of complaints of a dif-

ferent character are likely to do. Be that as it may, it is, we think, quite clear that more can be said in behalf of this experiment than in opposition to it, and that it is one which should be fairly tried.

Cancer Questions

THE successful eradication of yellow fever from certain localities as soon as it was found that the germ was carried by the *stegomyia* mosquito, and the cure of diphtheria when its antitoxin was discovered, created the impression in the public mind that all diseases would readily succumb to a scientific attack. All you have to do, thought the average man, is to hunt up the germ with a microscope and then keep it out or get an antitoxin to counteract it. Consequently there was a general expectation that the establishment of well endowed institutions in Europe and America for the investigation of the two most dangerous diseases, consumption and cancer, would be speedily followed by a satisfactory cure or preventive. Such cures are frequently announced, but not by those who have given the question most study.

The foes of the human race use very diverse weapons. The discovery of the cause of one disease only gives a clue to the secret of a few closely allied forms. The first duty and chief accomplishment of the cancer institutes have been the clearing away of the mass of misinformation and myths surrounding the subject. The latest report of the British Imperial Cancer Research Fund, summing up its six years' work, is chiefly composed of such negative enlightenment. No "cancer germ" has been discovered. It is not thought that there is one. No "antitoxin" has been prepared, because there does not appear to be any toxin. Cancer is not communicable and there does not seem to be any way of conferring immunity to it. It can be transferred from one animal to another of the same species, but only by the transplanting of the living cells. This relieves us of the fear of catching the disease from one in the family or from infected clothing, food or building. Men handling cancerous rats by the thousand day after day for years are not affected.

Many of the popular beliefs prove on

examination to be devoid of evidence. Cancer is not a product of civilization; it is not confined to human beings; it is not a penalty for eating flesh, or fish, or tomatoes, or cheese; it is not inherited; it is not certain that it is increasing. On the contrary, it afflicts vertebrates all the way down the scale of life to marine fishes. Men, savage and civilized, and animals, wild and tame, are not free from it. It prevails among the vegetarians of Japan and India as well as among the omnivorous Europeans and Americans. According to the medical statistics of England and Wales in 1889 the chance of a man above thirty-five years ultimately dying of cancer was one in twenty-one, and for a woman of the same age one in twelve. Now, according to the reports, the corresponding chances are one in eleven for men and one in seven for women. Whether this represents a real increase or merely greater ability to detect the disease and greater care in reporting it, is not yet settled. On the cause and cure of cancer the report of the Imperial Research Fund contains little to satisfy public curiosity. The most that can be said positively is that cancer originates, apparently spontaneously, at points of chronic irritation of any kind, and that under certain conditions the system may react against it and effect a cure. The only treatment recommended is early surgical removal of the tumor. From experiments recently reported by other investigators it seems likely that the radium emanation may be used successfully in some cases.

Progress in China

THERE is an Asiatic solidarity which may surprise the Westerners. The rise of Japan stirs India; the constitutional change in Turkey excites China to emulation. While all Asiatic countries arouse queries and problems, China remains the mighty mystery of the future, a menace or a blessing to the whole world of the next generation.

Two new ideals seem to have been created within the increasing body of ardent students in China, one that of freedom from all external authority, and the other the establishment of constitutional liberty. These two ideals and aims are em-

hatically recognized by the Rev. T. Richard, D.D., the able secretary of the Christian Literature Society, which has its headquarters in Shanghai, and which is doing so much to supply the need for books of Western learning for distribution in China.

That the new ideals are making progress in China appears from the fact that the various Viceroys and the Peking Board of Education, in spite of many obstructionists, are making fair progress in the work of introducing the new learning. Some of the old examination halls, covering acres in extent, have been pulled down to give place to normal schools, and the rest are disused and will follow suit in due time. In line with this is the stream of young students sent to Japan and those now coming to this country.

The postal and telegraph systems are growing with amazing rapidity, so that even Tibet is now connected with Peking by wire. These, with the railways, mean the unification of sentiment and of government. New railways are now being built and managed entirely by Chinese, and the principal capitals are now connected or soon will be, while branch roads are being constructed east and west. The last international friction comes from the assumption by the Chinese Government of the telegraph center in Peking. New industries on foreign lines are created, and commercial companies organized, such as banks and fire and life insurance companies, and large issues of Chinese bank notes are now put upon the public.

The passion for reform has become so general that we cannot doubt that the repeated promises of a constitution will in a few years be fulfilled. But this is an internal problem. Even more serious for outside nations is the growing determination that all foreign control shall cease. We cannot doubt that Chinese ports will not remain indefinitely as foreign concessions ruled by European governments. England and Germany and Holland will finally have to withdraw from their seats of vantage, so humiliating to Chinese pride, and even France may not be able to hold Cochin China when once the national consciousness asserts itself.

If China is thus regenerating herself, giving up her old ideals for new ones

borrowed from Christian nations, will she also adopt the Christian faith? Why not? While Christianity is doubling its adherents in India nearly once in ten years, and similar progress is making in Japan, Korea and China, the internal awakening appears in Chinese Confucianism, as in Hindu Brahminism, Japanese Buddhism, and even Turkish Mohammedanism. All these are trying to resuscitate their ethics into a living force, that is, to infuse them with Christian principles, but under the old names. Not only the Government universities in China, but even the Buddhist colleges have started the study of Comparative Religion in order to find out the best. The more of the teaching and spirit of Jesus they impart, the more we can rejoice, by whatever name it is called.

The study of the movements in China and Japan is of the greatest interest and importance to students of human progress all over the world. And yet the United States discriminates against the Chinese, and California insults both the Chinese and the Japanese by proposals of forced separation. It is not prudent; it is not right.

The Country's Wealth

The Bureau of the Census at Washington reports that the real taxable property of the United States amounts to about fifty-five billion dollars, the exempt to six billions. Railroads and their equipment, including street railways, add to our wealth nearly fourteen billions more, and nearly another billion and a half comes from telegraph and telephone systems, adding canals and shipping. There is half a billion under the head of electric lights and power stations. Live stock counts up four billions more, and all sorts of agricultural products, with farm machinery, gives us two and a half billions. Manufactured products, added to manufacturing machinery, amounts to over ten billions. Gold and silver coin and bullion add another two billions; clothing two and a half billions; and furniture, with carriages, and that sort of property, sum up nearly six billions more. These, with other smaller items, give us a total of one hundred and seven billions, to be compared with seven billions in 1850.

and about twenty-five billions at the close of the Civil War. It would not be altogether pleasant to add to this magnificent showing, if we must, that millionaires own nearly the whole of it. Mr. Powers, who reports for the Census Bureau, says there is no reason for believing that this is true. He begins at the other end of the reckoning and shows that the common people have an enormous holding in farm lands and other homesteads, in bank deposits, and in other forms of real and personal property. We hope that the next census will make this point decidedly more definite.

The Waste of Rivers

One of the most startling facts coming to the American public from the latest report of the Secretary of Agriculture is that the rivers of the United States are annually pouring into the ocean not less than one billion tons of sediment; and that this immense volume of waste consists of the most valuable elements of the soil, the very richest material, as the Secretary calls it, "the cream of the soil." At a moderate appraisal the annual loss exceeds all the land taxes of the whole country, and this loss is steadily increasing instead of decreasing. This does not take into account the coarse detritus which is pushed along the sides of the larger streams. Then we have to take into account, besides the soil impoverishment, that the sediment pollutes the waters that carry it, endangering the lives of those who are compelled to use them, and reducing their value for manufacturing and other domestic purposes. In fact, we have here a combination of evils that human language cannot cover or human thought embrace. We have not yet begun to do our duty in the way of forest preservation and other means for preventing the floods that cause the heavier part of this soil waste. The Department of Agriculture insists that as the evils begin on the farm, steadily destroying farm values, the remedies must also begin at the farm, and it has become a national duty to prescribe the remedies and enforce them. The chief individual contribution to an improved agriculture, with less waste, is along the line of intensive culture in the place of

careless extensive farming. Collective action will follow individual action; but to a certain extent State and national action is demanded as preparatory. To all this the geologists add the consideration that the constant addition of sediment to the bottom of the ocean changes the weight and stress on the earth's crust in its weaker portions, and is a cause of earthquakes.

The Rights of Chicago Women

The women in Chicago have been leaders and most efficient workers in all lines of civic progress, and have earned the ballot by demonstrating that they are qualified to use it wisely. They are now carrying on an active campaign for a municipal suffrage clause in the new charter, not after the manner of the suffragettes, but in a dignified and systematic way. The committee for the extension of municipal suffrage to Chicago women, which is leading the movement, is supported by over a hundred women's clubs in the city. If there are any men in Chicago who are better entitled to vote than the women at the head of this, such women as Ellen M. Henrotin, Jane Addams, Caroline M. Hill, Ella S. Stewart and Mary McDowell, for example, we should like to know their names. The charter, which was defeated by popular vote last year, had a woman suffrage clause as originally drafted by the committee of sixteen, but lost it in the convention thru the vote of the chairman, and was further mutilated in the legislature, so its defeat was fortunate. The same committee, in drafting the new charter, has recommended a separate bill to allow women to vote for city officers on the same terms as men. The men of Chicago should rise to the occasion and see that it is adopted.

Direct Nominations

In Nebraska the Legislature will probably pass a bill for the direct nomination of United States Senators. The bill provides that any candidate for the Legislature may have attached to his name on the official ballot the following pledge:

"I hereby state to the people of Nebraska as well as to the people of my legislative district that during my term of office I will always vote for that candidate for United States

Senator in Congress who has received the highest number of the people's votes for that position at the general election next preceding the election of a Senator in Congress, without regard to my individual preference."

Or he may sign an alternative statement that he will not feel obliged to regard the vote of the people as more than advice which he is at liberty not to follow; or he may decline to make any statement whatever. This seems to be a sufficiently clear way of making direct nominations more effective than they have proved in Wisconsin.

A Modern Hervé Riel Jack Binns, the Marconi operator of the "Republic," whose wireless messages brought aid to the shipwrecked vessel, has refused an offer to go on the vaudeville stage at \$1,000 a week, saying: "I am a wireless operator, not an actor, and I am going back to work. But first I am to have a month's leave to spend with my folks." That reminds us

"Demand whate'er you will,
France remains your debtor still.
Ask to heart's content and have! or my name's
not Damfreville!"

"Since 'tis ask and have, I may—
Since the others go ashore—
Come! a good whole holiday!

Leave to go and see my wife, whom I call
the Belle Aurore!"
That he asked and that he got—nothing more."

Negroes on Lincoln The February number of *The American Missionary*, the organ of the American Missionary Association, is devoted to eulogies on Lincoln by negroes, so called. Particularly do we admire the sanity of every one of these articles. Principal Imborden, of Enfield, N. C., says:

"The few discordant notes in our legislative halls have not caused the race to lose heart, but rather to fight more courageously for every right guaranteed by the Constitution and vouchsafed by a chivalrous people."

Professor Henderson, Dean of the Fisk University Divinity School, asks:

"Was Lincoln right? Have not the colored people in the progress of these forty-three years since his death justified his faith? . . . Let the two sections of the country come together by all means, but not over the grave of the colored man's political rights."

Professor Pickens, of Talladega College, says of Lincoln:

"He was a patriot statesman; altho he abhorred slavery in his own inclination, he was wise enough to see that the question of slavery was subordinate to the immediate object of saving the Union. 'If slavery is not wrong, nothing is wrong,' he declared as his private opinion; but it was his public duty and his oath to save the Union, regardless of slavery. His logic and clear seizure of the main point stood him in good stead against the overzealous Abolitionists on the one hand, while on the other hand, as soon as the interests of negro freedom and the interests of the Union coincided, the same unchanged and consistent logic answered those who assailed him on constitutional grounds."

Can anything be more touching than the opening of the article by Prof. Kelly Miller, of Howard University:

"One hundred years ago Abraham Lincoln was born amidst a lowly life. There is none other than the Son of Man to whom the great Messianic prophecy applies with such pointed pertinency. He grew up as a root out of dry ground. He had no form nor comeliness that we should desire him. He was a man of sorrows and acquainted with grief. The haughty and supercilious hid, as it were, their faces from him. He was wounded for our transgressions and bruised for our iniquities. With his stripes we are healed. He was cut out of the land of the living. Yet he has had his portion with the great and shared the spoils with the strong."

Of the nine writers seven were educated in the institutions of the American Missionary Association, which has done more than any other single agency for carrying on the work begun by Lincoln's Proclamation of Emancipation.

The Future of Hayti The *London Times* has a long article from a correspondent on the present condition and the future of Hayti, describing its political disturbance and corruptions, the prevalence of bribery and the shameful recourse to public loans at an exorbitant rate. The writer, recognizing that the Haytian negroes are fundamentally a fine race, anticipates what are the conditions that would look to a radical change. He declares that while the intelligent people wish no foreign domination, they are seriously considering whether free development under a stable government is possible without a foreign protectorate. He says:

"It is, perhaps, needless to say what Power the Haitians regard as the one most likely to interfere; they recognize the authority of the Monroe doctrine and the limitations it prescribes to foreign aggrandisement in the Amer-

ican sphere of political action. That they should freely discuss the possibilities of the situation is an indication of a certain preparation of the public mind for what seems to be the inevitable. . . . The aim might be to apply to the country a modification of the terms of the Platt amendment, by which, while its independence and political autonomy were guaranteed, a stable and honest government would be insured and a greater field opened for foreign enterprise and capital. Under such conditions the black man would have the liberty and power to develop which he does not possess at present, and the country might eventually become one of the richest in tropical America, instead of being as virgin in resources and achievements as it was when Columbus landed at Mole St. Nicolas over 400 years ago."

It may come to that, that the United States should finally do for Hayti what it has done for Cuba, with modifications. Hayti would have been straightened out long ago if the Senate had accepted President Grant's far-seeing plans for Santo Domingo. But Hayti has hardly been more revolutionary, or its government more corrupt, than that of Venezuela. A hundred years is not long to develop a nation. When we are told of the backward condition of Hayti or Liberia we must consider what slight influences have been present to lift them up, and we must compare them with the more backward of the Spanish-American republics.

An Elected Bishop In the spring of this year the hierarchy of Switzerland address an official letter to their clergy and people against the manufacture and sale of absinthe. As the land of William Tell has no archbishop, this letter was signed by the dean of the bishops, Mgr. Battaglia, of Coire. Shortly afterward he resigned his see. This—the oldest, it seems, in Switzerland—retains its ancient right of election. The six canons of the cathedral and the eighteen from other parts of the diocese, which includes the cantons of Uri, Schwyz, Zurich, the Glarus, the Grisons and the principality of Lichtenstein, met in the See House—*Hof* as it is called—and by a majority of votes elected and gave official announcement as follows:

"COIRE, May 7th, 11 a. m.

"Mons. Dr. George Schmid, of Grunegg, superior of the seminary of St. Lucius, Coire, canon of the Cathedral of Coire, vicar general, has been elected bishop of Coire. The voting lasted an hour. The name of the one elected

has been proclaimed in the Cathedral. At once a service of thanksgiving was offered, followed by the 'Te Deum.'"

The new bishop received the confirmation of his election and canonical induction from Rome. The Pope, moreover, has no choice but his approval, save in the case where the canon law is rightfully invoked. This privilege Coire shares with Cologne, Friburg, and a few more dioceses in Germany and Austria. There are no such privileged dioceses in this country. Here the select priests nominate three candidates, and this "terna" is sent to Rome, where the Pope chooses one of them if he pleases. Thus Dr. Hanna was "*dignissimus*" to the auxiliary Archbishop of San Francisco, with right of succession, and two others were named "*dignior*" and "*dignus*." But the Pope rejected them all and appointed the rector of the Catholic University, but without the right of succession. Just so the Pope has chosen the French bishops since the Government gave up its right of nomination. The democracy of Coire and Cologne is absent in this country.

There is special meaning in the choice of the Rev. Ozora S. Davis, of New Britain, Conn., as president of the Chicago Theological Seminary. Mr. Davis is pastor of one of the largest churches in Connecticut, with 1,150 members. But he is known for the work his church has done for the various racial elements in the city, for the languages and nationalities that make their welcome home in that church. How it is done Mr. Davis told in a remarkable address at the Cleveland meeting of the Congregational National Council, and the admirable report at the late meeting of the Federal Council at Philadelphia on Immigration was prepared by him. The Chicago Seminary has had its departments preparing theological students to work in various languages, and we may be sure that Mr. Davis's acceptance will ensure the continuance and development of this most important work, for there is no Christian work more important than to reach and influence our immigrants.

It has been said that one can make anything out of the Bible. Our Supreme Court interprets the Constitution liberally. Every one has supposed the Koran

and Islam to favor absolutism and to be hostile to free institutions. But such is not the fact, says the *Beyan-ul-Hak*, organ of the Constantinople organ of the Ulema. It declares absolutism to be contrary to the spirit and letter of Islam. It denounces the reactionaries of the old régime in the most vigorous language, of which the following passage is an example:

"They seized religious works and burnt them, arrested students and divines solely on account of their liberal views, and exiled them to distant provinces. They respected no law, divine or human, in a word, no ordinance or religion whatever, so that we began to believe that Islam had ceased to be."

Does not Homer tell us all omens favor patriotism, "The best of omens is our land's defense"? As all roads lead to Rome, so all religions lead to liberty.

A curious and ridiculous campaign has been going on in Ireland to require all students in the new Irish University and its attached colleges to study the old Irish language. It is feared that if this is not done the Protestants will swamp it with students. On the other hand, it is urged that the rule would reduce the number of students. The Irish bishops have been compelled to take the matter in hand and have published an appeal to the people to the effect that, while they look forward to the time when Irish will again be spoken thruout the country and become largely the medium of instruction in the constituent colleges, they would make it voluntary and oppose making Irish compulsory in the university. The effort to return to a local language is provincial and narrowing and against all the spirit of the age. English is good enough.

Here is a testimony which we take from the last number received of the *Manila Weekly Times*. Archbishop Harty had returned from a tour over the province of Batangas, during which he had confirmed over 52,000 applicants. Asked what state of feeling he had found he said:

"In public and private discourse I did not hear a single word of complaint against the civil government and I take it from this that the people are satisfied to leave their interests in the hands of the United States Government.

"In my intercourse with the principal people of the towns visited I found a spirit of con-

tentment, a lively interest in public improvement, energy and enterprise in the direction of agriculture and business pursuits and a general tendency to get out of the rut. They seem to have come to a realization of the necessity of attracting American capital and are making rapid progress along those lines."

Some Boston patriots ought to hasten to Batangas to show these mean-spirited people how they have been oppressed.

To those who like to try to unravel a puzzle we offer the following genuine letter from an Armenian boy to the teacher of a missionary school in Turkey. It is a fine example of "self-taught" English. We will help the reader by adding that it is an application for admission by a boy who cannot pay tuition and board:

Who good Mister

i love you kind teacher, have true a mind each day working, because the work of the gold is dearly, Hark do you my helped to me one day you keep in the minds and i thank of the you and god bless you Holy man.

i had love the english has me the desirous may gain the high.

The correctness of the spelling is about as marvelous as the absurd jumble of words.

The difference between Senator Platt, president of an express company, and Senator Root is to be seen in the following passage in the latter's address to the New York State Legislature which had just elected him:

"If you think it will be beneficial to the State of New York, for example, as I now think it would be, to have a parcels post provision included in our postal laws, so that the thirty-nine thousand rural free delivery carriers, instead of driving around the country with empty buggies, as they do now, shall earn enough to pay their salary by carrying small packages to the people they serve—if you think that would be beneficial to the interests of the State of New York, I would be glad to have you say so, and if you think I am wrong in that I would be glad to have you say so."

A lot of uninformed people are getting petitions signed all over the country by children and grown people begging President Roosevelt to forego his visit to Africa on the plea that hunting wild animals is cruel. But Mr. Roosevelt is no cruel pot-hunter. His interest is in the natural history of it and in the excitement of it. He gets no free license to shoot what he please, but the limited license, and what he kills will be mounted for the Museum

at Washington. That is perfectly legitimate and in the interest of science as much as is legitimate vivisection.

We have not waited till this day before we have said "Raise the Maine." We have said over and over again, and with all emphasis, that the United States has no right on any theory to leave it conspicuous and mischievous in Havana harbor. If it was blown up by malice we do not want to perpetuate the memory of malice. If it was blown up by accident we do not wish the charge of criminal malice to rest longer on innocent people. Let Congress pass the appropriation as Governor Magoon and President Roosevelt have recommended.

There used to be a law in England prohibiting the use of hops in beer. A bill has now been introduced into Parliament by the Government prohibiting the use of anything except hops in beer. Times change and the pure food laws change with them, but they have one fundamental principle, that whatever is, is right, and anything new is wrong. Potassium nitrate having been used by our forefathers to corn beef, but sodium benzoate, being a novelty, is looked upon with suspicion.

Reno is not a large city, but it is the largest in Nevada. Nevada is the only State in the Union which has no law against gambling. In Reno gambling is free and open; but there is a referendum clause in the charter, and the voters were appealed to to abolish open gambling. They did not succeed, for the saloons and hells were stronger than the churches, and by a vote of 2,010 to 1,209 the gamblers won. But the triumphing of the wicked will be short. It always is when the issue is fairly joined.

The new British act allows a man to marry his deceased wife's sister, but it does not allow a woman to marry a deceased husband's brother. The reason is that the Levitical law, as interpreted, definitely forbade the latter, but not the former (Lev. 18:16). Accordingly, an Englishman came last week to this country that he might legally marry his brother's widow. There needs a new cam-

paign for a Deceased Brother's Widow Bill.

We fail to understand why Secretary Garfield should accept the assertion of the San Francisco officials that the only way to get a supply of water for the city is to sequester five hundred square miles of the Yosemite public park, gratuitously squandering many million dollars' worth of water rights. Other engineers say water can be had elsewhere, and Congress ought to consider this whole question very carefully.

Figures are liable to get mixt in fervid oratory. In the trial of Thornton J. Hains for murder, the defendant's lawyer, John J. McIntyre, burst into the following: "This defendant has endured the pelting of a merciless *storm* from a conspiracy *hatched* in that room yonder at the Bay Side Yacht Club and parts of which were *born* in some fertile mind seeking notoriety at the expense of a human life."

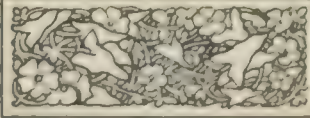

Some of the "better class" in Cuba—that is, rich Spaniards—are offended. They say: "They select an African (Delgado) for President of the Senate and an Italian (Ferrata) for President of the House, and yet they say, 'Cuba for the Cubans.'" And why not, if both are Cubans? Even those called Spaniards may be Cubans.

Spitzbergen is a no-man's-land. It has no inhabitants, and no country claims it, altho it lies near Norway. It is a base for polar expeditions. Now an American company has begun mining coal there and declares that the mines will ultimately rival those of Great Britain. There is a chance for another American insular possession right against Europe. Who will object?

We all know that Leo XIII patronized the institution of the Society of St. Jerome, whose object was to sell cheap copies of the Bible in Rome. It is from a "Modernist" source in a leading London journal that we are informed that "for some time it had been allowed to circulate only the Gospels and Acts; now it circulates nothing." We would like to know if this can be true.

Insurance

The Wallis Appointment

Frederick A. Wallis, Governor Hughes's appointee for the office of Insurance Commissioner, was not satisfactory to the State Senate and his name was finally withdrawn last week at the request of Mr. Wallis himself. Senator Thomas Grady, having learned that Mr. Wallis had been charged with the crime of rebating on life insurance premiums in connection with his department in the Home Life Insurance Company, "felt compelled" to take cognizance of the formulated charges of his violation of the reform laws drafted by the Governor himself, and in the discharge of his duties accordingly offered the following resolution in the Senate:

Resolved, That the acting Superintendent of Insurance be, and he hereby is, respectfully requested to forward to the Senate with all convenient speed authenticated copies of such correspondence as may be found on file in his department since the first day of January, 1907, bringing to the attention of the department or dealing with any complaints as to the rebating of insurance premiums or any other violations of the insurance law in which the Home Life Insurance Company or any of its agents or officers (and more particularly Frederick A. Wallis) was involved.

Following the publication of detailed accounts of the Senate's action in this connection in the daily press, a long conference took place between the Governor and his appointee with his attorney, during which the papers and correspondence called for by the Senate resolution from the files of the Insurance Department were very carefully considered. The nominee subsequently voluntarily wrote the following letter to the Governor:

MY DEAR SIR—I beg leave to ask you to withdraw my name for the office of Superintendent of Insurance. As you well know, this is a position which was not sought by me, and only at the instance of your earnest persuasion did I consent to have my name placed in nomination.

While the criticisms which have been directed against me since my nomination are each and every one of them utterly without foundation, and nothing has been or can be developed which can reflect upon me in any

manner whatsoever, I do not care to accept an office to which so much political opposition has been directed. I have, therefore, decided to continue in my present position with my company. Thanking you for the honor conferred, I am, yours very faithfully,

FREDERICK A. WALLIS.

The Governor followed the receipt of this letter with a message to the Senate as below:

To the Senate:

I hereby withdraw the nomination before made by me of Frederick A. Wallis, of New York, for the office of Superintendent of Insurance.

CHARLES E. HUGHES.

Senator Grady has stated that his opposition to Mr. Wallis arose because of moral and not political objections. Meantime the office of Superintendent of Insurance lacks an occupant that is satisfactory to the Governor and to the Senate.

CAN it be that the passing of a valued policy law in Vermont is indicative of a trend in insurance that will ultimately obtain in other States?

THE board of directors of the Provident Savings Life Assurance Society, at the quarterly meeting held January 21st, 1909, past the following resolution:

"Resolved, That steps be taken immediately to elect three policy-holders as directors to be nominated in accordance with any plan agreed upon, under the direction of counsel, between the president and insurance commissioners."

President Rittenhouse had already requested the legal department to advise him of the steps necessary to make this plan effective. The matter is now under investigation, and a definite plan will be formulated in accord with the sentiment expressed by the commissioners who signed the request to the society at the meeting of the insurance commissioners in Detroit last fall. It is announced that the financial condition of the society has very much improved, and that the intention of the management is to resume the writing of new business on or before July 1st, 1909.

The Condition of Business

THOSE who studied carefully the causes of the brisk upward movement which immediately followed November's elections expected a reaction. This temporary check, with comparative dullness, has been seen in the condition of business during January, which has been a month of waiting. The Steel Corporation's earnings have come to be one of the measures of general trade. These earnings, for the quarter ending with December, were made known last week. They were a little less than those of the preceding quarter, altho an increase of unfilled orders on hand was shown. The figures follow, the record of unfilled orders (in tons) being made at the end of each quarter:

1908.	Net earnings.	Unfilled orders.
First quarter	\$18,229,005	3,765,343
Second quarter	20,265,756	3,313,876
Third quarter	27,106,274	3,421,977
Fourth quarter	26,225,485	3,603,527

There was a progressive decline in earnings for the last three months of the year: October, \$9,415,668; November, \$8,756,729; December, \$8,053,088. Rumors of price-cutting by independent concerns are heard, but demand is light, and the lightness of it is due largely to the pending revision of the tariff. A feeling of uncertainty as to tariff rates also affects other industries and causes manufacturers to proceed with caution. Mr. Yoakum, of the Rock Island and Frisco lines, returning last week from a trip over the roads of his railway system, spoke of the retarding effect of this uncertainty:

"I met many manufacturers who were delaying an increase of output for future sale and delivery until the question is settled. The lumber business is most backward in the Southwest, and this is attributable to the disinclination of manufacturers and railroad men to undertake new construction until the new tariff rates are known."

In the past, business has been so affected while tariff revision was pending. No considerable reduction of duties is expected now, but there is a prevailing belief that, owing partly to Mr. Carnegie's arguments, the iron and steel rates

must be sharply cut, and that this will compel a reduction of other rates. The stock market has been dull and declining. Fundamental conditions are sound, however; our agriculturists are in an advantageous position. Improvement upon conservative lines may safely be predicted, altho the rate of progress may be slow until the new tariff is enacted.

....The twenty-first annual statement of the American Real Estate Company shows a surplus of \$1,653,111, a gain during the past year of \$112,142. The value of its real estate and improvements amount to \$10,818,225.07, an increase during the year of \$1,020,520.33. The total assets are \$11,851,866.07, a gain for the year of \$1,293,366. The real estate valuations have been appraised by the Real Estate Board of Brokers of the City of New York, and the titles to properties owned by the company have been insured by title guarantee companies, and certified public accountants have certified to the correctness of the annual statement.

....The year 1908 was the most prosperous one in the history of the Lawyers' Mortgage Company, of which Richard M. Hurd is president. Mortgages sold amounted to \$27,152,558 (against \$20,316,677 in 1907), and the net increase of guaranteed mortgages outstanding was \$13,508,200, making the total of such mortgages outstanding \$77,277,934. Earnings were \$560,931 gross and \$450,108 net—a considerable increase for both. The net profits were 18 per cent. on the capital stock. It is noticeable that more than 60 per cent. (\$16,502,100) of the mortgages sold were taken by savings banks, trustees, charitable institutions, insurance companies and trust companies; also that the sales netting 5 per cent. were \$12,613,450, and those netting 5½ per cent. \$8,856,150. Of the company's mortgages, 66 per cent. are on Manhattan Island, 28 per cent. in Brooklyn, and 6 per cent. in the Bronx. The company's operations are wisely safeguarded by provisions in its bylaws which make its guaranteed mortgages attractive to holders of trust funds and other careful investors.

The Independent

VOL. LXVI NEW YORK, THURSDAY, FEBRUARY 11, 1909 No. 3141

Survey of the World

California and the Japanese

Owing to the unexpected passage in the California House, on the 4th, of the Johnson bill for the exclusion of Japanese from the public schools, and to the adoption of sharp anti-Japanese resolutions in the Nevada House, there was much disquietude last week in Washington, and a feeling began to prevail elsewhere that our relations with Japan might become strained. At the beginning of the week, Mr. Drew, the author of the bill relating to the holding of land by aliens in California, accepted the amendment suggested at Washington, but declined to withdraw the measure, saying that his aim was to prevent Japanese from getting a foothold in the State. After a seven hours' debate, on the 3d, this bill was rejected by a vote of 28 to 48, and the prediction was then made that all the other pending anti-Japanese bills would be defeated by about the same majority. The argument having greatest weight against the Drew bill was that such legislation would tend to drive perhaps hundreds of millions of invested foreign capital from California. Mr. Drew asserted that the President had failed to solve the problem. The Japanese must in some way, he said, be kept out of the country. In California alone, he asserted, Japan could now raise an army of 40,000 men. This estimate was questioned by other members, who said that not more than seventy-five Japanese owned farm land. It appears that Governor Gillett's influence had been exerted against the bill with much effect. The galleries were full of people hostile to the Japanese. After the failure of this bill, the opponents of the Johnson bills were

much encouraged, and the Governor in published statements urged that the subject be laid aside. The discussion of it in the Legislature, he said, was making California ridiculous and unpopular in many other States. On the 4th, the Johnson bills were taken up. The one forbidding Japanese to be corporation directors was lost, 15 to 54; by a tie (37 to 37) the one empowering towns to confine Asiatics within specified limits was rejected. Unexpectedly, however, the bill excluding Japanese from public schools was passed by a decisive vote, 48 to 26. This is the exclusion which was attempted in San Francisco two years ago, to the great dissatisfaction of Japan. President Roosevelt at once sent to Governor Gillett the following telegram:

"Your kind letter just received. What is the rumor that the California Legislature has **past** a bill excluding the Japanese from the public schools? This is the most offensive bill of all, and in my judgment is clearly unconstitutional, and we should at once have to test it in the courts. Can it be stopped in the Legislature or by veto?"

On the following day, Governor Gillett sent a long special message to the Legislature. A motion to reconsider the action of the House having been made, Speaker Stanton, by an earnest personal appeal, procured unanimous consent for a postponement of further consideration of the matter until the 10th. Said he:

"A crisis has arrived. We are treading upon very dangerous ground. I wish I could tell you something I know, but my lips are sealed. Perhaps by Wednesday the Governor or myself may be able to tell you more."

In his message, the Governor asked that the action of the House be reconsidered. Reviewing the history of the school con-

troversy two years ago, he spoke of the settlement reached by the withdrawal of the Federal Government's suit, the withdrawal of the School Board's resolution, and the subsequent agreement as to immigration, pointing out that such legislation was regarded as a violation of the treaties, which gave to the Japanese children the rights and privileges of the children of the subjects of the most favored nation:

"There has been no general demand for such legislation, there is no immediate or present danger to our schools, and no bad influence exists therein by reason of any Japanese pupils attending our public schools, and there is no occasion, at the present at least, for alarm."

At the end of the week there were some indications that the majority for the bill might not be so reduced that a veto would be effective. It appears that those who attacked Kenji Kaneko on the grounds of the University of California were not students, but boys of the town. The matter has been dropped. Kaneko sent to President Wheeler the following letter:

"Hearing of your being in some zealous investigation of the assaulters, I wish to write to you that my profound thanks are due to you, but I hope you will quickly give up such useless attempt, because I am sure that your students are not in charge of. Wishing to add that I want not to exaggerate such small trouble nor to lead it into some international question, and especially desiring that the Californians are not so sensitive about Japanese problem."

—While the President has been striving to prevent the passage of bills against the Japanese, the influence of Senator Perkins, of California, is said to have been exerted in favor of these measures. On the 7th, the President sent to Governor Gillett the following telegram:

"I am astounded at George C. Perkins's conduct. He has for the last seven years done whatever he could to hamper us in the upbuilding of the navy, and has acted against the real advocates of the navy. Yet now he advises a policy of wanton insult."

Attitude of Nevada's Legislature

Anti-Japanese resolutions introduced by Speaker Giffen were favorably reported on the 1st in the Nevada House by the Committee of the Whole. They were very long. Com-

mending the Johnson and Drew bills pending in California, they characterized the Japanese as "these parasites of the world," asserted that President Roosevelt was attempting "to coerce and intimidate legislation in California," censured him for "his uncalled-for interference," and also said:

"We believe that if we must have war with the Japanese Empire sooner or later, now is a better time than ever to lay down the terms to that empire and teach those arrogant people that our rights cannot be encroached on, and that they cannot, nor ever will, be allowed or given an opportunity to acquire a foothold in this country or to assimilate with our race."

On the 3d, after the elimination of the paragraphs censuring Mr. Roosevelt, the resolutions were adopted, 44 to 1, together with another asking that a fleet of warships be kept near the Pacific Coast because of the menace of Asiatic immigration. In his comments upon the Giffen resolutions, the President remarked that there was no complaint in Nevada about his interference when, not long ago, the State called upon him for help and he sent troops to preserve order at Goldfield. On the 5th, the House past a bill permitting aliens, Japanese and Chinese excepted, to own land. Owing partly to messages from United States Senators Nixon and Newlands, the movement suffered a check in the Senate, where the call for battleships was laid on the table, and the Giffen resolutions were sent to committee. Some predict they will be smothered there. In a long letter to Governor Dickerson, Senator Newlands recommended that the matter be left with Congress and the Federal Government, also saying that Congress ought to exclude all immigrants except whites.

—It is expected that the Oregon Legislature will adopt a resolution urging Congress so to broaden the exclusion law that it will bar out Japanese. A bill relating to the holding of land by Japanese will also be considered.—Takeo Sogora, secretary of the Japanese Association of Colorado, said last week:

"We consider ourselves superior as a race to the Chinese, Koreans, and other Asiatics, and we do not want to be classed with them, and will demand our rights, granted the Japanese by treaty and under the Constitution of the United States, to be treated on equal terms with the French, Germans, Americans, or people of any other nation."

Governor Haskell Indicted for Land Frauds

Governor Charles N. Haskell, of Oklahoma, was indicted at Muskogee, by a Federal grand jury, on the 3d, for conspiracy to obtain possession of town lots in that place by fraud. Under the statute, the highest penalty is \$10,000 fine and two years in prison. Clarence W. Turner, A. Z. English, S. B. Severs, Walter R. Eaton, W. J. Hutchins and Jesse W. Hill were indicted with the Governor. All are wealthy residents of Muskogee. One of the grand jurors is a son-in-law of Severs and a brother-in-law of English. It was provided by law that the lots should be sold at auction for the benefit of the Creek Indians, and that occupants of them should be permitted to buy two lots apiece at half the appraised value. It is charged that the defendants used "dummies" to get possession of many lots at half price, and that in some instances they forged the signatures of the "dummies." The indictments relate to 152 such transactions, and it is alleged that in forty-seven of them Haskell, Turner and Eaton were associated conspirators. The Governor declares that he is innocent, asserting that President Roosevelt and William R. Hearst have plotted his ruin. But M. L. Mott, attorney for the Creek Indians, says that he alone is responsible for the prosecutions. Long ago, he adds, in published statements he charged Governor Haskell with these offenses, and he used the evidence in support of nearly thirty civil suits instituted against Haskell and others before Oklahoma became a State. The Government now prosecutes as trustee for the Indians. He also asserts that in his experience during fourteen years as United States Attorney in North Carolina he never knew a case in which the evidence was more clear than that which is to be used against several of those indicted at Muskogee. The names of ten residents of St. Louis, he says, were used, without their knowledge, in the conspiracy. The Oklahoma House has adopted (by the votes of the Democratic majority) a resolution expressing confidence in the Governor and denouncing the prosecution. Similar resolutions pending in the Senate assert that the in-

dictments are the work of "the Roosevelt-Hearst combination" and were designed to "blackmail" the Governor. Arriving at Muskogee on the 5th, the Governor was greeted by bands and cheers. In a speech he said he had incurred the enmity of corporations, the President and the Federal Government by advocating the cause of labor.—The Governor of Texas has issued requisitions upon Governor Haskell for the extradition of W. L. Chapman, secretary of Oklahoma's State Corporation Commission, and two others, who were recently indicted at Eagle Pass for complicity in frauds affecting lands of the Kickapoo Indians.—D. H. Hallock, a wealthy ranchman of Oklahoma, recently found guilty of acquiring Government land fraudulently by the use of "dummies," was sentenced, last week, to be confined six years in the penitentiary and pay a fine of \$1,000.

Census Bill Vetoed

President Roosevelt, on the 5th, vetoed the bill to provide for taking the thirteenth and subsequent censuses. His action had been foreseen. It was important, he said at the beginning of his veto message, that the statistical work should be conducted with entire accuracy, and that "the result should not be open to the reasonable suspicion of being a waste of the people's money and a fraud." The bill, he continued, provided that appointments should be "under the spoils system." This was the meaning of "non-competitive examinations." The present Director of the Census, in his latest report, had opposed this method, saying that personal and political pressure must be the determining factor in most cases. To provide for "non-competitive examinations" and also for selection "without regard to political party affiliations," meant merely that the appointments should be treated as the perquisites of the politicians of both parties:

"I do not believe in the doctrine that to the victors belong the spoils; but I think even less of the doctrine that the spoils shall be divided without a fight by the professional politicians on both sides; and this would be the result of permitting the bill in its present shape to become a law. Both of the last censuses, the Eleventh and the Twelfth, were taken under a provision of law excluding competition; that is,

necessitating the appointments being made under the spoils system. Every man competent to speak with authority because of his knowledge of and familiarity with the work of those censuses has stated that the result was to produce extravagance and demoralization."

He quoted the opinions of Robert P. Porter, director in 1890, and Frederick H. Wines, assistant director in 1900, to show the demoralizing effect of spoils appointments; also that of Carroll D. Wright, in charge of the bureau after 1890, who said that appointments under the civil service rules would have saved \$2,000,000 and a year's time. The latter also reported that one-third of the amount expended under his own administration had been "absolutely wasted," mainly because the bureau was not under these rules. "The non-competitive examination in a case like this," said the President, "is not only vicious, but in effect is a fraud upon the public." The appointees should be chosen by competitive examination from the Civil Service Commission's lists:

"It is of vital consequence that we should not once again permit the usefulness of this great decennial undertaking on behalf of the whole people to be marred by permitting it to be turned into an engine to further the self interest of that small section of the people which makes a profession of politics. The evil effects of the spoils system and of the custom of treating appointments to the public service as personal perquisites of professional politicians are peculiarly evident in the case of a great public work like the taking of the census, a work which should emphatically be done for the whole people and with an eye single to their interest."

It is said that if Congress passes the bill over his veto, the President will issue an executive order directing that competitive examinations be held for filling the 3,000 places involved.

Panama Canal Topics The canal plans which are now being carried out on the Isthmus have been approved by the engineers accompanying Judge Taft, except that the location of the breakwater at the Atlantic entrance is to be changed. That is to say, the lock type will be retained, and the great dam at Gatun will be constructed, its foundations having been pronounced trustworthy. Colonel Goethals promises that the canal shall be open for

ships on January 1, 1915. Judge Taft, much impressed by the evidences of progress and energy, predicts that the work will be completed at an earlier date. He expects to arrive at New Orleans on the 11th.—It is now said that indictments in the Government's libel case will be reported at Washington within a few days. Among those required to testify there last week was Norman E. Mack, chairman of the Democratic National Committee. In New York, United States District Attorney Stimson has replied to the letter of District Attorney Jerome concerning the proposed proceedings in the State courts. He welcomes the assistance of Mr. Jerome. The libelous assertions of the *World*, he says, were circulated "in a number of distinct and independent jurisdictions," and in "each jurisdiction each publication would constitute a separate offense." Mr. Jerome, he continues, pointed out that the attack upon Douglas Robinson was an offense against the laws of New York:

"The circulation of similar charges of personal corruption or dishonor against a gentleman who occupied the position of head of the War Department, among the officers and men of the army, resident upon the military reservations in my district or among the residents of the District of Columbia, where the War Department is situated, may well engage the attention of the officials whose duty it is to enforce the laws in those localities."

It is the duty of all prosecutors, he says, not to allow any conflict of jurisdiction to jeopardize an ultimate conviction, but to co-operate harmoniously. The prosecution proposed by Mr. Jerome would "in no wise be regarded as an interference" with the action of the Federal courts, and he undertakes to assist Mr. Jerome with information and in all lawful ways.—President Obaldia, of Panama, emphatically resents Congressman Rainey's attack upon him in the House. "My entire public life," he says, "is beyond the reach of slanderers." Sixteen members of the Panama Assembly publish a statement to show that Mr. Rainey's charges were false. By unanimous vote the Assembly has adopted a resolution protesting against the "slandrous and insulting" assertions of Mr. Rainey, and has sent a copy of the resolution to the Government at Washington.

An Englishman's Home

What the solemn warnings of Lord Roberts and the energetic efforts of Mr. Haldane could not accomplish is being done by a play which from a literary standpoint is rather crude and weak; that is, the English people are aroused to a realization of the defenseless condition of the country. The play, "An Englishman's Home," is anonymous, but is ascribed to Guy Du Maurier, the son of the author of "Trilby." It is simply a lifelike representation of the characteristic attitude of different classes of England on the question of a possible invasion. Mr. Brown, the typical English ratepayer, insists that his home is his castle, and when it is occupied as the strategic position in turn by the officers of the British and invading armies, he goes to look for a policeman to turn then out. The young men are interested only in football, regarding volunteering as "silly rot," and the girls of the household are chaffing them on their unbecoming uniforms, when the house is invaded by the advance post of the army of the "Empress of the North," Mr. Smith, the cockney "bounder," falls dead with a bullet thru the heart as he is perpetrating his slangy jokes. Mr. Brown attempts to defend his "castle," and is at once condemned to be shot as a civilian in arms. This is the logical end of the play, but the censor refused to allow it to be produced unless it were altered; so, at the end, the sound of the bagpipes, as in the "Siege of Lucknow," brings the hope of ultimate success to British arms. The play has been put on in several theaters in London and road companies are being organized to extend its influence thruout England. Within a few months the play will be witnessed by more Englishmen than ever before saw a single drama in the same length of time. Leaders in the papers which advocate an increase in the army are using the play as a text for their sermons, and a great boom is given to enlistment in the Territorial Army. The *Spectator* says:

"The effect of 'An Englishman's Home' has been of a kind quite outside of all former experience. The public has after its long sleep at last awakened to these plain facts: that in spite of the navy the danger of invasion is a real one; second, that if an invasion took place it

would mean something terrible and tragic beyond words; and, third, that we are not making proper preparations to present an invasion or to deal with it adequately if it took place.

"'An Englishman's Home' is showing the British people that they are living in a fools' paradise and is making them cry out, men and masters: 'What shall we do to be saved from the miseries that must fall upon us if an enemy landed on our shore?'"

The London *Times* advocates compulsory military training, since military authorities like Lord Roberts hold that a million partially trained men are needed for national security, and Mr. Haldane has not been able to get more than two-thirds of the 300,000 volunteers he wants for his Territorial Army. The English people lost faith in the efficiency of gorgeous uniforms and amateur soldiers thru the rude experiences of the Boer War. G. Bernard Shaw's "Arms and the Man," and Rudyard Kipling's "Flanneled fools at the wicket and mud-died oafs at the goal" perhaps also had some influence over popular feeling. London is short 11,000 volunteers to complete its quota in the Territorial Army, and the *Daily Mail* has received a check for \$50,000 from an anonymous reader to assist in recruiting the force. Under these circumstances, and since the invading army of the play is identified in the British mind with Germany, the visit of King Edward and Queen Alexandra to Berlin is not likely to result in any considerable increase in international amity. Still, however, elaborate decorations and festivities are being arranged by the German Government for the three days' visit.—The Cabinet is divided on the question of the increase of the navy. The Lords of the Admiralty demand the building of six "Dreadnoughts" and threaten to resign in a body unless the program is accepted. Sir Edward Grey, the Foreign Secretary, favors the increase, but Viscount Morley, David Lloyd-George, John Burns and Winston Churchill are opposed to building more than four at the most.

Owing to a sudden thaw and several days of heavy rains the rivers of Germany and Austria are overflowing their banks and doing great damage in many places. Along the

Rhine, the Elbe, the Main, the Danube and the Oder extensive losses of life and property are reported. Railroad traffic on the right bank of the Rhine has been discontinued owing to the washing out of the track and destruction of several bridges. At Nordhausen many bridges were swept away, ten persons lost their lives and a thousand head of cattle were drowned. The ice floes in the Elbe carried down part of the new Augustus Bridge, which is being constructed at Dresden. The Danube rose 22 feet above its normal level and flooded twenty villages in the neighborhood of Vienna. The Weser rose 21 feet, the Ruhr 23 feet, and the Rhine at Duisburg 11 feet within twenty-four hours. At Frankfort-on-the-Main the highest water in fifty years is reported and the lower part of the city is covered. More than fifty persons are known to have perished.

Now that the danger of an armed conflict between Austria-Hungary and Turkey is removed thru the acceptance of the indemnity offered for the annexation of Bosnia and Herzegovina it is expected that a similar solution may be found for the dispute between Bulgaria and Turkey arising from the seizure by Bulgaria of the Eastern Rumelian section of the Orient Railroad. The shrewdness of the Russian Minister of Foreign Affairs brought forward the most promising plan of settlement, a new way of paying old debts. According to the Treaty of San Stefano, which concluded the Russo-Turkish war in 1876, Turkey was to pay Russia an indemnity. On account of the chronic impoverishment of the Turkish Government most of this indemnity remains unpaid and there has been no good prospect of collecting it. Mr. Isvolsky now proposes to settle the mutual obligations by shifting them around. Russia will pay Turkey the indemnity owed her by Bulgaria, partly by remitting a portion of the old indemnity due Russia and partly in cash, then Bulgaria will assume the obligation of paying to Russia the remainder of the old Turkish indemnity. This plan seems to give satisfaction to all parties concerned. Russia gets better security for a bad debt. Bulgaria gets off

rather more cheaply than if she had to raise a large sum immediately to satisfy Turkey's claim. And Turkey is relieved of its oppressive obligation and also gets some cash in hand. The other Powers are agreeable with the exception of Austria-Hungary and Germany, which think it to their advantage to have troubled waters for their fishing. Russia and Turkey have not yet come to an agreement as to the amounts to be paid and reports of the details are conflicting. It is said that Russia is willing to pay Turkey \$24,000,000 in behalf of Bulgaria, of which \$7,600,000 will be advanced by Russia and \$16,400,000 by Bulgaria. Bulgaria will then repay Russia at the rate of a million dollars a year. How much of Turkey's debt to Russia will be cancelled by this arrangement is undetermined. If Turkey were now paying off this debt to Russia it would amount to about \$1,375,000 a year.

Austrian Racial Conflicts

The closing scenes of the Austrian Diet were the most disorderly ever witnessed in that assembly, which is saying a great deal. The strife between the Germans and the Czechs ~~past from words~~ to blows, and even to more primitive weapons. Baron von Bienerth, President of the Council of Ministers, attempted to address the house, but the Czechs prevented him by a hideous uproar. One of the deputies blew a huge trumpet continuously, another beat a drum, a third clanged cymbals, a fourth shook a tambourine, while others blew whistles or banged their desks. The German deputies attacked them and a free fight ensued. One of the Czech deputies was held down and whipt until he howled for mercy, another was bitten by a German on the cheek. Herr von Bienerth and other members of the Cabinet left the house and the president read a rescript declaring the session closed.—The general boycott of German products by the Czechs has aroused measures of retaliation. The executive committee of the Pan-Germanic Union has declared that it is a patriotic duty to boycott all the Czech products and in particular Pilsener beer. If Germans in general follow the recommendation it will strike a destructive

blow at the Bohemian breweries.—The Triple Alliance has been strained by the change of attitude of the Austrian Government in regard to the establishment of an Italian School of Law. The school at Innsbrück was broken up by racial riots among the students. The Government promised to re-establish the school elsewhere and it is said that Baron von Aehrenthal gave assurances to Signor Tittoni, the Italian Minister of Foreign Affairs, that the school would be placed in a city of Italian Austria, preferably in Trieste. However that may be, when the bill was introduced in the Austrian Diet it provided for the establishment of the Italian School of Law at Vienna and not at Trieste. In defense of this it was explained that in Trieste the population is almost equally divided between Italians and Slovaks and that since race feeling ran high and the municipal administration was inefficient, the presence of the Italian school would increase the discord. Since Signor Tittoni has been warmly defending the Austrian policy and the Triple Alliance against the attacks of his own countrymen this leaves him in an embarrassing position.

✽

Indian Mahometans The Mahometans of India, fearing that the proposed organization of the electoral system of India will deprive them of representation in districts where they are in a minority and place them at the mercy of the Hindus, have sent delegations of protests to the Viceroy in India and to Lord Morley in London. Syed Ameer Ali, president of the London branch of the All-India Moslem League, together with the other officers of the society, were received by Lord Morley and his secretaries at the Indian Office. The deputation expressed their approval of the proposed reforms in general, but insisted that the plan required important modifications in order to do justice to the Mahometan population of India.

"The Mussulman people share the burden of defending the Empire to the same extent as other races; they supply soldiers to the Indian army to a greater extent than most; they certainly feel justified in expecting, both from the Government and their compatriots, equitable and generous consideration."

The disparity between the Mahometan and non-Moslem population might at first sight appear great, but it should be noted that the Hindu population had been swelled by the inclusion of vast bodies of degraded or non-caste people with whom real Hindus never associated. The principle of proportional representation, the deputation submitted, was unsuited to a country where there is such a sharp division between the people, for the Mahometans would be practically unrepresented in some places. They therefore asked that instead of one native being placed on the Viceroy's Executive Council, two men should be given such positions, one of them to be a Mahometan and the other a Hindu. They also wished to have the election of members to rural and district boards and the municipalities made by separate registers of the Hindu and Mahometan voters, so the two communities could vote separately and on different days. For example, in a municipality where eight Hindus and five Mahometans are to be elected, the town would be divided into eight electoral areas, equalizing so far as possible the number of Hindu inhabitants in each, and into five similarly arranged areas for the Mussulman voters. Under Lord Morley's scheme, any districts where the Mahometans were in a minority, the representatives would be nominated instead of being elected. Lord Morley received the delegation in a friendly and conciliatory spirit, and called attention to the fact that his dispatch to the Viceroy was in the nature of a suggestion, not an absolute dictation of a definite plan to the Government of India. He thought it quite possible that some modification of the electoral colleges could be adopted in accordance with their desires. Lord Morley, however, held out no hope of adding two native members to the Executive Council, for the Executive Council, which is the real Government, consists of but six members, and if one Mahometan and one Hindu were appointed, one-third of the Council would be non-English, which would be a very serious step. He objected to selecting the Indian member of the Council on the basis of race or religion.

The Mystery of Lincoln

BY ROBERT E. KNOWLES

AUTHOR OF "ST. CUTHBERT'S," "THE WEB OF TIME," ETC.

THERE are few things in life so fascinating as the study of the secret of greatness. The world is never weary of digging and delving in that mysterious soil wherein the life of a great man has struck its hidden roots. A great man, we say—how carelessly, oftentimes, with but little sense of the significance of the term. For every truly great man stands before us a mystery, something for which we cannot account, endowed with certain powers—or, better still, with power, a nameless attribute—which betoken the special favor of the Infinite. Every truly great man, said one of the greatest, Thomas Carlyle, is a pillar of cloud by day and a pillar of fire by night to guide us across this wilderness of life.

It is doubtful if history has produced a more mysterious personality than that which was incarnate in the long, gaunt, uncouth form of the man whose hundredth birthday will engage the attention of the world on the approaching 12th of February. Abraham Lincoln has been defined, and justly, as "the first American"—but he is far more than that. Of exclusively English stock, he is one of the most wonderful blooms of the parent stem. He is one of the greatest products

of the Anglo-Saxon race. He is one of the few marvelous births of our common humanity.

And the spell that Abraham Lincoln exercises over all the world is undoubtedly bound up with the mystery of the man. Somewhat more than a thousand different biographers have tried their hand at its solution, but in vain. With reverent curiosity some, and with complacent smartness others, but all have sought to trace to their hidden source the sagacity, the eloquence, the insight, the humanity, the wit, the brooding tenderness—in a word, the power—of this unexplainable child of nature.

Let the mystery be outlined. Behold, a little more than a century ago, a log cabin, its solitary window of greased paper admitting the light of day amid the semi-wildness of a Kentucky clearance. Two inmates there, and newly wed. The husband, Thomas Lincoln by name, is a poor specimen of the "poor whites," synonym for ignorance and superstition to half a continent. To the day of his death he could neither read nor write. His wife, Nancy Hanks before her marriage, herself first saw the light thru a cloud of obscurity and shame. Her mother's

name (Lucy Hanks) was of dread similarity to her own. The husband could not write his name; the wife scarce dared.

It was on February 12th, 1809, that the first wail of the hapless infant floated thru the miserable cabin. This infant was named Abraham for his father's father; which said grandfather had been killed and scalped by an Indian savage. Eight years flit by, and the lonely child has grown fast—a solitary child except for his elder sister Sarah, his playground the somber forest amid which the rude shanty nestles. When eight years of age, in 1817, the little family moves, raft-borne along the stream, into the unbroken wilderness of Indiana. Again a log cabin serves as home, humbler than its predecessor—only three sides enclosed, the fourth open to the weather. A central fireplace pours its smoke forth thru the open roof; the boy's bed, straw-built, is on some boards that rest on the rough rafters beneath the roof, and he climbs to it with the aid of a few pegs driven into the mud between the logs. But Abraham Lincoln grows, long, lank, leathery, with tanned and swarthy face, crowned by a great shock of wiry, rebellious hair. The days and months pass by; the boy's mother falls sick. One midnight he is wakened to stand by the dying form, weeping. The yearning eyes look out on the boy's tear-stained face as he stands, scantily appareled, in the candle's uncertain light. Still gazing, the mother's soul passes out into the silent kingdom, and the tears flow faster down the face that is yet to be familiar to latest generations. Six months later, the orphan plods fifty miles thru the wilds and returns with a wandering Methodist preacher; the belated funeral service is held by the now greening grave in the glade of an Indiana forest.

The years pass by, years of labor as a hired hand. Out of them all young Lincoln snatches something less than nine months of schooling—eight miles a day he walks, to and from the forest school. The nights, unwasted, too, find him prone on the earthen floor, reading what books he can by the light of the cabin fire—the Bible, "Æsop's Fables," "Pilgrim's Progress" form the scanty library.

The year of grace 1830 comes—and the roving Thomas Lincoln moves again.

Illinois this time provides the far off fields of green. Buckskin breeches, coarse rawhide boots—stockings none—blue smock, and copious cap of coonskin make up the dress of an ungainly youth of twenty-one, already six feet four, who waves his goad and plies his voice above a laggard yoke of oxen as the canvas-covered wagon makes its creaking way over the unpeopled prairie. That ox driver is yet to be called the Great Emancipator. Squatting at last, he splits the rails that fenced half of his father's new-acquired farm; tiring of this, he turns river-boy for a time, finally engaged to pole a raft down the Mississippi to New Orleans. Here slavery, grim and lurid, breaks upon him; here he registers his vow in heaven to fight it unto death—but still clad in buckskin breeches and blue smock and coonskin cap.

Back by river to St. Louis—from St. Louis, overland and on foot, he makes his way to the Illinois hamlet of New Salem. Fifteen houses compose the village. Abraham Lincoln goes to work again, hired by this farmer and that, rail-splitting, drain-digging, cattle-tending. Suddenly comes a vacancy in the village store—he is employed; finds a set of Blackstone at the bottom of a discarded hogshead, containing much beside—and devours Blackstone, the rest ignored. Postmastership falls vacant—Lincoln is appointed; no office needed nor indeed possible; carries letters about in his hat and delivers them at sight—but reads all papers before surrendering! Then he learns, furtively, the surveyor's science; secures instruments, which are presently seized for debt. Reads law diligently, building meantime an occasional pigsty, or splitting rails for the defenseless acres here and there. Then comes the year of grace 1837, wherein Abraham Lincoln presents himself before an obscure lawyer in Springfield—examination satisfactory, interview most social, probably moist—and the still blue-jeaned Lincoln is admitted to the Bar.

Behold a scene in April of this same 1837! Miscellaneous country store, kept by one Joshua Speed. It is evening, and the door slowly opens. Enter the lank, gaunt figure of a sad-faced man of twenty-eight, carrying a saddlebag; which saddlebag contains all his earthly

possessions. He walks timidly toward the waiting Speed, his great form looming large in the twilight. He would know the cost of furnishing a bed, for he purposes to try to live in the village as a lawyer. Speed calculates, soiling a square foot of good brown paper the while. Seventeen dollars, quoth he. Abraham Lincoln admits, sadly, that so much money he does not possess—nor sees likelihood of possessing. If Speed would trust him he might some day pay. Speed will trust him. Lincoln repents himself and says, sadly too, that he does not care to begin with so much of debt; starts silently for the door. Speed studies the face in the semi-darkness; calls him back; he has a bed of his own upstairs, he says, and the stranger is welcome to half of it till he gets a foothold. Lincoln demurs, then accepts, mumbling his thanks the while—the saddlebag is borne aloft to the room; and Speed knew not, thru the long four years that followed, that he lay night by night beside one of the Immortals, toward whom the eyes of future generations should be backward turned in reverence.

Long years after Lincoln's martyr crown was won, Joshua Speed referred to this life romance in words like these:

"I remember his face as he came into my store that April evening. I slept beside him for four years. And now I can hardly realize it; to think that he was dependent on me for a place to lay his head, all his worldly goods in the saddlebag that lay upon the floor—and then to recall that I lived to visit him in the White House as President of the United States, to see him holding his own with the greatest statesmen of Europe, making and unmaking generals and admirals, holding his Cabinet of stalwarts in the hollow of his hand, carrying on his bosom the greatest war of history, despatching Ambassadors to foreign courts and dispensing the patronage of his august office, directing the legislation of a nation, holding in his hands the fortunes of millions and the lives of tens of thousands, affixing his signature to a document that gave liberty to four millions of the human race, saving an empire to itself and to the cause of liberty, and at last, his country delivered and his cause triumphant, dying amid the grief and reverence of Christendom—all this seems more like a dream than a reality."

Marvelous indeed was it all, as his old bedfellow might well exclaim. Herein lies the charm of Lincoln's checkered race—in its mystery. We do not marvel greatly at the career, for instance, of such a man as Gladstone. Born in the

same year as Lincoln, 1809, when 1832 arrived Gladstone had past thru Oxford with singular distinction, one of the first scholars of his age. He had traveled far, had drunk from almost every spring of learning on the Continent, had acquired many languages, had shared the stimulating friendship of men like Kinglake and Newman and Tennyson, and had taken his seat in the House of Commons as the nominee of the Duke of Newcastle. In that same year, 1832, Lincoln was heard to say: "I've a notion to study English grammar if I knew where I could get one." Some one told him that an old schoolmaster, Mentor Graham, seven miles afield, had such a thing; and that same night Lincoln traversed the fourteen miles to borrow the precious volume. Such was the handicap of his beginning—and how swiftly he overtook his great contemporary all the world knows now. Gladstone himself, Nestor tho he was, has left no contribution to political oratory, to human literature, such as fell from the lips of this untutored orator, who said: "He that would be no slave must have no slave"; or again, "What is inherently right is politically safe"; or again, "Let us highly resolve that these dead shall not have died in vain; . . . that government of the people, by the people, for the people, shall not perish from the earth"; or again, and noblest of them all, "With malice toward none, with charity toward all, with firmness in the right as God gives us to see the right, let us seek to finish the work we have begun." Montalembert commended Lincoln's style as a model for the imitation of princes. Probably none of Lincoln's varied gifts is so significant of his greatness as his wonderful power with words. Many of his phrases have become part of the daily speech of mankind. Few had so quick and reverent a sense of the wizardry of language, few could detect with so delicate an instinct the opal shades of words. Witness his well-known revisal of Secretary Seward's letter to the English Government concerning the Trent affair; Lincoln's verbal genius made the difference between peace and war. But doubtless his greatest triumph in this realm was won in his Gettysburg address. From that same platform Edward Everett, one of the

most eloquent *litterateurs* of his day, delivered a speech of two hours and a quarter in duration—now no man knows its sepulcher. Lincoln jotted his, so the story goes, on the back of an envelope as the train bore him toward the battlefield; it occupied two minutes in delivery, but the English-speaking world has memorized it and Immortality has "taken it out of Time's careless keeping into her own."

We look in vain for adequate provocation for Lincoln's separate powers. Whether it be as statesman, or orator, or diplomat, or commander, or wit, or seer, the contemplation of his strength and triumphs baffles our understanding. From such depths derived, to such heights ascending, his flight mocks the eye of reason. An untried country lawyer, he was thrust to the nation's helm amid such a storm as seldom ever smote a people; the plain man of the prairies was called, as in a single night, to responsibility as great as was ever laid on human shoulders. And with what majesty of self-control he climbed the dizzy heights. Napoleon's power made him drunken, as with wine—and he betrayed his people, snatching greedily at imperial glory, and fell prone at last. But Lincoln's great nature took on new humility, new unselfishness, new beauty, as he trod the dread winepress alone. The farther his genius removed him from "the plain people," as he loved to call them, the nearer did he come to them in the deep kinship of humanity.

Many and different have been the theories advanced in explanation of the mysterious resource that marked the wonderful *régime* of this strange product of

the forest. But the secret still is hidden. Uneducated, yet a master of letters; unfamiliar with many books, yet a kind of modern Æsop in homely wisdom; untrained in diplomacy, yet more than a match for Seward and Chase and the most cultured parliamentarians of his day; reared amid the most primitive influences, yet familiar with every aspect of human life and almost every current of the human heart; struggling fiercely from infancy against obscurity and poverty—often, too, against ruthless men—yet aglow with humanity, a great and compassionate lover of the human race; untutored in the ways of war, yet compelling the wondering confidence of generals in the field; the rail-splitter of the plains, the awkward man who at twenty-three was earning his eight dollars a month on the farm, became the uncrowned king of one of the strongest among nations, the savior of his country, the emancipator of the enslaved, the champion of freedom to millions who never saw his face; became, in short, one of the greatest benefactors of mankind.

What approaches nearest to explanation of it all is, when stated, itself in terms of mystery. Yet there is no other. Abraham Lincoln was a separate gift from the hand of Him who maketh one star to differ from another star in glory. Raised up, as surely as was ever Moses of old, for the performance of a stupendous task, called from the silence and the dark of the western forest to the great theater that awaited him, he was equipt by that Almighty hand according to his need, endowed by infinite Love and Wisdom for his mighty mission.

GALT, ONTARIO.

February

BY CLARESSA TOWNSEND BALDWIN

THE year is young. It does not know
That roses sleep beneath the snow,
Waiting for June's soft breeze to blow.

Our souls are young. We do not know
What power is ours for joy or woe.
We wait. Another life will show.

NEW YORK CITY.

Recollections of Abraham Lincoln

BY HENRY C. BOWEN

[For 1858 issue on Lincoln's Birthday, 1897, THE INDEPENDENT published what it called a "Lincoln Number," with articles from *forty-five* different men and women who had known and honored him. Of these not a few have since died, and it would be difficult if not impossible now to gather such an array of testimony to Lincoln's greatness from living men. They were gathered by T. Y. Crowell in a volume of over 300 pages, than which there is no better source for a comprehensive estimate of his character and his work. On this one hundredth anniversary of his birth we reprint one article by the then editor and proprietor of THE INDEPENDENT, giving an account of his success in securing Mr. Lincoln for that address in New York which introduced him to the people of the East and which resulted in his nomination as president of the Union.]

I N 1858 Abraham Lincoln was nominated at Springfield, Ill., by the Republican State Convention as the candidate for United States Senator from Illinois in place of Stephen A. Douglas, who desired re-election to that office. Afterward Lincoln challenged Douglas to canvass the State with him and publicly discuss the question of slavery. This discussion attracted the attention of the whole American people to Mr. Lincoln as a man of great intellectual and oratorical power—a splendid, keen, quick-sighted platform speaker. His speeches during that campaign were reported and read in every part of the country. They were noticeable for their brilliant and humorous illustrations, which made them very effective. I read most of these speeches with interest, and they made a deep impression on my mind. The fresh and aggressive style of Lincoln led me then to think that he had a brilliant political future of great value to the Republican party.

During the winter of 1859 several young men in New York, including Mr. Joseph H. Richards, who was then in my employ and connected with THE INDEPENDENT as its publisher; Mr. S. W. Tubbs, receiving teller of the Park Bank; Mr. S. M. Pettingill, a well-known advertising agent, and the Hon. James A. Briggs, decided to arrange for a lecture to promote a benevolent object supplementary to a course in Brooklyn. They wanted a man who would draw a crowd and make the lecture a success, they said, and asked me if I could name such a man.

I knew Mr. Lincoln by reputation, as a lawyer before his platform contests with Douglas in Illinois. He had been

employed by my firm—Bowen & McNamee—on several occasions. We found him to be able, efficient and successful. I gave it as my decided opinion that Mr. Lincoln would be the best man to fill Cooper Institute. The expense would be large in bringing him here from Illinois, but the young men decided to take the risk of inviting him. The compensation offered was \$200, which included all his expenses. The proposal made to him was promptly accepted, and on Mr. Lincoln's arrival in New York he came directly to my office, where I was very glad to receive him. I had never seen him before. His personal appearance surprised me somewhat.

The introductory conversation was quickly over, and he immediately made himself at home, completely covering the sofa, which was quite too small and short for his extended figure. I soon saw he was a talker. He bubbled over with stories and jokes, and speedily convinced me that I had made no mistake in recommending him as a lecturer. After an hour's talk I asked him where he was stopping in the city, and he said he had a quiet room in the Metropolitan Hotel, where he could have a chance to think. I invited him to be my guest in Brooklyn, but he declined, saying he was afraid he had made a mistake in accepting the call to New York, and feared his lecture would not prove a success. He said he would have to give his whole time to it, otherwise he was sure he would make a failure, in which case he would be very sorry for the young men who had kindly invited him. This interview was on Saturday. I then said: "Will you come to Brooklyn and attend church with me on Sunday?" He said

ABRAHAM LINCOLN.

The historical picture of Lincoln signing the "Emancipation Proclamation" was painted in the White House by Frank B. Carpenter in 1864 and is now in the Capitol at Washington, and the large engraving from it reproduced in our Sixtieth Anniversary Number was used as a premium by *THE INDEPENDENT* in the sixties and seventies. The portrait of Lincoln given above is from a photograph of the *replica* of the original study of Lincoln by Mr. Carpenter in 1887 and is now in the possession of *THE INDEPENDENT*.

he would be very glad to do so. He asked where I attended church. I told him Plymouth Church; and he said he would like to hear Mr. Beecher, and that he would come over in good time. I then invited him to dine with me after the morning service. He said he would do so. Soon after ten o'clock on Sunday morning he appeared at the door of the church, where I was waiting for him, and I escorted him to my pew. His presence in the church was unknown to any-

body. A few moments before the service commenced I introduced him to Mr. Horace B. Claflin, who sat in the next pew behind me. He talked with him a moment, and then Mr. Claflin turned round and spoke to his neighbor in the adjoining pew; and I am pretty sure that within ten minutes a large proportion of the audience knew Mr. Lincoln was present. The sermon seemed to interest him very much, and after the meeting closed I invited Mr. Beecher on a slip of

paper—to come down and speak to Mr. Lincoln. He did so, and the interview seemed to attract the attention of the audience, who remained, almost in a body, to look at the distinguished stranger from Illinois. All seemed anxious to shake hands with him, and hundreds did so. Finally he said: "I think, Mr. Bowen, we have had enough of this show, and I will now go with you." We started from the church, past thru the crowd and went to my house. When we got to the front steps he said: "Mr. Bowen, I guess I will not go in." My reply was: "My good sir, we have arranged to have you dine with us, and we cannot excuse you." His reply was: "Now, look here, Mr. Bowen, I am not going to make a failure at the Cooper Institute tomorrow night, if I can possibly help it. I am anxious to make a success of it on account of the young men who have so kindly invited me here. It is on my mind all the time, and I can-

give on Monday evening was fairly well advertised; but the young men, who greatly desired his success—mainly for financial reasons—did not seem to be very enthusiastic, Mr. Richards said, about the result.

The evening came, and everybody was apparently astonished to see a crowded house. The speech, which was mostly on slavery and kindred topics, was regarded a most wonderful success; it seemed to please everybody. He presented point after point in such a fair, happy and telling way that he made an army of friends at once; even the pro-slavery men present—attracted there to see the man who had the reputation of whipping Douglas—went away saying: "Well, I like that man, if I don't agree with him." "He is a good fellow, anyway." "He doesn't make you mad as Garrison and Phillips do," etc. More *zealous* Republicans were probably made within twenty-four hours after the deliv-

THE DEFENDERS OF OUR UNION.

From a photograph published in *M. Standard*, New York, in 1867.

not be persuaded to accept your hospitality at this time. Please excuse me and let me go to my room at the hotel, lock the door, and there think about my lecture."

The lecture which Mr. Lincoln was to

give on Monday evening was fairly well advertised; but the young men, who greatly desired his success—mainly for financial reasons—did not seem to be very enthusiastic, Mr. Richards said, about the result.

The evening came, and everybody was apparently astonished to see a crowded house. The speech, which was mostly on slavery and kindred topics, was regarded a most wonderful success; it seemed to please everybody. He presented point after point in such a fair, happy and telling way that he made an army of friends at once; even the pro-slavery men present—attracted there to see the man who had the reputation of whipping Douglas—went away saying: "Well, I like that man, if I don't agree with him." "He is a good fellow, anyway." "He doesn't make you mad as Garrison and Phillips do," etc. More *zealous* Republicans were probably made within twenty-four hours after the deliv-

quarters inviting Mr. Lincoln to lecture. The Hon. Hugh H. Osgood, of Norwich, Conn., made the first application to Mr. Lincoln for a lecture in that city. He had obtained the names and influence of most of the leading men in Norwich to aid him, and it was at once decided that Mr. Lincoln should go East, speaking in New Haven, Hartford, Norwich and also at Providence. Within ten days Abraham Lincoln was everywhere, in Republican circles, spoken of and applauded for his boldness and wisdom, and was pronounced the "coming man" and a great acquisition to the ranks of outspoken anti-slavery men.

The following May, at the Republican National Convention, which, fortunately for Mr. Lincoln, met at Chicago, he was made the candidate of the party for President. While he was popular and well spoken of in all quarters, very few believed that he would be nominated, and I was not among them. My choice was William H. Seward for President and Abraham Lincoln for Vice-President. The convention was greatly excited; the friends of Seward were legion, and they did their very best to secure his nomination. Mr. Seward obtained on the first ballot $173\frac{1}{2}$ votes, Mr. Lincoln 102, and the remainder were much scattered. At the second ballot, it seemed certain that Mr. Seward would triumph by a very large majority. But when the vote was taken, it showed 184½ for Seward and 181 for Lincoln. The third ballot gave Mr. Lincoln $231\frac{1}{2}$ votes—only two short of the number required to nominate him—when, before the result was declared, enough Ohio and New England votes were promptly given to nominate him. But that mere majority was not permitted to stand on the record, for State after State wheeled into the Lincoln ranks, and, amid immense enthusiasm, he was made by a unanimous vote, on the motion of the Hon. Wm. M. Evarts (Seward's strongest friend), the Republican candidate for President; and in due time he was elected the first Republican President of the United States.

In a long and private conversation with President Lincoln during a whole evening at the Soldiers' Home, during the week of his inauguration, he gave me a history of his feelings and anxieties during the campaign. He said he had

"gone his whole length" for the Republican party (six feet and four inches, I thought), and he felt that the nation was thoroly aroused and enthusiastic, as never before, for the overthrow of slavery and the establishment of freedom thruout the land. He was sure, he said, "from the word go," after his nomination that he would be elected.

In November, on the day of the election, he said he was calm and sure of the result. The first news he received, mostly from New York, was unfavorable, and he felt a little discouraged. Later the dispatches indicated a turn in the tide, and when he learned of his election he said his heart overflowed with thanksgiving to God for his providential goodness to our beloved country. He continued: "I cannot conceal the fact that I was a very happy man," and then he added, with much feeling, "Who could help being so under such circumstances?" He then said that "the enthusiastic greetings of his neighbors and friends during the evening, at the club," together with the numerous telegrams which poured in upon him, "well nigh upset him with joy." At a late hour he left the club rooms and went home to talk over matters with his wife. Before going to the club that evening to get the election news as it came in, he said: "I told my wife to go to bed, as probably I should not be back before midnight. When at about twelve o'clock the news came informing me of my election I said: 'Boys, I think I will go home now; for there is a little woman there who would like to hear the news.' The club gave me three rousing cheers and then I left. On my arrival I went to my bedroom and found my wife sound asleep. I gently touched her shoulder and said, 'Mary!'; she made no answer. I spoke again, a little louder, saying, 'Mary, Mary! *we are elected!*' Well," continued the President, "I then went to bed, but before I went to sleep I selected every member of my Cabinet save one. I determined on Seward for my Secretary of State, Chase for Secretary of the Treasury, Welles (whose acquaintance I made in Hartford) for Secretary of the Navy, and Blair and others for the other positions; but I was induced to make one or two changes when I got to Washington. My Cabinet, however, was substantially fixed upon that

night. I wanted Seward, for I had the highest respect for him and the utmost confidence in his ability. I wanted Chase also; I considered him one of the ablest, best and most reliable men in the country, and a good representative of the progressive, anti-slavery element in the party." In a word, he said he "wanted all his competitors to have a place in his Cabinet in order to create harmony in the party."

In 1862, Mr. Beecher and Mr. Tilton, who had then, by contract, the sole editorial control of the paper, while I retained direction only of the financial and other business departments, felt it to be their duty, against my wishes, to criticise President Lincoln for "not moving more rapidly in suppressing the Rebellion." At one time, while General McClellan was the leader of our armies in Virginia, the editors, believing that the great body of the people demanded more activity, spoke out plainly, and perhaps too much so, about the "slow course of the President." Mr. Lincoln felt deeply grieved by these criticisms in *THE INDEPENDENT* and spoke about it to

a mutual friend—the Hon. Schuyler Colfax—supposing, as he did, that I was then the sole owner and editor of the paper. Mr. Colfax—then a leading Republican Congressman from the West—lost no time in writing me on the subject. My reply to him was that I did not control the editorial columns of *THE INDEPENDENT* except in the business departments, and requested him kindly to state that fact to the President. He did so immediately, and

thought I had better let the President know this by a personal interview—if I could go to Washington—or, if not, by letter. I went immediately to Washington and called without delay at the White House. An immense crowd was there, and after waiting an hour or more, I came to the conclusion that there was no chance of seeing the President that morning. The city was then in the greatest excitement—as was the whole country—about the news from the battle-

fields; and I saw that the poor man had enough on his mind to crush him, without my adding a feather's weight to his troubles. I started to go to my hotel, when, in passing out of the reception room, I met the President face to face, on his way from his office downstairs to his luncheon. He grasped my hand and said: "Well, well! is this you? What can I do for you?" I commenced to tell my errand, when he broke out in the most tender and touching words, saying: "Mr. Bowen, I now know your position; it is all right. I am sorry you troubled your-

self to come here. Pray don't bother yourself a moment," and with many kind words he prest my hand, and we parted.

Never after that interview did the President have occasion to criticise *THE INDEPENDENT* for deviating from its uniform course in doing all in its power to sustain and encourage him in his efforts for the suppression of the Rebellion. Such measures, however, were soon adopted by him as convinced and satisfied the people of the whole North.

NEW YORK CITY.

GEN. JOHN C. FREMONT

An Unpublisht Lincoln Letter

BY HENRY OLDYS

THE letter of which a *fac-simile* is here publisht was in a bundle of old letters found among the effects of my grandfather, Hon. Nathan Sargent, on his death in 1878. The package contained communications from Henry Clay, John M. Clayton, Edward Everett, Lewis Cass, Henry A. Wise, Reverdy Johnson and a number of other men whose activities helped to mold the destiny of the nation. It has been my intention, when pressure of regular duties would permit, to publish these letters, which cast some slight additional light on the political history of the country for more than twenty years. This Lincoln letter belongs to a later period than is covered by the bulk of the correspondence, and readily detaches itself from the rest, as was long ago pointed out to me by my friend, Col. John G. Nicolay, who was anxious to use it in the life of Lincoln prepared jointly by himself and Mr. Hay. At the time I was not convinced by his arguments and was unwilling to part with the letter. As we grow older we grow wiser, and I have since regretted that I did not accede to Colonel Nicolay's earnest request. However, that is past, and I am glad that I now have the opportunity to offer this additional bit to the Lincolniana called forth by the centennial anniversary of the birth of our great President.

The letter was written in the period intervening between Lincoln's unsuccessful campaign against Stephen A. Douglas in 1858 for the Senatorship from Illinois and his nomination for the Presidency at the Chicago convention of 1860. The intense agitation attending the passage of the Nebraska bill in 1854

had been augmented by the subsequent rapid succession of events. The Ostend manifesto, with its open advocacy of the conquest of Cuba, for the purpose, as the North firmly believed, of extending slave-holding territory, and in the framing of which Buchanan, then Minister to England, had played a leading part; the various filibustering expeditions undertaken against Cuba, Nicaragua and Mexico, with the same design; the bloody reign of violence and lawlessness in Kansas; the frequent scenes of strife resulting from attempts to execute the fugitive slave law; the Dred Scott decision, with its pro-slavery *obiter dictum* of the Chief Justice of the United States Supreme Court—had swept both North and South off their feet and had produced a confusion of political alignments that resembled chaos. The demoralization of the great Democratic party, due to the tension on the slavery question and precipitated by Lincoln in his debates with Douglas, had given to its opponents a glimpse of victory, if only the diverse constituents of the opposition could be united. Judge Sargent, an old line Whig, was one of many who attempted to solve this difficult problem of fusing the various shades of opinion into one so as to present a solid front to the common enemy. A lifelong friend and ardent admirer of Henry Clay, it was but natural that his thoughts should turn to compromise. In the palmy days of the Whig party (to which he had given its name) he had been prominent in party counsels both as the editor of a leading newspaper and as a political writer (his "Oliver Oldschool" letters had been accepted as gospel by the rank

Springfield, Ill June 23 1859

Rev. Nathan Dane

My dear Sir

Your very acceptable letter of the 13th was duly received. Of course I would be pleased to see all the elements of opposition united for the approaching contest of 1860, but I confess I have not much hope of seeing it. You state a platform for such union in these words, "Opposition to the opening of the slave trade, & eternal hostility to the rotten democracy." You add, by way of comment "I say, if the republicans would be content with this, there would be no obstacle to a union of the opposition." But this should be distinctly understood, before Southern men are asked to join them in a National convention."

Well, I say such a platform, unanimously accepted by a National convention, with two of the best now living placed upon it as candidates, would probably carry Maryland, and would certainly not carry a single other State. It would gain nothing in the South, and lose every thing in the North. Mr. Gossin has just been beaten in Virginia on just such a platform. Last year the Republicans of Illinois cast 125,000 votes, on just a platform as yours this, can not cast as many by 50,000. You could not keep pursuing it, if you would but reflect that the republican party is either powerless against, if it ever, by any means, does for a single State who want to it from the democracy, for the sole object of preventing the opening, and nationalization of slavery. Whenever this object is warred by the organization, they will drop the organization, and

the organization itself will involve into this anti-
 Now platform proposes to allow the speaker, and
 (nationalization of slavery, ^{to} proceed without let or
 hindrance, save only that it shall ^{not} receive sup-
 plus directly from Africa. Surely you do not se-
 riously believe the Republicans can come to an,
 such terms—

From the passage of the Nebraska bill up to date,
 the Southern opposition have constantly sought to gain
 an advantage over the rotten democracy, by running
 ahead of them in extreme opposition to, and misre-
 facation and misrepresentation of black republi-
 cans— It will be a good deal, if we fail to remem-
 ber this in malice, (as I hope we shall fail to remember
 it) but it is altogether too much to ask us to try, to
 stand still them on the platform which has proved
 altogether insufficient to restrain them alone—

If the rotten democracy shall be beaten in 1860, it
 has to be done by the North; no human invention
 can deprive them of the South— I do not deny
 but that there are as good men in the South as
 the North; and I guess we will elect one of them
 if we will allow us to do so as Republican
 ground— I think there can be no other ground of
 union— For my single self I would be willing to
 risk some Southern men without a platform;
 but I am satisfied that is not the case with
 the Republican party generally.

Yours very truly
 A. Lincoln

and file). He felt it his duty, therefore, to contribute his share to the solution of the vexed question of devising a platform on which all the opponents of Democracy could unite. And not that only; with many other conservative men, he was greatly alarmed at the rapid growth of bitter sectional feeling, and hoped that if the Republican party could be committed to milder measures, the impending conflict would be averted. This was a hope that glimmered in the breasts of many in those exciting days, chiefly men of the older *régime*, who felt that the headlong whirl toward conflict that followed so closely the death of Henry Clay, the Great Pacificator, was largely due to the removal of that steady hand from the helm. The followers—and it is not hyperbole to call them the worshippers—of that gallant leader, were filled with the desire to secure a settlement of the burning question of slavery along the lines of the principles they had imbibed from him. Party rancor and strife for supremacy were not incompatible with national safety, but the vital prejudice for or against slavery must be dealt with by compromise, or the country would be plunged into a fratricidal conflict. It is possible that such men as Judge Sargent believed it would be better to lose the Presidential contest to the Democrats than to win on terms that would mean certain war.

Lincoln and those who had joined with him in organizing the Republican party were of sterner stuff. To them slavery was a hideous crime, and there could be no compromise with evil. Whatever the result, there was but one course—to prevent “the spread and nationalization of slavery” and to hope for its ultimate extinction in its Southern stronghold. In a letter written to Schuyler Colfax July 6th, 1859, a few days after the Sargent letter, Lincoln says, after deprecating the tendency to “platform” for local issues without regard to their effect elsewhere:

“Kansas, in her constitution that she can be saved to freedmen on ‘Squatter Sovereignty,’ must not be forgotten that to preserve the national and constitutional integrity of the Union is a national

concern, and must be attended to by the nations.”

He, too, was looking beyond the Presidential contest to the establishment of principles on which the sectional conflict must be settled. But with him it was no concession, but a fight to the finish. A country could not exist half slave, half free. One side or the other must dominate. It was not a question where to draw the line, for no line could be drawn that recognized the existence of slavery as right. The question must be decided definitely and forever whether slavery was right or wrong. Possessed as he was of an abiding conviction that slavery was wrong *per se*, he could consider no compromise with those who upheld it on moral grounds. His complete and forcible rejection of Judge Sargent’s proposed platform was to be expected, not only because of its weakness as a standard around which to rally the scattered forces of opposition, but because of its ignoring what he regarded as a national crime. In a letter to Canisius written just four weeks earlier (May 17th, 1859) he thus expresses himself:

“As to the matter of fusion, I am for it, if it can be had on Republican grounds; and I am not for it on any other terms. A fusion on any other terms would be as foolish as unprincipled. . . . I am against letting down the Republican standard a hair’s breadth.”

With him it was a question, not merely of expediency, but of moral principle; and moral principles are not a legitimate subject of compromise.

In his debates with Douglas during the preceding summer Lincoln had clarified and sharply delineated the issue between the North and South as no other man had yet done. He had widened and made impassable the breach between the Douglas and Buchanan Democrats; he had demolished the refuge of “squatter sovereignty,” and he had raised himself personally to such an eminence that his own unflinching individuality was the rallying point for all the uncompromising foes of slavery. His unyielding attitude and his towering figure are clearly marked in his letter to Judge Sargent.

Lincoln and Labor

BY W. J. GHENT

AUTHOR OF "OUR BENEVOLENT FEUDALISM," "MASS AND CLASS," ETC.

"I AM glad to see," said Abraham Lincoln in his New Haven speech, March 6, 1860, "that a system of labor prevails in New England under which laborers can strike when they want to. . . . I like the system which lets a man quit when he wants to, and wish it might prevail everywhere."

The strike of the Lynn shoemakers was then in progress, and Lincoln seems to have regarded it with deep concern. At Hartford, March 5th, and at New Haven the following day, he gave it considerable mention in his speeches. Doubtless to him at that time a strike was of the nature of a new phenomenon. He had been familiar only with the more primitive relation of employer and employee on the frontier. But the material well-being of workingmen was a subject upon which he had pondered for many years, and any legitimate means intended to further that well-being was sure to awaken his sympathy. As early as 1847 he had written:

"Inasmuch as most good things are produced by labor, it follows that all such things belong of right to those whose labor produced them. But it has so happened, in all ages of the world, that some have labored, and others have, without labor, enjoyed a large portion of the fruits. This is wrong and should not continue. To secure to each laborer the whole product of his labor, or as nearly as possible, is a worthy object of any good government."

This is a somewhat remarkable declaration, considering the time at which it was uttered, and the environment in which Lincoln lived. The hired laborers whom Lincoln knew were not of the factory or the mill, sustaining only an impersonal and collective relation with their employers. They were men who hired out for a time—as a rule, one or two to an employer—subsequently becoming independent producers or the employers of other men. The frontier was developing rapidly, there were no class lines, and the workman of one day was often the employer of the morrow. "There is no permanent class of hired laborers among us," said Lincoln in 1854; and tho the statement was by no means correct as applied to the East, it was in a large meas-

ure true of the Middle West. The concept of the wage laborer's right to the whole produce of his labor is one not usually found among men bred in a community where only the more primitive forms of capitalism prevail. Where did Lincoln get it? Was it framed out of something which he found in Horace Greeley's *Tribune*, then an outspoken advocate of Fourierite Socialism? Or did he develop it out of his own reflection?

There is no answer. But we know from his speeches and letters that the labor question claimed an increasing share of his attention. In his Cincinnati speech of September 17th, 1859, he devoted considerable time to it; and in his speech before the Wisconsin State Agricultural Society at Milwaukee, thirteen days later, he takes up, point by point, the argument subsequently made in his First Annual Message on the necessity of giving greater consideration to labor than to capital.

In all this he is still dealing with the forms of labor, whether hired or independent, typical of the Middle West. He praises the industrious, sober and honest wage-worker who "accumulates capital" and thus becomes the employer of other men. A relation of capital and labor is thus rightfully established between employer and employee, he says—"a relation of which I make no complaint." But he insists that that relation, after all, "does not embrace more than one-eighth of the labor of the country." In other words, in Lincoln's judgment, seven-eighths of the labor of the country was at that time being done by self-employed farmers and artisans.

Lincoln's statistics were sometimes faulty, and they were conspicuously so here. The crude census of 1860 does not help us much in determining the measure of his error, but it is certain that the factory system was already well developed in the Eastern States, particularly in the production of textiles, metals (including implements), lumber products and leather. When Lincoln came East in the winter of 1859-60 he became acquainted

with this—to him—new relation of labor and capital. The Lynn shoemakers had joined in a strike, and the Democrats, particularly Douglas, were making political capital of the trouble. Labor unions were then looked upon with grave apprehension by the people generally—that is, that part of the people who had so much as heard of such bodies. But Lincoln boldly took sides with the strikers. According to an abstract of his Hartford speech:

"Mr. Lincoln then took up the Massachusetts shoemakers' strike, treating it in a humorous and philosophical manner, and exposing to ridicule the foolish pretense of Senator Douglas, that the strike arose from 'this unfortunate sectional warfare.' Mr. Lincoln thanked God that we have a system of labor where there can be a strike. Whatever the pressure, there is a point where the workman may stop."

At New Haven his speech was reported verbatim. He said:

"Another specimen of this bushwhacking—that 'shoe strike.' Now be it understood that I do not pretend to know all about the matter. I am merely going to speculate a little about some of its phases, and at the outset I am glad to see that a system of labor prevails in New England under which laborers can strike when they want to, where they are not obliged to work under all circumstances, and are not tied down and obliged to labor whether you pay them or not. I like the system which lets a man quit when he wants to, and wish it might prevail everywhere."

The warm sympathy of Lincoln for laboring men, organized and unorganized, is manifest in many of his utterances. The reciprocal devotion of laboring men to Lincoln and the cause he represented is equally notable. In the years just preceding the Civil War the unskilled and unorganized workers of the North were generally prompted instinctively to oppose slavery. The skilled and organized workers, it must be confessed, too often objected to any interference with slavery. In this attitude they were no doubt guided by the manufacturers, who deprecated all anti-slavery agitation because it "disturbed business." The manufacturers followed what they conceived to be their immediate interests, and the mechanics, who had not then developed an independent class feeling, imitated the attitude of their employers.

But when the crash came they awakened to the real significance of the struggle. The organized workers enlisted with

the same eagerness as did their unorganized brothers. Printers, carpenters, painters, shoemakers, machinists, hurried to the front, and many unions were thinned to the breaking point. A general convention of trade unionists in Philadelphia in 1861 pledged their support to Lincoln and demanded the abolition of slavery. Sim-

ilar action was taken by many unions throughout the country, the most union men proved their devotion by promptly enlisting instead of remaining at home to pass resolutions. The Workingmen's Association of New York City, in March, 1864, elected Lincoln an honorary member, adopted a congratulatory address, and sent a committee to wait upon him and notify him of his election to membership. The workingmen of England recognized the significance of the struggle quite as clearly as did their American brothers. The cotton operatives of Lancashire, 6,000 strong, at a meeting in Manchester on New Year's Eve, 1862, refused to pe-

tition Her Majesty's Government to intervene, and adopted a congratulatory address to Lincoln, urging him to abolish slavery. Somewhat similar action was taken on the same night by large workingmen's gatherings in London and Sheffield. Other meetings in London and Bradford, on January 29th, 1863, and thruout England and Scotland during February and March, continued the movement. One of the most notable of these meetings was the gathering of trade unionists in St. James's Hall, London, on March 26th. It was addressed by John Stuart Mill, Professor Beesly, John Bright

ABRAHAM LINCOLN.

and others, and one of the resolutions was proposed by Sir W. R. Cremer, at the time a working carpenter.

In December, 1864, the Central Council of the newly formed International Workingmen's Association, a body destined to become famous as the forerunner of the International Socialist movement, transmitted to Lincoln an address con-

gratulating the American people on the President's re-election. It is possible that this address was written by Karl Marx—most probable that he had a hand in its preparation, for he was a member of the Council at the time, and many of the passages in the document are Marxian in thought and construction:

"From the commencement of the Titanic American strife, the workingmen of Europe felt instinctively that the star spangled banner carried the destiny of their class. . . . The working classes of Europe understood at once, even before the frantic partisanship of the upper classes for the Confederate gentry had given its dismal warning, that the slaveholders' rebellion was to sound the tocsin for a general holy crusade of property against labor, and that for the men of labor, with their hopes for the future, even their past conquests were at stake in that tremendous conflict on the other side of the Atlantic. . . . They [the working classes] consider it an earnest of the epoch to come that it fell to the lot of Abraham Lincoln, the single minded son of the working class, to lead his country thru the matchless struggle for the rescue of an enchained race and the reconstruction of a social work."

These evidences of working-class devotion to the cause he represented touched Lincoln profoundly. To the committee of the Workingmen's Association of New York City he replied at length, quoting the part of his First Annual Message regarding the relations of labor and capital, and adding:

"You comprehend, as your address shows, that the existing rebellion means more and tends to do more than the perpetuation of African slavery—that it is, in fact, a war upon the rights of all working people. . . . None are so deeply interested to resist the present rebellion as the working people. Let them beware of prejudices, working division and hostility among themselves. The most notable feature of a disturbance in your city last summer [referring to the draft riots] was the hanging of some working people by other working people. It should never be so. The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people, of all nations, and tongues, and kindreds."

To the address of the Manchester workingmen he replied on January 19th, 1863:

"I know and deeply deplore the sufferings which the workingmen at Manchester, and in all Europe, are called to endure in this crisis. . . . Thru the action of our disloyal citizens, the workingmen of Europe have been subjected to severe trials, for the purpose of forcing their sanction to that attempt [to perpetuate slavery]. Under the circumstances I cannot but regard your decisive utterances

upon the question as an instance of sublime Christian heroism which has not been surpassed in any age or in any country. It is indeed an energetic and reinspiring assurance of the inherent power of truth, and of the ultimate and universal triumph of justice, humanity, and freedom."

To the workingmen of London he wrote, on February 2d, 1863, expressing his "sincere appreciation of the exalted and humane sentiments" by which their address to him was inspired, declaring that the obligation had devolved upon the

by Charles Francis Adams, then Minister to England.

Said Lincoln in his First Annual Message:

"Labor is prior to, and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration. . . . No men living are more worthy to be trusted than those who toil up from poverty—none less inclined to touch or take aught which they have not honestly earned. Let them be-

From the Frederick Hill Museum collection

American people of testing "whether a government established on the principles of human freedom can be maintained against an effort to build one upon the exclusive foundation of human bondage," and rejoicing in the evidences of magnanimity which the London workingmen are manifesting in their attitude toward the struggle. There is no record of a reply by Lincoln to the address of the International, tho the receipt of the address was acknowledged in a formal note

ware of surrendering a political power they already possess, and which, if surrendered, will surely be used to close the door of advancement against such as they, and to fix new disabilities and burdens upon them, till all of liberty shall be lost."

Three years later he repeated these words, and added, "The views then expressed remain unchanged," and further, "I cannot better express myself."

"Lincoln did not see," says Mr. Henry Bryan Binns in his "Lincoln," "the industrial change that was coming. He

believed that in maintaining the individualistic ideals of the North he was maintaining the only practical social equality." He was, as I have pointed out in a previous article (*Collier's*, April 1st, 1905), fundamentally a Jeffersonian, though his Jeffersonianism was qualified by a good deal of what today would be called socialism. His thought lagged behind his feeling. Committed to the old individualism, oblivious of the tremendous change then going on in the operation of industry, and yet sympathetic to the core with the utmost assertion by the working class of its rights and powers, many of his expressions seem, in the light of modern judgment, to be paradoxical. Almost in the same sentence he talks of working-class solidarity, and yet of the opportu-

nity for each workman to become wealthy; of securing to each the whole product of his labor, and yet of the legitimacy of capitalist profit. In his economics he was an Individualist; in his ethics he was a Socialist.

It would be idle to speculate upon the changed views he might have held had he lived thru the great crisis that absorbed his thought and taxed his energies. He would have rounded out his convictions and made them more consistent with one another; but whether by attaining a more consistent Individualism or a more consistent Socialism, we cannot know. At all events he was, and would have remained, a devoted friend of the toiler—no doubt the truest, warmest friend of labor that ever ruled a nation.

NEW YORK CITY.

Lincoln in the Hearts of the People

BY BENJAMIN CHAPIN

[Sprung from the best New England stock, transplanted to the Western Reserve, Benjamin Chapin was born in Bristol, Ohio, a few years after the Civil War, and was educated at New Lime Institute and University of Chicago. Mr. Chapin has achieved extraordinary success in an original four-act play, entitled "Lincoln at the White House," running with daily matinees at the Garden Theater, New York. In connection with the centenary of Lincoln's birth and in view of the actor-playwright's long identification with the character of the martyred President, we have asked him to tell the readers of *THE INDEPENDENT* how the Lincoln idea has grown and developed with him as an artist and with the American people, his auditors.—EDITOR.]

WHEN I first express my intention of embodying Lincoln on the stage, my friends looked at me askance and gave me up as conceited or crazy. "You fail to realize," said a well-wisher, "the affection and reverence of the American people for the great martyr. When you portray the man, you flout that sentiment."

Undismayed, I continued to study passionately every bit of Lincolniana within my reach, to interview his surviving comrades at Washington and Springfield, and to prepare myself for the arduous task of making the President live again. The physical make-up and characterization proved but a matter of a few weeks. To embody the spirit of a man, so to speak, was a task of five years' duration.

When I faced the first audience to see and hear the Lincoln monologue, cover-

ing a two hours' entertainment, wherein I told stories, gave a cabinet meeting and a home scene with Mrs. Lincoln and Tad, all in the make-up of the President, my friends' predictions were falsified. There was not a man, woman or child who resented the Lincoln embodiment. Instead, for some time after the beginning of my performance, wonder and astonishment ruled the audience, as though a ghost rather than the actor walked the boards. Venerable ladies of sixty and more viewed me with that vacant, fascinated stare of the hypnotic subjects. After the performance ended several persons came up and talked to me. They did not address me as Mr. Chapin. Each man or woman called me Mr. Lincoln, and there was no joke nor flattery about this. Apparently I was Lincoln to them for the time.

I have often been asked, Do you por-

tray the real Lincoln? I answer, Yes—and no. It is obvious to those familiar with dramatic art that from my resources and knowledge of the character I must nevertheless portray the people's idea or ideal of Lincoln. The portrayal, my critics tell me, bears the stamp of truth. Yet

seph Jefferson's famous dictum that the secret of acting is to seem natural, not to be natural. The absolute, literal Lincoln of the White House would appear extremely unnatural to the audiences that go to see the character.

I had a striking illustration of this in

"LINCOLN" READING—"THE INDEPENDENT"
 (Mr. Charles Thompson of Chicago is his impersonator for the scene.)

it is the seeming truth and not the literal truth. I have ever been guided by Ju-

Butler, Pa., several years ago, when I address a teachers' institute and told a

real Lincoln story about Tad, his father, and the boy's discovery of a litter of pup- at a time. You have brought together all the main qualities, so I could get a per-

THE FUNERAL OF LINCOLN

This catafalque was used in the celebration of the obsequies of Abraham Lincoln in the City of New York, April 24th and 25th, 1865. The main platform was fourteen feet long, eight feet wide and fifteen feet one inch in height. On this platform, which was five feet from the ground, was a dais six inches in height on which the coffin rested. Above the dais was a canopy supported by four columns curved upward at the center and surmounted by a miniature Temple of Liberty. The platform was covered with black cloth, which fell at the side nearly to the ground and was edged with silver bullion fringe; festoons of black cloth also hung from the sides, festooned with silver stars and also edged with silver bullion. The canopy was trimmed in like manner with black cloth festooned and spangled with silver bullion, the corners surmounted by rich plumes of black and white feathers. At the base of each column were three American flags slightly inclined, festooned and covered with crepe. The Temple of Liberty was represented as deserted, having no emblems of any kind in or around it except a small flag at the top at half mast. The inside of the car was lined with white satin, fluted. From the center of the roof was suspended a large eagle with outspread wings, having in its talons a laurel wreath. The platform around the coffin was strewn with flowers. The car was drawn by sixteen gray horses covered with black cloth trimmings, each horse being led by a groom.

pies. The story was not broad in any sense. It was merely extremely homely and racy of the soil, but it did not fit in with the Pennsylvanians' idea of Lincoln. Several persons walked out and the village paper next day excoriated me. The lesson never had to be repeated. I aim to give all the essential sides of Lincoln's character, but attuned to artistic harmony and with the irrelevant details shoved far in the background. This seeming naturalness has succeeded so well that men who have known Lincoln in the flesh have often said to me:

"I saw more of the real Lincoln in two hours of your play than I ever saw before, tho I have been with him for weeks

spective view of the man himself which I never realized when I was with him, for perhaps I was too near to Lincoln to know him."

And this brings me to the neo-Lincoln idea, the place of Lincoln in history and in the hearts of his countrymen. During the eleven years I have been presenting this character, the public interest not only in my work but in Lincoln in general has been steadily growing. The multitude of plans for honoring Lincoln by monuments, memorial shrines, roadways and waterways, shows how intense is the affection of America for its greatest historical figure. If the public has been kind to my work, it has been, perhaps, because

I have shared this reverence for the man and have maintained the belief that Lincoln is the one world-wide contribution of the United States to the Immortals. He was most modest. Often he said that any other statesman could take his place and that the shoes of any of his Cabinet officers could easily be filled. My studies have led me to the opposite conclusion. No other captain at the helm could have weathered the terrible civil storm. And remember that Lincoln stood alone. No man in public life remained his undeviating supporter from the start to the finish. Even in his Cabinet he was much distrusted, and the story that the aged Senator Dawes told me of Charles Sumner illustrates the feeling of many in Congress. Sumner, raging and vengeful, took the horse car from the Capitol to Dawes's, and after denouncing the President remarked:

"It will be impossible for that man Lincoln to be re-elected President after my speech last night!"

Sumner's tremendous egoism was balked of this wish. The captain stayed at the helm. While his opponents changed and shifted, Lincoln was always the same. The phrases of boyhood and young manhood came back to his lips in his closing years. Always he possessed a wonderful all-around sympathy not only for the Unionists and their cause, but for all humanity. It is this which distinguishes Lincoln from our other great Americans. He was not a member of an aristocratic class like George Washington, nor was he simply a great national patriot like Washington, Jackson or Grant. Other nations recognize the uni-

versal character of Lincoln's genius by displaying his statues and portraits before the children in the schools, as the replicas of no other American statesman are displayed.

A great monument of brick and stone to Lincoln, like Grant's Tomb, for instance, would be an eyesore. Personally I should not care to look at it, and I doubt if most Lincoln admirers would derive pleasure therefrom. A great public roadway, like that proposed between Washington and Gettysburg, would express the spirit of the man better than anything else. With the project of the Lincoln Farm Association to purchase his birthplace at Hodgenville, Ky., I am in hearty sympathy. The receipts of my first performance at the Garden Theater were, in fact, devoted to this fund.

I believe in preserving the Lincoln farm, and there is nothing against having a reproduction made, if desired, of the old Lincoln log cabin. Historical investigation shows that the actual old log cabin has long since rotted away. The reproductions are not the cabin any more than the "scaffold" of John Brown, pieces of which used to be hawked about from house to house by peddlers in Ohio when I was a boy, was the real thing. My enterprising press agent several years ago credited me with the ownership of a freak cabin in which the timbers of the Lincoln and Jefferson Davis homes were commingled. Needless to say, he dreamed this without my authority or consent. I have often been asked to stand as sponsor for fake cabins, but have always refused to do so.

NEW YORK CITY.

Salutation

BY RUTH STERRY

Did you choose the journey, friend?

No, nor I;

But to make it cheerfully,

Let us try.

When the day is dark, I pray,

Sing a song to cheer the way,

For tomorrow we will be

One day nearer to the sea.

Did you choose the journey, friend?

No, nor I;

But we know the end will come

By and by

All today we bear the load

Up the weary winding road,

But tomorrow we may be

At the Inn in company.

OLD STATE HOUSE (NOW COUNTY BUILDING),
Springfield, Ill.

The Lincoln Illinois Country

BY DANIEL KILHAM DODGE

[At our request Professor Dodge, who holds the chair in English at the University of Illinois and who is known as a student of Lincoln, made a special trip thru the Lincoln Illinois Country in preparation for this article.—EDITOR.]

WHEN Thomas Lincoln moved with his family from Indiana to Illinois in the spring of 1830, he selected for his first home a spot about ten miles west of Decatur, the county seat of Macon County. In the short autobiography prepared in 1859 Lincoln wrote:

"Here they built a log cabin, into which they removed and made sufficient of rails to fence ten acres of ground, fenced and broke the ground, and raised a crop of some corn upon it the same year."

This cabin, which was occupied by the Lincoln family for only a short time, was exhibited at the Philadelphia Centennial Exposition, but by some oversight it was destroyed on the close of the exposition.

The cabin at the St. Louis Exposition was constructed from a picture of the original.

Altho the young Abraham Lincoln had reached his majority before this change in the family affairs had occurred, and was therefore his own master, he apparently wisht to give full measure of service. That same summer, however, he left home and started out for himself. Curiously enough, his first engagement, that of taking a flat boat to New Orleans, brought him to his later home, Springfield, then a town of about twelve hundred inhabitants. By another coincidence, the flat boat was stranded near his second Illinois home, New Salem, where he settled on his return from his

THE LINCOLN LOG CABIN.

After a small fire, the cabin was reconstructed by H. W. Seely about 1870.

eventful journey down the river. While in New Salem, in 1832, Lincoln became a candidate for the Legislature, but in spite of his personal popularity he suffered his first and only defeat at the hands of the people. During the New Salem period Lincoln volunteered for the Black Hawk War, and later served as postmaster, storekeeper and surveyor, and began the study of law. If for no other reason, the town of New Salem can claim distinction as the place in which Lincoln began his double career as lawyer and politician.

But close as is the association of New Salem with the beginnings of Lincoln's activities, the chief interest will always center in his later home, Springfield, to which he moved in 1837. As he himself said in the exquisite farewell address at the little station, on February 11th, 1861:

"My friends, no one, not in my situation, can appreciate my feeling of sadness at this parting. To this place, and the kindness of these people,

I owe everything. Here I have lived a quarter of a century and have passed from a young to an old man. Here my children have been born, and one is buried. I now leave, not knowing when or whether ever I may return, with a task before me greater than that which rested upon Washington."

From the time that he first settled there Lincoln was a loyal citizen of Springfield. He worked hard and sagaciously to have the capital moved there, and the success of this effort was due not a little to him. Springfield could not have been a very attractive town at that time, with its mud roads, often almost impassable for wagons, and with small straggling buildings, some of them log cabins. But as Lincoln had just come from a village of still more primitive appearance he was not critical.

Immediately after settling in Springfield Lincoln began the practice of law, his very informal admission to the Bar having been gained apparently the year before. He was associated at different times with

several different practitioners, his latest partnership, that with his biographer Herndon, being continued nominally until Lincoln's death. Inquiry failed to reveal any of the buildings occupied by Lincoln the lawyer. - The last one, a two-story brick house, continued to stand until a few years ago, when it gave place to a business block. The two buildings still remaining that are closely connected with Lincoln are the old State House, on the square, now used as the Sangamon County Court House, and the home, four blocks away, on the corner of Eighth and Jackson streets. The first of these must have been a very fine building sixty years ago, when architectural standards in Illinois were not as high as they are now, and it is still a very useful building, with no signs of decay. It served its original purpose for many years after Lincoln's death, and for the sake of its associations it should never be allowed to give way to a modern structure. But

when we think of the fate of so many of the county court houses of the Eighth District with which Lincoln's name is associated, we can sometimes fear that the desire for improvement may find a sacrifice in the old State House on the square in Springfield.

But fortunately for our descendants, the future of the far more interesting and significant building, the Lincoln home, is assured. It was built in 1839 by the Rev. Charles Dresser, the first rector of St. Paul's Church, now the pro-cathedral of the diocese of Springfield. Dr. Dresser married Mr. and Mrs. Lincoln in 1842, and two years later he sold the house to Mr. Lincoln. At that time it was what in the Central West is called a cottage, a house of a story and a half. Some time after the purchase it was changed into substantially its present shape under the direction of Mrs. Lincoln during the absence of her husband on the circuit. The story that Lincoln,

MACON COUNTY'S FIRST COURT HOUSE.

Used now as a stable.

on his return to Springfield, asked a friend who lived in that house, is thoroly characteristic, whether it be strictly true or not.

Some biographers, desirous of emphasizing the contrast between the Illinois home and the White House, speak of the former as a simple house or even as an humble home. This is quite from the question, for altho, even in its improved form, it was both smaller and plainer than the Edwards house and many others in Springfield, it was at that time not noticeably plain or small, and it was far from being humble. Many of the floors were of red oak. A portion of this wood, which had been removed in connection with the repairs, was used to construct a very effective frame for the ox yoke made by Lincoln, now in the possession of the University of Illinois. The rooms in the house, with the exception of the dining-room and the room above it, are decidedly large, and the effect of the two parlors to the left of the entrance is markedly good. The hall, to be sure, is long and narrow and without character, but that was the general fault of even

much handsomer houses, East and West, two generations ago. On the other hand, the most exacting architectural critic of today would be imprest with the symmetrical elegance of the balustrade and the landing above is almost spacious. The front bedroom to the left was occupied by Mr. Lincoln, and there is still on the walls a portion of the paper from about 1854. The freshness of the colors and the simplicity of the design show that the interior finish of the house during its occupancy by the Lincolns must have been far above the average. The room back of Mr. Lincoln's was occupied by Mrs. Lincoln and the younger boys. The rooms on the other side were used respectively as the spare room and Robert Lincoln's bedroom and study.

During the Presidency the house was rented and for some years after it received no special care, until 1883, when it was leased to an ideal tenant, Capt. C. H. Oldroyd, a warm admirer of Lincoln and an enthusiastic and discriminating collector of Lincolniana. He placed his collection there and opened the house to the public. A few years later Mr.

THE LINCOLN HOME, SPRINGFIELD, ILL.

Robert T. Lincoln presented the house to the State and Captain Oldroyd was appointed custodian. Since 1893 the home has been in charge of a descendant of Governor Ninian Edwards.

Altho the furnishing of the house is in the main not that of the earlier occupants, there are many objects intimately connected with the family. The solid old Empire sofa in the sitting-room is from the Edwards home and it is said to have been used by Lincoln and Mary Todd during the period of courtship. The sideboard in the dining-room came from the same place, and it is undoubtedly very much handsomer than the one with which Mr. and Mrs. Lincoln began housekeeping sixty-five years ago.

During his whole professional career

southern portions of the State was chiefly furnished by Springfield. This peripatetic practice furnished the lawyer interested in politics with an admirable opportunity to make himself known thru the State and to become acquainted in turn with the various local conditions. For Lincoln this legal pilgrimage seems to have had a peculiar charm, for he had much of the spirit of Dan Chaucer and could get entertainment and cheer from all sorts and conditions of men. There is no reason, however, to suppose that Lincoln on the circuit was ever the undignified, hail-fellow-well-met that some of his biographers represent him to have been.

Contrary to the impression held by many persons not acquainted with the

LINCOLN HOME AT SPRINGFIELD, ILL.

From a photograph taken in 1890

Lincoln was intimately associated with the thirteen county seats which, with Springfield, formed the original Eighth District of Illinois. In those days the number of lawyers in any town outside of Chicago and the capital was very small and the supply for the central and

State, the prairie of Central Illinois shows considerable variety and some portions lay claim to actual beauty. This is especially true of the portions crost by the Illinois, the Vermilion and the Sangamon rivers, the banks of which frequently consist of wooded bluffs. The

OX YOKE MADE BY LINCOLN
Now on exhibition at the University of Illinois.

old Macon County Court House now stands on a hill in a pretty park just outside of Decatur, and there are similar beauty spots in connection with many of the other towns visited by Lincoln. During the Presidency Lincoln once referred to his skill as a woodsman, and from many passages in his conversation and his writings we learn of his intimate knowledge of Nature. In the case of at least one of the county seats, Urbana, we have specific information that Lincoln was fond of walking in the woods to the

north of the town, and in spite of his sociability we may be sure that in other places he did not spend all his spare time with his colleagues in the court room or at the hotel.

Like his great rival Douglas, Lincoln was heart and soul an Illinoisan, and like Douglas, too, he was a citizen of the State, not by the accident of birth, but by deliberate choice. He happened to be born in the same year in which Illinois became an independent territory, and his body lies in the soil he so dearly loved.

FROM the wide reaches of the wind-swept wold
With tender care he drives his flock to fold
That they secure may sleep;—
Thus, Lord, from the stark nightfall and the cold
O shepherd Thou Thy sheep!

ASHELY PARK, N. J.

Memorable Words of Abraham Lincoln

[From scores of the notable utterances of Abraham Lincoln we select the few that follow, which are of such historical importance that they ought to rest in every one's memory.
—EDITOR.]

A HOUSE divided against itself cannot stand. I believe this Government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall, but I do expect it will cease to be divided. It will become all one thing or all the other.—Springfield, June, 1858.

A duty devolves upon me which is, perhaps, greater than that which has devolved upon any other man since the days of Washington. He never would have succeeded except for the aid of Divine Providence, upon which he at all times relied. I feel that I cannot succeed without the same divine aid which sustained him, and on the same Almighty Being I place my reliance for support, and I hope you, my friends, will all pray that I may receive that divine assistance, without which I cannot succeed, but with which success is certain. Again, I bid you all an affectionate farewell.—Springfield, February 11th, 1860.

I have never had a feeling, politically, that did not spring from the sentiments embodied in the Declaration of Independence. I have often pondered over the dangers that were incurred by the men who assembled here and framed and adopted that Declaration of Independence. I have pondered over the toils that were endured by the officers and soldiers of the army who achieved that independence. I have often inquired of myself what great principle or idea it was that kept this Confederacy so long together. It was not the mere matter of the separation of the Colonies from the mother land, but that sentiment in the Declaration of Independence which gave liberty, not alone to the people of this country, but, I hope, to the world, for all future time. It was that which gave promise that, in due time, the weight would be lifted from the shoulders of all men. This is the sentiment embodied in the Declaration of Independence. Now, my

friends, can this country be saved on that basis? If it can, I shall consider myself one of the happiest men in the world if I can help to save it. If it cannot be saved upon that principle it will be truly awful. But if this country cannot be saved without giving up that principle, I was about to say I would rather be assassinated on this spot than surrender it.—Independence Hall, Philadelphia, February 21st, 1861.

Our popular Government has been called an experiment. Two points in it our people have already settled—the successful establishing and the successful administering of it. One still remains—its successful maintenance against a formidable attempt to overthrow it. It is now for them to demonstrate to the world that those who can fairly carry an election can suppress a rebellion; that ballots are the rightful and peaceful successors of bullets; and that when ballots have fairly and constitutionally decided, there can be no successful appeal back to bullets; that there can be no successful appeal, except to ballots themselves, at succeeding elections. Such will be a great lesson of peace; teaching men that what they cannot take by an election, neither can they take by a war; teaching all the folly of being the beginners of war.

It was with the deepest regret that the Executive found the duty of employing the war power in defense of the Government forced upon him. He could but perform this duty or surrender the existence of the Government. No compromise by public servants could in this case be a cure; not that compromises are not often proper; but that no popular government can long survive a marked precedent that those who carry an election can only save the Government from immediate destruction by giving up the main point upon which the people gave the election. The people themselves, and not their servants, can safely reverse their own deliberate decisions.

As a private citizen, the Executive

GOVERNOR SPRAGUE,
 Soldier and Governor of Rhode Island during the
 Civil War.

could not have consented that these institutions shall perish; much less could he, in betrayal of so fast and so sacred a trust as these free people have confided in him. He felt that he had no moral right to shrink, or even to count the chances of his own life, in what might follow. In full view of his great responsibility he has so far done what he deemed to be his duty. You will now, according to your own judgment, perform yours. He sincerely hopes that your views and your action may so accord with his as to assure all faithful citizens who have been disturbed in their rights, of a certain and speedy restoration to them, under the Constitution and the laws.

And having thus chosen our course, without guile and with pure purpose, let us renew our trust in God, and go forward without fear and with manly hearts.

Message, July 5th, 1861.

Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-Chief of the Army and Navy of the United States in time of actual armed rebellion against the authority and Government of the United States, and as a fit and necessary war measure for suppressing such rebellion, do, on the first

day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do publicly proclaimed for the full period of one hundred days, from the day first above mentioned, order and declare that all persons held as slaves within said designated States and parts of States, are and henceforth forever will be free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons.

And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defense; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages.

And I further declare and make known that such persons, of suitable condition, will be received into the armed service of the United States, to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service.

And upon this act, sincerely believed to be an act of justice, warranted by the Constitution upon military necessity, I invoke the considerate judgment of mankind, and the gracious favor of Almighty God.—Proclamation, January 1st, 1863.

You dislike the Emancipation Proclamation, and perhaps would have it retracted. But the Proclamation, as law, either is valid or is not valid. If it is not valid, it needs no retraction. If it is valid it cannot be retracted, any more than the dead can be brought to life.

You say that you will not fight to free negroes. Some of them seem willing to fight for you; but no matter. Fight you then, exclusively to save the Union. I issued the Proclamation on purpose to aid you in saving the Union. Whenever you shall have conquered all resistance to the Union, if I shall urge you to continue fighting, it will be an apt time then for you to declare you will not fight to free negroes. I thought that in your struggle for the Union, to whatever extent the negroes should cease helping the enemy, to that extent it weakened the enemy in his resistance to you. Do you think differently? I thought that whatever negroes can be got to do as soldiers.

leaves just so much less for white soldiers to do in saving the Union. Does it appear otherwise to you? But negroes, like other people, act upon motives. Why should they do anything for us if we will do nothing for them? If they stake their lives for us they must be prompted by the strongest motive, even the promise of freedom. And the promise, being made, must be kept.

Peace does not appear so distant as it did. I hope it will come soon and come to stay; and so come as to be worth the keeping in all future time. It will then have been proved that among freemen there can be no successful appeal from the ballot to the bullet, and that they who take such appeal are sure to lose their case and pay the cost. And there will be some black men who can remember that with silent tongue, and clinched teeth, and steady eye, and well-poised bayonet, they have helped mankind on to this great consummation, while I fear there will be some white ones unable to forget that with malignant heart and deceitful speech they have striven to hinder it.

Still, let us not be over-sanguine of a speedy, final triumph. Let us be quite sober. Let us diligently apply the means, never doubting that a just God, in his own good time, will give us the rightful result.—Springfield Letter, August 26th, 1863.

Fourscore and seven years ago our fathers brought forth upon this Continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle field of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But in a larger sense we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here, have consecrated far above our power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is, for us the living, rather to be dedicated here to the

unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they gave their last measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this nation under God shall have a new birth of freedom, and that government of the people, by the people, and for the people, shall not perish from the earth.—Speech at Gettysburg, November 19th, 1863.

I may add, at this point, that while I remain in my present position, I shall not attempt to retract or modify the Emancipation Proclamation, nor shall I return to slavery any person who is free by the terms of that proclamation, or by any of the acts of Congress.—Amnesty Proclamation, December 8th, 1863.

I am naturally anti-slavery. If slavery

WILLIAM H. SEWARD,
Secretary of State of the United States

FIG. 1. contemporary. Brady negative

is not wrong, nothing is wrong. I cannot remember when I did not so think and feel, and yet I have never understood that the Presidency conferred upon me an unrestricted right to act officially upon this judgment and feeling. It was in the oath I took that I would, to the best of my ability, preserve, protect and defend the Constitution of the United States. I could not take the office without taking the oath. Nor was it my view that I might take an oath to get power, and break the oath in using the power. I understand, too, that in ordinary civil administration this oath even forbade me to practically indulge my primary abstract judgment on the moral question of slavery. I had publicly declared this many times, and in many ways. And I aver, that, to this day, I have done no

official act in mere deference to my abstract judgment and feeling on slavery.

I add a word which was not in the verbal conversation. In telling this tale I attempt no compliment to my own sagacity. I claim not to have controlled events, but confess plainly that events have controlled me. Now, at the end of three years' struggle, the nation's condition is not what either party, or any man devised, or expected. God alone can claim it. Whither it is tending seems plain. If God now wills the removal of a great wrong, and wills also that we of the North, as well as you of the South, shall pay fairly for our complicity in that wrong, impartial history will find therein new cause to attest and revere the justice and goodness of God.—Letter to A. G. Hodges, April 4th, 1864.

The Fleet Is Coming Home

BY SAMANTHA WHIPPLE SHOUP

THEY'RE coming home, they're coming home, they're coming home at last!
For all the seas of all the world are crost and overpast!
They've swept the Indian Ocean, they've past the southern Horn,
Across the broad Pacific they've led the rising morn:
As first from north to farthest south they plowed Atlantic thru,
So now from east to west they come across its stormy blue.

O thousand ships that bore the Greeks to ravage ancient Troy,
O dragons fierce the Norsemen sailed on their raids of savage joy,
O fleets that fought at Salamis, Lepanto, Trafalgar,
What were ye all to one of these in the deadly grip of war!

And what was the errand dire and grim that took them 'round the world?
And what the message nations read from their starry flags unfurled?
"Peace, peace on earth, good will to men," as of old the angels sang—
The song that once but angels knew from their deathful cannon rang.

With friendly heart they sailed the seas from billowing end to end,
And every eager nation rushed with the greeting of a friend.
At last they reached the ruined shore, the shaken, desolate land,
With succor, food and shelter and the grace of a helping hand.

Oh! see you not the dream fulfilled of prophets, bards and seers?
Oh! see you not the blossoming dawn of the blessed thousand years?
Lord, lead us on and lead us on to love our brother man,
Till all the nations consummate the work that Christ began!

THEY'RE coming home, they're coming home, they're coming home at last!
For storm, typhoon and hurricane are met and overpast;
They've crost the seas, they've circled earth around from end to end,
And from every port they bring us back the greeting of a friend!

INDIANAPOLIS, IND.

Darwinism Fifty Years After

BY DAVID STARR JORDAN, LL.D.

PRESIDENT OF LELAND STANFORD, JR., UNIVERSITY.

IT is a century since the birth of Darwin and half a century since the publication of the "Origin of Species," the great book of the nineteenth century, and one which changed the entire face of biology and of philosophy.

We may consider in a hasty way the condition of biology before Darwin, then with Darwin, and then fifty years after.

Before Darwin there were great naturalists, as eager to trace the thoughts of God and their ramifications thruout nature as any who have labored since. But while everywhere and in every direction the path of investigation was crowded with facts, all answers to the question "Why?" seemed hopeless. The simple problem of the meaning of likeness in animals and plants seemed without possibility of answer, or only of such answer as, couched in the language of metaphysics, was devoid of practical meaning.

That the world of life was divided into multitudes of species, that these species could be classified into groups of various grades by their structure, that long-enduring strains of likeness were traceable among them, that species themselves, tho long persistent, were not immutable—all these were facts known to every scholar. But that the mighty differences among living things were derived thru minor changes, in slow processes of divergence, very few dared to believe. Those who for one reason or another speculated in this direction were one and all unable to show any adequate causes behind such mighty effects.

Hence scientific men, following the fashion of the unscientific, settled down to the idea that each species of animal and plant had arisen to begin with by a process called "special creation." The scientific world never believed in "special

creation." The phrase was recognized as meaningless, and the process itself beyond the possibility of definition or of imagination. But anything else was also non-imaginable, and most men of science kept on with their special work and let it go at that. Agassiz, almost alone, figured to himself an actual special creation of groups of eggs or germ cells, under conditions unknown, but at least regular, and in accordance with the thoughts of God. "Material form" was to him ever "the cover of spirit." To Darwin material form was ever the lurking place of a cause of which the form was the natural resultant, and perhaps the more metaphysical phraseology of Agassiz meant the same thing after all.

Darwin showed us, what all naturalists half knew before, that the unit of variation is lower than the species, and that the species has no kind of permanence different from that of the race or the genus or the family or the tribe. In the world of life there are no two individuals alike, nor is the same individual quite the same thru any two successive periods. If no two individuals are quite the same, there must be a reason for it. If the members of a group, having a common origin, change in time, and change in space, diverging as they spread over the earth, there must be a reason for this also. That every kind of animal and plant fits the environment, whatever it is, as the "dough fits the pan" or the river its bed, is also evident, and for this again there must be some reason. That with time and space all forms seem to change and to divide into branches is also evident, and this also must have its causes. That again, all variant forms we know in all the earth are reducible to a very few types, is also

evident. It is plain that in whatever image man was made, the monkey, the dog, the cat, the bear, the mouse, and even the bird, the turtle and the fish are made in substantially the same image. And behind all this it is the duty of science to insist on knowing the reason why.

"One of the noblest lessons left to the world by Darwin," says Cramer, "is this, which to him amounted to a profound, almost religious conviction, that every fact in nature, no matter how insignificant, every stripe of color, every tint of

that matured, hundreds or thousands of eggs were laid for each animal that survived, tens or hundreds of animals were born for each one which came to maturity. He showed that the destruction of the mass with the preservation of the fit was not all the operation of chance, but went on under definite rule. Competition is at work everywhere and favors the individual who can best make headway as young or as adult in the conditions that actually are. The struggle for existence is ever present, is ever varied, the strug-

flower, the length of an orchid's nectary, unusual height in a plant, all the infinite variety of apparently insignificant things, is full of significance. For him it was an historical record, the revelation of a cause, the lurking place of a principle."

The clue to all this was found by Darwin in natural selection, the survival under any conditions of the individuals best adapted to these conditions, and the persistence thru heredity of the traits of those to whom survival and adaptation were possible.

Darwin showed that thousands or millions of seeds were cast for every plant

gle of like with like in a congested district, the struggle of like with unlike, the struggle of all with the varied conditions of life. Out of all this, by natural causes, arose the variety in life as we know it today, the variance of individuals, the differentiation of species, and the fitting of some living forms to all conditions, from the snows of Orizaba to the abysses of the deepest sea.

Darwin found that species could be altered, divided or modified by conscious and purposeful mating, with the destruction of the undesirable. This represents the art called "artificial selection," "the

magic wand" by which the breeder effects his creations. For the cognate process in nature, unconscious but none the less efficient, he chose the term "natural selection." In his mind "natural" or actual was balanced against supernatural or imaginary, for to him an actual result must ever be associated with a tangible cause.

Animals and plants vary, and in all directions nature selects those whose variations are most favorable for the continuance of the species. More exactly, those individuals unfavorably built or unfavorably placed are first to die. Those who are left determine the future of the group. Like produces like. *Like the seed is the harvest.* This is the law of heredity, and the inheritance of one generation is from the individuals which survived in the generation which came before. The bonds of unity among living forms find their explanation in heredity. Homology or fundamental likeness of any sort means blood relationship.

The essential factors in the procession and divergence of living forms which we call "organic evolution" are therefore (1) variation, which Darwin took as a fact without explanation; (2) heredity, which he also took as a fact, with an attempt at explanation, as nearly adequate as the scanty knowledge of histology in his day would permit; and (3) selection. Heredity and variation are innate, or intrinsic, causes. They are involved in the nature of organic life. Selection is an external cause, operating as a motive force, pushing groups of organisms along as the force of gravitation rushes the water of a river to the sea. Without such motive force, evolution would get nowhere. Nothing happens in vacuo. A train of cars would not move were there no friction on the rails. "Heaven forbid me," Darwin once declared, "from the Lamarckian nonsense of innate tendency toward progression."

Under natural selection Darwin grouped all natural, or extrinsic, causes affecting the movement of life. The finer analysis of later times detaches from selection another factor indispensable to it, the "räumliche Sonderung" of Moritz Wagner, the condition known as separation, segregation, or isolation. It is isolation always that renders selection effec-

tive. Without some form of separation, the chosen fittest are lost again in the mass. Without geographical separation, we could account for the actual origin of very few of our actual species of wild animals or plants. Without artificial separation the work of the animal or plant breeder would be without result. So with the process of selection in nature. But all these facts were more or less clearly recognized by Darwin, and to detach natural "separation" as a friction-factor in organic evolution from the broader term of natural "selection" is but to clarify Darwin's terminology, without changing the essential meaning of Darwinism.

"The four factors named," says Dr. Ortman, "variation, inheritance, selection and separation, must work together in order to form different species. It is impossible to think that any one of them should work by itself or that one could be left aside."

These words, written nearly fifty years after the "Origin of Species," gave a compact statement of the essential doctrine of Darwinism; and this statement seems still to be absolutely true.

Now, after these fifty years of biological investigation, of intensive work in observation and experiment such as never was known before, observation and experiment all directed toward the opening door of "why?" to enter which the origin of species gave us the first clear warrant of authority, where do we find ourselves? What is today our conception of organic evolution? When a new land is opened to exploration, its first map, sketched from some mountain peak perhaps, shows the general features of the land, but without special detail, unless it be about the mountain peak itself. Such a new land was opened by Darwin in his survey of the methods and processes of organic evolution. The survey of special details was begun in his own garden at Down. In a large way, the salient features of the land were sketched with amazing truthfulness. The rivers run where he placed them. We have his word for valley, forest and cliff, and in all these larger features fifty years have wrought no very material changes. Men have sought to change the map. Shrill voices from every civilized nation have arisen in criticism.

Here a forest would be moved, here a lake and there a river. But better studies have shown the largeness of Darwin's vision. These critics could not see the landscape for the brush. Or, dropping the allegory, already too cumbrous, we may see that our knowledge of organic evolution has grown by leaps and bounds, but chiefly along lines laid down or foreseen by Darwin.

Since Darwin's time, the compound microscope has opened the secrets of histology. We have given meaning to the "physical basis of heredity." We have learned the process by which two germ cells from two different individuals divide and mingle to form a new individual, and we have followed this process thru many complex and unforeseen ramifications. We have settled many difficult questions, and we have raised a thousand more, which may yet in turn be settled, but with the same result of raising thousands of new questions. We have found reasons why no two individuals can be alike, why no two germ cells can ever be alike, and we have some hint as to why characters will be latent in one generation to reappear in the next.

With the microscope and its accessions we have traced the life history of thousands of species, from the germ cell to adult life, thus adding the third of Haeckel's "ancestral documents," which define for us the actual nature of any animal. These are morphology, the knowledge of the animal's actual structure; paleontology, the history of its ancestry, and embryology, the history of the stages by which the individual is made up. For "Unter jedem Grab liegt eine Weltgeschichte" ("In every grave lies a world history").

With the development of histology, morphology and embryology, we have developed the physiology of all sorts of organisms. We have learned what organs of all sorts can do, and experimental physiology is ever getting nearer and nearer the meaning of the condition we call life. But with all our increase of knowledge, we are no nearer the end of the problem. Some men believe in vital force, because they come into contact with phenomena explainable thru no other force. Others reject vital force, because the existence of such a force is

inconceivable. And so it is, and equally inconceivable is its non-existence. As Professor Brooks, wisest of American naturalists, used to say, "We shall never know the truth in this matter until we find it out."

The Lamarckian belief in the heredity of results of use and disuse, and of the impact of environment, accepted by Darwin without question, has been practically eliminated from Darwinism. After fifty years we have no clear case of any such inheritance of characters not unborn in the parent. And yet, with the death of the Lamarckian hypothesis, the same principle arises in new forms. One of the interesting problems of the day is the effect of changed environment in promoting germ variation. Inheritance of acquired characters in kind may not take place. The evidence seems all against it. But the thesis that external conditions do not cause germinal reactions is not yet clearly established. The discovery of Gregor Mendel as to dominant and recessive characters in peas has proved a valuable basis for investigation in the methods of heredity. But no change in the theory of Darwinism is made necessary by it. The hypothesis that the characters of species may be described as units, and that they may be transmitted as units by certain portions of germ plasm, is a convenient one as a framework for investigation. It is a sort of atomic theory of animal life, not true, but capable of being treated as true until we have a better idea of what the truth really is.

The investigations of Dr. De Vries have proved of great importance in suggesting fruitful lines of investigation. The study of pedigreed animals and plants cannot fail to give us many new ideas of heredity and variation. Darwin recognized many different grades of variations among animals and plants. These range from the sudden large change which De Vries calls mutation to the minute fluctuations which separate individual from individual. But Darwin saw no fundamental difference between the wide and the narrow oscillation, nor has such difference been clearly shown by any one. With all admiration for the painstaking and illuminating work of De Vries, I do not think that the question of

the origin of species has been affected by it. Species in general do not arise thru mutation, or the abrupt separation of one individual from the rest of its kind. If any single species should be shown to have arisen in this way, it would not change the general relation of the recognized factors in evolution, for a mutation, like any other variation, is dependent for preservation on heredity, on selection and on separation or isolation.

Since Darwin's time, natural selection has been exalted as all-powerful by many writers who, as Darwinians, went far beyond Darwin himself. In reaction, other authors have denied to selection, not merely "*allmacht*," or all-sufficiency, but any sufficiency or reality at all. It is enough for our discussion to disclaim all these extreme views. Selection must find its place in the heredity of any individual or species. We know no other cause for the myriad adaptations of life to its environment. We know no other reason for progressive adaptation. And yet the actual traits of actual species are largely non-adaptive.

The splitting of forms into different species is everywhere associated with geographical separation. One form may be as well fitted as another, one set of color markings as convenient as another, but if barriers of land, or sea, or climate, or food shut off one from another, each will persist in its own place, in its own way.

The study of the geographical, faunal and geological distribution of life on the earth, which has been pursued with such energy and with such success since Darwin's time, has laid greater and greater stress on the effect of barriers in producing species. With this, the effect of constant pressure in the same direction, extending thru long periods of geological time, has been dimly perceived and recognized under the term Orthogenesis. If all individuals could move anywhere on the earth without friction, all animals closely enough related to interbreed

would assume a common character. There is everywhere friction in geographical distribution. As dialects form in human speech, where men cease to mingle evenly, so species form among animals or plants where there exists a check to migration. The separation of forms by barriers is a natural process, but it is not a part of natural selection, but rather a distinct factor, natural separation. But the extension of our knowledge of this or other factors has not changed the general situation, for the general facts of geographical distribution were clearly recognized by Darwin. It is, in fact, from a study of these phenomena as shown in species inhabiting the coasts of South America that Darwin was first drawn to the problem of the origin of species. Professor Conklin observed not long ago, "On the whole, then, I believe the facts which are at present at our disposal justify a return to the position of Darwin." This he said with reference to a special problem in heredity, but these words apply to many others. "The position of Darwin" is very safe standing ground. What we have learned with better tools and keener insight into minor details has not changed the large problems very much, and this, as Conklin said again, is "but another testimony to the greatness of that man of men, that, after exploring for a score of years the ins and outs of pure selection and pure adaptation, men are now coming back to the position outlined and unswervingly maintained by him."

The chief and essential contention of Darwin, that species are formed by natural tangible processes, is now absolutely beyond question from those competent to form an opinion. That the animals and plants today, man included, are descended from the animals and plants of earlier periods by natural lines of descent with natural modification, due to innate and external causes, is one of the certainties of modern science.

STANFORD, CAL.

Literature

The Old East and the New

ANYBODY can see the Oriental from the Occidental point of view, but to see the Oriental in the only true way, that is, the Oriental's own way, that is both the hardest and the most necessary thing to do. The author of the story of *Ah Moy*¹ has lent herself with a great deal of very wise sympathy to the Chinese way of thinking. She draws a picture of the religious and national spirit of the people, of the girl's place in the family life, of the deeper meaning of the footbinding custom, of the poise, the bravery and the restrained power of China's women, and the relation of the slave business to the nation's poverty, with an insight which it is unusual for an Occidental to acquire. The narrative may not be very dramatic but it is very illuminating and suggests some rather strikingly new points of view to those who read sympathetically. And the West will never come to understand the East with any understanding that is worth while until we have a great deal more of just this sympathetic and human delineation. It isn't their differences but their similarities that bring men together where yellow perils and white perils and purple perils pass away into forgotten bogies.

Of course, there never was anything easy in trying to explain China to the obtuse minds of the West, and it's a toss up which is more impossible—the endless complications of her ancient history or the hurrying transformations of the new. Nevertheless there are men bold enough to try both. Mr. Broomhall, as one of the Secretaries of the China Inland Mission, has a singularly good opportunity for speaking accurately of New China; moreover, he does it vigorously. His little book² is as up to date as anything can be upon a subject that changes with kaleidoscopic rapidity, and it drives home the fact that the reforms are real and widespread and are changing China as

she has not been changed for two thousand years. A foreign drilled army approaching 200,000; nearly 4,000 miles of railroad; hundreds of thousands of boys—and many girls—studying the history, geography and sciences of the West in schools from which the immemorial examinations upon the ancient classics have been forever abolished; a rapid increase of postal and telegraph service; the opening of mines and the spread of modern industrial methods; as well as a startling solidarity and national spirit which means everything for the advance of the Middle Kingdom—all these stare at us from the pages of the book. And they are hard, cold facts and are forcing the nations of the earth to reckon with them. New China is not only a surprise, it is a force.

Professor Parker³ with almost reckless bravery sets out to furnish an ancient China simplified—as if anybody under heaven could do that! The very essence of Old China is complexity twice confounded, and the professor has not been much more successful than those who have tried before him to simplify complexity. Anybody can square a circle, but the trouble is to keep it squared when you have done it. He confines himself to the period centering about Confucius from about the eighth to the third century B. C., omitting—in pity for his readers—as many names as possible and discussing his history topically rather than chronologically. He brings wide reading to his task, but the result is anything but simple. The period when half a dozen really independent principalities engaged in endless wars among themselves for the nominal purpose of protecting a figurehead Imperial power that was no power at all, and for the real purpose of self-aggrandizement over the other States that made up the loose confederation that was ancient China—this period may be discussed but it cannot well be elucidated. The present historian has unfortunately divested his story of about all

¹ *AH MOY, THE STORY OF A CHINESE GIRL*. By Lu Hsiang-shan. New York: The Century Company, 1905.

² *PRESENT DAY CHINA: A HISTORY*. By H. Broomhall. New York: Fleming H. Revell Company, 1905.

³ *ANCIENT CHINA SIMPLIFIED*. By Charles Parker. New York: J. P. Potter & Company, 1905.

the human touches which even the ancient sources contain, which is too bad. Yet the period is one of great interest to the student and Professor Parker has done a good deal toward reconstructing the life of the time.

Chinese characteristics are a source of inexhaustible inspiration to the globe-trotter and book-maker, and they usually exaggerated the oddities for the sake of effect. Mr. Chitty's⁴ knowledge is limited and sounds in places suspiciously second hand; Mr. Macgowan,⁵ tho tinged with a deprecatory Western point of view, knows whereof he speaks. Except for some unsympatheticness and an exaggeration of peculiarities, he gives an interesting and thoroly readable narrative of the salient features of Chinese life. The book is got up attractively with a number of charming colored plates that give the lie to the usual notion of the colorlessness of Chinese scenery.

The 1908 volume of the annual resumé of Christian activity in Japan⁶ furnishes valuable testimony to the progress of the Empire. Japan is making Christianity her own just to the extent that she takes up the work of its extension on her own initiative. The volume opens with a detailed survey of national history for the year. *Missionary Heroes*⁷ is a retelling of the thrilling experiences of several of the pioneers of the great modern missionary movement.

*Things Korean*⁸ bears little resemblance, either in comprehensiveness or authority, to Chamberlain's "Things Japanese," from which it borrows its title, but Dr. Allen has given us an interesting collection of miscellaneous notes of his observations and experiences during twenty years of residence in Korea. As American Minister during the troublous times when China, Russia and Japan were struggling over the Land of the Morning Calm, he had opportunities for exceptional insight into the political and personal forces of the conflict and he was almost the only disinterested friend and

adviser whom the Emperor could find among the foreigners at Seoul. But Dr. Allen's sketches deal more with the life of the people of all ranks than with political questions. He sympathizes with the Koreans in their loss of liberty, of a chance to work out their own destinies, but he sees no advantage in intervention now.

The present struggle of the Chinese Government to abolish opium has been received with indifference and incredulity by the world at large. Mr. Merwin's book,⁹ if it is widely read as it should be, will open the eyes of the American people to the greatness of the peril and the earnestness of the fight against it:

"The point which these chapters should make clear is that opium is the evil thing which is not only holding China back but is also actually threatening to bring about the most complete demoralization and decadence that any large portion of the world has ever experienced. It is evident, in this day of extended trade interests, that such a paralysis of the hugest and most industrious of the great races would amount to a world disaster."

Mr. Merwin holds England directly responsible for the introduction of opium into China and believes that so long as India gets \$20,000,000 a year from the opium traffic England will stand in the way of China's attempt to reform herself.

Problems of Today. Wealth, Labor, Socialism. By Andrew Carnegie. New York: Doubleday, Page & Co. \$1.40.

There are no more important problems before the American people today than International Peace, The Race Issue, and those discussed in this book. And we know of no living American who has taken a more practical and progressive stand on all these three than Mr. Carnegie. The present volume, as its subtitle implies, is a discussion of wealth, labor and socialism. We shall not give a *résumé* of the arguments, for the book is not long and it will amply repay perusal. Suffice it to say that Mr. Carnegie believes that the private and individual ownership and enjoyment of wealth is a necessity for progress and human endeavor, and that the unequal distribution of wealth is at the bottom of all socialist agitation. In his desire to preserve the good of individual ownership of wealth

⁴THINGS SEEN IN CHINA. By J. R. Chitty. New York: E. P. Dutton & Co. 75 cents.

⁵SIDELIGHTS ON CHINESE LIFE. By Rev. J. Macgowan. With twelve illustrations in color. Philadelphia: J. B. Lippincott Company.

⁶THE CHRISTIAN MOVEMENT IN JAPAN. E. W. Clement and G. M. Fisher, Editors. Tokyo: Methodist Publishing House.

⁷MISSIONARY HEROES IN ASIA. By John C. Lambert. Philadelphia: J. B. Lippincott Company.

⁸THINGS KOREAN. By Horace N. Allen. New York: Fleming H. Revell Co. \$1.25.

⁹DRUGGING A NATION. By Samuel Merwin. New York: Fleming H. Revell Co. \$1.25.

and at the same time remove the dangers of its concentration in the hands of the few, he advocates not the income tax, which he abhors, but the progressive inheritance tax. As to labor, Mr. Carnegie does not hold with Herbert Spencer that the wage system is a form of slavery; nevertheless he and the great philosopher agree that the way for labor to emancipate itself is by some form of profit sharing and not thru the so-called tyranny of State Socialism. As to Socialism, Mr. Carnegie finds it pretty bad, and he must do so, holding as he does that the owner of capital is ethically entitled to income. The ethical title to income is the whole crux of the socialist argument, and on that point the battle has finally got to be fought, but Mr. Carnegie does not directly take up this issue, tho we wish he did. He does, however, give the socialists some hard nuts to crack and he shows he has approached the study of a subject that is now engaging the best minds of the world in no spirit of prejudice or passion. Mr. Carnegie knows the trials and triumphs of the capitalist and the laborer first hand. If his book is not the last word on the subject to the economist, sociologist, and, of course, the socialist, it is the sincere and mature views of the best type of a philanthropic and practical man of affairs that the present generation in America has produced, and as such may be of more value to the student of our civilization than those more labored works from the closets of the expounders of the "dismal science." The question arises, however, whether Mr. Carnegie may not be regarded as the most practical of living socialists, for no man has converted more individual wealth into common wealth than he.

The New Schaff-Herzog Encyclopedia of Religious Knowledge. Based on the Third Edition of the Realencyclopädie. Founded by J. J. Herzog and edited by Albert Hauck. Prepared by more than six hundred scholars and specialists under the supervision of Samuel Macauley Jackson, D. D., LL. D. Complete in twelve volumes. Vol. I, Aschen-Basilians. Large 8vo, pp. xxx. New York: Funk & Wagnalls Co. \$1.00.

We have largely abbreviated the title, which pretty well fills the big page, omitting names of associate and department editors. It was time that this great German work, first edited in English by Dr.

Philip Schaff, should be reissued with the advantage of the investigations of the last twenty years; and it is well that this work should be attempted by the present publishers, who are masters in the art of publishing dictionaries and encyclopedias.

The examination of the longer articles that happen to come in this volume shows the need of this revised edition, and the prevalence of the more advanced views is noticeable. The first article we turn to is "Abraham," and after the biblical study of the patriarch by Rabbi Köhler follows a discussion by Professor McCurdy, which treats him as a tribal personage of whom we know very little. Similarly Adam is treated after both the literal and the mythical style, altho it is not clear that any one of the three writers defends and accepts the Genesis story as historical. Under "Africa" we have a general account of missions in Africa, such as we miss under "Asia." "Agnosticism" is pilloried by Professor Warfield, because it impoverishes, secularizes and degrades life. The "Amarna Tablets" is a new contribution and gives a compact account of this wonderful discovery of early Palestinian history. The article "Angel" contains much biblical and rabbinic lore, but lacks reference to Persian and other sources of the doctrine of angels. There is an excellently full article on "Apocrypha," with brief characterization of the apocryphal writings. It is proper that considerable space should be given to "Architecture," but American contributions to the art are treated as "affording little occasion for congratulation." Under "Asherah" and "Ashtoreth" we observe the usual assertion that column-worship came from tree-worship, which is as unlikely as that the Roman herm came from the worship of trees. "Assyria" and "Babylonia" are new and excellent articles prepared by an associate editor, Prof. George W. Gilmore, but we observe that he puts back Babylonian history to 4500 B. C., and Abraham's date is made 2250 B. C. One would think to read "Auburn Declaration" that the document was an extremely conservative document, and its denial of imputed sin and righteousness is not mentioned. The story of "Balaam" is told biblically by one writer and analyzed into various

contradictory documents by another critic. We observe Catholic contributions in "Baltimore Councils" and other articles. The article on "Baptism" has given as much trouble as any, and the Baptist view of immersion is both controverted and defended.

It is absolutely necessary in these days to include in a Bible dictionary or encyclopedia both the conservative and the critical view. This is done in the "Jewish Encyclopedia" also, and with excellent profit. We commend the present important work to students and libraries, only wishing that it had been issued in six volumes on half as thick paper.

Chateau and Country Life in France. By M. K. Waddington. New York: Charles Scribner's Sons. \$2.50.

Madame Waddington's pleasant papers, with their illustrations, make an attractive volume. The chapters are undated, but stretch, one would judge, over a period of at least twenty years. The earliest, dealing with the home life of an old chateau, where Madame Waddington spent much time soon after her marriage, gives vividly the quality of the ancient house and of the home-keeping couple to whom it belonged. There is a delicate charm about the life in France away from Paris, a charm enhanced for the stranger perhaps by its unexpectedness, the French of the provinces being quite the opposite of what the foreigner has been taught to believe the Parisian. Simplicity, sincerity, love of the past, reluctance before change, these seem the foremost characteristics of the gentlefolk of the French country. Madame Waddington, of American birth and cosmopolitan life, adopted France heartily. At least, there is hardly a note of comparative criticism in her descriptions, and for this very reason the book lets us uncommonly into the life there pictured. One of the prettiest papers is that on the Christmas tree at St. Quentin, a chapter that well answers the cry for a new Christmas story. All the accounts of fêtes bring close the astonishing poverty of the region with which for the most part Madame Waddington deals. Fewer people of importance figure here than in her earlier volumes, the months at the forest of Villers-Cotteret being her real holiday, away

from courts and government affairs. Had the sheets been a little more carefully revised, the confusion sometimes arising from the mixture of tenses in the same account, and the slight repetitions that show the book made in part from letters and in part of recollections, would have been avoided without loss of the easy and intimate style which is its especial pleasantness.

Wulnoth the Wanderer. By H. Escott-Inman. Chicago: A. C. McClurg & Co. \$1.50.

Better than most boys' books is the story of *Wulnoth the Wanderer*, which uses the subjects and vocabulary of the sagas with good effect. Alfred of England is one of the kings served by Wulnoth the Strong. Its appeal to the "sons of the Saxons" is earnest and manly. The tale of the wars between Dane and Saxon is bloody, but not hideous; and as one of our latter-day Sagamen says: "Death is cleaner than vice." It will not harm a growing lad to learn that his ancestors were brave in battle, honest in word, forceful in deed, and true to wife and overlord.

Race Adjustment.—Essays on the Negro in America. By Kelly Miller. 12mo., pp. 306. New York: Neale Publishing Co. \$2.00.

Prof. Kelly Miller is one of the most intelligent writers on negro questions, is himself colored, and is Professor of Mathematics in Howard University. This volume gives his views on most of the matters that interest negroes, and we commend it most heartily not only for its clear presentation of the author's views, but for their general truth. He does not stand on the extreme of the "Niagara Movement" led by Professor DuBois, and yet he inclines that way. He admires President Roosevelt, but he condemns his action in the Brownsville case. The Booker Washington of the earlier days, who seemed to sink the negro to purely industrial conditions and education, he could not approve, but he sees and admires the Booker Washington grown broader and wiser. There is no book which more fully and correctly represents the wishes and demands for equal recognition in civil and political rights than does this volume.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Subscribers who have not already obtained the semi-annual index may secure a copy without charge by sending a postal card to the Business Department.

Generalizing the Boys

IN his speech to the Williams College Alumni the other night, President Woodrow Wilson threw out one of those phrases which Professor Patten, in his recent address as president of the American Economic Association, described as worth more than whole books, because they work harder and live longer. President Wilson was talking about the character of the college and the aims of the university, and was arguing that the university of today should make the boys as unlike their fathers as possible, not because the fathers are not admirable men, but because they are too specialized. We must try, he said, "to generalize the boys over again."

We heartily agree with President Wilson's idea. The men of today, in the professions and in business, are too specialized. They are narrow in sympathies and in knowledge. A few years ago a New England manufacturer of iron and steel products, who happened to hold a

different opinion from that of his associates in his industry on the question of the necessity and justice of a protective tariff, asked one of them—who had graduated from Yale College and from Professor Sumner's classroom an ardent free-trader—why he had changed his views and become a busy protectionist log roller. He got this answer:

"When I left college I was interested in the human race. Five years later I was interested in the steel industry. Today I am interested in my balance sheet."

The anecdote is authentic, and it tells about a good many things besides protection and free-trade. The whole tendency of high pressure American life for more than a generation has been to concentrate the attention of men upon the essentials to material success. Women have felt this pressure less than men, and educated women have continued to care more than men for miscellaneous knowledge and broad ideals of culture. The forces at work have made themselves felt upon the public schools down to the grammar grade, at which most of the boys terminate their nominal education. The high schools are inhabited chiefly by girls.

Of course, the colleges and the universities have felt these tendencies, and to a great extent have yielded to them. Nothing more significant was brought to light in Dr. Slosson's study of Harvard University than the extreme specialization which is there accepted as a matter of course in undergraduate work. To get into Harvard a boy must know a little something about "a number of things" of which the world is full. But once in he can get thru and get out without knowing anything further beyond two or three more or less interesting aspects of two or three more or less significant languages or literatures, or two or three special phases of chemistry or physics, or two or three departments of botany or zoölogy. And what is true of Harvard is in a lesser degree true of other colleges.

Admitting that a high degree of specialization is necessary nowadays for business or professional success, it cannot for a moment be admitted that it is necessary for the enjoyment of life in hours of relaxation, or for fitness to grasp the problems and to perform the duties of citizenship. Nor can it be ad-

mitted that education has no other purpose than to train men for business or professional success, regardless of their capacity to enjoy life intelligently, and to play their part as members of a democratic state. When the college has become a professional school, it will have ceased to be a college in any legitimate meaning of the word, and if we cease to have college education, we shall cease to be a high-minded people.

President Wilson is right, and we hope that he knows how to go about the work of generalizing the boys over again. We do not think that he, or any other educator, will find it an easy undertaking. Not only is the whole force of economic pressure against it, but also the old-time educational resistance to mere economic pressure has been weakened by the ill-advised yielding to the clamor against the classical training. When all has been said, it was that classical training which, more than any other discipline ever invented by man, generalized the boys. It did so because it was not possible for the college student to read Greek and Latin for four years, even in the stupidest way or under the most desiccated instruction, without discovering that Greek civilization expressed and represented something besides the business balance sheet. And if he were not particularly stupid, he discovered furthermore that the Greek civilization had consciously weighed the relative advantages of honor and profit, and had produced a noble array of minds that preferred honor. There was, to be sure, a poet, Phokylides, who gave out that he desired first to acquire a competence and then to practice virtue, but his compatriots thought that he was misguided and amusing. American education at the present moment, we deeply regret to acknowledge, is pretty well contrived to bring up boys in the conviction that old Phokylides wasn't such a fool as Plato and the rest of the philosophers made out.

The Inferiority of the Caucasian Race

THE inferiority of the Caucasian race is recognized and accepted by many of that race in this and other lands. This explains, as nothing else can explain, their fear that they will be overrun and beaten by superior races. They know

they have the present advantage in numbers, and wealth and weapons of war, that the government is in their hands, but they see the danger if they allow those of superior races equal opportunities. We can hardly blame them for their fear and their insisting on excluding or suppressing those whom they dread.

This explains the California and the Nevada proposals to forbid aliens to buy and hold land in fee simple. They mean the Chinese and Japanese. They look up to these Mongolians as Tom Thumb, Barnum's white dwarf, looked up to the Chinese giant Chang. The Mongolians are their superiors, they know, in thrift, in diligence, in money-making, in all sorts of acquisition, and they tremble at a rivalry with them. If allowed they would soon own the whole Western coast. San Francisco would be theirs. Hence these tears. Hence Mr. Drew's bill; he does not believe he could hold his own modest estate if a Japanese were allowed to ask for it. It is, it can be, nothing else but a sense of their own inferiority which explains the unwillingness of these men to allow Chinese and Japanese to meet them on even terms and let the best win.

To be sure, the President has no fear that these Mongolians will get the better of us Caucasians, but he is a headstrong man, full of conceit, hasty in conclusions, and he does not know as much of Japanese as he does of bears. Because he can shoot a bear he thinks he can beat any alien. But the Japanese are another sort of beast, like the Martians we have heard of, all science, all heartless, and all huge. We poor Caucasians, we puny Anglo-Saxons and Celts, would stand no chance with them; we would be pushed into the mountains or the forests as the pignies have been driven back by the superior Senegalese and Mandingoes. In the long run the superior wins—it always does—and the Caucasians are doomed. Somehow, by wit or war, the superior race will win over the inferior race. It will be better for the world that those who lack in courage and virility should be replaced by a better stock.

And there are terror-stricken herds of cotton-tails that are trying to hide behind high fences against the advance of the black Southern wolves. They talk a

very different dialect from what they did half a century ago. Here is what J. Wilkes Booth left behind him in a sealed letter before he fired the shot in the Washington theater:

"The country was formed for the white not for the black man, and looking upon African slavery from the same standpoint held by the noble framers of our Constitution, I, for one, have always considered it one of the greatest blessings, both for themselves and for us, that God ever bestowed upon a favored nation."

He thought the black race so inferior that it was only fit for slavery. He did not fear them any more than did Abraham Lincoln when he liberated them; for he thought they were only a bit more than a mule. But Senator Tillman has seen the mule become a superior man, and so has Gov. Hoke Smith, and so have the legislators of a dozen States. They are afraid of being beaten. They see how an eighth of negro blood will dominate seven-eighths of Caucasian. They shiver at the thought of probable negro supremacy if they do not, while they can, and while the school has not done its fatal work, exclude the negro from the protection of the ballot-box. There is no other plausible explanation that can be given of their terror except that they feel that they and their children will be beaten in a fair fight. It is natural for a weak race thus to defend itself, by all walls of stratagem and defense against the time when strength shall claim its own. Thus they may save themselves. Thus Ulysses put out the eyes of Polyphemus and escaped the giant's clutch.

Forgive us if we sometimes think this is cowardice, that they ought to be willing to try the arbitrament of the struggle for existence and abide its result. But that implies some hope of success. We must make allowance for the benumbing, the paralyzing effect of conscious inescapable racial inferiority.

Mr. Stead's Evidence

MR. W. T. STEAD tells us in *The Fortnightly Review* that he has what is to him conclusive proof that the dead return. He has communicated with them over and over again. He has tested the genuineness of their communications fully himself. For him there is no need

of any Psychical Research Society, for he needs no medium. His own involuntary hand is used by a deceased friend, and messages are sent equally from the absent living and the present dead. More than this, he believes that the dead can be photographed, and he has the photograph of Piet Botha thus taken, whom nobody in England knew anything about, but who was recognized by a relative who came to London after the Boer War. More amazing, he tells a wonderful story to prove that the dead have the power of prophecy, for he had the message by his own hand foretelling the death within the year of a secretary of his, who in the insanity of fever actually jumped out of a window and killed herself within a very few days of the year's end.

We do not pretend that we can explain these things thus reported. We do not question that Mr. Stead tells, or means to tell, the exact truth, or that he fully believes in these communications with the dead, but each story needs careful scrutiny, which it is impossible for us to give. Yet two things may be said about them.

One is that he asserts too much for ready belief. We refer to the photograph and to the prophecies. We know something about the laws of light. To make a genuine photograph, or any other, requires the light and shade caused by the presence of an obstructing medium. To the eye there was no obstructing medium to deflect light. Mr. Stead could not see Piet Botha by his side as he sat before the camera. If the presence of Piet Botha's ghost was sufficiently material to intercept light, which it is hard to believe, then, while this "clairvoyant and clairaudent" photographer was taking the picture, an independent photographer should have taken the picture from another angle to see whether the two agreed. Optics is a science and light will work the same way for two similar cameras similarly developed. Further, it is very hard to believe that, even if the ghosts have a sort of spiritual body corresponding in appearance to their buried physical body, their clothes also appear as ghosts. Mr. Stead's friend "Julia" appeared several times to her friend, and so did others. Were they clad? So it seems. Is it easy

to believe that a coat, a pair of trousers, a shirtwaist, a bonnet, have a spiritual body, such as will obstruct light, and which the deceased can take with him from the closet where they are still hung on a peg? Why don't ghosts appear nude?

Further, we are asked to believe what is very hard to believe when we are told—and Mr. Stead gives two cases—that the gift of prophecy is possessed by his deceased friends. One case is the foretelling of death; the other is the foretelling that an engagement could not be met because, at the time set, one of the parties would have to be three thousand miles away. How does the disembodied spirit know these things? That requires omniscience. Has he suddenly acquired knowledge of all coming contingencies, or has God told him? All this is harder to believe than that the dead can communicate with us. There is some limit to our belief.

The other point, besides the extraordinary demand on our belief, a demand which seems to contradict scientific knowledge, is the failure of Mr. Stead to bring us any report worth while from the Beyond. He tells us freely that he has got great comfort from these communications which he has received even from his own son. But the comfort seems to be in the assurance that they are alive. That is all he tells us, the evidence he has that they still exist. Now, will he not give us in a second paper something which they have been able to tell him that is of value as to that undiscovered country in which they live? What do they do? How do they spend their time? What has Darwin learned since he left the flesh? In what way do they move from place to place; or are times and places all one to them? The worthlessness of all the communications make us question their genuineness. They ought to be of tremendous value. Do they agree as to the conditions of the other life? We await results, information, something of value. So long as we have nothing we hesitate to believe, for trivialities are not what we have the right to demand.

We thank Mr. Stead. We cannot explain what he has told us, but we are not satisfied. The stories do not seem credible, nor the revelations worth while. We

ask much more from the Society of Psychological Research.

The Children's Bureau

THERE has been a strong effort to secure the passage of the bill to establish a Federal Children's Bureau during the present session of Congress. This effort has been seconded in a surprisingly strong way by the conference in behalf of department children which met in Washington at the call of President Roosevelt. Two hundred and twenty men and women, experts in the care of children, from almost every State in the Union, responded to that invitation and spent fifteen and a half hours in discussing the best methods of caring for the one hundred and fifty thousand dependent children in the United States. At the close a remarkable paper was prepared by the committee on resolutions, embodying the results of the discussions. This was adopted unanimously by a rising vote. Jews and Christians, Protestants and Roman Catholics, the advocates of institutions and those who believe only in the placing-out method, forgot their differences and urged the need of finding the best way, whatever it might be.

All the speakers, from Miss Jane Addams to Dr. Booker T. Washington, had expressed the need of some central bureau of information with reference to affairs concerning children, so the closing resolution was heartily in favor of the proposed children's bureau, which is to be solely a means for research and for publicity, so that the world may know the facts as to the birth rate, infant mortality, orphanage, juvenile delinquency, juvenile courts, illegitimacy, dangerous occupations, child labor, legislation about children, and such facts as have a bearing upon the health, efficiency, character and training of children. While this scheme was under consideration by the conference a private cablegram announced that the English Parliament had just passed the child law for Great Britain.

At a Congressional hearing, immediately after the conference, Miss Addams, Miss Wald, Judge Mack, Dr. Devine, Mr. Homer Folks, Judge Ben Lindsay and a score of others, including

speakers from Alabama and Georgia, urged the formation of a children's bureau. The former steel manufacturer, Mr. W. H. Baldwin, was one of the ardent supporters of the bill. He said these expert authorities were like expert engineers and the Congressional Committee was like a board of managers, and if it were a question of making improvements in steel the report of the experts would be accepted and acted upon by the managers. He thought Congress could do no less than act in consonance with the wisdom of those who best knew what was needed for bettering the condition of children and making, not steel, but good citizens. Certainly the children's cause must have received a great impetus from the intelligent and sympathetic appeals of the disinterested men and women who appeared in behalf of the measure.

A Suffrage Song

"LET me write the songs of a nation and I care not who makes its laws," was not spoken by a suffragist. They want to write the songs in order to get a chance to make the laws. One of the first acts of the newly organized Committee for Extension of Municipal Suffrage to Chicago Women was to open a contest for the best suffrage song set to a popular melody. A prize of \$100 was given by Mrs. L. B. Bishop, and this has just been awarded to Louis J. Block, a bachelor teacher of Chicago, for a song to the tune of "John Brown's Body." It is eminently fitting that this old war song which inspired the hearts of the men who freed the negro should be again drafted into service in this new crusade for a greater justice. Even a confirmed misogynist would have to admit that the million negro men on whom the ballot was conferred in 1865 were not as well qualified for it as are 21,000,000 women of America who are now deprived of it.

"John Brown's Body" is one of the best marching tunes in the world, but it has never had satisfactory words wedded to it. The war-time words are worse doggerel than "God Save the Queen."

"Confound their politics,
Frustrate their knavish tricks,"

is not much higher in moral tone than
"Hang Jeff Davis on a sour apple trees."

Mrs. Julia Ward Howe's beautiful poetry has failed to satisfy the public demand. The American people have never really learned it "by heart" in the deepest sense of the phrase. And as a digression we wish to express our satisfaction in learning that there was no truth in the newspaper report that "Dixie" was to be ruled out of the Lincoln celebrations in the schools of Chicago. It is, indeed, especially appropriate for such an occasion for, as Lincoln said, when we conquered the Confederacy we captured their pretty songs. His grief over his divided country had been intensified by hearing "Dixie" played by the bands on but one side of the Potomac, and as soon as Lee surrendered he asked to have it played by the military band at Washington.

"John Brown's Body," unlike "The Star-Spangled Banner," is adapted to bass more than to soprano voices, but this does not unfit it for its present purpose. The new song should be sung as much by masculine as by feminine voices, for it is as much to the interest of men as it is to women that equal justice be done to both sexes.

Some of the papers are making fun of the ladies who got up the contest because the prize was won by a man, although more women than men were among the contestants. This shows only their ignorance of the significance of the woman movement, which is a movement for equality of opportunity, and is not dependent upon any particular view of the relative morality or ability of the two sexes. No doubt suffrage orators sometimes make exaggerated claims of the superiority of women, but this is merely to counteract the exaggerations of the enemies of womankind, just as the socialists are sometimes led into absurd claims of the superior wisdom and virtue of the proletariat. But the sensible advocates of woman's equality avoid making such rash assertions as that all women are wiser or better than all men, or even that the average woman is wiser or better than the average man. They avoid it for three reasons: First, it may not be true; second, if it were true it could not be proved; third, if it were true and could be proved, it would not materially strengthen the argument. All that it is necessary to prove in order to

substantiate the claims of women for free admission to any field of human duty and endeavor is that some women are superior to some men in that field, and this can be proved in the case of almost everything, from poetry to politics.

But Mr. Block's song is not such a triumph of poetical art as to add to the literary laurels of his sex. Still, it will serve its purpose, and we quote the last stanzas, in order to give our readers a chance to try it in their public meetings for the good of the cause:

"Mother, prophetess and holy, thru the ages of
the clan,
Uttering words of potent wisdom in the ear of
struggling man,
Woman rose and strode beside him 'mid the
dangers of the van,
Kindling hope that led him on.

"Forth they step and march together, forth the
Man and Woman go.
To the plains of vast achievement, where unfettered
rivers flow,
And their work shall stand exalted, and their
eyes shall shine and glow
With the hope that led them on.

CHORUS.

"Glory, glory, halleluia! Glory, glory, halleluia!
Glory, glory, halleluia! For the hope still leads
them on."

The Navy League

MR. ARTHUR HENRY DADMUN, the field secretary of the Navy League of the United States, writes us that "Dr. Jefferson's article in the February 4th issue is unjust to the Navy League and the Navy, it seems to me," and he incloses us a pamphlet containing the League's "1909 Program," with this sentence marked:

"The Navy League has no proposals for a great increase in the cost of the navy. It does not suggest that we should have the biggest navy on earth. It emphatically disapproves of 'jingoism' in relation to other nations or going about with a chip on our shoulder."

That is, the Navy League does not advocate naval supremacy for this country, or jingoism. But for that matter nobody else does except the discredited Hobson and his ilk. The objection is to the *increase* of the navy, with all its attendant economic and moral loss.

On the next page of the pamphlet, however, we read:

"A strong and efficient navy affords cheap

insurance against the mere material cost of war, not to speak of the frightful sacrifice of human life."

The Navy League seems to ignore the Hague Court and Conferences, and the twenty-four peace treaties negotiated by Secretary Root with our sister nations. Why should the rates of insurance go up when the risks are going down.

The pamphlet continues:

"The millennium has not arrived. We have heard no proposals for a reduction of our police forces."

If our navy was only a police force no one would hear any proposals to reduce it. The function of a policeman is to use the minimum amount of force to bring the enemy within the jurisdiction of the law. The function of a battleship is to use the maximum amount of force to pound the enemy into insensibility, or, as President Roosevelt puts it, "to hammer the opponent until he quits fighting." There is the difference.

"Other nations are jealous of our marked progress and prosperity."

Who are they and will they fight or stay jealous?

"Weakness always invites attack."

Then let Canada, Cuba and Mexico beware.

"History repeats itself and if international difficulties have occurred in the past, they are bound to occur in the future."

One might as truly say history never repeats itself.

And finally:

"An ounce of prevention is worth a pound of cure."

What Dr. Jefferson and THE INDEPENDENT object to is having a pound of prevention considered necessary to effect an ounce of cure.

The Town Meeting

Is Governor Johnson warranted in the emphasis he is placing on local self-government as opposed to concentration? This is a Jeffersonian principle, and the followers of that statesman are expected in a general way to exalt the idea as fundamental in our system of government. It is certainly true that ours is not a mere republic in the platonic sense of that word, but is a federation of republics, constituting a federated republic.

The most devout Hamiltonian will hardly assert that any other form of government could freely expand over a continent by the good will of the people, and not drop in pieces by its own weight. A study of Madison on this subject would be of value to our high school pupils. How far are we veering from this fundamental principle in our recent legislation? We remember that Judge Cooley charged the legislation which followed the Civil War with being revolutionary in this regard. He affirmed that, among other things, the United States courts had seriously infringed on the rights of State courts, and that national banks had driven State banks out of existence. President Andrews, in his "History of the United States," bluntly asserts that amendments of the Constitution exist which have never been put in print.

Justly or unjustly, the present Administration is held to represent advanced views of nationalism, while Governor Hughes has recently and repeatedly expressed himself as strongly opposed to centralization. It will, however, be noted that he refers more to the weakening of local self-government inside State lines. Charles Francis Adams, as also President Eliot, have spoken strongly concerning the danger of allowing State governments to trespass upon the counties and the towns. Governor Johnson may or may not be right as to the drift of our national affairs. Governor Hughes we believe is thoroly warranted in reaffirming the seat of all popular government to be with the township. We come down from the Zeelanders and the Jutlanders, with whom the town or tun was a group of people inclosed by a wall. Inside this wall there were common interests, which developed common customs or laws. These ancestors of ours cared very little for the customs or laws outside of their tunship, but so far as they did co-operate, it was as counties, while a group of counties constituted a natural State, with a government inclusive of county and town government, but not subversive.

The importance of town meeting in the evolution of American society cannot be easily overestimated. It is, as it always was, the unit of the people's government. It is not impossible to conceive

a republic where representative government does not stand for the people or express popular will, because the town has been abrogated in some of its functions. Our legislatures have become the creatures of bosses rather than of the people, as the English Parliament has at times assumed absolutism. We easily call to mind the Ripper bills of 1900 to 1902, which took away the municipal rights of several cities, especially Detroit in Michigan, Scranton, Pittsburg and Allegheny in Pennsylvania. These bills swept away local government and placed large towns under the control of deputies appointed by the Governor. A few years ago the New York Legislature, for political reasons, past a series of special acts, forbidding the citizens of Oneida and Herkimer counties any longer to hold spring elections. Town meetings could be held only in connection with State and national elections. These acts were excused on the score that it was good economy not to hold two elections in the same year.

Ripper bills have been abrogated, but there are counties in more States than one that still remain disfranchised. The abolishing of spring elections and the confusion of town affairs with State and national has led to the practical abandonment of the town meeting. State issues overshadow local issues to such an extent that the latter are generally forgotten. Instead of a town gathering, such as was formerly held, when the people turned out in force to discuss local affairs, listen to the reports of their officials and debate town enterprises, public affairs fall into the hands of half a dozen persons, mostly office holders, and these vote what taxes they please. This is un-American and contrary to the whole Anglo-Saxon spirit.

Another difficulty accrues in the way of complicating ballots. Sometimes not less than a dozen issues are placed before the voter at the same time. In nine cases out of ten he has investigated not more than one or two of these interests, and throws away his ballot on the rest. Complications follow which make it difficult to determine the result of an election inside of two or three weeks. However, the partisan advantages have fortunately proved to be futile. Party leaders insist

that the independent vote has been greatly increased by such measures, and that neither party can now keep its followers in line. But the real core of the difficulty is in the breaking down of republicanism and the robbery of the political rights of the people. The town is the core of all government or forms of government that exceed it or are made up of it as a political unit. Representatives are appointed to stand for the people only where the people cannot themselves assemble and speak their will. Without the New England town we should never have had Massachusetts and Connecticut; and it was the town that was sown all along the line of Western pioneering. It made possible our federal republic.

The Bantam State

With blunt ungrown spurs the bantam cock of the flock struts forward and challenges all the bigger breeds. California laughs. Japan smiles courteously at the Nevadan nonsense. Nobody takes Nevada seriously. By the last census Nevada had a population of 42,335 inhabitants, not so many as in many a third class city in other States. Yet Nevada has a Senate, and an Assembly, a noisy and noisome lot, and it sends two Senators to Congress, but only one Representative. She has about the population of Augusta, Ga., or Johnstown or Lancaster, Pa., or Pawtucket, R. I., or Sioux City, Ia., or Wheeling, W. Va. On the basis of population Camden, N. J., or Bridgeport, Conn., or Trenton, N. J., or Wilmington, Del., would each send four members to the United States Senate. It shows with how much seriousness this disturbance is to be taken, when we observe that the 42,335 residents of Nevada are spread very thin over an area of nearly the extent of the six New England States, with New York added. Massachusetts has twelve cities larger in population than all Nevada, and New York has ten. Would the country be greatly disturbed if Brockton, Mass., a little city, but one which has more business, more wealth and more people than all Nevada with her 110,000 square miles put together, were, by her City Council, to vote that she did not want any Japanese to settle within her limits? That

Brockton should do such a thing is hardly conceivable, for it is a town and a people of sanity. But if Brockton were to say such a thing, were she to telegraph encouragement to the beaten legislators at Sacramento to stand pat, no one would think it worth while to cable the news to Tokio; and yet Brockton is worth more than all Nevada. Of course, the action of Nevada is ridiculous, but she does not suspect it. She has to be told so. By a vote of 44 to 1 the Assembly approved the resolution of approval of the anti-Japanese bills in the California Legislature (which were overwhelmingly defeated the same day), and then unanimously past a resolution asking Congress to provide for a fleet of warships on the Pacific Coast sufficient to repel the Japanese menace. It is farcical, ludicrous. We are credibly informed that no guns yet mounted on the Japanese battleships could fire a shot over the Sierras of California, so as to endanger the cabins of Nevada. Carson is safe; Reno need not tremble. The country is laughing at the blustering bravado of the featherweight champion; but the Nevada Assembly is so frantically absurd that its members do not hear. We trust that among the 42,335 citizens, men, women and children, there may be included several of sense who have found their way to the State Senate, enough to kill the Assembly's bill. Now that the California Assembly, by an overwhelming vote, has rejected the hostile bills, any intelligent members of the Nevada Senate may find courage to save the records of the State Legislature from embalming this blunder in actual legislation.

The Japanese Invasion

Just what is the portentous influx of the Japanese in this country? In the New England States and the Atlantic States to Georgia and Florida there are 3,469 Japanese. In the Central States, from Ohio and the Dakotas to Texas, there are 2,334. On the Pacific Slope there are in California, Colorado, Utah, Nevada, New Mexico and Arizona, 44,883. In Oregon there are 3,403; and in Montana, Wyoming, Idaho, Washington and Alasaka there are 17,623. The total in the country is

71,712—not a frightful number to make a fuss about and threaten international conflict and war. Further, Japan has good reasons for not wishing her citizens to rove this way. Her principal interest is in Formosa and Korea and Manchuria. All her effort is devoted to filling Formosa with Japanese industry and in assimilating Korea. She feels the danger of another war with Russia, and no danger of war with the United States. She must master the coast against the Russian advance. She has once beaten Russia back when Korea was threatened with absorption; can she do it when in a few years Siberia shall be filling up its great vacancies with a vast population? Japan must pour her excess of population into the region of the Yalu and the Amoor if she will maintain her hold there. She will be glad to call back those of her sons who have wandered across the Pacific. With Japan our relations will be commercial. The Chamber of Commerce at Seattle, Wash., in communication with other chambers of commerce on the Pacific Coast, has asked Japan to send a commission of fifteen leading men and as many experts to visit this country and consider means for extended commerce. This will be a return of the courtesy shown the American delegation that lately visited Japan. This makes a fair answer to some of the empty political bluster.

Philippine Independence Why should we be asked this question? Have we not answered it plainly enough again and again? Mr. Erving Winslow, secretary of the Anti-Imperialist League, writes:

Waiving the discourtesy of your characterization of the sentiment with which you read my brief history of the Anti-Imperialist League, I should be greatly obliged if you would definitely affirm the position which your words imply as to the future of the Philippine Islands. While the program of the Anti-Imperialists is simple and definite, it has been extremely hard to obtain any definition of principles from those who accept the "destiny" of events as final. Will you tell me, publicly or privately, if you believe that the Philippines should in the form of States become a component part of the Federal Union?

Certainly, if we keep them at all—and just as soon as, after tutelage as self-governing Territories, they are ready

for it. That is just what we say for Porto Rico, or any other dependency of ours. If we find we cannot for any reason give them the same equality of rights within the Union which Massachusetts has and New Mexico will soon have, then we should expect, as soon as is safe and wise, to bid them choose their own destiny, whether as independent or as dependent on some adjacent Power. That is what we have consistently taught, with no regard to differences of race, or even distance. All the world is near us, and we are all brethren.

✱

Sir Harry Johnston's Report

Sir Harry Johnston has had great experience in Africa for the past thirty years. He has traveled and been in Government service, and he founded the British Central Africa Protectorate and was commander of the Uganda Protectorate. He has been looking into the conditions of the negro in our Southern States and has published six long articles on his observations in the *London Times*. He has made good use of his eyes, as far as he went, or was taken, and his conclusions are substantially ours, except that, having seen only Hampton and Tuskegee, and not Howard University or Fisk or Atlanta or Talladega, or any other college for higher education, his views on this matter lack balance. He is more optimistic than we should dare to be when he says:

"In all probability the difficulty is gradually thinning out. In twenty years' time there may be no more need to discuss the color question in the United States."

He saw a passionate anxiety to preserve "pink-and-whiteness" and maintain the purity of Anglo-Saxon blood. He himself suspects that in a lifetime other races may startle us with their emergence. He is concerned for the million of "near-whites," and for the educated and responsible negroes, who are cruelly discriminated against by law, and who ought to be treated like other people. Indeed, he thinks there is dark blood in half of us. He says:

"Surely it is time that the South accorded the 'near-whites' the full privileges of American citizenship, and no longer compelled them to ride in special cars or herd with the rougher

types of illiterate negroes in waiting-rooms and other public resorts. There is no hardship to any man or woman more than two-thirds white in associating with refined and educated people like Booker Washington, Professor DuBois, Professor Carver and thirty or forty thousand others of similar type; less hardship, in fact, than would lie in social intercourse with the 'poor whites' in certain backward States and regions. . . . So long as twenty, thirty, forty thousand (perhaps more) negro men and women in the eleven Southern States, of high education, notable achievements, irreproachable lives, are treated by their white fellow citizens as social outcasts, the color problem of the American republic remains unsolved and the Constitution of that mighty country is not honorably applied in the letter and spirit of its provisions."

In this country you may put as much or as little pomp as you please into your wedding or funeral, but not in Paris, under the rule of its Archbishop. When separation of Church and State came in France, Cardinal Richard directed a reform of simplicity and economy in ecclesiastical matters, under which marriages and funerals were divided each into eight classes, for which the funeral tariff was to range from \$80 for the highest to \$1.40 for the cheapest; and clergy were to celebrate marriages at rates grading down from \$63.80 to \$1.20, with extras allowed in the higher classes for music, etc., not to exceed \$40. The present Archbishop Amette finds that these tariffs are unsatisfactory and has appointed a commission to revise them.

It is no pleasant report that Bryn Mawr College is \$130,000 in debt; but it is good news that the Alumnæ have raised \$100,000 for an endowment fund, after a labor of four years, and that the General Education Board has promised to give \$250,000 for its endowment fund, if before June 30th, 1910, the debt can be paid and the endowment, including the \$100,000 from the Alumnæ, can be increased to \$500,000. That is, there will have to be \$280,000 additional secured. Philadelphia Quakerdom will not think the task too great.

We take the following sentences from an editorial on the suffragets in the *Boston Pilot*, now under the control and direction of Archbishop O'Connell:

Women have not won the ballot. A few

sexless creatures do. They have exhausted every other sensation producing agency. They have at last come to this. They want the rights of men. Let them have them, but let it be understood at the same time that they assume the obligations and troubles of men. . . . They cannot have their cake and eat it, too. . . . The trouble with these howling females is that they have been spoiled. They are like shouting, disobedient children, who muss up a drawing-room and disturb the guests and shame their families by atrocious temper. . . . The normal woman in the prime of life is condemned by nature to certain periods of seclusion. That one fact removes women from the struggle of life and the competition of men."

A bill has been introduced in the Wisconsin Assembly to repeal the primary election law as to the election of Senators and substitute direct election by the people. The bill will go no farther. It is well for legislators to have some primary knowledge of the United States Constitution. It says (Art. I, Sec. 3, 1):

"The Senate of the United States shall be composed of two Senators from each State chosen by the legislature thereof."

The people are not the legislature. The legislature must do the choosing, but the people may nominate or even substantially direct.

The Register of the United States Treasurer hires a whole private car for his speaking tour in Oklahoma. That is the only State in the Union, out of the limits of the former Confederacy, that has a Jim Crow law, and Register Vernon is a so-called negro. Out of regard to the Constitution these laws include a provision that the accommodations shall be equal, but they never are. Negroes cannot get a sleeping berth.

The House of Representatives the other day expunged from the Congressional Record a speech because of its improper abuse of the President. There ought to be fixt rules on such a subject, and it is well that in the Senate a rule is proposed which will shut off such a personal speech as Senator Tillman has threatened the Senate with.

It is just one year since Harry K. Thaw was acquitted, and he is still where an insane murderer belongs.

Insurance

Taxation and Insurance

It costs money to run a government. Those who are charged with the business of government soon come to a realizing sense of this truth. The raising of revenue is a serious problem. No one really enjoys the payment of taxes, but without taxation there is no revenue. Since taxation must be accomplished somehow, therefore, the government must find taxable subjects. Those who spend all they get before or after they earn it are not of much account in so far as direct taxation goes. The burden of taxation of necessity falls upon the thrifty citizen. The man who saves something for the traditional rainy day and who invests his savings in real estate is taxed at once. When real estate holdings proved insufficient, some one happened to think of taxing insurance premiums. This thought was the father of the deed, and this form of taxation was so close at hand and so fruitful a field that it grew in volume until it now yields a gross revenue of something like \$12,000,000 per year. That is to say, because of this form of taxation, the men who wish to protect those near and dear to them by means of the insurance principle pay \$12,000,000 a year more for such protection than they would have to pay if insurance was looked upon by legislatures as is the savings bank idea. So insidiously has insurance taxation grown that most of the States, in ways that lack uniformity, vie one with the other in taxing insurance.

According to a tabulation that appeared in *The Insurance Press*, Alabama, Arizona, California, Colorado, Delaware, Florida, Georgia, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, New Hampshire, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, South Dakota, Texas, Virginia, West Virginia and Wyoming tax gross premiums, without deductions.

Connecticut, Illinois, New Jersey and Wisconsin have laws for reciprocal taxation.

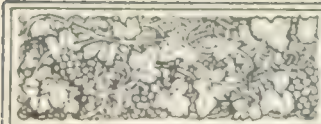

Arkansas allows deductions for policy claims, including death losses, endowments and commissions. The District of Columbia allows a deduction for dividends. Hawaii allows deductions for return premiums, reinsurance, death losses, all other payments to policyholders, and operating and business expenses. Idaho and Oregon allow deductions for policy claims. Indiana allows a deduction for death losses. Tennessee allows a deduction for dividends used in payment of premiums. Utah allows a deduction for the State tax on property. Vermont allows a deduction for dividends, reinsurance and return premiums. Washington allows a deduction for return premiums.

The Massachusetts tax is on reserves. Neither premiums nor reserves are taxed by Nevada.

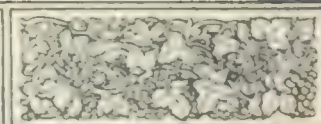

The injustice of insurance taxation has long been known to life insurance executives, but it has recently become apparent to a wider circle, and steps are just now being taken looking toward reformation along this line. A committee of life insurance men from the Association of Life Insurance Presidents, the American Life Convention, and the Canadian Life Officers' Association, representing companies that have 85 per cent. of the insurance in force in the United States and Canada, that met in Chicago last month, has taken up the subject, and after careful consideration it has declared that

"the taxes imposed on life insurance companies are, for the most part, excessive, inequitable, unjust and a direct burden on policyholders, and it has directed attention to the fact that a majority of the States tax gross premiums, without allowing deductions for death losses and payments to policyholders, resulting in double taxation."

A campaign is about to begin, the direct result of which will be to bring the whole matter of taxation to the attention of legislatures and the premium-paying public, with the ultimate object of reducing the burdens now unjustly laid upon policyholders. THE INDEPENDENT is heartily in favor of drastic tariff revision in so far as it applies to the taxation of life insurance premiums.

Financial

Increased Cash Reserves

FOLLOWING the panic, laws increasing the cash reserves which must be held by State banks and trust companies in New York were enacted at Albany. These new statutes became completely operative on February 1st. Mr. Williams, the Superintendent of Banks, now shows that they have increased the cash reserves of these institutions by \$116,796,000, and that \$103,736,000 of this is cash in vault. Of the total increase, \$108,707,000 is held by institutions in the Manhattan and Brooklyn Boroughs of New York City. Having pointed out how their strength has thus been augmented, he adds:

"The reserves of our State banks and trust companies are now sufficient to meet any demands that might be made upon them for which a proper reserve would be adequate protection."

These new laws are excellent ones and they were needed. The enactment of them was due mainly to the report of Governor Hughes's commission of bankers and to the efforts of Superintendent Williams.

The Treasury Deficit

WHEN Congress revises the tariff, it must also make provision for additional revenue. The deficit for the current fiscal year, up to February 1st, was \$79,-814,443. For January alone it was \$15,-500,000, and for the entire fiscal year it will probably exceed \$130,000,000. The Treasury's working balance is between \$40,000,000 and \$45,000,000. There has been about \$100,000,00 on deposit in the banks, and Secretary Cortelyou now calls for \$30,000,000 of this sum.

It is not expected that the needed additional revenue will be obtained by the tariff revision. While some rates, and possibly a majority of them, will be reduced, it is not the purpose of the revising committee, nor will it be the purpose of the ruling majority in Congress, to increase imports of dutiable manufactured goods. Because of some additions to the

free list, and on account of the protective policy of the revisers, it may be that tariff revenue will be reduced. At all events, no considerable increase can be expected, even if the revisers impose duties upon coffee and tea.

There is talk at Washington about an increase of internal revenue taxes. Some point out that \$55,000,000 could be gained by doubling the tax on beer; some would revive taxes of the Spanish War. Stamps for checks and for proprietary medicines are suggested. The prediction is made that a duty of 3 cents a pound on coffee will be recommended. This would yield \$25,000,000. Those who ask for such tariff duties as would cause large importations of manufactured goods and an increase of customs revenue are met by the assertion that our manufacturing industries, recovering slowly from panic depression, are in poor condition to contend against competition thus stimulated.

A majority of the people would probably say that the additional revenue should be obtained by reasonable taxes levied upon wealth. If the Ways and Means Committee is convinced that the revenue must in some way be increased largely, it should at least inquire concerning such taxes and report its conclusions.

....Mr. Warrel S. Pangborn, for three years treasurer and chief accounting officer of the Empire State Surety Company, of New York, has resigned to again actively engage in the profession of accountancy. Mr. Pangborn is a certified public accountant of the State of New York, and before going with the surety company was vice-president and general manager of the Empire Audit Company.

....The output of pig iron in this country in 1908 was 15,936,018 tons, against 25,781,361 (highest on record) in 1907. This decrease of 38 per cent. was due, of course, to depression caused by the panic. Germany's output fell from 13,045,760 (metric tons) to 11,-813,511; Canada's from 581,146 to 563,-672.

VOL. LXVI NEW YORK, THURSDAY, FEBRUARY 18, 1909 No. 3142

Survey of the World

Movement Against the Japanese Checked

The movement in Pacific Coast legislatures against Japanese residents was checked last week, and there are indications that it will soon cease to excite public discussion. In the California House, on the 10th, the bill excluding Japanese from the public schools (past on the 4th by a vote of 48 to 26) was taken up again on a motion to reconsider, and was rejected by a vote of 37 to 41. Action against pending anti-Japanese measures was also taken in Nevada, Oregon and Washington. At the beginning of the week, the opponents of the Japanese in California were saying that their school bill could not be defeated. Altho Speaker Stanton did not give to the public the disquieting information which he had received from Washington, Governor Gillett said Japan had given notice that the enactment of anti-Japanese legislation would be regarded as a breach of faith. On the 8th, President Roosevelt sent to Speaker Stanton a long telegram, which was published. The first part was as follows:

"I trust there will be no misunderstanding of the Federal Government's attitude. We are jealously endeavoring to guard the interests of California and of the entire West in accordance with the desires of our Western people. By friendly agreement with Japan we are now carrying out a policy which while meeting the interests and desires of the Pacific Slope is yet compatible not merely with mutual self respect but with mutual esteem and admiration between the Americans and Japanese. The Japanese Government is loyally and in good faith doing its part to carry out this policy precisely as the American Government is doing. The policy aims at mutuality of obligation and behavior. In accordance with it the purpose is that the Japanese shall come here exactly as Americans go to Japan, which is in

effect that travelers, students, persons engaged in international business, men who sojourn for pleasure or study and the like shall have the freest access from one country to the other and shall be sure of the best treatment, but that there shall be no settlement in mass by the people of either country in the other."

During the last six months, he continued, the number of Japanese in the United States had been reduced by more than 2,000, and if the present policy should work as well in the future, all causes of friction would disappear. But by this school bill nothing in the line of the object aimed at could be accomplished, for it would give just and grave causes for irritation, and the Federal Government would be obliged to test it at once in the courts, holding it to be a violation of the treaty:

"In short, the policy of the Administration is to combine the maximum of efficiency in achieving the real object which the people of the Pacific Slope have at heart with the minimum of friction and trouble, while the misguided men who advocate such action as this against which I protest are following a policy which combines the very minimum of efficiency with the maximum of insult, and which while totally failing to achieve any real result for good yet might accomplish an infinity of harm.

"If in the next year or two the figures of immigration prove that the arrangement which has worked so successfully during the last six months is no longer working successfully, then there would be ground for grievance, and for the reversal by the National Government of its present policy. But at present the policy is working well, and until it works badly it would be a grave misfortune to change it, and when changed it can only be changed effectively by the National Government."

This appeal had some weight with the legislators. Governor Gillett and the Speaker had used all their influence with them in support of the President's wishes. Upon the motion to reconsider, on the 10th, there was a long and stormy de-

bate. After the bill had been rejected, 37 to 41, a second motion to reconsider was lost by a tie, 38 to 38. In a message of congratulation to Governor Gillett, the President said:

"All good Americans appreciate what you have done. I feel that the way in which California has done what was right for the nation makes it more than ever obligatory on the nation in every way to safeguard the interests of California. All that I personally can do toward this end, whether in public or in private life, shall most certainly be done."

In the California Senate, a resolution censuring Mr. Roosevelt for his criticism of Senator Perkins was referred, and another resolution for a special election at which voters should express their views about Asiatic immigration was lost by a vote of 12 to 22.—The Chinese of San Francisco have addrest to the President a formal complaint, asserting that there is discrimination "in favor of Japanese aliens as against Chinese citizens, residents and privileged classes." He is asked to test the constitutionality of the school laws of California because they discriminate against Chinese children.

Action in Nevada and Other States In Nevada the anti-Japanese measures past in the House were tabled in the Senate, on the 9th, following an unfavorable report from committee. In Oregon a resolution urging that Japanese be included in the Chinese Exclusion Law was rejected, upon the ground that it was unwise to interfere with the Federal Government, which was zealously guarding the interests of the Pacific Coast. A memorial for such an extension of the law is pending in Montana, and a bill forbidding the employment of Chinese or Japanese in stores or factories has been introduced in the Nebraska House. The State Department asked the Governor of Washington whether it was true, as reported in Japan, that there was pending in the Washington Legislature a bill requiring Japanese attending the Alaska-Yukon Exposition to give bonds that they would leave the country when the Exposition closed. There was no such bill. Both Houses by unanimous vote adopted resolutions declaring that if one should appear it should be indefinitely postponed and also

that no anti-Japanese bills should be considered. In the House, a bill discriminating against the Japanese was roundly denounced by a member whose mother is an Indian. At the dinner of the Silk Association, in New York, K. Midzuno, the Japanese Consul-General, spoke of the part played by international trade in bringing peoples together, and then said:

"I am not unaware of the war scare and jingoistic expressions which once more occupy the big headlines of the sensational papers. War is the question of life and death for a nation, and the destiny and fate of a nation are too serious a question to be risked by a few ambitious politicians and professional alarmists. I do not doubt for a moment that the present anti-Japanese agitations do not represent the true sentiment of the great American people."

Ambassador Takahira says that Japan has made no protest thru him or any other official representative. Japan, he adds, desires to avoid giving our people any cause for displeasure. Reviewing the effect of the immigration agreement, he points out that Japan has enforced the same restrictions concerning emigration to Canada and Mexico, and that for this reason very few laborers can come across the boundaries into our States.—The news of the rejection of the school bill in California was received with intense satisfaction in Japan, and it gave much relief to resident Americans. Dispatches in the Japanese papers, indicating a menacing growth of anti-Japanese sentiment on the Pacific Coast, had been widely read and had made a deep impression. There was danger that the business interests of Americans would be affected injuriously.

Views of Mr. Carnegie and Judge Gary

Mr. Carnegie was asked, last week, to express his views concerning tariff commissions. "The difficulty with tariff commissions composed of members of Congress," said he, "is that these gentlemen are necessarily uninformed upon the true conditions of the varied industries." Disinterested evidence would not be given to them by interested parties. Such a commission would not understand the bearing of the testimony submitted and would get no trustworthy evidence as to conditions abroad. There should be a

permanent staff of able, disinterested men, charged with studying conditions in all manufacturing countries:

"The industrial world is about to undergo the most momentous change known in its history, even more far reaching than was the change from the individual domestic manufacturer, manufacturing at home, to the factory system and the huge establishments of today. We are rapidly losing competition in articles of general consumption upon which nations have hitherto depended to insure reasonable prices for the consumer. Some of our most important industries today are only nominally competitive, and in reality are monopolies so far that an understanding exists as to prices that will prevail. We cannot, it seems the opinion, withstand this movement. It has to be received and tested, which means that these virtual monopolies must be controlled some way or another. The only force appears to be that of the national Government.

"A supreme industrial court will have to be created, and eventually it will have to pass upon prices—disguise this as we may. To leave monopolists in control would not be satisfactory to the people, but there must be control in some form, and that, so far as one sees, must be in the hands of the general Government. This is even a larger question than the tariff, but our troubles with revisions of the tariff will be greatly overcome by a body of experts, keeping themselves fully informed of all matters pertaining to the question."

There was nothing alarming, he added, in the coming change. The American people would adjust it for the best interests of the nation as a whole. We should have to grope our way. The new industrial tribunal might make mistakes, but it would gradually create traditions and make decisions which would be guides for the future. It would eventually adjust relations between the manufacturer and the consumer to their mutual satisfaction.—Judge Elbert H. Gary, chairman of the Steel Corporation's board of directors, was the guest of honor at the annual dinner, last week, of the Illinois Society in New York. George W. Perkins (of J. P. Morgan & Co.) assured the Society that Judge Gary had been absolutely sincere in his public support of the Government's policy concerning corporations, and had not been playing a part in the interest of his own great company. Judge Gary, in his address, said that if leading men would try to harmonize with those who had been elected to positions of public trust, "instead of resorting to complaint and con-

demnation of official action, sometimes even defying the law itself, the grounds for much of the unfavorable criticism of Government management would disappear." Vested rights must yield whenever they became antagonistic to the public welfare and safety:

"The opportunities for the acquisition of wealth have been and are so great that large and increasing fortunes of individuals and corporations compel the most thoughtful men to dread the results of the future unless the influence and power of money can be controlled by Governmental authority. The question is too far reaching to be laughed out of court. If the power of accumulated money be not so controlled, who can tell when or how and to what extent it may be attacked by the mob?

"It is a good time for all of us to decide that at the outset of the new Administration we will use every effort, not only to conform to the laws of the land in every respect, but to recognize our individual responsibility, and to lend our efforts to advance the interests of the public. If profiting by the past, following the example of the Chief Executive who is about to lay down the cares and responsibilities of public office, keeping in mind the ideals concerning civic life and practice which he has unfalteringly proclaimed, we shall evidence our disposition to subordinate private interests to the public good, we need have no fear that vested rights in property or private and pecuniary interests in business will be disturbed or interfered with by the incoming Administration."

4

Washington Topics

No one appears to have discovered until the 9th inst. the fact that Senator Knox was ineligible (under the Constitution) for appointment to a Cabinet office because the salaries of members of the Cabinet had been increased by Congress during his term in the Senate. There has been some good-natured comment upon the failure of such constitutional authorities as Judge Taft, Senator Knox and Secretary Root to take into account that provision of the Constitution which relates to a case of this kind. In the Senate a bill was introduced on the 10th to remove the obstacle by repealing the law which increased the salary of the Secretary of State. This was promptly passed, without objection, and concurrent action is to be taken in the House this week. Judge Taft, who arrived at New Orleans from the Isthmus on the 11th, sent telegrams to prominent members of Congress, expressing his hope that the

bill would be past and saying this legislation was sufficient to clear the way for the appointment of the Senator. Authorities differ, however, as to the effect of this bill or any other remedial measure. Several Senators are of the opinion that Mr. Knox cannot be made eligible. This is said to be the view of about half the members of the House Judiciary Committee, and it is expressed by the Democratic leaders in the House. Those who hold this opinion predict that if the Senator becomes Secretary of State the legality of his title to the office will be tested in the Supreme Court in proceedings relating to his certification of acts of Congress or to the attachment of his signature to official papers of importance.—Owing to the strenuous opposition of Senator Tillman and others, no action will be taken at this session upon the nomination of Dr. W. D. Crum (a negro) for reappointment as Collector of Customs at Charleston.—It is now said that there will be no attempt to pass the Census bill over the President's veto.—A report from the Senate Committee on Appropriations concerning the secret service asserts that the work of the Government in detecting crime has not been affected by the legislative restrictions of which the President complained. This assertion is supported, so far as their departments are concerned, by the testimony of Secretary Garfield and Attorney-General Bonaparte.—Mr. Roosevelt has sent to Congress the report of his Commission on Country Life, with a special message. The Commission's inquiry, he says, points to the need of effective co-operation among farmers, of new schools to prepare pupils for country life, of good roads, of a parcels post, and of better sanitation in farmers' homes.—It is reported that Judge Taft has chosen for Secretary of War Jacob M. Dickinson, of Tennessee, a native of Mississippi, who served in the Confederate army and is now general counsel for the Illinois Central Railroad Company. Mr. Dickinson is an anti-Bryan Democrat, who voted for Judge Taft. He was Assistant Attorney-General twelve years ago, and in 1901 was counsel for the United States in the Alaska Boundary case.

Settlement of Disputes with Venezuela An agreement was reached, on the 12th, for a settlement of all the pending controversies between the United States and Venezuela. For some days there had been danger that the negotiations would be unsuccessful, owing to differences concerning the claim of the New York and Bermudez Asphalt Company, Venezuela insisting that her right to punish a corporation guilty of treason should not be submitted to arbitration. The removal of this obstacle is regarded as a notable achievement on the part of Commissioner Buchanan. Arbitration in this case is excluded. The company regains possession of its property, will pay Venezuela \$20,000 a year and will compromise the Government's suit against it by a cash payment of \$60,000. It will be recalled that a fine of \$5,000,000 was imposed. Three claims—those of the Orinoco Steamship Company, the Orinoco Corporation and the United States and Venezuela Company—go to the Hague Tribunal for arbitration. The claim of A. F. Jaurett, who was expelled from Venezuela by Castro, and who demanded \$25,000, will be settled by a payment of \$5,000. The agreement has been approved by the Venezuelan Cabinet, and Commissioner Buchanan sails for home this week. Minister Russell will soon return to Caracas.—In his recent annual message, President Davila, of Honduras, asserted that Guatemala had incited the revolt against his authority in July last. He has now averted the resentment of Guatemala by making an apology.—Honduras has forcibly expelled from the country Lee Roy Cannon, a Virginian, who led a force of revolutionists in July last, was captured, and was afterward confined in prison. He promises to return and to enter the country from Salvador at the head of another band of revolutionists.—Owing to the protest of the United States Minister, President Zelaya, of Nicaragua, has released forty prominent citizens of Granada who paraded with an American flag in celebration of the election of Judge Taft and were imprisoned because Zelaya regarded their action as hostile to his Government.

King Edward's Visit to Berlin

Not much was hoped for and somewhat was feared in the visit of the King of England to the Emperor of Germany, but the affair went off more smoothly and probably did more good than was expected. King Edward undoubtedly made a good impression, and his plain-spoken and sincere expressions of good will and friendship did as much as such speeches can to remove the distrust which the present spasm of militarism in England has aroused in Germany. This is the first state visit which King Edward has made to Germany since his accession to the throne and is a return for the visit paid by Emperor William to England last year. The special train bringing King Edward and Queen Alexandra from Calais arrived at the Lehrter railroad station on February 9th and was met there by the Emperor, the Crown Prince and other princes, Chancellor von Bülow, Foreign Minister von Schön and other cabinet and court officials. The Socialists had prepared a counter demonstration for the same hour as a protest against royalty and municipal inefficiency. Fifteen mass meetings were held in various parts of the city, and at their conclusion two processions of the unemployed were formed and attempted to make their way to the town hall and the palace at the same time that King Edward reached these points, but they were checked without much difficulty by the police. The four days' visit was filled with the usual series of calls, dinners, balls and opera performances, the only marked innovation being the visit of the King to the Rathaus, where he was received by Burgomaster Kirschner and several hundred distinguished citizens of Berlin. During these festivities conferences were being carried on between Chancellor von Bülow and Sir Charles Hardinge, Under Secretary of the Foreign Office, and between the Earl of Crewe, British Colonial Secretary, and Herr Dernburg, German Colonial Secretary, but none of the results of their deliberations have been made public.—But while their sovereign is making amicable speeches to the Germans, the English people are getting daily more excited over the possibility of an invasion of the island by the Germans under the

impulse of the patriotic play "An Englishman's Home." Sentiment in favor of a strong volunteer force or even conscription is being developed. The British Cabinet has come to an agreement to construct six new "Dreadnoughts" in the place of four, as was first proposed.

Woman's Suffrage in Sweden

A bill for the reform of the electoral law past the Swedish Diet on February 13th by a vote of 120 to 98 in the first Chamber and 134 to 94 in the second. It provides for proportional representation in Parliament, and all persons over twenty-four years of age are entitled to vote without discrimination on account of sex. Women have now the complete suffrage in the three Scandinavian countries of Norway, Sweden and Finland, as well as the British colonies of Australia and New Zealand, and the American States of Wyoming, Colorado, Idaho and Utah.

Turkish Cabinet Crisis

The Turkish Ministry, the first under the new constitution, has been overthrown by a parliamentary vote of lack of confidence in its head, the Grand Vizier Kiamil Pasha, by 198 to 8. The Chamber of Deputies directed the President to request the Sultan to appoint in his place a Prime Minister possessing the confidence of the Chamber. This is an overwhelming victory for the Young Turks, who have always distrusted the Grand Vizier, altho he has been a life-long constitutionalist, because he was in favor of a moderate policy. Of late Kiamil Pasha has shown favor to the other and more conservative branch of the reform party, the Liberal Union, but judging from the vote this party is not yet strong enough to make any headway against the Committee of Union and Progress, as the Young Turkey party is called. Kiamil Pasha suspected the committee of conspiring to overthrow the Sultan and establish a military dictatorship under Prince Yussef Izz-ed-Din, eldest son of the late Sultan. To prevent this the Grand Vizier dismissed Ali Riza Pasha, Minister of War, and a member of the Young Turkey party, replacing him by Nazim Pasha, on whose loyalty

and firmness he thought he could rely. The Minister of Marine and Minister of Public Instruction were also dismissed from the Cabinet by the Grand Vizier, their places being filled by Hussein Pasha and Zia Pasha. This created an uproar in the Chamber and the Grand Vizier and his appointees were denounced as reactionaries in the most violent language. Upon learning the vote of lack of confidence in his administration, Kiamil Pasha resigned as Grand Vizier and the Sultan charged Hilmi Pasha with the formation of a new Cabinet. In this the Ministers of Finance, Justice, Public Works and Commerce have been retained. Hilmi Pasha retains his portfolio as Minister of the Interior, while Ali Riza Pasha is reappointed Minister of War and also of Marine. The Committee of Union and Progress has publicly repudiated any intentions to overthrow the Sultan and establish a dictatorship. The Grand Vizier Hilmi Pasha was formerly Inspector-General of Macedonia and is well fitted for the office, but it is unfortunate to have a change of administration at a moment when the relations of Turkey to the Balkan States and the European Powers are so complicated. The last act of the Government before going out of power was to accept in principle the proposal of Russia to settle the difficulty between Bulgaria and Turkey by releasing Turkey from part of the indemnity on account of the war of 1876 and accepting as a substitute the obligation owed by Bulgaria to Turkey on account of the seizure of the Orient Railway.

Manchurian Railroads and Telegraphs

The Treaty of Portsmouth left unsettled the most important question involved in the war, that is, what nation should have the opportunity of developing or exploiting the province of Manchuria. China's sovereignty over that region remains nominally unimpaired, in fact reaffirmed by all the treaties, but Russia retains the upper half of the Manchurian railroad, and is levying taxes on the Chinese of Harbin as tho she had full territorial rights; Japan succeeds Russia's privileges in the southern part and has ac-

quired some others of her own; English capital is seeking to enter the field with a rival railroad enterprise; and America demands "an open door." The Chinese Foreign Office and the Japanese Minister at Peking have long been engaged in negotiations over the two main questions involved, the construction of telegraph and railroad lines of Manchuria, and the first of these has been settled by a treaty now signed and ratified. According to the Peking correspondent of the *London Times* the convention contains eight articles and stipulates that the cable shall be of two sections, the Manchuria end being worked by Japan and the Chi-fu end by China, the connection being a point $7\frac{1}{2}$ miles from Chi-fu. Japan undertakes under reserve of the most-favored-nation treatment not to land submarine cables or construct telegraph or telephone land lines or establish any kind of wireless telegraphy in China outside her leased or railway territories without first obtaining the consent of the Chinese Government. Japan also undertakes on the payment of 50,000 yen (about \$25,000) immediately to hand over to China all Japanese telegraph lines in Manchuria outside her railway territory. Further, Japan will not extend her present telephone system in Manchuria without first obtaining the consent of the Chinese Government. China undertakes to place special telegraph wires between the treaty ports, An-tung, Niu-chwang, Liao-yang, Mukden, Tieling, Kwang-cheng-tsze, and the railway territory at the exclusive disposal of the Japanese Government for a period of fifteen years, the telegraph service on such wires to be worked by Japanese clerks in the employ of the Japanese Government from the Chinese telegraph buildings, but only used for the exchange of telegrams from or to places under the direct control of the Japanese telegraph system. Japan also undertakes to pay China a small annual royalty on all messages forwarded over the Japanese Manchurian telegraph lines. The supplementary agreement provides for the use of the Gregorian calendar and the English language in all communications.—The other question, that of the railroad, is still under consideration. An English company acquired the franchise for the

extension of the Chinese line from Hsin-min-tun northward to Fa-ku-men, but this was opposed by the Japanese on the ground that it was a violation of the treaty of 1905, in which China bound herself not to construct any main line in the neighborhood of or parallel to the South Manchurian railroad or any branch line prejudicial to its interests. The proposed line undeniably parallels the South Manchurian, which is owned by the Japanese, but it is a considerable distance away from it and taps an undeveloped region of great fertility. China, therefore, contends that the position of Japan is a violation of her pledge at Portsmouth, "not to obstruct any general measures China may take for development of commerce and industry in Manchuria." The request of the Chinese Government, made June 6th, that Japan give a clear definition of what was understood by the words of the treaty "in the neighborhood of or parallel to that railroad," has remained unanswered. At first the British Government agreed with the contention of Japan and refused to support the English capitalists who acquired the concession, but lately there are indications of a change of attitude and Japan may be disposed to arrange a compromise on the railroad as on the telegraph question.—The president of the Board of Communications, Chen Pi, and three under secretaries have been dismissed in disgrace. The charges of corruption and inefficiency brought against them are probably true, but the summary removals of the most prominent officials of the former reign do not give confidence in the stability of the present Government.

Foreign Notes

The Moroccan difficulty, which has for four years been a point of contention between France and Germany and has more than once seemed likely to involve Europe in war, is reported to have been completely settled by agreement between these two Powers. The proposals of Foreign Minister von Schön are entirely acceptable to France.—The convention which has been meeting in Cape Town to draft a plan for the federation of Cape Colony, Natal, Transvaal, Orange River Colony and Rhodesia has

completed its labors and adjourned. The delegates to the convention take back with them copies of the proposed constitution in Dutch and English, and on March 30th the various parliaments will meet to discuss the plan. Any amendments suggested will be referred back to the convention for final decision some time in May, when the premiers will appoint a delegation to carry the proposed bill to England. The point that caused the greatest conflict of interests and opinion was the location of the capital of the future federation. The convention adopted a compromise on this question, which gives something to each of the three colonies whose claims were most urgent. Pretoria in the Transvaal is to be the administrative capital, while the Federal Parliament is to meet at Cape Town and the Court of Appeals is to be located in Bloemfontein, in the Orange River Colony.—The dominion actually ruled over by the Shah of Persia is becoming limited to Teheran and its immediate vicinity. Tabriz is in the hands of the revolutionists, and at Ispahan the Shah's government has been displaced and Samsam-es-Sultaneh, head of the Bakhtiari tribe, is ruling the city and country quite independently, tho professing loyalty to the Shah. His administration of the city is said to be orderly and efficient. The legations at Teheran have been notified by the Nationalist clubs that no foreign loans or concessions can be recognized unless approved by the parliament.—In the Court of Alipur, a suburb of Calcutta, a youthful Bengali shot and killed Ashutosh Biswas, who acted as public prosecutor in the recent trial of the Hindu anarchists charged with conspiracy against the government. A bomb was thrown at a railroad station, near Barrackpur, with the intention probably of assassinating Lord Minto, Viceroy of India, but the explosion did no harm.—The convention of the United Irish League at Dublin passed a resolution in favor of making Gaelic a compulsory subject for matriculation in the new national university at Dublin. A proposal to extend parliamentary franchise to women in Ireland on the same terms as the men was defeated by a large majority. John Edward Redmond was unanimously re-elected chairman of the Irish Parliament party.

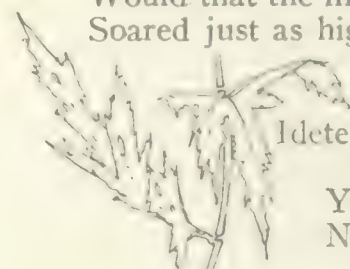

Poems

BY HIS MAJESTY MUTSUHITO, EMPEROR OF JAPAN.

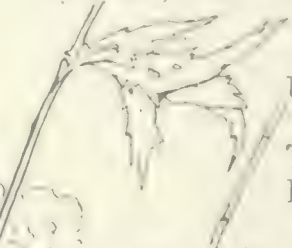

Hisakata no
Sora ni haretaru
Fuji no ne no
Takaki wo hito no
Kokoro to mo Gana!

Fuji's clear-cut peak
Stands proudly soaring 'gainst the cloudless sky:
Would that the man's heart
Soared just as high as that.

Matsurigoto
Idete kikinu to
Omoishi wa
Yume narikeri na,
Niwatori no naku.

Methought I sat before my Council Board,
Engrossed in pressing business of the state.
'Twas but a dream; for presently the Cock*
Crowed, and I woke to Life's Realities.

Toki hakaru
Utsuwa no maye ni
Arinagara,
Tayumi gachi nari,
Hito no kokoro wa!

Poor human heart! so weak that e'en the Clock:
With tireless tick meas'ring the steady hours,
Shames it not into unwearying energy.

Fuki susabu
Kaze no mani-mani
Sasowarete
Iye no uchi made
Tsumoru yuki kana.

Bleak blow the Winter's blasts; the whistling flakes
Drift at the wind's behest; and, swept against
Windows and doors, make bold to invade my house.

*In the Japanese cycle, this year is the year of the Cock.

Poems

BY HER MAJESTY HARUKO, EMPRESS OF JAPAN

Tsutae koshi
Fumi arite koso,
Shirare kere
Tôtsu mi-oya no
Kami no mi-idzu wo.

Had we not had our books,
An heirloom of the Ages, writ of yore,
In which we read the ancient comings-forth
Of our god-ancestors [and learn that we,
Their offspring, must be godlike in our lives].

Kaku bakari
Megumi amaneki
O mi yo ni
Umare au koso,
Ureshi kari kere.

Only to have been born in such a reign
When the Imperial Mercy is so wide,
Pervading all the land, is joy enough.

Ayamatan
Koto wo omoeba,
Karisome no
Koto ni mo mono wa
Tsutsushimaretsutsu.

When we fear
To slip or err, we wisely take good heed
And e'en the smallest deed do heedfully.

The Mikado a Poet

BY YONE NAGUCHI

[The poems by the Emperor and Empress of Japan, which are printed on preceding pages, were furnished by Baron Takasaki, the "Japanese Poet Laureate," for THE INDEPENDENT and have been translated by Mr. Arthur Lloyd, who had already published a volume of translations of Imperial poems. The following article on the "Mikado a Poet" is written by one who, since he left the United States three years ago, has been giving lectures on English literature at Keio College, Tokyo. Mr. Naguchi says it is based on a conversation with Baron Takasaki and a book called "Kinio Heika Go—Buntoku Roku." We print the article without change.—EDITOR.]

THE Mikado, it is said, quite often recalls, not without a reasonable pride, the uncomfortable situation in which he was placed in his boyhood days, when his father, Komei Tenno—the very person who sowed the seed for the present glory of this Meiji era—gave him five or six subjects of *uta* poems as a daily task. His early training already foreshadowed the man of heart, as well as the man of strength, which he proved afterward. Komei Tenno's foresight in giving him, on the one side, a Spartan sort of education, was perfectly realized when the Mikado's strength alone was able to overcome the difficulties of the national affairs of the past forty years; and it is a blessing to have him sitting on the throne not only as a soldier, but as a poet. We pray with *bansai* that his life of sword and heart—I do not say merely pen—will be "eight thousand years," as in the national hymn.

After a thought or two, we find that the Japanese Emperors, to begin with Jimmu Tenno, the founder of the Japanese Empire in 660 B. C., have been poets; they have governed the state with poetry and heart. The imperial palace, wherever it might be, was always the center of culture and art. I am not ready now to speak, without making a mistake, of the true merit of the *uta* or thirty-one syllable poem; and I may be one perhaps who does not value it so highly. But I say that in Japan—or old Japan, at least—it was the only golden road which led

straight to the divine castle of the Muses, and, in fact, many Japanese poets arrived there triumphantly. And I am sure that it is its virtue to give you a fresher meaning of life, just as any other form of poetry, and that you will learn thru it to find a new beauty in any common sort of things and affairs. We might say that even your snore and your cough will be your *uta* poem; I am rather suspicious, to say the truth, of the *uta* poet's discrimination. There is much to say, of course, on this *uta* as a mere form of art. But I have another reason for speaking of the Mikado as a *uta* poet.

Uta writing to the Mikado is not a work of art at all, but a sacred rite in its best meaning, like a *sutra* recital in the Buddhist temple or a *norito* chant in the Shinto shrine; it is not the idle work of a poetical fancy, by any means, but the very outcry of his truest heart. He has left the mechanism far behind, entering into the true realm of poetry or *uta* poetry, "by which, without an effort," as Kino Tsurayuki, the *uta* poet of the tenth century, remarkt in his famous preface to the *Kokinshin* anthology, "heaven and earth are moved, and gods and demons invisible to our eyes are touched with sympathy." Therefore his *utas* are not a forced work, and they flow from his heart as a river out of the mountain's breast. It is said that it is not unusual for him to write forty or fifty *utas* in one day. He has been found

quite often, I am told, jotting them down on a piece of paper or in his note book, amid his reading of the state papers or listening to a minister's appeal in his Gakumonjo room. His training since his eighth year, when his father first made him write *uta*, should count for a great deal; but only his being a born poet—boundless in his poetical heart—made it easy for him to command poetry on his finger tip. We have a thousand *uta* poets, but very few true poets. We had many Emperors before the present Mikado who have left able *utas*; but the Mikado in fact, has no competitor whatever. We have, I dare say, many things of which we can be proud, without much pretension, and I believe that the Mikado among them is first and last.

I am sure that his "thirty-one syllables," which were sent out occasionally from his Chiyoda palace during the late war, like a golden flash of a god's speech, went straight to the nation's heart; it is not too much at all to say that they moved far more deeply than his imperial edicts which are formal and cold. How they, tho they were only thirty-one syllables, comforted our minds and again encouraged us; the voice of love and true heart proved, after all, the mightiest of all. In reading his *utas* we were happy to know that his joy and sorrow were ours, and decided at once that we would try our very best to please his august heart and be ready to die for the nation's glory. We have many stories illustrating the impression his *utas* made upon our minds in the war time. There was an old farmer in a certain province who had sent off his only son to the Manchurian battlefield; he was extremely unhappy to lose his boy, on whose shoulders, however slender they were, he depended as if he were his "house-pillar." And he gradually yielded himself to the fatal despair; tho he had some pieces of land, he suddenly stopt taking care of them, and left them free to the wanton hands of wild grasses. And he would not listen to his neighbors' words of reasoning that it was his duty to keep his land rich and trim, and that it was nothing but another expression of patriotism, and that people, rich and poor, old and young, had to do what they

ought to do, especially in the time of the nation's life and death struggle. One day this old man happened to read one of the Mikado's poems in the paper:

Kora wa mina
Ikusa no niwa ni
Idehatete
Okina ya hitori
Yamada moruran.

"I suppose all sons to the front are gone,
To do their duty all under arms,
And their old sire at home alone
Guards and watches their lonely farms."

(Translated by Baron Suyematsu.)

"The sons all, ere this fall,
At the country's call
To the front are gone,
Leaving farm and field and all
In the hands of the aged sires alone."

(Translated by Dr. Wadagaki.)

"They're at the front
Our brave young men, and now the middle-aged
Are shouldering their arms, and in the fields
Old men are gathering the abundant rice,
Low bending o'er the sheaves. All ages vie
In cheerful self-devotion to the Land."

(Translated or versified somewhat freely by A. Lloyd.)

And he wept on coming to knowledge of the Mikado's sympathy with a rustic household and of his infinite tenderness; and he thoroly repented his former untimely foolishness. And it is said that he changed his *kimono* to look proper, and sat with his face toward the sky where he thought the Mikado's palace might be, and bowed several times. And he ran to the chief of the village, and promised him that he would do his best, tho he was already old, and be worthy of being a Japanese, as far as in his power lay.

It was soon after the imperial court was transferred to Tokyo (in 1869) from Tokyo, that western capital of temples and silence, that Onuta Kakari, or "the Honorable Poetry Office," was created in the imperial Household Department; it is the predecessor of the present Poetry Office, where Baron Takasaki, with his venerable white hair and youthful beam of eye, sits as its chief. The chief of the Onuta Kakari in those days was Suyetomo Sanjonishi, a court noble, known as an *uta* poet of the modern times; the other members of the office

were Tomonori Hatta, Bisei Fukuba and others. And also among the attendants in the imperial palace, or "Juju," were many *uta* poets like Horikawa, Tomino Koji, Nishi-yotsutsuji and others; there was never another time like those days when the palace gathered so many literary stars. It was the seventh of Meiji when Baron Takasaki, the vice-counselor of the Sain Office in those days, returned from a European journey and was appointed Chief of the Attendants in the Imperial Palace or "Jiju Bancho," when his Sain Office was abolished. However, he was not called to the palace as an *uta* poet at that time. The proclamation of the Emperor's northern tour was presently sent out, and the people who were to journey with the imperial train were appointed. But the nation was not rich, as today, and the allowance for Gojanko, or Honorable Tour, was small, so that the Mikado could not take Mr. Sanjonishi, the chief of the Poetry Office, with him. But as it was feared that the northern people—the Ou provinces were quite classical in Japanese literature—might present their *utas* to the Emperor it was thought best to take somebody who might know something of *uta* poetry, and Baron Takasaki was asked to represent temporarily the Poetry Office during the tour, in addition to his work as Jiju Bancho. Thus it was accident that the present "poet laureate" began to see the Mikado thru the channel of poetry.

As was expected, the tide of welcome *utas* presented by the people from the height of joy at this uncommon occasion of seeing the Emperor, the real son of God in their understanding, with their living eyes, flooded in. The Emperor on his part was much pleased at meeting such a reception, as, in fact, he was not without anxiety how he might be received. For many hundred years the golden light of the Emperor's blessing had not shone over the dense forest of their local sentiment, which only flowed toward their own lords; altho it was a temporary misunderstanding, they did not mind even throwing their hostile arrows against the Mikado's chrysanthemum badge when feudalism began to totter. There was more than one reason for the Mikado's uneasiness of mind, as

his northern tour occurred only a few years after the grand restoration or the Mikado's coronation. And it appeared all the people found out that they had been hitherto worshipping a deceiving god, who was obliged to run away like a false light before the morning sun, and they knelt before the Mikado and wept. And they tried their best to reveal their own hearts and souls thru the golden medium of *utas*. Since many of them were afraid that their *utas* might not be read by the Mikado, Baron Takasaki said, they devised a new plan; some *utas* were found under the table cover in the Mikado's stopping house, and some were tucked in the crack of a door in the corridor, and some were written improperly on a leaf of a writing tablet. The Mikado read them carefully and was much impressed. I am sure it was at this time the true power of the *uta* was revealed to him, and he came to think that it was only thru "thirty-one syllables" that the beauty of the inner heart could be perfectly communicated. I dare say that he determined in his own heart at this time that he would become a true poet, and govern the country with a poet's heart, as did his forefathers. But he was still young in age then; doubtless as a poet he was immature, and if I may be permitted to say it, he was far from grasping the true conception of it as he grew to realize it in later years.

It was soon after his northern tour that he again left his Tokyo palace for the province of Yamato, there to worship the "honorable tomb" of Jimmu Tenno, the conqueror and first Emperor, at Kashiwabara. It was perfectly proper for him to make a journey to please the spirit of the first Emperor, as his Land of the Rising Sun, which he established in 667 B. C., had returned again into his hand after many centuries, when the boorish feudal lords pushed the Emperor back to his nominal throne behind the screens of the Kyoto palace. When he had ended his tomb-worshipping, the Saigo rebellion, or the Meiji Tenth War, as it is generally called, broke out, and the Mikado stopt in Kyoto without returning to Tokyo from the Yamato province, where he made his headquarters to direct his armies. But the rebellion subsided early the next year, and he took

the sea route back to his Tokyo palace. It was the hottest weather in the month of June when the Mikado and his suite crost the Yenshu Nada or Totomi Sea; everybody on the ship felt quite sick under the gushing sweat. The Mikado, who kept up with his usual dignity and composure, could not help feeling cheerless and slow, and he called Baron Takasaki, who was with him as Jiju Bancho, right into his presence. (By the way, the Baron was connected with the Poetry Office in one way or another at that time.) And he let him read his three *utas* and choose the best among them as a poetical critic. The Baron thought the one which sang of Fuji Yama, whose divine cone could be seen from the sea, the best of all; but the Mikado was not pleased with his judgment. The *uta* which the Baron selected was written without any difficulty, and the Emperor thought that the others were better, since, in fact, he had tried his utmost over their poetical scheme. When he askt the Baron about the nature of his decision, and the Baron duly replied, the Mikado sighed deeply and exclaimed: "There's nothing so difficult as *uta* writing." "Is it so difficult, your Majesty?" the Baron said. He had no idea, when he said it, to invite the Mikado's great displeasure; but a moment later he found out that he was facing the most embarrassing and saddest situation that ever he happened to be in.

The Mikado's face was seen slightly changed, as, doubtless, his dignity was impaired by the Baron's words, and his voice was hard when he said: "I understand the reverse. You can claim the name of poet, I am told, if even one real *uta* be credited to you; and it is said that it is too much to expect to have two real ones in one's life. It is poetry which is deep, tho it may look shallow; it is more difficult than it appears. However, you said that it was easy. I presume that you must be a great poet; now, I will give you a subject or two to write your *uta* on. Be ready." And the Mikado pusht a *susuri-bako*, or writing-box, before the Baron, who was bending his head. The latter said that he had not expected to be placed in such a difficulty, while he was suffering enough already

from the terrible shaking of the sea under the most oppressive heat. And he said further, when he was sternly commanded by the Emperor again, that it was not the Mikado's way of benevolence at all, for which he was distinguished. "Are you fooling me with mere language?" The Mikado was excited. The Baron said in a low voice that he had no learning or accomplishment to be proud of, as he was only a rustic sort of *samurai* from Satsuma, as he had said before, but he never had fooled anybody in his life. "Fool your Majesty? Never! Never! I will not leave the spot even for death till such a thought of your Majesty shall be cleared off," he exclaimed. The Mikado began slowly to be imprest by the Baron's honesty and patriotism, as he was noted for those qualities since the first day he knew him; and suddenly he softened his face and voice, and said: "Tell me why you said that *uta* was not a difficult thing at all."

The Baron proceeded: "Ki no Tsurayuki, of the Heian period (800-1186), a real *uta* poet second only to Hitomaro, of the eighth century, who might be compared to Confucius or Buddha in his own line of poetry, remarkt in his preface to the *Kokinshu* anthology:

"The poetry of Yamato (Japan) has the human heart for its seed, and grows therefrom into the manifold forms of speech. Men are full of various activities, among which poetry is that which consists in expressing the thought of their hearts by metaphors taken from what they see or hear. Listening to the nightingale singing among the flowers or to the cry of the frog who dwells in the water, we recognize the truth that of all living things there is not one which does not utter song. It is poetry by which, without an effort, heaven and earth are moved, and gods and demons invisible to our eyes are touched with sympathy. By poetry the converse of lovers is made gentler; and the hearts of fierce warriors soothed. *Uta* or poetry is nothing but the human heart; poetry is born with man, the Japanese *uta* with the Japanese and Japan. There is nothing more absurd than to try to learn how to write poetry; we have only to make our own soul nobler and truer, and that is poetry. To give a voice it seems to me is a secondary sort of thing; and if we have our own voice, we should sing it simple and true as a bird or the wind. Simplicity is first and last in poetry; and the simple *uta* is like a chant in the Buddha temple; by virtue of its recital we approach Light and Beauty. To write *uta* is nothing but the culture of our own minds; and we have to return to the original human nature where simplicity is grandeur. We have a hu-

man heart; there we have *uta* poetry. And that is the only reason why I said that *uta* is not a difficult thing at all, your Majesty."

The Mikado quite beamed with delight over this fresh talk on poetry as, hitherto, he had thought himself to be missing somehow the main track of *uta*; indeed, the Baron's language meant for him a poetical salvation and light. And when he asked the Baron why he objected to write his *uta* when he commanded him to do so, the Baron said: "Poetry is not an art, as I said; I protest against its becoming artificial. I cannot write *uta* when the spirit is not glad to move; poetry is not to be made, but sung. And that was why I objected even to your Majesty's august command. This seems to me to be the age of decadence, when there is so much talk on poetry, but no real poetry. The people who are clever, even wonderful, to talk on *uta* are those quite often who cannot be true poets. I am afraid that modern Japan is growing bright in the discussion of poetry; and I begin to doubt the truth and faith in her heart. Again I say that poetry is nothing but the true heart. Tsurayuki said, in his *Kokinshu* preface: 'In the present day love has seduced men's hearts into a fondness for ornament. Hence nothing is produced but frivolous poetry, without depth of feeling. In the houses of those given to a life of gallantry, poetry is like a tree buried in the ground and unknown to men; while with more serious people it is regarded as a flowering *suzuki* which will never bear ears of grain.' I wonder where is the present Tsurayuki? There is no other person we need more than he. Kagawa Kageki, of the modern age, who well understood the true conception of Tsurayuki, has written much upon the *uta* humanity. It is a human voice, but not the speech of art; and therefore we value it highly."

Then the Mikado read to the Baron some half a hundred *utas* which were already known to Sanjō-in, or Reier, (or some such court poet) and he was again delighted in listening to the Baron's offhand criticism. There was no word to express the Baron's joy when the situation, which looked seriously sad, turned happy finally. In his inner heart he felt quite proud thinking that he could

succeed somehow to illuminate the Mikado in one or two things. And when the ship reached Yokohama Bay, the Mikado and the Baron were splendid friends.

The Baron was called to the palace almost every day by the Emperor after that, who asked him one thing or another, and read him his new *utas*; and the Baron was obliged soon to accept the Mikado's proposal for him to become the chief of the Poetry Office or poet laureate of Japan, altho he at first tried to decline the honor. And he is sitting on that chair now some twenty years; and I am told by the Baron himself that he has seen some sixty or seventy thousands of the Mikado's *uta* poems since the tenth of Meiji. That means that he has written some two or three thousand *utas* every year; I am sure that there is no other Emperor who wrote so many poems in all Japanese history, nor in the world. I believe that he will be remembered in the future as a poet as well as a mighty Emperor, of this Meiji era, which is a renaissance of Old Japan and also the beginning of New Japan. However, he wrote only two or three hundred *utas* in the twenty-third year, the Baron said, when his imperial mind was occupied busily with the matter of the constitution and the issue of the proclamation for the National Assembly in that year; it is clear that his being a poet does not mean that he neglects his state affairs, which, in fact, are first always in his mind.

A year or two ago the Mikado was pleased to confer a posthumous rank of merit on the spirit of Ki no Tsurayuki, who spoke to him thru the mouth of Baron Takasaki on the Totomi Sea almost twenty years ago, and greatly enlightened his mind on the spot. Tsurayuki attempted to bring back the *uta* poetry to its original function from the degenerated *utahayashi* which were widely spread at his time. And the Mikado entered into the true kingdom of *uta* from the two-hours discussion with the Baron. Tsurayuki must be happy to be officially recognized after waiting one thousand years.

THE END.

The Tale of Trinity

BY JOHN P. PETERS, D.D.

[Dr. Peters is rector of St. Michael's Protestant Episcopal Church in this city, as were his father and grandfather before him. This church appeals very successfully to others besides the wealthy. Dr. Peters has written a history of the Episcopal Church in the city and is as well informed as any man on the subject here treated. To the general public he is chiefly known as a Biblical and Oriental scholar, and as one who has given much attention to the betterment of civic affairs. Trinity is the wealthiest church in the United States.—EDITOR.]

IN 1697 the English Crown, in pursuance of its policy, inaugurated after the overthrow of James II., of combating French and Roman Catholic influence in the colonies, granted a site at the head of Wall street for a parish church, for "the use and behalf of the inhabitants from time to time inhabiting and to inhabit within our said city of New York, in communion of our said Protestant Church of England, as now establisht by our laws." By the act of incorporation in the same year the corporation of this church was to consist of "the rector and inhabitants of our said city of New York, in communion of our Protestant Church of England, as now establisht by our laws." It was further provided that this should be the "sole and only parish church in the city of New York." This corporation was confirmed by the Colonial Legislature in 1704, with the addition of the words: "and their successors." To the parish thus incorporated was granted, in 1705, at a nominal rental, the King's Farm, which constitutes the great bulk of Trinity's present real estate holdings. The title of this property was changed from nominal lease-hold to actual fee-simple somewhere toward the close of that century, and the former King's Farm was recognized as the absolute property of the corporation when, in 1784, after the Revolution, the State Legislature confirmed it in the powers and privileges granted in 1697 and 1704. In 1788 the name of the corporation was changed, by the substitution of the words "Protestant Episcopal Church in the State of New York" for "Protestant Church of England," etc.

At this time the corporation possessed three churches, Trinity, the parish church proper, at the head of Wall street, St. George's Chapel, on Beekman street,

and St. Paul's, on Vesey street. With the growth of the city more churches became necessary. In 1793 a separate and rival congregation, Christ Church, was created, but refused admission to convention, because Trinity was, by law, the "sole and only parish" in the city of New York. But the example of this separate church had its effect, and in 1802 St. Mark's in the Bowery, erected by Trinity, with the original intention of making it a chapel, like St. George's, was set apart at the desire of those who were to worship there, as a separate church, and twenty-five lots of land deeded to it as an endowment. At the same time Christ Church was admitted to Convention and Trinity ceased to be in fact the "sole and only parish" in New York City. (Following the example of St. Mark's, St. George's was converted from a chapel into an independent church, with an endowment of thirty-three lots of the common land, in 1811.) The corporation now entered on a policy of church extension, and in the next few years a number of churches were erected by it and in some cases endowed with gifts of land, on the theory apparently that the property held by it belonged, as according to the deed of grant, to the inhabitants of New York in communion with the Protestant Episcopal Church, and that each new church establisht should, therefore, have a share in that grant, among the churches so establisht being St. Stephen's, Grace, St. Michael's and St. James. At the same time Trinity built one new chapel, St. John's, Varick street, in 1807, for its own congregation, which was commencing to move northward.

But Trinity did not confine its grants of land to churches, nor to the limits of New York City. Now, as previously, it interpreted the purposes of the grant and

its powers under it, in a general and elastic spirit, endowing and assisting churches in Long Island, Westchester, and elsewhere, as well as educational institutions. It even granted three lots to a Presbyterian Church and among its other gifts are recorded grants of land for a ferry and a couple of markets.

It ought to be said that at this time and for a considerable period thereafter the rector of Trinity Church was also bishop of the diocese of New York, and that Trinity practically bore the expenses of Episcopal maintenance, and in fact constituted the center and governing body of the Church at large in the diocese of New York. Because of this relation to the diocese it became, also, an efficient factor in the development of the Church under the aggressive leadership of Bishop Hobart in the central and western part of the State.

In 1811 and 1812 some members of St. Stephen's Church undertook to vote in the annual election by the corporators of the wardens and vestrymen of Trinity Church, and their votes being refused, there was much dissension and some danger of civil process. This attempt raised, also, the question of the legality of the grants made by the corporation to the separate parishes of St. Mark's, St. George's, St. Stephen's and the rest. Accordingly, in 1813, application was made to the Legislature to change the charter to meet existing conditions. The separate incorporated churches, which had already received their share of the general common land, did not oppose this action and St. Mark's officially supported it, for indeed some such change seemed necessary in order to give it an unquestioned title to its holdings. Individual members of the Episcopal Church did, however, protest against the change. The act was finally past by both houses of the Legislature by substantial majorities and went to the Council of Revision on questions of constitutionality raised by the Chancellor, where the vote was tied. The act finally became law without the governor's signature, he having voted against the bill in council. Among the members of the council voting in favor of the bill was Judge afterwards Chancellor Kent, who later put himself on record against its constitutionality, say-

ing that he had voted for it on incorrect information as to facts.

By this act, past January 25th, 1814, the name of the corporation was changed to read "the rector, church wardens and vestrymen of Trinity Church in the city of New York," and the corporators, or those entitled to vote in the annual elections for wardens and vestrymen, were declared to be "all male persons of full age who for the space of one year preceding any election shall have been members of the congregation of Trinity Church aforesaid, or of any of the chapels belonging to the same, and who shall hold, occupy or enjoy a pew or seat in Trinity Church or in any of the said chapels or have partaken of the holy communion therein within the said year." By this act Trinity ceased, by law as in fact, to be the "sole and only parish church" in New York. The separate corporations already created were confirmed in their legal existence and it was provided that "when and as often as it shall seem expedient to the said rector, church wardens and vestrymen in the city of New York to divide the congregation or corporators belonging to the said corporation, it shall be lawful for them to do it."

In the memorial advocating the passage of this bill presented to the Council of Revision by Colonel Robert Troup, a vestryman of Trinity Church and the authorized agent of the church for that purpose, occur these words: "It is morally certain that the future increase of the population of the city will strongly recommend to the corporation of Trinity Church the policy of dividing its corporators, and setting them off in separate churches, with suitable endowments, and to enable the vestry to do this in a mode free from all legal doubts . . . is a fifth object of the bill."

Further he says:

"The bill, when past into a law, would have the happy consequence of enabling the Vestry of Trinity Church, from time to time, as society shall advance, to separate the churches, with the consent of their congregations, and to endow them with competent estates. No power can be more congenial than this to the spirit of our republican systems. The frequent exercise of the power, likewise, by

breaking down the estate of Trinity Church, would allay the fears of those honest republicans who look upon large estates as nurseries of sentiments hostile to liberty; and it would calm the minds of those enthusiastic devotees who believe that religious societies, when possessing wealth, seldom employ enough of it in the heavenly work of propagating the Gospel."

One of the grounds, therefore, for the change of its charter was to enable Trinity to divide its corporators, "the inhabitants of the city in communion with the Protestant Episcopal Church," as need arose thru the increase of the population of the city, and to set off independent churches with a just share of endowment. The pursuit of this policy was an implied condition of the new charter, and from its past history the Legislature had every reason to suppose that the corporation was, if possible, only too ready to alienate parcels of the original land grant for that purpose, and even for purposes outside of the actual intent of the grant. But the bill once past, Trinity began to reverse its policy and whereas, between 1748 and 1814, 299 lots were granted by it to churches and benevolent corporations, since that date only nineteen have been granted. The period immediately succeeding the grant of the new charter was one of peculiar stagnation in the church life of New York. For some years no new churches were built. When church extension was resumed, we find Trinity substituting gifts of money in place of the land endowments formerly given. Later, for gifts were substituted mortgages; and at last, in 1861, Trinity formally adopted the policy, as stated in its Year Book of 1877, of restricting its gifts and donations "to the parish proper, excepting in cases in which poor churches had become dependent on the corporation, and could not hold their ground without its continued help." Not only did Trinity thus pursue with increasing definiteness a policy of selfishness and accumulation in its treatment of its financial trust, it also adopted the policy of refusing to divide its corporators, even at their own desire, rejecting in 1830 the request of the pewholders of St. Paul's Chapel for independence, and in 1909 the similar request of the pewholders of St.

John's, in striking contrast with its action toward St. Mark's and St. George's before 1814.

With the growth of the city the Trinity property increast enormously in value and soon a twofold hostility to Trinity corporation developed; one within the Church, on account of the party policy pursued or believed to be pursued by Trinity in the use of its grants and mortgages for the support and strengthening of the High Church party and for the control of Convention, the other without the Church because of the republican distrust of great accumulations of wealth, especially in the hands of a religious corporation. In 1835 a memorial was addressed to the Legislature setting forth that under its original charter the income of Trinity was not to exceed the amount of £1,200 (equivalent to about \$3,000 of the then currency), and that this limit had been greatly exceeded, so that by means of its wealth Trinity corporation had become a menace to religious liberty by exercising a preponderating influence, not only in the affairs of the Protestant Episcopal Church in this State, but in those of the United States, and praying that "the whole of said real estate, or so much thereof as creates the excess of revenue, beyond the amount limited, may be taken to and for the people of this State." This memorial was referred to the commissioners of the land office, who reported against the memorialists.

The Protestant Episcopal Church in New York was, originally, the Church of the wealthy and well-to-do classes. All the original independent churches, as well as the chapels of Trinity, had been erected by or for this class of the community. There was no place in the Church for clerks, mechanics, artisans, and the like, much less for the very poor. With the election of Bishop Onderdonk, in 1830, the Church began to wake up to its obligations toward these classes of the community, who had increased greatly in numbers with the development of trade and commerce consequent especially on the construction of the Erie Canal, and in 1831 the New York P. E. City Mission Society was established for the purpose of erecting free churches in various parts of the city for their use. All the churches contributed toward this work. Trinity

giving from \$600 to \$1,800 annually. But the change of population brought with it another change. The well-to-do classes began to move northward out of the business districts. Those were somewhat barbarous days, from the modern religious point of view, and we find the experiences of Micah and the Danites of the Book of Judges repeated in New York. The well-to-do, as they moved up town, picked up their churches and their priests, treating both as their own personal property, and marched northward, as the Danites had done with Micah's priests and Micah's gods, leaving the unfortunate newcomers, too poor to provide for themselves, churchless and godless. Some of the churches salved their consciences by building chapels for the poor elsewhere, but these enterprises, combined with the new burdens of church erection and the like, consequent on their removal, interfered with their co-operation in the general work of the Church in New York represented by the City Mission Society.

To its honor, be it said, that Trinity for a considerable period resisted the temptation to take part in this impious movement for the removal of churches from poorer districts to those more well to do. It continued and enlarged its work in the lower part of the city, taking back the old St. George's Chapel on Beekman street, when St. George's Church moved to more fashionable quarters on Stuyvesant Square. But finally, under the pressure of some of its own well-to-do members, who had moved uptown, and wanted a more conveniently located church home gratis, Trinity itself joined the procession and built Trinity Chapel on Twenty-fifth street, and \$230,000, a very large sum for that time, was put into this building. To secure the money for the erection of this chapel without impairing its principal, Trinity felt it necessary to abandon the work among the poor. As a consequence the City Mission Society was dissolved, and one of its churches, St. Matthew's, in a most needy part of the city, among Trinity's own tenants, was sold under the hammer. Appeals for aid in other directions were similarly disregarded. Zion Church, on Mott street, a most admirable center for a great mission work, in what was then becoming the most vicious and

most needy part of the whole city, was sold to the Roman Catholics, Trinity, to whom churchmen had turned for aid in the emergency, refusing aid. On the west side of the city a large and needy population was sweeping northward, utterly godless and uncared for. Dr. Howland, at the Holy Apostles, on Twenty-eighth street, was trying, with very limited means, to serve a part of this growing population, and the rector of St. Michael's, reaching down from above, had established St. Timothy's Church, in Fifty-fourth street. Both these were very feeble stations. Dr. Howland addressed himself to Trinity for aid, offering to give \$15,000 of his own means toward erecting a church for the great community growing up between these two feeble stations, if Trinity would give \$10,000, and his request did not even receive the courtesy of an answer. At the same time Trinity's own chapel of St. George's was closed and the site sold. Perhaps Trinity was no more guilty morally of forsaking Christ's poor than were other well-to-do churches, which had been created out of the original Trinity endowment, and whose wealthy members had appropriated that endowment and carried it up town for their own use, instead of putting their hands in their pockets to provide a new church for themselves, leaving that which had been given from the Trinity endowment for the use of the poorer population southward. But Trinity's misconduct seemed more flagrant, because she was the trustee of a great property belonging to the whole Church. Being so abundantly endowed as to need no support from well-to-do parishioners, she could perfectly well have afforded to prosecute, with her inherited means, the work of the Church among the poor. It was generally felt that the well-to-do members of Trinity Corporation in appropriating \$230,000 to build Trinity Chapel, at the very moment when there was such crying need for help in the Church's work among the poor, were robbing the Church and poor alike. General John A. Dix, himself a member of the Trinity vestry, writes of this:

"I was opposed to the construction of Trinity Chapel, believing the private wealth of the district for which its ministrations were designed sufficient to furnish them without the aid of Trinity Church."

He had a vision of a far nobler and more honest use for Trinity's great trust fund, and in 1851 he proposed to the corporation this: 1. To make the seats in Trinity Church, St. John's and St. Paul's chapels free. 2. To establish free schools in connection with Trinity Church and its chapels. 3. To devote the funds of the corporation to the education and religious instruction of the poor of the city. His plan being—

"to rescue the lower part of the city—that portion which has not only an immense body of resident poor, but which receives into its bosom the greater part of the destitute who seek a refuge here from hardship in other countries—to rescue this combined mass of permanent and temporary indigence from the utter spiritual abandonment with which it was threatened by the removal of those to whose wealth and liberality it had been accustomed to look for sympathy and pecuniary aid, to more congenial districts."

His scheme comprehended the spiritual instruction of the adult inhabitants, the education of their children, and the ministration to their temporal wants; and to his vision God's poor constituted the true parish of Trinity Church.

As a result of Trinity's appropriation of its trust fund to build a costly church for the well-to-do (Trinity Chapel, commenced 1851, completed 1856, at a cost of \$230,000) at the same time that it refused absolutely essential aid to the work among the poor, and as a result also of its supposed abuse of its trust to promote the interests of an ecclesiastical party within the Church, public feeling became greatly aroused. In 1846 a number of the leading clergy and laity had address to the Legislature a memorial, asking for the repeal of the law of 1814, as a means of enabling them to go into the courts on a fair basis, to determine the legality of Trinity's use of its trust, and to reclaim for the Church at large that which was originally granted to the Church. The committee of the Senate to which the memorial was referred presented two reports, the majority against the memorialists. The following year the same memorial was introduced in the Assembly and referred to the Judiciary Committee, which unanimously reported against it, on the ground, apparently, that the memorialists had their remedy in the courts. Now the fight was renewed in a different and more serious

manner. Trinity was attackt on the floor of the convention and in the press, Anthon, Taylor, Tyng and Muhlenberg, the most distinguisht leaders of the Church of that day, all taking part against her, together with such laymen as Robert B. Minturn, Frederick S. Winston and John D. Wolf. Finally, in 1855, moral suasion proving ineffective, the whole matter of Trinity's management of her trust was carried to the Legislature.

The Senate appointed a committee of investigation, which demanded of Trinity: (1) The names of the corporators. (2) An account of the use of its funds; as, how many free churches had been built in destitute parts of the city, feeble churches assisted, etc., during the five years preceding. (3) What appropriations had been made to charitable institutions and other benevolent work during the same period. (4) What property was owned by Trinity, the number and location of its lots, and the value of the same. (5) The conditions on which that property was leased and to whom. For a long time Trinity refused to give an answer, claiming that, by a special provision of its charter of 1814, it was exempted from the obligation of making any such report. At last, in 1856, under protest, the corporation presented a report in answer to the questions askt, which report was submitted to the Legislature and by it returned to the committee, with instructions to investigate further and report what action, if any, should be taken in the premises. Accordingly, subpoenas were issued and a rather extensive investigation conducted, the result of which was that the committee presented to the Legislature a report of the most scathing character. There were, it seemed, in the diocese of New York, sixty-six parishes encumbered with mortgages, held by Trinity Church, with accumulated interest to the amount of about \$600,000. These mortgages, the committee held, "can hardly be considered in any other light than as mortgages upon that very independence which it was one object of the law of 1814 to secure." The allowances granted to feeble churches were reported to have been granted to a considerable extent on a partisan basis, to produce reli-

ance "for opinions as for pecuniary support on the corporation of Trinity Church." As to Trinity's property holdings, the committee reported that the value stated by the Trinity Corporation was only about one-fifth of the real value of the property, as determined by their investigations. The original Trinity property had consisted of 2,068 lots, of which since 1748, 318 had been given away in the endowment of churches and charitable institutions, as mentioned above; 1,059 had been sold, the proceeds being used either for building and current expenses within the parish, or for gifts and loans to churches and charitable and educational institutions; 691 lots remained in Trinity's possession, having a value of \$5,221,293.47, instead of \$1,016,327.58, as reported by Trinity. Reviewing Trinity's relation to the passage of the law of 1814, and its administration of the property held by it since the passage of that law, the report proceeds: "If there had been any such fraudulent intention to obtain power under that law, in order to defeat the very ends which it proposed to secure, your committee cannot see that it would have been necessary for the corporation, in that case, to alter in any respect that which has been their actual course, in order to carry out such fraudulent intention with entire success."

A bill to amend the charter was introduced, the passage of which would have meant the restitution of the property to the Church in New York at large. Numbers of churches thruout the State rallied to the defense of Trinity, sending in petitions to the Legislature against the repeal of the charter of 1814. These, as it was claimed by the advocates of the proposed legislation, came almost exclusively from "high churches," which were tied to Trinity directly or indirectly thru mortgages and stipends. The bill finally past the Senate by a very fair majority in 1857 and went to the House, where it was referred to a committee, from which it was not reported back before adjournment.

This ended the legislative battle. It did not result in any serious change in the Trinity policy. The Trinity Corporation seems to have felt that the inaction of the Legislature confirmed it in

its treatment of the property as belonging to Trinity only, for its own sole use and behoof, the bill of 1814 and its own representations at the time of the passage of that bill to the contrary notwithstanding, and it has since that date continued to regard the property as belonging to the corporators of Trinity parish only, or, rather, to Trinity Corporation, *i. e.*, the Rector, Wardens and Vestrymen of Trinity Church. In fact, as already stated, the corporation did formally commit itself, in 1861, to this view, determining at that time to confine the use of its property thereafter to Trinity parish, maintaining its church and chapels in the downtown districts, and from time to time "providing for the accommodation of parishioners as they remove to a distance from the churches" more Trinity chapels.

By the Religious Corporations Act of 1867, the passage of which it was instrumental in securing, Trinity obtained the means of erecting chapels, the congregations of which should not be a part of the Corporation of Trinity Church, entitled to vote at the elections of wardens and vestrymen. Under the terms of this grant it erected St. Chrysostom's Chapel, at Seventh avenue and Thirty-ninth street (1869) and St. Augustine's Chapel, in Houston street (1877), the latter being at the time of its erection the most elaborately equipt plant in the city for institutional Church work as then known. The construction of these chapels indicated a revival of the city missionary spirit, consequent on the resurrection of the N. Y. P. E. City Mission Society in 1864. By general consent, as set forth in the Trinity Year Book of 1877, the lower part of the city was now assigned to Trinity as its special field of work and it accepted the obligation, holding "that the greater part of the means of the corporation should be spent in ministering to their welfare," maintaining nine churches, "either wholly or in greater part, for that purpose," and extending the work "as fast as the means at command exist."

In 1892, however, it repeated the same sort of action which had aroused such indignant protest forty years before, by spending half a million dollars in erecting a magnificent chapel and parish

house (St. Agnes's) for the well-to-do people of the upper west side, who were entirely competent to provide such a place of worship for themselves. This was the most expensive chapel it had ever built. But at the same time that its own well-to-do parishioners were thus helping themselves out of the corporation purse, Trinity was undergoing serious criticism for its failure to provide proper housing for its poor tenants in the lower parts of the city, or to introduce the sanitary improvements which were regarded as absolutely necessary for health and decency. It resisted in the courts the Tenement House Law, which provided for the introduction of water on all the floors of tenement buildings. Jacob A. Riis, in his "Battle with the Slum," speaking of its action at this period, says: "Trinity, the wealthiest church corporation in the land, was in constant opposition, as the tenement house landlord, and finally, to save a few hundred dollars, came near to upsetting the whole structure of tenement law that had been built up, in the interest of the toilers and the city's safety, with such infinite pains."

Trinity did, however, add one more chapel to the number of its missions at this time. St. Luke's Church, on Hudson street, being unable to support itself financially, Trinity purchased the property and turned it into St. Luke's Free Chapel, for the purpose of providing spiritual ministrations for the middle-class population in that portion of the city, Greenwich, which has been least affected by the inroads of modern improvements, a region of small separate houses.

The Trinity Year Book of 1877 sets forth a very noble theory of the work to be done by Trinity for the poor in the lower districts of the city; but in practice Trinity did not do that work effectively. It seemed to lack the originaive power, the sympathetic vision and the aggressive spirit requisite to enable it to meet the new conditions created in the lower part of the city by the introduction of great masses of foreigners of non-English-speaking nationalities. Numbers of Italians, Syrians and Jews have settled in those parts of the city which would be supposed naturally to be under

the charge of Trinity, but Trinity failed to provide for or to reach them by missions or welfare work such as have proved so effective at St. George's, St. Bartholomew's, St. Andrew's, Yonkers, and elsewhere. It has conducted stately services and parochial schools along old-fashioned lines, and that has been practically the extent of its work. So far as it was concerned, the foreign nationalities were practically left to shift for themselves.

As a result of its general lack of aggressive policy, in work among the poor, and under the changing conditions of population in the lower part of the city, St. John's Chapel, on Varick street, almost died out. When erected, in 1807, the fashionable chapel of Trinity, St. John's stood facing a beautiful proprietary park, surrounded by handsome residences. As the population moved away and the old houses were turned first into boarding-houses and then into tenements, those having a proprietary interest in the park sought to derive a pecuniary benefit by selling the property. The majority of the Trinity vestry sympathized with this sentiment, but the then rector, Dr. Berrian, refused his consent. On his death pressure was immediately put on his successor, Dr. Dix, to consent to the sale. He, new to the office, yielded. The park was sold to the New York Central Railroad for a freight depot and a great opportunity to create a much needed public recreation ground for the poor of that part of the city was lost. Dr. Dix has indicated, in his "History of Trinity Church," how deeply he later regretted this action, which allowed "the juggernaut of commerce" to pass over what should have been the playground of the people.

But that very freight station gave Trinity the opportunity of doing a new and most effective work. Thousands of teamsters and truckmen past the doors of St. John's Chapel every day. Here was an opportunity to reach the masses of the people and no one had the vision so much as to give them a cup of cold water in the name of an Apostle. The teamsters water their horses at the troughs in front of the saloons. If they want a drink they must get it in the saloons. They must eat their lunches on

their trucks or in the saloons. No watering trough for horses stood in front of St. John's Chapel; no water fountain was placed there. A high iron fence with closed gates shut the people out from the open space within. No one seems to have thought that it was the Church's part to provide such simple things for the welfare of the laboring men passing its doors in crowds each day, and within the iron fence the doors of the chapel were closed. The organ never played at noon; there was never any noonday preaching from its pulpit. Close at hand were some of the largest factories in the city of New York. No one ever thought of organizing preaching missions there at noon time, or of inviting the shop girls and the working people to come and make themselves at home in the open space about St. John's, nor of providing an occasional service for them in the church. A little to the north was a large Italian colony. Many of these Italians had come to this country churchless because they were out of sympathy with church conditions in their home land. No effort was made to reach them or to minister to them.

Having allowed the chapel to sink to a low ebb, the vestry proposed to abandon it altogether, and much pressure was put upon the rector, Dr. Dix, to accede to their desires. It was the church in which he had been brought up, to which he was attached by ties of personal love. Before agreeing to abandon the work altogether, he desired to make one more effort to test its usefulness. A young and energetic man was put in charge of the work about eighteen months ago. The staff was gradually increased to three clergymen and two women. The work grew rapidly. The congregation doubled and trebled. Boys' clubs, men's clubs and various religious and social organizations for women developed. Rated by communistic contributions, baptisms and the like, the church became once more an efficient religious factor, with still greater promise for the future. It dealt, however, only with poor people. From the financial standpoint the returns were extremely small. The church site was valuable, and would fetch a high price for business purposes. After Dr. Dix's death the new rector seems to have

yielded to the pressure of the business end of the vestry, as Dr. Dix had yielded in the matter of St. John's Park half a century before, and on November 9th, 1908, the decision was reached to close the chapel. The announcement of this action led to protests from all sides. Over a month later, as a result apparently of the outcry aroused by their action, the earnest appeal of the staff of St. John's and the protest of the congregation itself, the vestry undertook to ascertain the facts of the situation from the spiritual side, and sent to the Federation of Churches for statistics of the population of the district and to St. John's Chapel for statistics of the congregation to justify its action. But with the best manipulation the figures were damning to their claim, showing a considerable population in the district for which this was the only church, and an active and increasing congregation. In the old contest in the middle of the last century, when the opponents of Trinity showed that two or three independent churches, with vastly smaller means, contributed many times more than Trinity **and its chapels for charitable and benevolent objects**, Trinity retorted by showing that it presented more candidates for confirmation and recorded more baptisms and had more communicants than those churches. Judged by the same standard which Trinity used at that time, St. John's under an aggressive leadership had shown itself one of the effective working forces in the city. Its confirmations, its baptisms, its communicants, are far above the average, comparing favorably with the similar statistics of many of the larger churches in more well-to-do sections of the city, not to speak of Trinity's own chapels. But Trinity Corporation on this occasion seems to have considered only the financial aspect of the case, precisely that aspect which, in the former controversy, it argued should not be used as a gauge of spiritual activity. Moreover, having, without proper investigation, on financial grounds, decided to abandon the work, it put itself further in the wrong by refusing to let any one else step in and do the work in its stead. An offer of a number of representative churchmen to take over St. John's Chapel and carry on the work was curtly re-

fused, and a request on the part of the congregation for independence, under the law of 1814, was similarly rejected.

But, oddly enough, Trinity Corporation seems to have overlooked the fact that the members of the congregation of St. John's Chapel are corporators of Trinity Church, entitled to vote for wardens and vestrymen—so to speak, stockholders in the Corporation. Because they were poor the Corporation seems to have come to think of them as "mission people," subsisting on its bounty. The appropriation granted for the maintenance of St. John's was counted as a benevolent dole given to the poor; the similar appropriations to the well-to-do congregations of Trinity and St. Agnes were regarded as their right. The well-to-do congregations had representatives in the Corporation, the poor congregation had none. In principle, the methods of the insurance scandal were repeated here. Then at last the congregation of St. John's demanded its rights. Trinity had told them that when it closed St. John's they might go to St. Luke's, a mile away, and Trinity would graciously give them a mission dole there. But St. Luke's is a free chapel, under the Religious Corporations Act of 1867, the members of which are not entitled to vote. In other words, Trinity had proposed to disfranchise these corporators and deprive them of their corporate rights, because they were poor and presumably ignorant. They appealed to the civil courts to protect them from being robbed of their rights, and the court granted a temporary injunction restraining Trinity Corporation from closing St. John's. So the matter stands at the present writing.

But outside of and beyond the question of the closing of St. John's Chapel, there is a bigger and a broader issue involved. Has not the time come when the churchmen of New York, to whom this whole property was originally granted, and the community at large, should demand that Trinity administer this trust according to the letter and the intention

of the original law? Ought they not to insist that those representations under which Trinity secured the charter of 1814 should be enforced in the spirit as well as in the letter? And has not the time come when they should demand interference by the Legislature, methods of moral suasion having proved ineffective? Trinity is continuing to pursue the same policy condemned so scathingly by the legislative committee of 1856. By a report just published it appears that it holds \$375,000 in church mortgages, "mortgages upon that very independence which it was one object of the law of 1814 to secure." Its productive property has increased from an assessed valuation of \$1,000,000 to an assessed valuation of \$13,500,000 (with a real value presumably of nearer \$30,000,000), which property is now professedly and avowedly claimed and held by the Trinity Corporation for itself and for the maintenance of dependent churches and chapels under its own control, instead of as a trust for the Church, as a means of establishing independent churches to spread the Gospel of Christ, which was one of the purposes of the act of 1814.

The object of this paper is not to present an arraignment of Trinity Church, but to recite certain facts. If I were to draw a moral from this tale it is that, as a matter of common honesty and of common sense, Trinity should revert to the policy pursued by it before 1814. If it would set apart its chapels as independent churches, with a reasonable endowment; if it would divest itself of its vast accumulations of wealth by creating, in growing and in needy parts of the city, new and independent churches, it would promote the cause of Christ in this city to tenfold greater advantage than it is doing by its present methods, and it would at once disarm that hostile criticism of the Church which has been fostered and exaggerated among the masses of the people of this city by the accumulation of wealth in the hands of one religious corporation, and by the method of the administration of that wealth described in this paper.

NEW YORK CITY.

Men, Women and Topics in Westminster

BY JUSTIN McCARTHY

WE hear and have been hearing for some time past very little about the opening of the Houses of Parliament. It is our habitual way in England to talk over such an event eagerly and assiduously, even in long anticipation of its coming. Yet this year somehow it has not made much of a common topic with us, altho we know full well that it is destined to be a session of momentous importance and effect.

The Government must decide how to deal with the House of Lords and the Licensing bill. The hereditary chamber must be compelled to revoke the sentence it has past on that measure, and, if the peers will not yield to that decree, they must make up their minds to fight the battle out with the Ministers and the Commons on an appeal to the decision of the country at a general election. As a matter of fact every one knows that the great, the traditional dispute, between Lords and Commons, must be settled now once for all, so far at least as this generation is concerned.

Then there is the question of Home Rule, and even altho with all the other work they have on hand the Prime Minister and his colleagues may perhaps not be expected under all the conditions to introduce another measure of Home Rule in this coming session, they will certainly be expected to make some distinct and positive declaration of their resolve to

stand firmly by the accepted principle of Home Rule and to introduce an adequate measure on the earliest possible opportunity.

Here, then, one might imagine there

would be found subject enough to occupy incessant and animated conjecture and speculation and argument to keep our tongues going until Westminster Palace becomes filled and alive once again. Of course, we have had sessions which opened with little expectation that they were to bring us anything much outside the range of commonplace and routine business, and yet even the approach of such sessions has usually been heralded by eager and widespread conjecture among all who feel or profess any actual interest in political subjects. Now we have a session close at hand concerning which we have all made up our minds that it must mark an era in the history of the country, and yet

we seem inclined to occupy ourselves in talk about anything rather than the action of the Government and the Opposition when the Lords and the Commons meet again for legislative work.

It may of course be pointed out that we have recently had some most unusual and even some tremendous public events which might well for the time have absorbed among them all our attention and left us little time or thought for the

LORD MORLEY

workings of constitutional government. Never before at any time in history has a national calamity occurred of such sudden and portentous horror as that which was wrought by the volcanic eruption in Sicily. It cannot be denied that this event did arouse the attention, the horror, the sympathy and the charity of all civilized human creatures thruout the world, and might naturally have carried away and turned the thoughts of most Englishmen for some time from any consideration as to the prospective work of the coming parliamentary session. But then the actual fact is that all the time the

calamity any more than they had with the opening of Parliament, and the question which I am now endeavoring to raise is as to the reason why the great political events promised or threatened by the opening of the coming session should not have been preceded by anything in the nature of popular anticipation and discussion. The condition of India, the various important questions connected with the relations of capital and labor—were not these worth discussing? And in the meantime let us ask ourselves what has been the subject which during the last fortnight or so might have seemed to

LORD MORLEY'S HOME AT WIMBLEDON.
The building on the right is his library and workroom.

newspapers and the public generally did keep discussing all manner of topics which had nothing to do with the Sicilian

the passing observer to have the liveliest interest for our reading public.

London has not for a long time been

occupied by a sensation so absorbing and to all appearances so futile as that which has lately been haunting all classes of her population. Nor has it been haunting London alone, but the whole of England and of Ireland, Scotland and Wales as well, and probably of many Continental

W. P. FRITH, R.A.

cities also, while I can have little doubt that it has even already become a topic of conversation in American club-rooms, dining-rooms and drawing-rooms. I am now concerning myself with what used to be described in England as "the motor tragedy of North Wales," but has more lately been entitled "the phantom lady" and sometimes even as the "tragi-comic story about Miss Charlesworth." The newspapers first heard of the event as altogether tragical, as the story of a young lady of position and means belonging to North Wales, who, with her sister and a chauffeur, was driving along the edge of a cliff in that region, and was herself actually engaged in trying her skill on the working of the motor when the car by some sudden accident flung her thru the glass door and over the side of the cliff, down a depth of sixty feet, and into the waves which swallowed up her body.

Such was the tale we all heard of this beautiful young woman, and we all thought with horror of the tragedy, and sympathy with the rescued sister and the other members of the family who shared with her in this sudden calamity. But then some inquisitive persons, police officials, no doubt, and the like, set to work at a close examination of the angle where the event was declared to have occurred, and they informed us all that there were no marks of blood or other indications of a death-fall on that part of the wall of coast, and, further, that the sea along that part of the shore never was more than six inches deep. So we all began to wonder, and to wonder all the more because the sister of the missing lady did not with the chauffeur appear to have given any testimony to the authorities as to the reality of the supposed destruction of life. In the midst of our wonderment came several letters to the newspapers from persons who positively affirmed that they had seen the young lady after the day when the death was supposed to have occurred. The number of testimonies given to this effect all quite agreed to the fact that the missing young woman had been seen and recognized alive and well on the day after the supposed tragedy. Each witness told of some different place, but all these places were within reach of the North Wales cliff where the motor-car was said to have flung out its victim. Here then the whole question began to be discusst as one merely of gossiping speculation, and the newspapers set to publishing various conjectures and explanations. (One form which conjecture took was that adopted by some, who believed in the death, but did not believe in any living reappearance, and therefore maintained that the ghost of the young woman must have been seen, "the phantom lady," by those who declared that they had looked upon the lost Miss Charlesworth a day or two days after the alleged accident to the motor. Meanwhile, the newspapers printed all manner of stories about the young woman having lavisht large sums of money and got heavily into debt, and being anxious to escape by any means from the demands of her creditors and to start a new life in some new country. Just at present we find in the columns of several journals very distinct intimations

that the whole truth has already been discovered and that each journal is only waiting the fitting moment to bring the story of the "phantom lady" to full and unquestionable revelation.

I turn, however, to a subject of a very different order, which is just now occupying much and occupying worthily the attention of the literary and artistic world here and abroad. The Nobel Prize for literature is to be offered this year by the Swedish Academy of Literature and the committee of the society of English authors under the presidency of Lord Avebury have issued a circular in which they announce their intention to suggest the names of Algernon Charles Swinburne and John Morley, now Lord Morley, as worthy of the honor, and invite all members of the Society of Authors to write in reply, each member naming one of these two suggested competitors as the one whom he would favor with his vote. This circular tells its readers that the Swedish invitation requests each proposer of a name "to suggest the living person who has produced a most distinguished work of an 'idealistic' character," and then concludes with its own suggestion as to the limitation of their choice. The question, therefore on which the members of the Society of Authors have to make up their minds within the next few days is whether, according to the opinion of their majority, the literary work "of an idealistic character" has been done more completely by Mr. Swinburne, the poet, or by Lord Morley, the prose writer. Now, as one of the Society of Authors thus invited to give my vote I must say that I find myself placed in a somewhat embarrassing position. I think Mr. Swinburne is, on the whole, the greatest writer of poetry now living, and poetry, I presume, is of an "idealistic character," and I am quite satisfied that Lord Morley is one of the very greatest prose writers of our time. But I do not feel quite certain whether his works could be described as exactly "idealistic," and then I feel further embarrassed by the difficulty of deciding whether, if the choice has to be made, one ought to give the preference to poetry or to prose. Mr. Swinburne has given to the world a large quantity of verse which for many reasons I sincerely wish

he had allowed to remain unprinted, even unwritten, even uncomposed. But he has done great and noble work. I find it hard to regard Lord Morley as an especially idealistic writer, but he is a great writer, and so I must think the matter over, and shall not yet make my portentous decision known, even to my readers of *THE INDEPENDENT*.

The whole literary and artistic world, and indeed I might say the whole educated world generally, has lately been aroused to deep interest by the announcement of the fact that William Powell Frith, the famous painter, has just been celebrating his ninetieth birthday. The news must, of course, have reached the United States almost simultaneously with its announcement throughout the British Islands, for Frith is well appreciated on

A. C. SWINBURNE.

the American side of the Atlantic as he is in Europe. Frith has led a life of marvelous artistic activity and at the same time has found much pleasure in out-of-door exercises of all kinds, in travel and in study, and he told his

friends the other day, in his usual cheerful manner, that he had not yet begun to feel the expected weight of old age, and that he had never found himself in better condition than on his ninetieth birthday. Mr. Frith had friends and hosts and guests in all London circles where art was appreciated and it gave him a sincere pleasure to bring young men into the society of their famous elders. I for one can never forget the occasion when, during the very early days of my life and literary work in London, I met for the first time, at one of Mr. Frith's social gatherings, the late and great Sir Edwin Landseer, one of England's immortal painters. I met many other illustrious men at the same house, and it has therefore become a sort of consecrated place in my memory. For many years during my later life of earnest and incessant political and parliamentary work I was unavoidably drawn much away from the delightful quarters where art holds its mastery, but I have never ceased to keep in my living recollection the genial hospitality of Mr. Frith. Not often, I should think, does the history of art record such an event as that which showed us England's great modern painter alive and in vigorous health and celebrating with his friends his ninetieth birthday. Mr. Frith, it may be added, was not a total abstainer in the now accepted sense of these words, and could enjoy a good dinner,

altho he was always moderate in his use of what the poets of the past day used to call the foaming grape, or indeed in the use of fermented liquor of any kind. But he much enjoyed the products of the tobacco plant and no one could better appreciate a good cigar. Some of us who are already beginning to regard ourselves as rather far down the descent of life may well feel cheered and reanimated for further work by the announcement that Mr. Frith has in full health of body and cheerfulness of spirit been celebrating his ninetieth birthday. We have indeed had in England during recent years some men of great distinction who lived as long or nearly as long as Mr. Frith has yet done. Gladstone, for instance, was close upon his ninetieth year when he was called from this world, and the late Charles Villiers, whom also I knew very well, lived to celebrate his ninety-sixth birthday, and kept well in touch with the political world until the very end. It seems absolutely certain that life in civilized countries is reaching an average period which could no longer be strictly represented as having three score years and ten for its limit. But I have not for a long time heard so bright and genial an illustration of prolonged and still promising old age as that given by Mr. Frith's celebration of his ninetieth birthday.

LONDON, ENG.

The Cross

BY EDITH CAMPBELL BABBITT

I wonder if the Master knew,
 Those weary days He walked apart,
 Communing in the silent wood
 With His Father, heart to heart,
 Which of the myriad trees that gave
 Their fragrant breeze and grateful shade,
 Transformed into the cross should be
 To witness Him at Calvary.

I wonder if He sought or glimpsed
 That single tree above the rest;
 And did He think of it accurst,
 Or in God's planning, doubly blest?
 And did He speak to it a word
 None other ever yet had heard,
 Making its leaves to shiver there,
 With a nameless, wild despair

I wonder if He ever prayed
 Beneath that conscious, trembling tree;
 If it a mystic comfort gave
 When He cried out in agony.
 Were they companions, close-allied
 By the sad word, "Crucified,"
 Or did He shrink, with startled breath,
 Before this emblem of His death.

I wonder if He knew the day
 When they struck it from its place;
 If, wandering thru the woods, its fall
 He watched, with drawn and haggard face;
 If He said, "Ah, woodland tree,
 We meet again at Calvary.
 Thou shalt be with me at the last,
 And on thy breast shalt hold me fast."

BELOIT, WIS.

Maxim's Noiseless Gun

When the Rev. Mr. Gatling invented the Gatling Gun, one of the most terrible weapons known to man, he was asked how he, a minister of the Gospel of Peace, could invent so horrible a weapon. His reply was: "The more terrible we make war the sooner it will cease." Perhaps it is a similar purpose that lies behind the invention of the "Silencer," by Mr. Hiram Percy Maxim, for the result of this invention must be so great in increasing the effectiveness and horrors of war that it will go far toward its prevention.

Mr. Maxim has invented, and demonstrated within the last few days, the "Silencer," which may be attached to any rifle, and make its discharge practically noiseless. The very simplicity of the device will commend it almost universally, especially as it can be attached to any rifle, with the least possible modification of that gun. The "Silencer" is nothing but a bit of steel-tubing, six inches long, lined with a series of ten pierced disks, so arranged that while there is a clear passage for the bullet when discharged, the gases of the powder, which make the noise, by their explosion in the air, when coming out of the muzzle, are caught and discharged so gradually that no sound results.

The arrangement of the disks, as shown in the illustration, is such that the reverse of the action of a turbine engine is obtained, and the force of the explosion is entirely overcome. Besides, in taking up this force, the recoil of the gun is taken up, and at least one-half of the "kick" of the rifle is overcome. Mr. Maxim claims that the overcoming of the noise and the "kick" will tend to steady the aim of every soldier or sportsman, and that consequently he has increased the efficiency of fire appreciably. An army equipped with this noiseless gun, and smokeless powder, could not be traced, either by the sight of the smoke or the sound of discharge, so that it would have an enormous advantage over the foe, betrayed at every point by the discharge of its rifles.

The "Silencer" is attached to any gun by being screwed on the end of the barrel, beyond the sight. It interferes in no way with the bullet, but makes the gun absolutely noiseless. Mr. Maxim is now working on the application of the "Silencer" to cannon, and other artillery, so that a battle will not only be smokeless, but noiseless as well. The fact that any of the World Powers may equip their army

with "Silencers" makes this device the property of the world at large, and as many European Powers have sent their weapons to be fitted with this device a great step has been made in preserving the peace of the world.

That the "Silencer" actually does what is claimed for it was proved past peradventure at the demonstration made in New York a few days since, before some fifty invited guests, representing many of the leading newspapers.

CLIFTON HARBY LEVY.

MAXIM FIRING WITH THE "SILENCER" ON.

The First Pan-American Scientific Congress

Santiago, Chile, December 25, 1908

BY PAUL S. REINSCH, Ph.D.

AMERICAN DELEGATE TO THE CONFERENCE AND PROFESSOR OF POLITICS IN THE UNIVERSITY OF WISCONSIN.

GENERAL Scientific Congresses, taking for their province the whole realm of human knowledge, are an American specialty. The great meeting of scientific men from all parts of the world, during the St. Louis exhibition, is well remembered by all, on account of the fame of its participants. This was the first attempt to gather in one convention representative scientific men from all nations. But our neighbors to the South made the beginning in holding general scientific congresses on a continental scale. In 1898, thru the efforts of the Argentinian Scientific Society and under the auspices of the Argentinian Government, there was convened the first Latin-American Scientific Congress in the cosmopolitan city of Buenos Aires.

So successful was this first attempt that the idea took root and the scientific congress became an institution of American life. In 1901, the second congress met at Montevideo, followed in 1905 by the third in the beautiful capital of Brazil. In all these congresses the government of the country of meeting acted as the host, and the president and public ministers took part as honorary or active officers. Thus, from the first, the congress was imprest with a semi-public character, and governments were represented in it thru specially designated delegates. This did, of course, not exclude the presence of representatives of universities and other learned bodies, as well as of private "adherents." These congresses served to establish closer bonds of union and of mutual friendship and understanding among the participating countries of America.

When the Organizing Commission of the Fourth Congress, in Chili, began its work, it was suggested that this con-

gress should include all the nations of America, not only those using tongues of Latin derivation. This decision was a fruit of the efforts to establish relations of active friendship among all American countries, which had been made in the diplomatic conferences at Washington, Mexico and Rio de Janeiro. These had prepared the way for a union of American men of science. Thus the suggestion commended itself to the far-seeing men who composed the Chilian Commission, and they inaugurated a new era in American intellectual life by making the Scientific Congress Pan-American in scope and character. Not only did they decide to include the United States among the nations invited, but they were guided by the same concept of Americanism in the elaboration of the program for the congress.

The congress was divided into nine sections: Mathematics; Physics and Chemistry; Biology, Anthropology and Ethnology; Engineering; Medicine and Hygiene; Jurisprudence; Social Sciences; Education; Agronomy and Zootechnics. This grouping of subjects resulted favorably in bringing together men interested in similar lines of study and investigation. The section on Social Sciences was, however, somewhat overcrowded with materials; as it was made to include, not only history, economics, politics and sociology, but also literature and the fine arts, as well as constitutional and international law. The latter should better have been included in the section on jurisprudence. The subordinate place assigned to history in this arrangement indicates, perhaps, a certain absence of the historical sense and of purely historic investigation in South America. To be sure, there are many notable writers on historical subjects, but the scientific study of history

has not as yet made much advance in that part of the world.

On the basis of this classification, the work of the Congress was mapped out with great care by the Commission. They issued a pamphlet containing a list of topics suggested for papers and discussions in the various sections. In this matter they were guided by their dominant motive—that of Americanism. The Congress, in their hopes, was to consider primarily specific and general problems peculiar to science dealing with American materials. It is a strange fact that Americanism in its technical sense, has heretofore had its leading representatives among European *savants*. It is, of course, natural for any science to deal with materials close at hand, to interest itself in its surroundings. But no attempt had hitherto been made to take stock of special American problems and of American achievements in the various fields of science. This, then, was the guiding thought of Don Valentin Letelier and his associates—to have American scientists consider the special problems, in substance and in methods, which are offered by the physical and social life of our continent. How far this ambitious plan succeeded can be judged of only after a careful examination of all the publications of the congress. But those who witnessed its proceedings were impressed with the wealth of materials and discussions on purely American subjects that were here brought together from all the parts of the continent, and subjected to a comparative analysis. The policy of the commission seemed to us to have been justified by the results, tho the ideal—a complete synthesis of American scientific labors—can in the nature of things be attained only in the course of many such meetings.

Certain subjects are of so universal a nature that in them problems of a local nature can hardly be said to exist. This is true especially of the sciences comprised in the first two sections of the congress—mathematics, chemistry and physics. But even here, special American problems in seismology and meteorology, as well as questions on educational methods, were dealt with in connection with the more general principles

of the respective sciences. But when we come to the biological and social sciences and to applied science in all its forms, the special conditions existing in the western hemisphere found the principal basis for discussion. In this way the original plan of the congress was amply carried out. As we look back at the work of the congress, it seems not too much to say that whoever hereafter desires to deal with special American problems in any science cannot afford to neglect the papers of the First Pan-American Congress. Tho in no branch of science has the last word been said, these papers offer a most interesting and suggestive record of what problems confront American scientists and publicists. Nor should it be understood that there was in all this a covert design to set up separatist standards and to sever American from European science. All the speeches and declarations of the congress show clearly that no such intention existed. What was sought was a clear understanding of the manner in which American scientists could best cultivate the field assigned them by Providence, and how they could thus repay the debt which the New World owes to the Old in the matter of learning.

The citation of a few titles of papers presented will best illustrate the American character of the Congress. In anthropology, there were papers on "The Antiquity of Man in America" and "The Sphere of Influence of the Inca Empire." The section in engineering was taken up almost entirely by discussions of American problems in railway building, sanitary construction, mining, etc. There were papers on the Transandean tunnel, the port of Rosario, irrigation in the Argentine, etc. The American Society of Mechanical Engineers had co-operated with the congress, and many valuable contributions were sent in by North American engineers. The section in medicine formed an important medical congress by itself, discussing for the first time general and special American problems upon a continental basis. Col. W. C. Gorgas, of Panama, read his valuable paper on "Tropical Sanitation," and there was a special study and discussion of international prophylaxy in the vari-

ous American countries. Almost every phase of medical theory and practice was touched upon in the numerous papers of the section. On account of the "actuality" of its problems, the section on the social sciences attracted especial interest and attention. In international law the discussion centered about the question as to whether there exist in international law special American problems, situations and principles. The economists fought ardently over questions of banking, the currency, labor protection and commerce, illustrating them all with the many-colored experiences of the countries here represented. In the sections on jurisprudence, education and agriculture there prevailed the same desire to formulate clearly our special problems. An enumeration of the interesting papers would lead far beyond the present limitations of space. But the mere program of the congress is in itself of high interest as an index as to what is being thought and attempted at the present time in the various countries of America.

In the personnel of the congress the diplomatic element was prominent. Nearly all of the Latin-American countries had appointed as the head of their delegations their respective ministers accredited to Chile. In accordance with the custom of the congress to elect as its president a representative of the country where the congress held its last session, led to the election of Senhor Lisboa, Brazilian Minister in Santiago, to that honorable position. Other diplomats who took an active and prominent part in the proceedings were Señor Amadon, of Argentina; Señor Elizalde, of Ecuador, and General Uribe-Uribe, formerly Minister of Colombia in Chile. The latter gentleman, a farmer-diplomat, as he would call himself, played a prominent part in several sections of the congress, especially in the social sciences and in agronomy. Argentina sent the largest delegation. Its leading members were Dr. Canton, the head of the medical faculty at Buenos Ayres and president of the Chamber of Deputies, and Dr. Agustín Alvarez, of the University of La Plata. Dr. Canton combines the highest efficiency as an operating surgeon with

the ability to make an excellent speech and to guide the national Congress in its deliberations. He is a tall, black-haired, full-bearded man, of imposing presence and of great charm of address. Dr. Agustín Alvarez, a notable writer on sociological and political subjects, also is a most brilliant speaker, with a kindly and conciliating manner, that endeared him to his associates, and helped to smooth over some difficult places in the proceedings. Brazil was ably represented by various scientists, especially the eminent teacher of international law, Senhor La Viana, who emulates in eloquence and learning the now celebrated Ruy Barbosa. Peru, with Manzanilla, Tamayo and Miro Quesada, was ably represented, as these men took a leading part in the discussions of their sections and were looked to for illuminating ideas. Our neighbor, Mexico, was represented by its Minister, by Dr. Monjaras and by Señor Martínez Sobral. Among the Chileans connected with the congress the figure of Don Valentín Letelier stands out prominently. A valiant fighter in the cause of higher education, the rector of the University of Chile, he is a man who stands at the height of cosmopolitan culture, a man who lifts his powerful sentences with a perceptible effort, but who always succeeds in launching them forth triumphantly and of striking home with his passionate words. Many were the able lieutenants in the organizing work. Those who during the congress perhaps impressed their personalities most upon us outsiders were Señor Alexander Alvarez, the councillor of the Foreign Office, a man of notable achievement in international law; Señor Rodríguez Piña, the president of the National Education Society; Señor Heria Riquelme, of the organizing commission; and Señor Julio Philippi, the secretary of the section on social sciences, the son and grandson of prominent scientists, of German descent, but representative of the best in Chilean character and civilization. But an enumeration of this kind is necessarily most imperfect; there were many other personalities who strongly and agreeably impressed themselves upon their North American associates, no two of whom would perhaps agree on a list of the

most notable personalities of the congress. Suffice it to say that there were numerous men who, by virtue of their ability, their knowledge and their charm of personality, made a powerful impression on the Chilean community and on their associates. The people of one idea were not entirely absent, and presiding officers in the various sections were obliged to be on their guard for surprises. But tho a few isolated resolutions slipped thru that will be recognized to have their source in what the Spanish call *chifladura*, the proceedings of the congress were on the whole remarkably free from this element, considering the fact that its doors and its floor were wide open to every comer.

The desire to put to formulation the conclusions of a scientific paper as a resolution to be discussed and voted upon is one that ought not to be encouraged in future congresses. It leads to wrangling about immaterial points of phraseology, and to the adoption, not infrequently, of inane declarations as a result of the mature thought of a learned congress. Discussion should be encouraged, by all means, but the experience of the Santiago congress is not favorable to a procedure which makes it possible for any member to submit resolutions. There is too great a temptation to boom some particular country or institution, or even the private investigations or methods of the modest proponent. This sort of abuse can be prevented only by having a council of wise men, a committee on general welfare, consider such motions before allowing them to come to a vote, or by confining votings entirely to matters of an administrative or ceremonious nature.

The public formal meetings of the congress were characterized by great dignity and by a strong desire on the part of all speakers to emphasize the pan-American character of the congress and of its work. During the formal opening session occurred an incident of some interest in international affairs. A brilliant assemblage of ministers of state, diplomats, officials and the leaders of Santiago society had assembled at the Municipal Theater to witness the formal opening of the congress, in the presence

of the head of the state. Twenty-four or more speeches were made, by ministers, presidents, actual and honorary, and by the heads of the delegations. The audience—with the student body of Santiago in the top galleries—gave a rousing welcome to the chairmen of the delegations as they stepped forward to address the president. Specially warm was their reception of Brazil, Argentina and the United States. But when the representative of Peru—a phlegmatic diplomat—stepped forward, a veritable hurricane of applause and vivas broke forth. It was the first occasion upon which a representative Chilean audience had had the opportunity to show its desire to bury old hatreds. But the ovation did not arouse the enthusiasm of Peru's speaker. He scarcely took any notice of the audience, but, turning toward the president, read his discourse in a low tone of voice, not audible beyond his immediate neighbors.

The entertainment of the delegates to the congress was most brilliant, and, what is better, was accompanied with a frank cordiality which made the hospitality of the Chileans doubly agreeable. Not only were there public banquets of the whole congress, receptions and dinners at the American, French, Argentinian, Brazilian, Mexican and Bolivian ministries, but the local society entertained lavishly in its clubs and in its homes. After ten days of most concentrated activity and enjoyment, many of the delegates went as the guests of the Government upon a trip thru southern Chile.

Altho a great meeting such as that which has just ended at Santiago cannot in itself do the work of science, which is carried on in the quiet of the laboratory and the study, it can establish relations of mutual helpfulness, it can stir up the imagination to a conception of the great tasks still to be achieved, it can be a true peacemaker, by showing thinking men their common interests and ideals. These ends were surely achieved by the First Pan-American Congress. May they be continued in the same spirit at the second, which is to meet at Washington on October 12th, 1911.

SANTIAGO, CHILE.

Literature

A Novel of the Oregon Days

MANY wonderful things happen in Mr. Hough's historical novel, *54-40 or Fight*.* It would seem that for the acquisition of Texas and Oregon the United States owes a vast debt to the heroine, Baroness Helena Von Ritz. But for her Texas, California, Oregon and all the territory west and south of the Louisiana Purchase might now be divided between England and Mexico. She was a Hungarian lady, beautiful and fascinating beyond all expression, and was at the time a spy in the service of England. Fortunately for American expansion, she fell in love with Nicholas Trist, a young diplomat in the service of John C. Calhoun. This love was unrequited, for young Trist was already pledged to a beautiful young lady, by name Elizabeth Churchill, having in some measure the attractions of Helena, not the least of which was an unclouded past. Helena, however, was great of soul, and, tho she suffered keenly from the unresponsiveness of Trist, generously made the United States the present of a good many millions of miles of territory.

Historical novels, we are inclined to believe, ought to cling more closely to recorded history than does this one. There is no valid objection to filling in the outlines with the romantic happenings of imagined beings. But at least violence ought not to be done to the established records. President Tyler, for instance, ought not, at a Presidential reception, to press upon Mr. Calhoun the acceptance of the Secretaryship of State at a time when Mr. Calhoun is at home in South Carolina. Mr. Calhoun withdrew from the Senate in 1843, and went home. Secretary Upshur was killed on February 28th, 1844, and on March 6th the President wrote Calhoun offering him the vacant portfolio. Calhoun did not receive this letter until March 15th, and it was not until very near the end of

March that he arrived in Washington. The stirring events asserted to have happened in Washington during that month, in which Calhoun is represented as the chief actor, must have occurred without the presence of the principal.

The bellicose character given to Calhoun, moreover, does not agree with the records. He was against war over Oregon, and equally against it over Mexico. It is rather amusing to have him represented as inspiring poor Tyler to talk fire and slaughter to the astonished British Minister. We are led to doubt if any British Minister to any country has ever had to listen to the sort of rant and bluster which is alleged to have been poured out upon the head of Sir Richard Pakenham by John Tyler on a certain March evening in 1844. Certainly the torrent could not have been inspired by Calhoun. His Senate speech, in the winter of 1845-46, on the Oregon question, is a noble plea for peace; and he made repeated denunciations of the movement of troops to the Rio Grande.

Mr. Hough has steered safely out of the Whitman controversy in relating the Oregon episode. Indeed, his mention of Whitman is so slight as almost to be unnoticed. Perhaps, tho, he may be the cause of another Oregon controversy only less bitter and prolonged than the one centering about the martyr missionary. For not only the Baroness Helena but also the young Nicholas Trist in pursuit, make the well-nigh impossible Eastward journey from Oregon to the States in the fall of 1845. The pursuer is, indeed, stopt by snow at Fort Laramie, but the unconquerable Helena completes her journey. There is ample basis here for fresh controversy.

Of the personages in the story we cannot say that any of them adequately proves his or her existence. The sorriest figure of all is the British Minister. We are inclined to hold that had Sir Richard been the man here represented the settlement of the Oregon dispute would have been on the basis of fifty-four

* *54-40 or Fight*, by Mr. Hough, New York, 1844.
ed. by the Historical Committee.

forty, and no fight. For we did not get fifty-four forty, but in spite of the imbecility and treachery of Sir Richard had to be content with forty-nine.

Porfirio Diaz and His Government

PLAIN speech by a Mexican of standing and authority about conditions in his own country is so rare as to merit special notice. Particularly, just now, when very conflicting reports about Mexico have for some time been in circulation. Señor Rafael de Zayas Enríquez, who in addition to being called poet laureate of Mexico has long been a member of its Congress and one of the circle of original supporters and afterwards advisers of Diaz, has written a book on the dictator-president which in its last chapters contains speech both plain and pointed.¹

It is these closing chapters which are of most interest to readers in the United States, who must have had a surfeit of magazine articles and books on Diaz written in the vein of extravagant eulogy, and must have wondered if, after all, Diaz-worship were not carried to the extreme in Mexico. The "literature" in English on Diaz and Mexico has been written chiefly by whilom sojourners, with an imperfect knowledge or no knowledge at all of Spanish; sometimes by persons having a selfish interest in projects for exploitation. Even where the writers have been disinterested and reasonably equipt with knowledge of the Spanish language and of Spanish institutions and with some experience in Mexico, it has always been easier for them to follow the lines of least resistance; with a subsidized press preaching the perfections of Diaz and his Government, and Mexicans generally, from bankers to school children, echoing these preachings, it is the exceptional stranger who would or could look beneath the surface. So the Diaz-fetish has grown abroad as in Mexico, reaching its climax in the hysterical eulogies of an English writer, a woman, who calmly put Diaz above Lincoln or Bismarck or any other man of the nineteenth century.

Señor Zayas Enríquez has, in the chapters which constitute a biography of Diaz down to the past few years, not broken with the tradition of extreme eulogy. He is a hero-worshipper, even tho now and then a blunt expression or a damaging statement of fact escapes him. Señor Zayas Enríquez has not written the biography of Diaz or the history of Mexico during the last half-century as the impartial pens of the future will write them. It is his concluding chapters of criticism, with their frank admissions and implications, that are of pertinent value.

To make a really adequate picture of the present Government of Mexico we must supplement not only the explicit statements but also the implications of these chapters of criticism. The story is only partially told by saying that Diaz is an absolute ruler under the forms of a constitution. It is not merely "one-man government" at Mexico City; it is "one man government" in every one of the States, and "one-man government" in every town within the limits of those States. No man can be Governor of a State without previously receiving the "O. K." of Diaz. Indeed, the rule now is that only one candidate appears in the "elections," he being the official choice. When local factions are too strong, or other reasons appear, it is not uncommon for a man from outside to be sent to a State as "provisional governor" (the elected incumbent "resigning" or being otherwise provided for) and thereafter to be "elected" regularly as long as Diaz chooses to keep him there. When Governor Ahumada was sent from Chihuahua to Guadalajara (Jalisco State) in this way, Enrique Creel became provisional Governor of Chihuahua; he was "elected" to the latter post while serving as Ambassador at Washington, a "provisional Governor" taking his place at Chihuahua, in training perhaps for a future designation as Governor in his own right.

The Governor of a State, in his turn, designates the "chiefs" of the larger towns or administrative units. In the State capitols there are "elected" councils (*Ayuntamientos*), but usually the government of the leading city is really absorbed into that of the State and combined with it fiscally as well as politically.

¹PORFIRIO DIAZ. *By Rafael de Zayas Enríquez.* Translated by T. Quincy Browne, Jr. New York: D. Appleton & Co. 12mo. Pp. 282. \$1.50.

Commonly, the "chiefs" of the large towns select the "chiefs" of towns, etc., within their districts; but, in all cases, even where there is retained a semblance of electoral methods, it all comes back to the Governor as the seat of power and the master of all subordinate executives. Thus a complete unity of command is obtained, from the President's desk in Mexico City down to the pettiest officer with power of arrest on the most remote ranch or in the smallest mountain settlement.

How can the elections be mere farces, with universal suffrage? someone may ask. For just the reason that no one presents himself as a candidate for Governor of a State against the man designated by Diaz, is the first answer. In 1904, for example, there was held, in the average State, an election at which were chosen: electors for President and Vice-President, members of the Federal Congress, Federal Judges, a Governor, and Justices of the State Supreme Court. The rule was, only one candidate for each office, the one designated by the "machine." The official gazette carried long proclamations, lists of polling places, etc. In the State capitol it took the Legislature from three days to a week to "cavass" the returns, one or two offices a day. Yet practically nobody had voted—in many cases, polling places were never really opened at all. The local officials simply "returned" so many votes as cast. As one mine manager, who "returned" (thru the local "jefe," a man in his pay) 1,200 votes for the official ticket from his camp, replied to an inquiry: "Oh, no, we didn't actually have the peons cast the ballots. Why, they'd have thought we were giving them meal tickets."

In fact, it is the indifference to public affairs on the part of those very men who ought to take an active interest therein, if Mexico is ever to attain self-government, which strikes an outsider as the most serious element in the present situation. It is here that Señor Zayas Enríquez sees and writes most clearly, perhaps. Tho he himself yields to the tendency to eulogize the man in power, as has been pointed out, he nevertheless perceives the deadening influence of absolutism on one hand and sycophancy on the other; and he perceives that it has been

growing stronger, not lessening, among his people during those very years which constitute Mexico's great period of progress.

For, as these last words imply, there is no intention here to belittle the work of Diaz; only to show the other side of the shield. His great achievement was the restoration of order, opening up thereby the opportunities for development of Mexico industrially and of her people socially. That was the one vital thing to do when he came into power; but the sort of governmental machinery by which he has achieved it had served its proper purpose some time ago, and since then has been a drag upon the country's evolution in self-government. In many respects Mexico is further from real self-government today than when Diaz began his rule.

Heartbreak Hill. By Herman Knickerbocker Viele. New York: Duffield & Co. \$1.50.

There is nothing disagreeable in this story of the two young people who are distant cousins and who jointly own Heartbreak Hill, which, unknown to them, contains a rich copper mine. The author explains that it is a "comedy romance," so it is scarcely worth reading unless one desires a book warranted to insure perfect rest and not to take hold upon any faculty. It is not even sufficiently convincing to hold the attention. But it abounds in the liveliest tinkle of conversation. We recommend it to persons afflicted with insomnia. If any man can read it without frequent and involuntary dozes, he should regard his case as hopeless.

Dictionary of the Bible. Edited by James Hastings, D. D., with the coöperation of John A. Selbie, D. D., and with the assistance of John C. Laimbere, D.D., and of Shailer Matthews, D. D. Large 8vo, pp. xvi, 992. New York: Charles Scribner's Sons. \$5.00.

Hastings's *Dictionary of the Bible*, with its four thick volumes and a supplementary one, is well known, and is the standard *English Dictionary of the Bible*, rivaled only by the somewhat later "Encyclopedia Biblica," edited by Professor Cheyne on a more radical theory of criticism. For many private libraries these works are too expensive, and Dr. Hast-

ings has done well to supplement them by this one-volume work. It deserves only praise. It is not a mere abstract of Dr. Hastings's larger dictionary, but the principal topics have been committed to other writers and the latest discoveries have been embodied, but, of course, in condensed form. With compact printing this single volume contains about as much type as one and a quarter volumes of the larger work, and conclusions have often been given with less of the process of proof. The authors of the articles are selected with judgment, and can be trusted to speak with authority. We commend the volume more heartily, and even to those who possess either Hastings's or Cheyne's larger dictionaries, for this is later than either of them, and no duplication of either.

A Standard Bible Dictionary, designed as a comprehensive guide to the Scriptures, embracing their languages, literature, history, biography, manners and customs, and their theology. Edited by Melancthon W. Jacobus, D. D., Edward E. Nourse, D. D., and Andrew C. Zenos, D. D., in association with American, British and German scholars. Embellished with new and original illustrations and maps. Large 8vo, pp. xxiv, 920. New York: Funk & Wagnalls Co. \$6.00.

As the one-volume Hastings's "Dictionary of the Bible" is intended to represent a medium point of view on the biblical questions raised by modern criticism, so this *Standard Bible Dictionary* is meant to represent a moderate, but not extreme, conservative position. This may be gathered from the names of the editors, of whom two are from the Hartford Theological Seminary, and one from the McCormick Seminary. It is very interesting to see from this work what moderate conservatism means. The main results of the Old Testament criticism are frankly accepted. The Pentateuch is composite, and J and P and the rest of them are accepted. The Babylonian flood story is made the key to the biblical tradition, and is based on a local catastrophe and tidal wave in lower Babylonia. It is the moral teaching of the story that is of value. Deuteronomy belongs to the age of Josiah. Isaiah is a composite book, the latter portion of which belongs to Exilic or post-Exilic times. Daniel is one of the later books

of the Bible. The miracles of the Pentateuch represent folk-lore, as the books were written as much as four hundred years after the events described. The same is true, in a measure, of the miracles of the Elijah and Elisha stories. It was never intended that the story of Jonah or the celestial journeys of Ezekiel should be taken literally. It is in all these cases the religious content that is of value. But the New Testament miracles are accepted as historical. Thruout the New Testament a similar conservative view prevails. That appears in the discussion of the Gospel of John, and in that of the resurrection of our Lord. The development of the belief in resurrection is fairly told, except that the relation to Persian theology is omitted. The editors have been diligent in securing a generally trustworthy discussion of the topics belonging to a Bible dictionary, and in a compact form making it useful for the Bible scholar who has no access to more pretentious works. The writers are men of recognized scholarship. Possibly we are not to credit Professor McCurdy and Dr. Leary for the titles under the illustrations for the articles "Semitic Religion" and "Cosmogony." Under the former we are told of a "Procession of Gods in Babylonia," that it represents "the Sun, Moon and Five Planets carried on the backs of (idealized) animals." Hardly. The first is not the Sun, but Bel Merodach; the second is not the Moon (who would be masculine), but Belit, and the sixth is Adad, not a planetary god, but god of thunder and lightning. Under "Cosmogony" are the pictures of four "boundary stones," and we are told that these are "Primitive Babylonian representations of the Cosmos (the signs of the Zodiac)," and that the serpent appearing in them represents Tiamat, the primeval watery chaos. This is all wrong. These figures are not primitive Babylonian, but belong to the middle Kassite period; they do not represent the Cosmos, but are symbols of various gods who will punish any one who may cancel the grant of land or deface its record; and the serpent does not represent Tiamat but another deity. But these flaws can be easily corrected. The maps are good, and we find the historical and geographical articles of particular value.

Literary Notes

....The Francis D. Tandy Co. has been reincorporated, under the name of the Tandy-Thomas Company, and plans to publish an interesting series of Lincoln books together with other timely publications.

....The life of *Sheldon Jackson*, Home Missionary and Superintendent of Education in Alaska, has been written by Dr. Robert L. Stewart, professor in the Theological Seminary of Lincoln University (New York: Fleming H. Revell Company).

....All persons interested in municipal improvement should get the three numbers of *Charities and the Commons* (New York), containing the Pittsburgh Survey, carried out by the aid of the Sage Fund. The first number, January 2nd, gave the results of the study of component elements of the population; the second, February 6th, discusses the topographical conditions. The third, March 2nd, will deal with the industrial well being of the wage earning population. (25 cents each.)

....It would be hard to write an uninteresting book about the Uganda Mission. As a record of Christian conquest it is unapproachable in missionary annals. Bishop Hannington's commanding personality and tragic death almost in sight of his goal is a part of Uganda history, even tho he never set foot in the territory of Mwanga. Mr. W. G. Berry's book of *Bishop Hannington and the Story of the Uganda Mission* is largely a compilation from the larger histories and is designed for the use of study classes. He has seized upon the essentials of the great tale and leaves us stirred with a new wonder at the Gospel which could inspire such devotion and win such triumphs. (Revell. \$1.00.)

....An unusual piece of scholarly work is the *Ancient Persian Lexicon*, by Prof. Herbert C. Tolman, of Vanderbilt University. With it is given the transliterated text, with translation of the famous Behistun Inscription of Davies, and all the other known Akhæmenian texts. We recall no one else in this country besides Professor Jackson, of Columbia, and Dr. L. H. Gray, who has given attention to these texts, or, indeed, to Iranian literature. This collection of texts with lexicon ought to introduce the study to universities. We miss references to the sources for the inscriptions in weights, vases and seals, by which the correctness of the transliteration can be tested. (American Book Co., New York. \$1.25.)

Old Times on the Upper Mississippi, by George Byron Merrick, is a very extensive volume, plentifully illustrated, and published by the Arthur A. Clark Company, of Cleveland, Ohio, for \$3.50. The author was a pilot on the river for the nine years previous to the war, and besides his own personal recollections has been collecting a vast amount of information about the steamboats of the river, the rise and growth of trade, the change and development of its cities. The narrative is simple, somewhat commonplace, but the value of the facts still remains. Another book of a similar nature,

tho by no means so pretentious, is issued by G. P. Putnam's Sons for \$1.50, entitled *The Sloops of the Hudson*, with William E. Verplanck and Moses W. Collyer as joint authors. The book has a record of the packets and market sloops of the last century and some reminiscences of old sailing masters. Leading directly from the sloops of the Hudson to the invention of steamboats and their use, we are given by the Knickerbocker Press *The Story of Robert Fulton*, by Peyton F. Miller, a little book of a hundred-odd pages, more brightly and personally written than the others. We are made to feel anew by this author the jovial and genial character of his hero, again we appreciate his pertinacity and steady temper, and again we rejoice in his successes. Fulton was a man whom we all love to honor more for his healthy, sanguine vigor than even for his inventive genius. As an example to our American youth, it is difficult to find one more sturdy.

Pebbles

"He talks well, doesn't he?" "Yes; he has to. He's employed by the artesian company."
—*Baltimore American*.

"THAT young couple seem to be enjoying themselves immensely. Are they married?"

"Yes, but not to each other."—*Fliegende Blätter*.

A YOUNG man married against the wishes of his parents, and, in telling a friend how to break the news to them, said:

"Tell them first that I am dead, and gently work up to the climax."—*Insurance*.

"It would please me mightily, Miss Stout," said Mr. Mugley, "to have you go to the theater with me this evening."

"Have you secured the seats?" asked Miss Vera Stout.

"Oh, come, now," he protested; "you're not so heavy as all that."—*Dramatic Mirror*.

"ARE the Gildays back from their wedding tour?"

"Yes."

"How are they?"

"Doing nicely. She has had a kernel of rice removed from her left eye and the doctors are in hopes she can see again, and his broken collar bone—where the old shoe struck him—is knitting favorably."—*Cleveland Plain*

IN VAIN.

"It is useless to urge me, Gerald," the maiden said. "It is impossible. I shall never marry."

"There is some other man, perhaps," he suggested, with bitterness.

"No. I have a higher regard for you than I have for any other man."

"Why do you tell me that?"

"To save your face, if you insist upon knowing," proudly answered the high-spirited girl.

Yet, as she spoke, she saw it was too late. His countenance had fallen.—*Chicago Trib-*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Defenders of the Constitution

It is simply beautiful to see such loyalty in Congress to the Constitution of the United States as has been evinced by the discovery that Senator Knox cannot constitutionally become Secretary of State under Mr. Taft. He had been a member of the present Congress when it increased the salaries of the members of the Cabinet, and the Constitution says that no member of Congress shall hold any office during the term to which he was elected whose emoluments have been increased during that term. It never occurred to President-elect Taft, or to Senator Knox that there was such a prohibition in the Constitution, and they are profound lawyers. It never occurred to President Roosevelt nor to any member of the Senate or House, nor to any of the people for weeks that such a provision existed. By a sort of accident somebody reading the Constitution came across the section and noticed its application, and then there was universal surprise and dismay, for it was a general desire that Mr. Knox should be Secretary of State. Can we believe that in the old days when Daniel Webster was the Expounder of the Constitution there

would have been so little general knowledge of its provisions? In Daniel Webster's day "The Federalist" was the universal text-book in colleges.

But we do not call attention to this remarkable exhibition of ignorance or forgetfulness to illustrate how little the Constitution is considered in these days, but rather to illustrate the sudden devotion to it when any violation of its provisions is discovered. The first thought was, How unfortunate that he cannot serve? the second thought was, Cannot some way be found by which Mr. Knox can constitutionally take the office? The Senate, of which he is a member, discovered a way. It was to defer the date of increasing the salary of the Secretary of State until the period for which he was elected Senator shall expire. Courtesy rules more or less in the Senate, and no one objected and the bill passed. But it then came to the House and the Democratic leaders, the Hon. Champ Clark, of Missouri, and the Hon. J. Sharp Williams, of Mississippi, and their followers oppose, and the bill may fail to pass the House; or, if it can pass by a party vote Senator Knox may not think it wise to accept an office whose tenure is thus declared to be tainted. The objection they make is, that this provision is nothing less than an evasion of the distinct provisions of the Constitution. It is an act simply intended to get around the Constitution, and after a law has been passed making him ineligible, trying to sneak him in under another law enacted for his personal benefit.

It is beautiful, we say, to see such devotion to the Constitution from such a source. They are horrified at the idea of evading the Constitution—these men who have been doing their best to evade it all their political lives. They represent States which have enacted laws whose sole purpose, frankly expressed a thousand times, freely admitted when those laws were under discussion, openly announced within the last few days in the Senate by Mr. Tillman, was to annul the provisions of the Constitution which give equal rights to all citizens. Those laws are defended still by these members of Congress. They think they have been shrewdly devised to accomplish what the Constitution forbids, and they glory in

the evasion. And these are the men who now make their indecent expression of their intense loyalty to the Constitution of the United States! Pah!

The Commission on Country Life

THE Commission appointed by the President to investigate rural conditions, Prof. L. H. Bailey and the rest of them, have taken a surprisingly short time to present their report. Yet it is not surprising, for they have worked without salary, and worked hard, and there has been no appropriation even for their expenses. Under the circumstances they would get thru with their job and get back to their farm work as soon as possible. Their report is naturally short, but it is comprehensive. It is based on tens of thousands of answers received from farmers all over the country and on a number of public conferences. If any important point is omitted we have failed to discover it, unless it be that sufficient attention has not been given to the backward condition in certain sections of the country which have been devoted to single crops and where ignorance is most prevalent.

A noticeable recommendation is that farmers need to be more organized for their own interests. They have local granges, etc., but they lack the consolidation of purpose which mechanical laborers possess. If we understand it, the commission would have farmers and farm laborers organized into State and National unions, like the other labor unions, so that they can by political and other ways secure needed advantages. There is a very interesting paragraph on this subject:

"Many existing organizations and institutions might become practically cooperative or mutual in spirit, as, for example, all agricultural societies, libraries, Young Men's Christian Associations, and churches. All the organizations standing for rural progress should be federated in States and nation."

Some of these are already federated, such as the Young Men's Christian Associations and the churches. It is the agricultural societies that need it. Farmers are far behind mechanics in this matter.

A much more effective campaign for

agricultural education is proposed. One suggestion is that all agricultural colleges shall present extension courses. There are such colleges that at present send their teachers thru the State, in a special railroad train, giving lectures and expositions of rural industry, and these are of great advantage in teaching not only the boys in the colleges, but the working farmers what are the better ways in which they can carry on their industry. The commission would have the public schools brought into closer touch, in country districts, with country life. On this subject we have often spoken, and we are glad to have this commission emphasize the need.

Of course, farmers need good roads, as well as do the automobilists, and this the commission gives attention to, as well as to the desirability of the postal parcels post and postal savings banks.

It is interesting to see the importance which the commission gives to the social forces which give enjoyment to country life; and chief among these it puts the churches. This is well said, and perhaps its emphasis will surprise some readers:

"We miss the heart of the problem if we neglect to foster personal character and neighborhood righteousness. The best way to preserve ideals for private conduct and public life is to build up the institutions of religion. The church has great power of leadership. The whole people should understand that it is vitally important to stand behind the rural church and to help it to become a great power in developing concrete country life ideals. It is especially important that the country church recognize that it has a social responsibility to the entire community as well as a religious responsibility to its own group of people."

This means that the churches should make their edifices a center not only for teaching religion, but also for making the whole tone of local society sweet and agreeable by the social functions which they should provide. We commend this portion of the report to the attention of the new interdenomination Federal Council.

But after all it is the general personal education of rural communities that alone can secure improved conditions. The improvement of public schools is a chief necessity. Think of sections of the country in which the public school continues only three or four months of the year, and in which the teachers are

poorly paid, and in which no provision is made except for the five or six lower grades. What ambition will such people have to read agricultural journals, to secure or understand the leaflets sent out by the agricultural colleges, or in any way develop the ambition to learn methods superior to those of their fathers? Here is the great need, and one which can be but slowly felt, of the improvement of the personal character of those engaged in agricultural labor. Life on the farm ought to be the most delightful, as it is the most honorable of all industries. There is in it more variety, more opportunity for the use of intelligence and forethought than in any other business. It is the queen of industries. On it all life depends. All pursuits are subservient to that of the farmer, and President Roosevelt and the commission have done well to magnify its importance. If we would lift up the country we need most to lift up country life.

The President's Veto

ON the occasion of the President's veto of the Census bill only the *Tribune*, of the New York papers, told us that the mention of "professional politicians" was greeted with "applause"; the other papers said it was received with "laughter." And the attempt of a very large number of the members was made to pass the bill over the President's veto. They were angry, Democrats and Republicans, angry because the bill was denounced as a "spoils" measure. They declared that the President had "insulted Congress." A week has past and they have done nothing about it. Let us look at it again. Let us go over his message with scrupulous care.

The President began by saying that he vetoed the bill with extreme reluctance, because of the importance of having provision for the decennial Census made as soon as possible. But it is also of "high consequence" that it be conducted with accuracy and without suspicion of political or personal bias so as to be a fraudulent waste of the people's money. Now the bill specifically provides that the selection of employees should not be subject to competitive examination; that is,

they shall be appointed under the spoils system. This provision was evidently put in for the very purpose of preventing the President from putting the appointments under civil-service examinations. There are to be many thousands of appointees. The Director of the Census has asked that they be appointed after competitive examination. The President says that to appoint them without such competitive examination surely means that "the appointments shall be treated as the perquisites of the politicians." He adds:

"I do not believe in the doctrine that to the victor belong the spoils, but I think even less of the doctrine that the spoils shall be divided without a fight by the professional politicians on both sides; and this would be the result of permitting the bill in its present shape to become a law."

The two last Censuses were taken under a provision of the law excluding competition, and the President says the result was extravagance and demoralization. The Director begs to be relieved of such a handicap. To be sure the bill says that the non-competitive examination shall be conducted by the Civil Service Commission, and the appointments be independent of party affiliations, but that is mere words, so long as there is no force in the examinations and no power in the examiners. The President says with truth and force, and it is an appeal to the people:

"It is of vital consequence that we should not once again permit the usefulness of this great decennial undertaking on behalf of the whole people to be marred by permitting it to be turned into an engine to further the self-interest of that small section of the people which makes a profession of politics."

"The evil effects of the spoils system and of the custom of treating appointments to the public service as personal perquisites of professional politicians are peculiarly evident in the case of a great public work like the taking of the census, a work which should emphatically be done for the whole people and with an eye single to their interest."

The hostile Congressmen are angry because the President denounces the "professional politicians" who treat the public service as "personal perquisites." But he did not mention them as such. It can only be because they are such that they take offence. They want to control these appointments for their own political ends, and not for the good of the country. The President has done well

to unmask them, to dare them to vote against civil service reform. He has done well to appeal to the people, for the people will stand by him.

A World Congress in Washington

It has cost some millions of dollars to send the United States naval fleet around the world, yet it has not been able to penetrate beyond the coast line of the countries it has visited. But there are other ways of extending American influence so as to make it penetrate to the very center of the life and institutions of other nations. This is not only done by our food products, but by the influence of American ideas. Thus forty years ago the United States took the lead in forming the International Prison Congress. It has enabled the United States not only to draw from the experience of other nations, but in return to make contributions of profound value to modern civilization. Take, for instance, the Children's Court. It was first started in Chicago, then copied in Buffalo, Denver, New York and other cities. It has revolutionized our criminal procedure and turned a criminal court into a child-saving institution. Thru the International Prison Commission the history, organization and results of this experiment have been communicated to the civilized world. All over Europe similar courts are being established. The probation system, developed in this country, has been adopted in France and Belgium. Thus American ideas are making themselves felt in the peaceful pathways of science and philanthropy.

Secretary Root, always anxious to promote international relations, has asked Congress for an appropriation of \$50,000 for the International Prison Congress, which is to meet in Washington in 1910. The invitation has been extended by our Government and the meeting will have a distinctly official character. As it is the first time that this organization, tho founded by the United States, meets in our own country, nothing should be spared to make it a memorable success.

The amount asked for is small when we consider what may be effected with it. The body of reports furnished for this

Congress will be of permanent value, and our foreign guests should have an opportunity to see what the United States has done in probation work, reformatory treatment and especially in preventive and child-saving work in various parts of the country. While the House bill only carries \$10,000 for this object, enough for entertainment merely in Washington, it is to be hoped that the full amount asked for by Secretary Root will be granted in the Senate and agreed to by the House.

Going Back to the People

THERE is a constant flux in the principles of government which we may hope to be a real development toward a final ideal standard. At present it appears to be moving toward the elimination of intermediaries in both the legislative and the executive branches and the consolidation of power in the ultimate source thereof.

The ultimate source of power in legislation we have now come to know is in the people. The Regicides taught that to the world. Even Russia gives up the divine right of any autocrat. In a republican form of government the people are the source of power, and they choose intermediaries to formulate their laws only because they cannot meet and make laws for themselves. The process would be too cumbrous. They must select lawmakers. In little Athens, or in a New England town direct legislation has been possible, not in the United States.

There are two schools of thought to be observed as to the method of legislation in this republican government. One is the old school which had control in the formulation of our National Constitution, and which so far feared the people that it provided for safety by an intermediary system. The people could not be trusted to choose a President, and wise electors must be chosen to do what the people were not competent to do. Equally the people were regarded as incompetent to make their laws, but it was also impossible in the nature of the case for them to meet and consult and enact. But of late years conditions have changed. We have new means of inter-

communication. Railroads, telegraphs, telephones and newspapers have annihilated distance and made intercourse and information easy and universal. There has naturally grown up a new movement, a school in politics, which would restore to the people as a whole as much as possible of the power which had been given to their elected representatives. That school would reduce the final authority of the legislatures, while the conservative school stands by the prevailing method of representative power provided for in the National or State constitutions.

Senator Root has declared himself in this a conservative. In his address to the New York Legislature he said:

"Because I believe in maintaining the two grants of power of the Constitution—maintaining the national power to its full limit and still preserving the State power—I am opposed to everything that tends to belittle, to discredit or to weaken the authority of the legislatures of the States. You cannot take power away from privileged public bodies without having the character of those bodies deteriorate. For this reason I am opposed to the direct election of Senators, as I am opposed to the initiative and referendum, because these things are based upon the idea, that the people cannot elect legislatures whom they trust. They proceed upon the idea of abandoning the attempt to elect trustworthy and competent State legislatures, but if you abandon that attempt—if you begin to legislate or to amend constitutions upon that theory, what becomes of all the other powers of the State legislatures in maintaining the system of local self government under the Constitution?"

"If the people of any State are not satisfied to trust their legislature to discharge the constitutional duty of electing Senators, let them cure their own faults and elect legislatures that they can trust. Ultimately in the last analysis we must come down for successful government to the due performance of the citizen's duty at the polls, and there is no reason to believe that the citizens would perform their duty in the direct election of Senators or in voting down the initiative or the referendum any better than they perform it in the election of members of the Senates and Assemblies of the States. I am opposed to all steps that proceed upon the theory that the people of our States are to abandon the duty of making their State legislatures able and honored bodies competent to perform the great duties of legislation for these great commonwealths."

Thruout his address Senator Root was concerned with the danger of the usurpation of State rights by the central Government; and it is this thought which he distinctly says, makes him an opponent of the school which takes final power, by election of Sena-

tors, or by initiative and referendum, from the legislatures. But his argument does not hold. He says that because he believes in "maintaining the national power to its full limit, and still preserving the State power," he is "opposed to everything that tends to belittle, to discredit or to weaken the authority of the legislatures of the States," such as initiative and referendum. But it is not the legislation of the States that is thus belittled or weakened, only the legislatures which are reduced in power, and that power maintained in full strength in the States and exercised by the people. Not an iota of their power is transferred to the National Congress. Take an example. The legislature of a State feels unwilling to take responsibility for the enactment of a liquor law or a taxing law, and refers it to the popular vote. Senator Root can find in that no invasion by the national power. The State still rules supreme. The authority has simply gone back to the source which had given it to the legislatures. The people have taken their own. The question is simply the old one of difference between aristocracy and democracy. Can you trust the people? Or, to put it in another way, can you trust the people as a whole any better than you can trust their representatives? We are inclined to think we can. We think that, if the people were appealed to as they are when we elect a President, or a Governor, they are more likely to give a sound ethical judgment and less likely to be manipulated by designing or selfish or corrupt men. Of course they will make mistakes, but they can rectify them next time. Even legislatures make sad mistakes.

State Partnership with Business

So long as the capitalistic interests—the phrase is used in no derogatory sense—continue to insist that all business activity by the state is socialistic, and that all state regulation of business is "dangerous," as tending insidiously to destroy our good, time-worn individualism, there will be a humorous side to the propositions that these same capitalistic interests from time to time make to take the public into partnership whenever the law begins to pinch them.

Not all of the multi-millionaires are ready to follow Andrew Carnegie in his subversive program of inheritance taxes, state regulation of prices, and public ownership of natural resources, and not all the big corporations are ready to go as far as the Standard Oil Company in proposing to work a good thing on shares, or under a plan of joint control with one or more commonwealths. But there are plenty of indications that that part of the community which has enjoyed exceptional solvency so far shares our common human nature as to accept the principle that half a loaf is better than no bread, even if it comes with a little pink label that might conceivably deepen, one of these days, into the more lurid color of undisguised socialism.

Naturally, the Standard Oil Company loathes the sovereign authority of the Commonwealth of Missouri, and the Commonwealth of Missouri has proclaimed its frigid sentiments toward the Standard Oil corporations. Nevertheless, the Missourian is human, and on the whole he prefers kerosene to tallow dips; at any rate so long as tallow on the hoof moves at present prices. So the Standard Oil Company, with that practical business sense which appears to be one of its most substantial assets, cuts out its animosity and submits to the Missourian a proposition that it be permitted to go on doing business in his State under a joint arrangement and subject to whatever control the Commonwealth sees fit to institute.

Some of the details are interesting. The Supreme Court of Missouri had handed down an ouster decision, turning out the Standard Oil Company of Indiana. The company's brief in protest proposes that, in lieu of the judgment of ouster, a Missouri corporation shall be formed to take over all the Missouri property of the Indiana company, and succeed to the Missouri business, and that all of the stock of the new company, less enough to qualify directors, shall for four years stand in the names of two trustees, one selected by the State, the other by the Indiana company, and both approved by the State Supreme Court.

It is further proposed that the trustees so created shall act as officers of the court, and so supervise the affairs of the company that its conduct shall be "fair,

just and lawful," at all times according "proper treatment to the public as well as to the property." And if ever it shall happen that the two trustees cannot agree, the controversy shall be submitted to the judges of the court, or to an arbitrator named by them, and the decision of the judges or the arbitrator shall be final.

Looking at this proposition seriously, we hope that the proposed experiment will be tried in earnest and in good faith. It is precisely one of those possibilities which cannot be judged of *a priori*. In the daily increasing complexity of our industrial system, the method of trial and selection is the only one which promises substantial success.

On a smaller scale the plan is to be tried in Kansas, where the International Harvester Company has agreed with the Attorney-General and the Supreme Court that, in addition to the payment of a fine of sixty thousand dollars, the company will submit to a public control of its business in Kansas, and the regulation of its prices by the State Supreme Court or a public utility commission.

It is plain that the campaign of the American public against the unbearable abuses, which monopoly, privilege and lawlessness have been piling up in the business world, is one of progressive victory pretty nearly along all the line. Some of the State attempts to fix railroad rates, and to "bust the trusts" have been crude and ill advised. But the public, like individuals, learns something thru its mistakes, and, when all is said and done, the public is still sovereign in these United States of America. In one or another way, it will be demonstrated that the people will create corporate powers, and bestow great business opportunities upon corporate enterprise on the sole condition that the people, as well as the money-making interests, shall profit thereby.

Children and Vacation

THERE is a certain association between the two words, perhaps because children have naturally that vacation spirit which grown-ups endeavor to acquire at stated intervals. Perhaps that is the reason—but if it is not it will have to serve until we can invent a better one—why we

have decide to devote the pictures of our next Vacation Number to the children. It is, as usual, to be a co-operative enterprise, in which our readers are, as before, to do all the work, thinking up the novel ideas and getting them exprest by the aid of pen and camera, while we have nothing to do but to look over a few hundred pretty pictures and decide which are the prettiest, and to read over a few hundred interesting stories of vacation adventures and decide which are the most interesting. Can any one imagine a better vacation week for an editor?

We want to have a good big section of that issue filled solidly with children, uncontaminated by reading matter; boys and girls and babies in all the possible costumes and in all the impossible postures they can get into; with any convenient accessories in the way of scenery and properties such as mountains, trees, stone walls, boats, marbles, sandwiches, pets and more children; no limit as to age, childhood is not a question of years; no restriction as to looks, all children are good-looking; no nationality barred, children of every land belong to a race of their own. The photographs may be taken of them when they are asleep or awake, standing on their feet or on their heads; at play, or, by using a quick shutter, at work.

We know that our readers have lots of such photographs, because we have seen them. They have been sent to us when we did not want them. When we askt for snapshots of wild animals they sent us boys, evidently believing with Plato that the wildest of wild animals are boys. When we requested photographs of objects of local interest, expecting prehistoric tombstones, Washington elms and such like, they sent us babies. We have become convinced, in spite of alarmist reports to the contrary, that there is a very considerable interest taken in the young of the human species in many parts of the United States and even in foreign lands.

But besides the children we want other pictures, a great many of them, on any phase of vacation life or which can be plausibly connected therewith; photographs of all shapes, sizes and styles, any kind except the flat, fuzzy and foggy

kinds. For the best photograph of children or other vacation theme we will pay \$10, for the second best \$5, and for all the others we use \$2 apiece. Send as many as you like. They will all be returned, barring accidents, if you put on each your name and address and enclose postage.

So much for the pictures; now for the reading matter. This is to consist as before of the personal experiences of our readers. If you have a bound set of THE INDEPENDENT, as you should have, look up our Vacation Numbers of June 6th, 1907, and of June 4th, 1908, and then send us something as different from any you find there as you can. Make it brief, individual and to the point. Tell it as you would to a friend or as you would have a friend tell it to you. We can buy in the open market plenty of articles from more or less distinguisht people on "Hunting in Uganda," "Explorations in the Arctic Regions" and "Travels in Tibet," but most of our readers will never have the opportunity, if they have the desire, to go hunting for elephants, poles, or mahatmas, and they are even more interested in knowing how to make their time and money go as far as possible next summer. Consequently such topics as "How to be Happy in a Summer Hotel," "A Tour Around My Garden" and "The Adventures of an Amateur Chauffeur" would be more profitable reading. For each vacation story we print we will, as last year, give two annual subscriptions to THE INDEPENDENT, to your own or other addresses. This will give you a chance at the cost of two cents and a little time to have your own subscription extended by a year and also send THE INDEPENDENT to a friend, perhaps one who shared the vacation experience you narrate. These stories should be between 250 and 500 words, with a leaning on the side of mercy. Sign your name, unless by the advice of counsel, you prefer not to. If you can send pictures with your story so much the better. Manuscripts alone will not be returned; keep a copy if you wish to show your friends how much better it was than those we publisht. All pictures and articles should be sent in before May 1st, 1909.

The New Vatican Magazine

Acta Apostolicæ Sedis is the title of this new departure. Its "moderatores" announce that it is an official commentary and the exclusive organ of Papal communication with the Episcopate. The notice is on the last page, headed "From the Secretary of State" and dated, "Rome, the Vatican, December 31st, 1908," but unsigned. Nowhere is it stated whether the magazine is daily, weekly, monthly or yearly. It presents a very pleasing aspect, is well printed and very legible. The price is \$3 for countries outside of Italy.

The first number opens up with the invariable authority, authorizing the magazine. It repeats briefly the various ways in which the Vatican has gotten in touch with the bishops and declares that this *Official Commentary* is started in response to the appeals of many bishops.

The brief adds that publication in it must be regarded as the sole and legitimate way of promulgating Pontifical constitutions, laws, decrees and other acts of the Roman Pontiffs and of the Sacred Congregations and the Holy Office. This will save large expense in sending to all bishops separate announcements, and if they subscribe it will pay for itself.

Its contents need delay us but little. The twelve opening pages are taken up with the Constitution of Pius X regulating the Roman Curia. But as this document was published June 29th, 1908, it seems a trifle stale. The Rules for the Roman Rota next follow, with full details of membership duties, lawyers and taxes for judicial expenses.

The latter half of the magazine explains the order to be followed in all the Sacred Congregations. And it seems a curious commentary that here with the Latin text an Italian translation is given. Dealing with the world at large only Latin is used; treating, however, of the details as worked out in the many bureaus in Rome, Italian also is given. Is it possible that the numerous auditors, sub-secretaries, archivists, copyists and the whole tribe of *minutante* know not Latin?

At the end is a list of the members of the various Congregations. Only a few interest us. Cardinal Gibbons is a mem-

ber of but two, Propaganda and Studies. This last, by the way, is the largest, with twenty-eight cardinals on its board. As far as we can see the only American bishop a member, as a consultor, is Archbishop Keane, of Dubuque, who is in the same two Congregations as Cardinal Gibbons. This doubtful honor serves to remind His Lordship of Dubuque of the days, following his removal from the rectorship at Washington, when he lived in Rome, a submissive if discontented prisoner of the Curia.

Our readers will bear in mind that the new Papal organ is for questions affecting the Episcopate. As for matters of state, that is, between the Vatican and various governments, they are carried to and fro by couriers, whose present headquarters, we are informed are at Strassburg.

The "Slave" Auction

It was in the Rev. John D. Long's Parkside Presbyterian Church, of Flatbush, N. Y., that the advertised "slave auction" took place last Friday night. It was not like the case when, in Plymouth Church, Mr. Beecher put a slave woman up for redemption by purchase, for these were for sale. Three hundred men, they said, had offered themselves for sale, because they could not find work. The Constitution forbids "involuntary servitude," but these were cases of voluntary servitude, which is quite a different thing, and absolutely no different from any other case of hiring out by the day or week or year, except that the hiring was done in public. Mr. Long is head of the Christian Socialist organization, and it was in the interest of that society's work that this spectacular exhibition was made of the number of men out of employment. Only a dozen were auctioned off, and the bids were very slow, the first man going to a baker at ten dollars a week. Of course, in such a "sale," either party can back out at the end of the week. These cases of failure of willing men to find employment ought to raise the very serious question whether the State or city government ought not to keep some public work open at all times, at very moderate wages, such as road-building, for which any one can apply in

hard times. Of course, the purpose of this so-called sale was to show that all sorts of labor should be supplied by the State, and that the State should give every man his job, much as the Methodist Church gives a preacher for every pulpit and a pulpit for every preacher. But they have a way to keep down the number of preachers.

The Settlement with Venezuela

It is well that our little quarrel with Venezuela is to be settled by a new

arrangement with President Gomez, who replaces the intractable President Castro. But the method of settlement is interesting. The minor matters go to the Hague Tribunal, but the principal one, that about the asphalt lake leased by the Bermudez Asphalt Company, does not go to The Hague, but is the subject of a new agreement. President Gomez was as unwilling as President Castro to admit that the decision of the Venezuelan Supreme Court, which declared the title forfeited by failure to meet the conditions and by proved aid to the Matos revolution, should be referred to arbitration, so that decision is not to be reviewed, and the Bermudez Company is to get its rights back only by a new agreement, paying a minimum annual rent to the Government, and a fine for its part in the attempted revolution. There has been a very general impression that Venezuela was not wholly wrong in its conflict with the Bermudez Company, and this explains the hesitation of our State Department in putting pressure on Venezuela.

The Free Baptists on Union

Professor Anthony, of the Free Baptist Theological Seminary at Lewiston, Me., is chairman of the denominational committee engaged in negotiations with the Northern Baptists for union. The proposals have been referred to the two denominations for approval, and under the rule adopted, union will be accepted by the Free Baptists if two-thirds of their Yearly Meetings and three-fourths of the resident church membership approve. But this majority has not been obtained, and Professor Anthony, who strongly favors

the union, says that possibly the unreported Yearly Meetings may secure the majority, or those which have voted against it may reverse their vote, or the General Conference may reduce the majority required. He says that there have appeared some reactionary tendencies among the Baptists as among the Free Baptists, and the need of time and patience is apparent. There has been some question as to direction which union should take, some preferring to remain separate, and others to join with another willing denomination. In such a case there are always a body of recalcitrants that cannot trust brethren of other names, and are suspicious and fearful that they will suffer prestige. At present there is no real difference between Baptists of the North, Free Baptists and Congregationalists.

The appointment of Dr. O'Connell, rector of the Catholic University at Washington, as Auxiliary Bishop of San Francisco, does not assure him the succession to Archbishop Riordan, but makes it probable. He is a man of ability and scholarship, and deserves the promotion, for it is understood that the Catholic University does not seek a permanent rector. Two or three years is a usual term. This appointment eliminates Dr. Hanna, of Rochester, who was presented to Rome as the chosen candidate with right of succession, but the charge made against him by a fellow professor in the Rochester Seminary that he was tainted with Modernism was sufficient to prevent approval at Rome.

Some lynching may become an ordinary method of dispensing justice if a case in Texas is to be taken as an example. It was in Houston, Tex. A negro boy of seventeen had robbed and killed a Baptist minister. A mob of 300 men asked the judge to try the accused immediately, but he refused, whereon they went to the jail, with no masks to conceal themselves, took the prisoner out and hanged him. The dispatch says it was an orderly mob, and no shots were fired. The gentlemen who constituted the volunteer court took their leisure,

and allowed the boy time to pray. Thus lynching is civilized. But lynching is also resisted. Last week a thousand men attempted to lynch a negro whom the victim of an attempted assault could not identify, and three officers with pistols held the mob at bay and rescued the accused. There was courage and conscience, which would succeed anywhere.

A committee of Liberians has been in this country to enlist the interest of our Government in the protection of Liberia against encroachments from Great Britain and France. And now we hear that the British in Sierra Leone have threatened force if Liberia does not keep better order on her borders. We have so much sentimental interest in Liberia that we hope the President will find some way to help the little republic. It has had very little help or direction from our people. Even missions have been inadequately conducted. Just as the Zionist movement is trying to create a Jewish state in Palestine, we wish that American negroes would take an active interest in the political and industrial and social improvement of Liberia. It has been a segregated people, and such are always backward.

President-elect Taft is back from Panama, and he will now have to limit his propensities for travel, and stay at home for four years, perhaps for eight. His engineers tell him that the lock system is safe and that the work can proceed on that plan. They may be right, but other engineers have talked differently, and the sea level canal would have afforded more convenient passage, and probably with no more original cost. We are not yet informed that the engineers go further than to claim that the Gatun dam will be safe. They perhaps thought their duty ended there, and so do not put themselves on record as to a choice between the two systems.

Congressman Julius Kahn, of California, is making addresses in the East in which he declares that the Chinese and Japanese must not be allowed to settle in this country, because "wherever the Chinese or Japanese settle the white man

has to go." After the earthquake, he says, some Chinese bought at a high price a very few desirable lots, and then they got all the neighborhood very cheap, because no white people wanted to live near them. We have heard the same thing about negro quarters, and Irish quarters, and Jewish quarters, and Italian quarters, but we have not observed that there was not room, and usually better room, for those who moved out.

The faculty of the College of France have presented the name of Loisy to the Minister of Public Instruction for the chair, History of Religion, vacated by the death of Jean Reville. This means his appointment, a happy ending to a laborious love of study crowned with honest endeavor. *Ad multos annos!* How fitly might not a lithographic copy, say six by four, of the Encyclical on Modernism be hung up behind the chair of Monsieur le Professeur, Alfred Loisy.

We are a peculiar people. Before Mrs. Longworth, the President's daughter, could use the trowel to lay the cornerstone of a post office in Michigan she had to be elected a member of the labor union whose members claim the sole right to dab mortar on a stone. It is childish and amusing. Equally President Taft must be initiated into Masonry.

During the year 1908 there came into the United States 5,503 Japanese non-laborers, students, merchants, farmers, women and children, and 2,860 laborers, including several hundred working students. On the other hand 5,718 Japanese left the country, of whom 2,523 were laborers. That is, the addition to the country of 237 Japanese laborers in twelve months has raised all this fright.

It is said that when Governor Chamberlain, of Oregon, goes to Washington to be sworn in as United States Senator his secretary will, under the law, be Acting Governor, and will sign all official documents for him; and she a woman. It would be an agreeable novelty to see a law signed by Mrs. Shelton.

The Regulation of Motoring

THE arrogance of motorists is at last bearing fruit. The long-suffering worm is beginning to turn. Pedestrians who have heretofore quickened their jig steps before the sounding horn of the automobile driven up to and perhaps beyond the legal speed limit on city streets, because they thought they had to do so or perish in revolt, are finding out that they have some rights of which they have been unwarrantably deprived. A New Haven judge remarkt from the bench the other day that no pedestrian should be obliged to run to get out of the way of a passing auto. There are other evidences that the man who walks is coming slowly to his own. One of these signs of the times is given expression in a bill recently introduced into the New York Assembly that provides that every person who owns or operates an automobile is required to be insured for not less than \$10,000 against losses thru accidents caused by the operating of his machine. The insurance company is made liable to pay all damage to property and persons injured, not including the occupants of the car. Further provisions of the bill are:

Notice of the accident must be filed with the company within a month thereafter, and the company must pay on proof that the damage or injury was caused by an accident in the operation of the automobile, without regard to any negligence on the part of the party injured or the person operating the machine.

For the injury of one person in any one accident the policy is liable for \$5,000, and for injury to several persons in one accident for \$10,000, but the recovery of such money does not take away from the injured person the right of further recovery against the owner of the machine in a court action.

All hired chauffeurs also must be insured to the amount of \$2,000, which is to insure the owner for damage to the machine outside of the natural wear and tear and for excess of the \$10,000 in case of accident. The chauffeur must also pay the Secretary of State a license fee of \$3 yearly.

The bill fixes the amount of the yearly license to be paid the Secretary of State by owners as follows: For a machine of 10 horse power

or less, \$5; between 10 and 30 horse power, \$10; between 30 and 60 horse power, \$15; more than 60 horse power, \$25.

It begins to look as if the owners of motor cars will soon be held to account for damage done and injuries inflicted. The proposed bill will certainly make automobile drivers less autocratic than they have been. It ought to pass.

The Independent Endorsed

OUR remarks on "Taxation and Insurance" in the last issue of THE INDEPENDENT have received appreciative endorsement. In this connection it is perhaps pertinent to quote a few words on the subject from the sixty-third annual report to the members of the Connecticut Mutual Life Insurance Company of Hartford, Conn., by the president, John M. Taylor. On the subject of taxation Mr. Taylor says:

We therefore invite your personal cooperation in securing relief for yourselves from a tremendous and increasing burden. The remedy lies in your own hands. The directors and officers have done all in their power, by proper means, to secure right and justice in this matter; and they will not lessen their efforts. Redress must come thru your representatives in the various legislatures, by necessary and proper remedial legislation; and you should insist, thru protest, petition, and appeal, that they give your interests in this regard immediate consideration and just treatment. It is only necessary that the army of policyholders interested in the life companies, act in one direction to ultimately gain their end.

It may also be said in general that life insurance companies more than any other class of corporations are taxed with the most surprising disregard of just and scientific methods.

FREDERICK A. DICKSON, formerly an agency director in this city for the New York Life Insurance Company, has been elected secretary and a director of the Provident Savings Life Assurance Society. Senator Edgar T. Brackett has also been made a director.

"Unlisted" Securities

It is reported that the commission appointed by Governor Hughes to inquire concerning speculation and trading in securities and commodities will recommend the abolition of what is called the unlisted department of the New York Stock Exchange. Perhaps it was a premonition that such a recommendation would be made that caused several great corporations to apply recently for the admission of their securities to the regular list. Why should there be a department or annex in which corporations may avoid the making of detailed reports for the information of the public and their stockholders, while at the same time their securities are classed, in the daily published statements of transactions, with those of the listed corporations which obey the Exchange's rules concerning reports? This unlisted department has been a refuge for Trust combinations and other companies which were unwilling to give the investing public that information about their affairs which the public should have. At times, certain unlisted securities have led all others in the volume of daily transactions. And yet, while the daily stock reports given to the press did not indicate that their relation to the Exchange differed from that of other securities, there was a decided difference, in the protection afforded to investors by the authority of the Exchange.

There should be no unlisted department, in which the privileges and facilities of Stock Exchange trading can be enjoyed by companies that do not make adequate reports. We hope the commission will recommend that it be abolished. On the New York Stock Exchange there should be no trading in the securities of a corporation that does not make reports in accord with the requirements that are now by corporations which are on the regular list.

Tariff Revision

An attempt will be made by a considerable number of Congressmen to delay the beginning of the special session

until the latter part of March. It ought not to be successful. The work of tariff revision should be taken up on the earliest possible date and should be completed as soon as a reasonable allowance of time for discussion will permit. Business will suffer so long as there shall be uncertainty as to the new tariff rates. The effect of this uncertainty upon the great iron and steel industry can be seen now. Orders are small; railways and other buyers are holding off, taking only what they must have, because they think prices may be lower in the near future. Steel duties are to be reduced. Mr. Carnegie says they are no longer needed for protection. Congress may scale them down one-third, possibly one-half. Probably the prices ruling today cannot be maintained under the new rates. There are buyers who can wait for the reduced prices. Certain other industries are affected in the same way to some extent. Probably the tariff bill will not be past before midsummer. There should be no delay that can be avoided, and something may be gained by beginning the work promptly.

....A new industrial city, like Gary, Ind., is to be built by the United States Steel Corporation around a plant to be erected, at a cost of \$15,000,000, about three miles from Superior, Wis. The site is on the St. Louis River. The corporation has bought 1,600 acres on the Wisconsin side of this stream, and a part of the plant will be set up there, but the blast furnaces will be on the Minnesota side.

....Harvey Fisk & Sons offer to investors, at 100 and accrued interest, \$1,500,000 of the six per cent. convertible gold coupon notes of the Hudson Companies (McAdoo Tunnel system), secured by the first mortgage gold bonds of the Hudson & Manhattan Railroad Company.

....Alaska's output of minerals was about \$10,000,000 in 1908, against \$20,871,771 in 1907. The product since 1880 has been \$148,000,000, of which \$142,000,000 was gold.

The Independent

VOL. LXVI NEW YORK, THURSDAY, FEBRUARY 25, 1909 No. 3143

Survey of the World

Return of the Battleship Fleet

The battleship fleet ended its long and memorable cruise around the world on the 22d, when, escorted by four battleships, two armored cruisers and three scout cruisers, it entered once more the harbor out of which it sailed fourteen months ago, and came to anchor in Hampton Roads. There was a great crowd of visitors, who had come on special trains and excursion boats. Rooms in the hotels had been engaged four or five months in advance. President Roosevelt had come down from Washington on the "Mayflower," and he stood on the bridge of the yacht as the returning battleships, beginning at 11 a. m., past him in review, firing their customary salutes. Two or three hours later, after all had come to anchor, the Rear Admirals called upon him to pay their respects and receive his congratulations. He was in a joyous mood. "Do you remember," he asked a friend, "the prophecies of disaster? Well, here the ships are, returning after fourteen months without a scratch." Visiting the four flagships, he made a brief address to the officers and men on each of them. Speaking to Rear Admiral Sperry and his men on the "Connecticut," he said:

"You have falsified every prediction of the prophets of failure. In all your long cruise not an accident worthy of mention has happened to a single battleship, nor yet to the cruisers or torpedo boats. You left this coast in a high state of battle efficiency and you return with your efficiency increased—better prepared than when you left, not only in personnel but even in material.

"As a war machine the fleet comes back in better shape than it went out. In addition you, the officers and men of this formidable fighting force, have shown yourselves the best of all possible ambassadors and heralds of peace.

Wherever you have landed you have borne yourselves so as to make us at home proud of being your countrymen. You have shown that the best type of fighting man of the sea knows how to appear to the utmost possible advantage when his business is to behave himself on shore and to make a good impression on a foreign land.

"We are proud of all the ships and all the men in this whole fleet, and we welcome you home to the country whose good repute among nations has been raised by what you have done."

In the evening the Rear Admirals and Captains were guests at a banquet given by the Navy League. From Minneapolis Rear Admiral Evans, retired, who commanded the fleet until it arrived at San Francisco, sent to Rear Admiral Sperry a message of congratulation, expressing a hope that Congress would make him a Vice Admiral.

National Topics

Senator Knox is to be Secretary of State. The Senate's bill restoring the original salary of the office to which he will be appointed was past in the House on the 15th by a vote of 173 to 117, after an unsuccessful attempt to obtain for it a two-thirds vote under a suspension of the rules. Opponents of this measure still insisted that the constitutional bar could not be removed by such legislation. After this action, an obstacle was found in an appropriation bill, then pending in conference. This provided for the payment of the increased salary. But a resolution authorizing the conference committee to recommend the desired change was adopted, and at last the way was cleared for the transfer of Mr. Knox to the Cabinet. Judge Taft says there is now no room for doubt as to the Senator's eligibility. There is reason to believe that the Cabinet will be made up as

follows: Mr. Knox, Secretary of State; Jacob M. Dickinson, of Tennessee, Secretary of War; George W. Wickersham, of New York, Attorney General; Frank H. Hitchcock, of Massachusetts, Postmaster General; George von L. Meyer, of Massachusetts, Secretary of the Navy; Richard A. Ballinger, of Washington, Secretary of the Interior; James Wilson, of Iowa, Secretary of Agriculture; Charles Nagel, of Missouri, Secretary of Commerce and Labor. It appears that the head of the Treasury Department has not yet been selected, altho there are reports that the place has been offered to Franklin MacVeagh, of Chicago, whose brother was Attorney-General in President Garfield's Cabinet.

—Judge Taft was made a Free Mason at Cincinnati, on the 18th, his initiation consuming only forty minutes. The ceremony took place in the presence of the highest Masonic authorities of seventeen States. He is a member of the lodge of which his father was Master.

—Addressing the Chamber of Commerce in that city, he spoke of the Treasury deficit and of the condition of business. There was a halt, he said, because business was waiting for the new tariff. He was very hopeful that after the coming revision a revival of activity would so favorably affect the revenue that receipts would no longer fall below expenditures. —The House Committee, reporting the Sundry Civil Bill, has reported in it the restriction concerning the use of secret service men to which the President has so earnestly made objection. This is due in part to the recent testimony of Secretary Garfield and other officers representing several departments that the work of those departments has not been affected injuriously by the restriction. This testimony is at variance with the assertions in Mr. Roosevelt's messages. He has sent to the Senate Committee a long letter in reply to the report upon this subject recently made by Senator Hemenway, saying that this report was inaccurate and misleading in important respects and pointing out errors alleged to have been made. —A bill creating the Calaveras National Forest has been signed. It preserves the grove of great trees in Cali-

ornia. They were in danger. The owner accepts in exchange standing timber of equal commercial value elsewhere on the public domain. —The bill giving statehood to New Mexico and Arizona has been past in the House without a dissenting vote, but favorable action upon it in the Senate at the present session is not expected. —While the Naval Appropriation bill was pending in the Senate last week, the size of the two battleships was reduced from 26,000 to 21,000 tons by what appeared to be a decisive vote, but on the following day, after an earnest appeal from Mr. Lodge, the original tonnage was restored. Mr. Lodge said it would be necessary hereafter to keep a powerful fleet in the Pacific. A resolution was adopted providing that, in the discretion of the President, half of the entire navy might be kept in Pacific waters at all times. By a vote of more than four to one the masts were restored to the ships. This reverses action taken by the President.

—During last week there was no revival of the movement against the Japanese in the Pacific States. An attempt in the California Legislature to obtain anti-Japanese legislation by indirection was promptly defeated. Two or three of the bills discarded in California were introduced in Montana. Public attention was directed to two bills in the Hawaiian Legislature, designed to deprive Japanese of fishing privileges. Late reports say that these bills have been laid aside. —In a special message to Congress, the President recommends that a Federal Children's Bureau be established, and asks for legislation that will harmonize in all Federal territory the laws and practices in regard to the care of dependent children. One of the duties of the proposed bureau would be to investigate and report upon all matters pertaining to the welfare of children and to child life. The National Government, he says, "is the only agency which can effectively conduct such general inquiries as are needed for the benefit of all our citizens." He transmits a report of the proceedings of the conference, recently held in Washington, on the care of dependent children, and approves the conference's conclusions.

The Panama Canal Libel Suits

Indictments in the Panama Canal libel case were returned

on the 17th by a Federal grand jury in Washington, and bench warrants were issued for the arrest of the defendants, who reside in New York or Indianapolis. Those accused in the indictments are as follows:

Joseph Pulitzer, proprietor of the New York *World*; the Press Publishing Company, which publishes that paper; Caleb M. Van Hamm, managing editor, and Robert H. Lyman, night editor, of the same journal; Delevan Smith and Charles R. Williams, owners of the Indianapolis *News*.

The indictments, which are very elaborate, were filed before Justice Gould, in the Criminal Court of the District of Columbia. It is charged in them that the defendants, in news articles, editorials and cartoons (all of which are quoted or reproduced) unlawfully and maliciously sought to vilify and defame the persons whose names follow:

Theodore Roosevelt (the President); William H. Taft (the President-elect); Elihu Root (recently Secretary of State); Douglas Robinson (brother-in-law of the President); Charles P. Taft (half-brother of the President-elect); William Nelson Cromwell (who was attorney for Panama); and J. Pierpont Morgan, the well known banker.

The removal of the defendants from their places of residence to Washington will be opposed by their attorneys, who rely upon the decision of the courts in the similar suit against Mr. Dana, of the New York *Sun*. District-Attorney Baker, of Washington, however, says that the decision in that case is no longer authoritative, because it has been overruled. It is now expected that indictments will be returned in New York as well as in Washington. Therefore removal of the *World* defendants to Washington may not be required. The alleged libel, of course, was the publication of the story that a profit of more than \$30,000,000 was made by a syndicate of which Charles P. Taft, Douglas Robinson and Mr. Cromwell were the leading members, and that these men were enabled to make this profit by the aid of, or by collusion with, the responsible officers of the national Government. Mr. Cromwell on the 17th published a statement. The story, he said, had been concocted two years and a half ago by unscrupulous persons,

some of whom had criminal records. They attempted to blackmail him, demanding \$25,000 as the price of silence. They were then, he says, in frequent conference with the managers of the *World*. He repelled them and reported to District-Attorney Jerome their attempt to blackmail him. On the eve of publication, he continues, he warned the *World* that the story was wholly false, that the authors of it had sought to extort money from him, and that he had appealed to the District-Attorney. In conclusion he says that there was no American syndicate, nor any purchase of the French companies' securities by Americans, as alleged; that every dollar of the \$40,000,000 was paid directly to the companies, as the official receipts show; that every step in the transaction was a matter of official public record in France; that the money was distributed among 270,000 persons by authority of the French courts, and that the receipt of each of these persons is on file in the court and bank records of France. The *World* asserts that the proceeding is a political one, in which Mr. Roosevelt seeks to satisfy his personal desire for revenge by punishing two papers that supported the Democratic ticket. The *News* says the principle of the freedom of the press is at stake.

Engineer's Report on the Canal

The President sent to Congress on the 16th the report of the engineers who accompanied Judge Taft during his recent visit to Panama, saying, in a brief message, that it "shows in clearest fashion that the Congress was wise in the position it took, and that it would be an inexcusable folly to change from the proposed lock canal to a sea-level canal. In fact," he continued, "this report not only determines definitely the type of canal, but makes it evident that hereafter attack on this type—the lock type—is in reality merely attack upon the policy of building any canal at all." In their report the engineers unanimously approve the type, saying that a change to sea level would add greatly to the cost and the time, without compensating advantages either in capacity of the canal or in safety of navigation.

They discuss at length questions relating to the Gatun dam, approving the plan and saying they are confident that the structure will be safe, tight, and durable. The height of it, they add, can with safety be reduced by 20 feet. Minimizing the possible danger of disturbance by earthquakes, they assert that the injurious effect, if any, would be "much the same" upon the structures proposed for a sea-level canal as upon those of a canal with locks. They think the canal may be finished even before January 1st, 1915, "if all goes well." There is much commendation of the condition of the work, the provision made for employees, and the medical and sanitary service. The report's estimate of cost is \$360,000,000, the payment of \$50,000,000 to Panama and the French company included. Saying that the original estimate of \$140,000,000 included neither the \$50,000,000 nor the expense of sanitation and Zone government (\$27,000,000), the engineers remark that this present estimate exceeds the first one by only \$143,000,000, nearly one-half of which can be accounted for by changes in the plans, while "the remainder is to be attributed mainly to the higher unit cost of the different items of the work." Colonel Goethals, the chief engineer, while testifying recently before one of the committees of Congress, estimated the cost at \$375,201,000. The cost of a sea-level canal, he said, would be \$477,600,000.

The Tennessee Steel Merger

After testimony had been taken concerning the purchase of the Tennessee Coal and Iron Company by the Steel Corporation in November, 1907, the Senate Committee on the Judiciary referred the matter to a subcommittee for a report. While this report has not been published in full, what is said to be the substance of it has been printed in the daily press. It is said that those voting for the report were Messrs. Kittredge, Republican, and Culberson and Overman, Democrats, who were opposed by Messrs. Clark and Tillingham, Republicans. If the published summaries are trustworthy, the report was strongly critical of the action of President Taft and Attorney-General Bonaparte. The committee was required

by resolution to ascertain whether the President had exceeded his authority in permitting this merger. The subcommittee reports, so it is asserted, that the President actually approved the transaction, when application to him was made by Judge Gary and Mr. Frick; that he was not authorized to do this; that his action amounted to a suspension of a law; that he had no authority to give to the Attorney-General the instructions which the latter received; that the Attorney-General deserves censure for failing to execute the law; and that the merger was a violation of the Sherman Anti-Trust act. It also finds, the press dispatches say, that the merger was not required to prevent a dangerous extension of the panic; that only one firm of brokers was seriously involved; that the property acquired is worth a great deal more than was paid for it by the Steel Corporation; that the purchase of it gives the Steel Corporation control of 62½ per cent. of the entire supply of high grade iron ore in the country, and a monopoly of the steel trade in the South; and that the transaction tends to make a steel and ore monopoly for the entire country. It is said that the report will be approved by a majority of the full committee.

The Opening of Parliament

Parliament was opened on February 16th by the King and Queen, who rode in the state coach, drawn by eight cream-colored horses, and escorted by the guards, from Rockingham Palace to Westminster and back. Queen Alexandra wore for the first time the Cullinan diamonds, cut from the largest stone ever found and a gift from the Transvaal Government. Two other processions shared the attention of the public on the same day, the suffragettes and the unemployed. The former are renewing their efforts to enter the Houses of Parliament and every day adopt some new tactics. On the day of the royal procession Miss Muriel Matters rose above the city in an airship with "Votes for Women" on its banners, but the aeronaut was not able to guide the balloon, so instead of following the King to Parliament, where she was preparing to shower down handbills on

the crowd, it was blown in the direction of Holloway Jail, much to the amusement of the spectators. On the 18th two attempts were made to get at Premier Asquith. In response to a call for "volunteers for dangerous duty" over sixty women assembled in Downing street and endeavored to push their way through the lines of police, mounted and on foot, which were drawn up to oppose them. The women charged repeatedly, but the police held their ground and arrested twenty-three of them, who all went to prison rather than pay the fines imposed. In the evening Mrs. Despard, with sixteen other ladies in evening dress, took taxicabs to the House of Commons and insisted on their right to present a petition to the Premier, but they were refused and arrested. The procession of the unemployed was composed of seven or eight thousand poor women and girls, led by a band playing "The Marseillaise." The King in his Speech from the Throne expressed his gratification at the conclusion of arbitration treaties with France, Italy and Spain, and the progress of the negotiations with the United States. In reference to the legislative program of the Government he said:

"The Irish land and the housing and town planning bills will be reintroduced and also a bill for the disestablishment and disendowment of the Church of Wales. Measures will be proposed for the better organization of the labor market thru a system of coordinated labor exchanges, with which other schemes for dealing with unemployment may subsequently be associated. A bill will be introduced for the constitution of boards of trade in certain branches of industry in which the evil known as sweating prevails. A measure will be introduced to alter the law affecting Parliamentary elections and registration in London.

"In connection with the financial arrangements of the year proposals will be brought forward for amending the old age pensions act in certain particulars in which in practice certain inequalities of treatment have been found to arise. Bills will be presented to amend the law as to inebriates, the supply of milk and the hours of work in shops."

The Franco-German Agreement

The agreement between France and Germany in regard to Morocco, which removes from the sphere of international controversy the troublesome question of the commercial and political rights of these countries,

takes the form of a joint declaration of the following tenor:

"The Government of the French Republic and the German Imperial Government, actuated by an equal desire to facilitate the execution of the Act of Algeciras, have agreed to define the significance which they attach to its clauses with a view to avoiding any cause of misunderstanding between them in the future. Consequently, the Government of the French Republic, wholly attached to the maintenance of the integrity and of the independence of the Shereefian Empire, decided to safeguard economic equality there, and accordingly not to impede German commercial and industrial interests, and the German Imperial Government, pursuing only economic interests in Morocco, recognizing at the same time that the special political interests of France are closely bound up in that country with the consolidation of order and of internal peace, and resolved not to impede those interests, declare that they will not prosecute or encourage any measure calculated to create in their favor or in favor of any Power whatsoever an economic privilege, and that they will endeavor to associate their nationals in business for which these may be able to obtain contracts (*l'entreprise*.)"

The British, Russian and Spanish Governments were informed by the French Government, and the Italian and Austrian by the German. The announcement was made on the day of the arrival of King Edward in Berlin, in order that it might not be thought the result of that meeting. The negotiations leading to it were carried on between the French and German Legations at Tangier during the summer of 1907, but Germany at that time was unwilling to conclude the agreement. On January 6th, however, Baron von Schön, the German Foreign Secretary, in conversing with the French Ambassador at Berlin, M. Jules Cambon, about the Near Eastern question, expressed a desire to take up the question again. This was done, and an exchange of *pour-parlers* brought the matter to a conclusion in thirty-two days. The agreement seems to meet the legitimate and immediate demands of both parties and is in accordance both with the International Convention of Algeciras and of the Anglo-French Convention of April 8th, 1904, which precipitated the trouble by offending Germany. In fact, the wording is in part the same as in the Anglo-French Convention in recognizing "the special political interests" of France in Morocco and in insuring equality of commercial opportunity to Germany and other countries.

The South African Constitution

The union of the
British Colonies in
South Africa is an

event of as great importance as the formation of the United States, for the country involved has a greater area than all the Atlantic Coast States and may include a large part of the African Continent. If we include Southern Rhodesia, which tho not entering into the present union will doubtless soon belong to it, the area is 517,370 square miles and the present population 557,000 whites and 4,112,000 negroes. On account of its importance we give below a very full abstract of the proposed South African constitution as drawn up by the recent convention of representatives of the four colonies, the Cape of Good Hope, Natal, the Transvaal and the Orange River Colony, as it has been transmitted to England for approval and to the separate colonies for their ratification. Of course considerable changes may be made in it before it is finally adopted. The preamble is as follows:

"Whereas it is desirable for the welfare and future progress of South Africa that the several British colonies therein should be united under one government in a legislative union under the crown of Great Britain and Ireland.

"And whereas it is expedient to make provision for the union of these colonies which may voluntarily assent thereto and to define the executive, legislative, and judicial powers to be exercised in the government of the union.

"And whereas it is expedient to make provision for the establishment of provinces with powers of legislation and administration in local matters and in other such matters as may be specially reserved for provincial legislation and administration.

"And whereas it is expedient to provide for the eventual admission into the union as provinces or territories of such parts of South Africa as are not originally included in such union.

"Be it therefore enacted, etc."

The constitution will take effect by royal proclamation within a year after the passage of the act by the British Parliament and the union will include any two or more of the four colonies whose parliaments have agreed to it. Other colonies not becoming part of the original union, and other British territories of South Africa may be admitted on said terms as to representation and otherwise as are approved by the Parliament of the union. The executive government of South Africa is to be administered by a Gov-

ernor-General, appointed by the King as his representative, with a salary of \$50,000 a year. The Executive Council, consisting of not more than ten ministers, shall be chosen from the members of Parliament by the Governor-General to administer the departments of state and holding office during his pleasure. The legislative power of the union shall be vested in a Parliament, to be styled the Parliament of South Africa, which shall consist of the King, a Senate and a Legislative Assembly, the Governor-General having the power to call Parliament into session and to prorog and to dissolve the Senate and the Legislative Assembly simultaneously or the Legislative Assembly alone. There shall be a session of Parliament once at least in every year. For the first ten years after the establishment of the union and until otherwise provided by Parliament, the Senate shall consist of eight Senators appointed by the Governor-General in Council and eight Senators elected by each original province. The Senators shall hold their seats for ten years. Of the eight Senators appointed by the Governor-General four shall be "selected on the ground mainly of their thoro acquaintance by reason of their official experience or otherwise with the reasonable wants and wishes of the colored races in South Africa." The election of the eight Senators from each province shall be by a joint session of the two Houses of the Legislature of each province sitting as one body and presided over by the Speaker of the Legislative Assembly, voting "according to the principle of proportional representation with the single transferable vote." This method of voting is specified in almost all the other clauses of the constitution. The qualifications of a Senator are as follows: He must be thirty years of age; be qualified to be registered as a voter for the election of members of the House of Assembly in one of the provinces; have resided for five years within the union; be a British subject of European descent; and in the case of an elected Senator be the registered owner of immovable property within the union to the value of not less than \$5,000. The House of Assembly shall be composed of members chosen directly by the voters of the union in electoral divisions of which

the method of delimitation is specified in detail. The distribution of the first election is Cape Colony, 51; Natal, 17; Transvaal, 36, and Orange, 17. This may be increased, but not diminished, according to the changes in population as shown by a quinquennial census. Parliament is authorized to prescribe the qualifications which shall be necessary to entitle persons to vote at the election of members to the Legislative Assembly, but "no person, who, after passing any such law is registered as a voter in any province shall be removable from the register by reason only of any disqualification based on race or color." The re-division of electoral districts in each province and the allocation of additional representatives to which the provinces may have become entitled after the quinquennial census are to be carried out by a commission of three judges of the Supreme Court of South Africa appointed by the Governor-General. A member of the Legislative Assembly must be a British subject of European descent and have resided five years within the union. The Legislative Assembly continues for five years and no longer, but may be sooner dissolved by the Governor-General. Each Senator and member of the Legislative Assembly receives an allowance of \$15,000 a year, from which is deducted \$10 for every day of absence from the session.

"Parliament shall have full power to make laws for the peace, order and good government of South Africa. Bills, appropriating revenue or money, or imposing taxation shall originate only in the House of Assembly. The House of Assembly shall not originate or pass any vote, resolution, address or bill for the appropriation of any part of the public revenue to any purpose unless such appropriation has been recommended by a message from the Governor-General."

In the case of a disagreement between the Senate and the Legislative Assembly they meet in joint session and decide by majority vote. When an appeal is presented to the Governor-General for the King's assent he shall declare "that he assents in the King's name or that he withholds assent or that he reserves the bill for the signification of the King's pleasure." The King may disallow and annul any vote within a year after it has

been assented to by the Governor-General. The chief executive officer of each province is the Administrator appointed by the Governor-General, preferably a resident of such province, holding office for five years and irremovable except by the Governor-General. There shall be a Provincial Council in each province, consisting of the same number of members as are elected for the Legislative Assembly and elected by the same voters in the same electoral divisions. There shall be freedom of speech in the Provincial Councils. Each Provincial Council shall elect three to five of its members to form with the Administrator an Executive Committee for the province. The powers of the Provincial Council are restricted to the following: (1) Direct taxation. (2) Borrowing money on the credit of the province. (3) Education, other than higher education. (4) Agriculture. (5) Hospitals and charitable institutions. (6) Local institutions. (7) Local works and undertakings. (8) Roads and bridges. (9) Markets. (10) Fish and game preservation. (11) Punishment by fine or imprisonment for violation of laws of the province. (12) All matters which in the opinion of the Governor-General are of a merely local or private nature in the province. (13) Other subjects delegated by Parliament. The judges of the Supreme Court of South Africa shall be appointed by the Governor-General and not be removed from office except by the Governor-General on an address from both Houses of Parliament in the same session praying for such removal on the ground of misbehavior or incapacity. The seat of the Government of the Union is Pretoria and the seat of the Legislature Cape Town:

"Both the English and Dutch languages shall be official languages of the union, and shall be treated on a footing of equality and possess and enjoy equal freedom, rights, and privileges; all records, journals, and the proceedings of the Union Parliament shall be kept in both languages, and all bills, acts, and notices of general public importance or interest issued by the Government of the Union shall be in both languages."

This constitution may be repealed or altered by a two-thirds vote of both Houses of Parliament sitting together.

The World of Life:

As Visualized and Interpreted by Darwinism

BY ALFRED RUSSEL WALLACE, LL.D., D. C. L., F. R. S., ETC.

The World of Life is a new and original work, which has transformed zoology, botany and physiology into new sciences and radically influenced modern sociology, philosophy and theology. For such a survey of Darwinism in the light of a half century of unparalleled scientific activity no one is better fitted than Dr. Wallace, whose paper embodying the same idea was presented with Darwin's at that memorable meeting of the Linnean Society of London in 1881. This is our reason for departing from our custom by devoting so large a part of our space in this and the following number to a single article.—EDITOR.]

THE theory of natural selection, commonly called Darwinism, is one of the most simple and easy of comprehension in the whole range of science; yet, after fifty years of continuous exposition and study, there is perhaps none that is so widely and persistently misunderstood.

This is the more remarkable because it is based upon facts of nature which are not only universally admitted, but are well known at least verbally to every man who takes the slightest interest in living things; and further, this misunderstanding is not confined to the ignorant or unscientific alone, but prevails also among the educated classes, and is found even in our highest seats of learning among the teachers and highly placed professors of various departments of biology.

It is not my intention here to combat these strange misapprehensions in detail, but it is my hope—if I can succeed in placing the subject before you in all its simplicity—while yet fully emphasizing its underlying complexity and grandeur, to satisfy you that the theory of Darwin is the only one that is in accordance with Nature herself, with her most obvious facts and phenomena, with the broad and fundamental laws which are in action now and have been thruout all past ages, and that any less far-reaching and less fundamental theories are altogether inadequate and unmeaning.

Why Darwinism Is Simple and Intelligible.—Some readers may be surprised at my statement that the theory of Darwinism is essentially simple and easily understood. What I mean is that it needs no special training to understand it; no laboratory work is required, no

knowledge of anatomy or physiology, more than can be obtained from observation of the structure of the rabbit and the partridge, the oyster and the crab that we dissect, or see dissected, at the dinner table. The facts appealed to are, thruout, the facts of external nature, which every one has (or ought to have) the opportunity of observing for himself, and which, as regards foreign countries, are to be learnt from the most popular works on natural history. And the more important principles arising out of these facts are also of the most simple and obvious nature, so much so that the objection is often made that they are self-evident truisms; while many people feel, with Huxley, that the real marvel is that the theory was not thought of and applied long before. As a matter of fact, it *was* several times thought of and was very clearly stated, but never applied to the solution of the problems of the origin of species before Darwin and myself so applied it. The reason of this failure was that those who discovered the principle had no sufficient knowledge of or interest in the great facts of external nature to see its obvious application to the solution of the problems it presents.

It is perhaps for the very reason that Darwinism is so simple that it is so persistently misunderstood. Those who have gone thru a long course of study in the anatomy, physiology or embryology of animals or plants, very naturally think that a theory which can dispense with all their work (tho it is often strikingly supported thereby) cannot be of much value; while it often happens that those who have the most extensive knowledge of these departments of biol-

ogy do not possess the special type of faculty that is essential for a full grasp of the great masses of fact which underlie and are essential to the actual working of the principle of evolution through natural selection.

All this and much more will, I hope, be made clear as we proceed with the examination of our subject.

Numbers, Variety and Intermingling of Life-forms.—The first great group of facts to which I must refer is that of the vast numbers, the astounding variety, and the universal intermingling of the species or forms under which life is manifested on the earth.

Taking first the vegetable kingdom, as that upon which the very existence of animal life depends, and limiting ourselves to the higher or *flowering* plants, as those best known, and which from our point of view are alone of importance, we find that so comparatively poor a flora as that of the British Isles comprise about 1,800 species (counting only the species and sub-species in Sir J. Hooker's "British Flora"), but probably over 2,000 on the estimate of most local botanists. Europe has about 9,000 species, while in the whole world there are now about 136,000 described species, but perhaps nearly twice that number, if the whole area were as well explored botanically as Europe.

Great mountain regions even in the temperate zone are usually very rich. Thus, the European Alps, in an area about equal to that of Britain, has about 4,000 species, while the mountains of China and Japan are still more productive. Certain areas in tropical countries are probably the richest of all, but few of these have been sufficiently explored.

For our special purpose it will be more interesting to consider briefly the facts as to how the 1,800 British species are distributed over its area. The most important and interesting feature is, that while there are a small number of species which are each strictly confined to very limited areas—such as the lovely *Gentiana verna* in a few square miles of upper Teesdale, in Yorkshire; the pretty little *Simethus* in a small pine wood near Bournemouth, and several confined to single mountains in the highlands of Scotland or Wales—yet the majority of

the species are either universally spread or widely scattered over the greater part of the country, so that almost every county, tho having little more than one-fiftieth or even one-hundredth of the total area, yet has somewhere about half the total number of species. Much smaller areas often possess a very large number of species proportionally; and this applies to all the chief groups of animals as well as to plants.

The proportionate increase of species as the area diminishes. This often depends on the greater or less variety of rock in the compared area, but also, in part, on the past history of the regions in a way we can only imperfectly understand. This is well shown in the case of the Cape of Good Hope, where an area less than half that of Great Britain (the Cape district) contains about 4,500 species of flowering plants (including almost all the known species of *heaths*, *pelargoniums*, etc.), while the Cape peninsula itself, only a little larger than the Isle of Wight, has about 2,000 species.

There are many such interesting cases to be found in our own country, but the facts are difficult to get at. The most striking I have met with is that of the parish of Edmonsham, where, in $2\frac{3}{4}$ square miles, the Rev. E. F. Linton has collected 640 species, more than half the number found in either Dorsetshire or Hampshire, the former having 350 times the area and the latter nearly 700 times. This is explained by the fact that the parish is about half on the chalk and half on the early tertiary formation, with an undulating surface, many small streams, an abundance of woodland, old pastures and wooded hedgerows, all favorable to a varied vegetation.

The facts now briefly indicated show us how wonderfully complex must be the adaptations of species to each other, which enables such great numbers to live together each in their special station and due proportion.

I must, however, before quitting this branch of my subject, call attention to the close dependence of insect on plant life, so far as it is illustrated by the number of species of each. We know that the larvæ of the *Lepidoptera* almost all feed upon living plants, and

that while some plants support several species, yet there are single species which feed on several distinct plants. Often, however—perhaps generally—each insect feeds upon its peculiar plants; and it is at all events suggestive that the numbers of species of flowering plants and of *Lepidoptera* *ææ*, in Britain, so nearly equal. Beetles, however, whose larvæ feed upon both animal and vegetable matter, in all stages of decay, are much more numerous. To fully discuss this subject would itself occupy a volume, but the facts now given show the remarkable intermingling of species in the same area, and this applies in different degrees to every form of animal life, perhaps even more than in plants.

Powers of Increase of Plants and Animals.—One of the most important of the factors—perhaps the most important of all—in the development of the world of life from its earliest appearance to the present time, is the enormous capacity for increase posset by every species of living thing. This is perhaps best shown in plants, in which the possible increase annually is not only twofold or fivefold, as in some of the higher animals, but usually many hundred and often many thousand fold.

A good-sized oak tree, in an average year, produces an enormous quantity of acorns, perhaps 100,000 or more in number; while Kerner states that a common British weed, one of the hedge mustards (*Sisymbrium Sophia*), produces an average of three quarter million of seeds; and that if all of these grow and multiplied for only three years the whole land surface of the globe would not hold them. A tall spike of maglove, loaded with its rather large seed-vessels full of minute seeds, probably has quite as many, as have many of the orchids and other plants, so that the powers of increase in the vegetable kingdom seem wholly beyond any possible need, especially when we consider that the oak lives some hundred or more of years, and only *one* grown out of its successive annual crops is needed to replace it.

Yet the consideration that *all* animal life depends upon vegetation may enable us to see how important it has been that no adverse conditions of drought or flood, of hurricane or volcano, should be

able to destroy the plant life over any considerable area, without that area being rapidly replenished with food for animals, who would in the meantime destroy much of the vegetation in adjacent areas.

Turning to the animal kingdom, we still find the reproductive powers always ample and often enormous. The slowest breeding of all is the elephant, which is supposed to rear one young one every ten years; but as it lives to more than one hundred years, Darwin calculates that in seven hundred and fifty years (a few moments only in the geological history of the earth), each pair would, if all their offspring lived and bred, produce nineteen millions of elephants.

The smaller mammals and most birds increase much more rapidly, as many of the smaller ones produce two or more families every year. The rabbit is one of the most rapid, and Mr. Kearton calculates that, under the most favorable conditions, a single pair might easily, in four or five years, increase to a million. Australia, being so favorable in climate, vegetation and absence of enemies, they have so multiplied as to become a nuisance and almost a danger, and tho their introduction was very easy, all our powers of destruction seem, so far, impotent against them.

It is interesting to note that the numbers of many of the species of animals bear little or no relation to their rate of increase the slowest rate being amply sufficient to keep up the greatest population when the conditions of life are otherwise favorable. Two well-known cases are those of the American bison and the passenger pigeon of the same country. In the eighteenth century the bison ranged over almost the whole of temperate North America, being abundant in Pennsylvania and Kentucky, sometimes reaching the east coasts, while within the memory of living persons it occurred all over the western plains in vast herds of 10,000 or 20,000 each. The passenger pigeon lays only two eggs, but seldom rears more than one chick in each nest. The quantity of these birds was formerly enormous. In the early part of the nineteenth century the ornithologist Wilson gave a wonderful account of them. One of their breeding places

in Kentucky was a tract of forest forty miles long and several miles wide, and in this space (in April and May) almost every tree was crowded with nests, both on the higher and lower branches. As soon as the young were fully grown people came from the whole country 'round and camped there, feeding on the young birds and carrying away sacks or even wagons full of them. During this time the noise made by the myriads of birds, both with voice and wing, was a continuous roar like thunder, so loud as to render it difficult to make oneself heard. The ground was covered with broken limbs of trees, eggs and young pigeons, on which herds of hogs came to fatten, while high overhead birds of prey—hawks, buzzards, and eagles—were sailing about and seizing the young birds from the nests. The country people cut down the trees most laden with nests and sometimes got 200 young pigeons from a single tree. The parent birds daily roamed the country to a distance of nearly 100 miles for their food. Wilson describes one of these great flocks on its daily excursion as being more than a mile wide and of very great depth, in the air far above gunshot. They flew with immense speed—50, 60 miles an hour—and the stream went on for several hours before it diminished in density, and some hours more in straggling parties. He calculated, roughly, that this one flock, going to and from one breeding place, contained about 2,000 millions of birds, and this was only one out of many such aggregations known at that time in the United States.

Now, the spread of cultivation and the clearing away the forests have entirely destroyed this most striking illustration of what Darwin termed a dominant species; which, though so apparently defenceless, with so many enemies, and with a very slow rate of increase, was yet able to maintain such an enormous population.

An equally remarkable, but somewhat different phenomenon is that of the curious little Lemming of the north of Europe (something like a very short-tailed vole), which at intervals of ten or fifteen years, under some unknown favorable conditions, increases so enormously in the Arctic and sub-Arctic mountains of

Scandinavia as to overrun the adjacent parts of the country, always migrating southward and spreading out east and west towards the sea. The migrating hordes march on slowly, increasing as they go, devouring the country like a flight of locusts, sometimes continuing their march for from one to three years, but always going on, and never returning, crossing over lakes, climbing over houses, eating their way through haystacks till they ultimately disappear in the Ocean. The whole great invading army thus melts away, the remnants being everywhere cleared off by the multitude of enemies attracted to the feast. A somewhat similar picture of the sudden increase of swarms of rodents is given by Mr. Hudson in that wonderful chapter of his fascinating "Naturalist in La Plata," entitled "A Wave of Life."

Insects show the same phenomena, but they generally possess a still higher rate of increase. The queen bee lays from 2,000 to 3,000 eggs, and many moths are equally productive. But one of the most striking cases is that of the flesh-fly, which lays 20,000 eggs, and these go through their complete transformation of grub and pupa to perfect fly in two weeks. Linnæus calculated that the progeny of three of these flies would devour a dead horse as quickly as could a lion.

These overwhelming powers and possibilities of increase thruout the whole realm of nature must never be forgotten, for they serve to explain many of the phenomena of the world of life. They afford as it were the material and motive power which has led to the interpenetration of so many widely different types, all securing their food and that of their offspring in the same localities yet in many different ways so as not to interfere with each other—in the earth, the water, or the air, in field or forest, on marches, or dry uplands, or sandy wastes. Thus in the course of ages every vacant place in nature has come to be occupied, and immediately one type dies out others are ever ready to take its place. Exactly how this has been effected we shall see a little later on.

Birds afford many illustrations of this specialization. Our Tree-creeper has a

slender curved bill and very strong feet and toes, adapted to run up the trunks and branches of trees and pick out the small insects that hide in the crevices of the bark. In South America there is a quite distinct family, the *Deudrocolaptidæ*, specialized for a similar purpose. A still more numerous and more highly specialized family are the Woodpeckers, whose chisel-like beaks, extremely hard skull, and elastic, very muscular neck, enable them to cut away the solid wood of trees, so as to reach the various kinds of large grubs which make their burrows there. Their very long and extensile tongue with a horny barbed tip enables them to pierce and draw out the defenceless insect. These three families have thus been modified to obtain insects from trees, yet are not related to each other.

Inheritance with Variation.—We now pass on to consider two combined groups of facts which are of the most vital importance to a comprehension of Darwinism—inheritance and variation.

These are often termed "laws"; but, taken in their generality, they are the commonest and best known of all the facts pertaining to living things, and it is rather the *mode* and *extent* of their occurrence than the occurrence itself which are subject to special laws. Our ignorance of the fundamental *causes* of these two phenomena is often adduced as a difficulty in the way of the Darwinian theory, but it has really nothing to do with it, as all we require to know are the facts. The *facts alone*, not their causes, are the agents in bringing about Natural Selection.

The great fact of inheritance, of each species producing its like, is so common—so universal, even, that it is only the deviations from it that surprise us. That offspring should be like their parents seems to us quite natural and to require no explanation; it is only when there is a considerable difference that we begin to ask the reason why.

Inheritance, therefore, is a universal fact in the world of life; but it is not *absolute* and nobody expects it to be absolute. Never do we see a son absolutely like his father—even as the parents often are, and they are never *absolutely* alike. But in all well marked species of

plants or animals the offspring are so much like the parents as never to be mistaken for other species. Yet *variation* always exists; it is really very considerable even when small numbers of individuals are examined, and it follows certain laws of a general nature which are of great importance to a comprehension of Darwinism, and to these laws we must therefore devote some attention.

The first great law is, that the frequency of a certain amount of variation of any character, in any species of animal or plant, depends (in an inverse ratio) upon the amount of its departure from the mean value. It may be accurately represented in a diagram by what is termed the Curve of Error. Such a curve has been obtained by using measurements of 2,600 full-grown British men, taken at random. Only one man was so short as 4 feet 8 inches, less than ten were below 5 feet; but about fifty were 5 feet 4 inches, and above this height the numbers increase rapidly till we find 150 at 5 feet 7 inches, and 160 at 5 feet 8 inches. From this point the numbers at each successive inch of height decrease, just as they had increased up to that height, there being 150 at 5 feet 9 inches, only fifty at 6 feet, barely ten at 6 feet 6 inches, and only one who reaches 6 feet 8 inches. The point where the numbers reach a maximum show us the mean height of the whole of the men measured; and as there were numerically more of this particular height than at any other, and also more at each half inch or inch below or above it than at any lesser or greater height, we are almost sure to find that those about the mean height form the majority in every miscellaneous assemblage of people even when only a few hundreds in number.

With regard to the extreme of stature there is less certainty, just because they are so rare. Among even a hundred people you might chance to find a giant or a dwarf, but if a million were measured in Europe or America we should be almost certain to find some as tall as 7 feet, and others as short as 4 feet 4 inches.

Now, such curves of variation apply not to man only, but serve to show very closely what occurs with almost all the commoner animals and plants in a state

of nature. This was long doubted or denied, simply because no one had taken the trouble to collect and measure large numbers of individuals of the same species. Even Darwin himself did not realize how much and how universally most wild species vary. Hence he used misleading expressions, as "If they vary: for without variation natural selection can do nothing." And again: "A variety must, perhaps after a long interval, vary or present individual differences of the same favorable nature as before." These expressions (used in the "Origin of Species") have been seized upon and exaggerated, so as to present quite a false picture of the facts of variability in a state of nature.

I myself gave sixteen such diagrams in my "Darwinism," and since that first appeared far more extensive comparisons have been made, sometimes more than a thousand individuals being accurately measured. In every case, without exception, a large amount of variation has been found to exist in every part and organ, and almost every observer has re-observed the interesting and suggestive fact that the different parts of the individuals measured always exhibited a large amount of independent variability.

There is, therefore, now ample proof that the phenomena of variation here shown are such as are present throughout the whole realm of nature, while it has been found that in the lower and less specialized forms the variation is very much greater than among the higher.

The Law of Natural Selection.—The various phenomena we have now seen to form essential features of every part of the world of Life—its enormous extent and diversity of form structure and habits—the vast population of every species; especially of those which we term common—the great number and variety of the species which live together on the same area, each one more or less dependent on all the others, either as competitors for food or in escaping from enemies or from the elements, thus leading to a constant or intermittent "struggle for existence" of extreme severity—the almost incalculable powers of increase of every species, so that no vacant spaces can occur which are not very quickly taken possession of by the

ever-flowing tide of new life—and, lastly, the marvelous facts of *inheritance* with *variation*, in their combined effects, lead us inevitably to what Darwin termed "Natural Selection," or the preservation of favored races in the struggle for life. Herbert Spencer suggested the term, "Survival of the fittest," as more closely representing what actually occurs; and it is undoubtedly this survival by extermination of the unfit, combined with universally present variation, which brings about that marvelous *adaptation to the ever-varying environment*, which is an essential feature of every living creature which survives long enough to produce offspring.

All the evidence at our command goes to prove that species remain unchanged for long periods, certainly for many thousand years. Some few have no doubt become extinct during historical times, but that has always been due to human agency. Since the last Glacial Epoch, however—a period of time estimated for Europe as not more than 80,000 years, and in parts probably much less, the remains we find of plants and animals are all of species still living, though their distribution was then somewhat different from what it is now.

There is thus a wonderful stability of the forms of life under all the vicissitudes of climate and of general environment which have occurred during the last ten or twenty thousand years, or perhaps more, and this alone demonstrates the complete, tho generalized, adaptation of every species to what may be termed a constantly fluctuating environment; but fluctuating periodically and within defined limits, the average conditions during each century, for example, being almost identical.

Now this continuous preservation of the same complex aggregate of life-forms is evidently due to the series of facts I have endeavored to impress upon you—enormous powers of multiplication, combined with a large amount of variation of every part, every organ, every faculty, in each generation. For, let us consider what happens in one of those severe winters which occur only a few times or only once in a century, when even, in our favored climate, the ground is frozen two or three feet deep.

or buried for a month together in a vast snowfield. An enormous destruction from cold or absence of food then occurs among many of our smaller birds and mammals, but so wonderfully are they adapted to support life under these adverse conditions that some (probably many in actual numbers) always escape, either from capacity to resist cold or from greater ability to procure food, or from having found shelter—and these “fittest” that survive rapidly increase during the succeeding summer, and their offspring, for the most part inheriting their “fitness,” quickly stock the country with well-adapted forms.

It is this fact, of great destruction among adult animals recurring at long intervals only, that enables us to understand the large amount of *variation* that is found in average years. For this variability in the dimensions and proportions

of all the parts and organs, and no doubt also in the senses and faculties, such as sight, hearing, and intelligence, would seem to imply that the adaptation is *not* very close, for if it were these great variations from the mean could not exist. But when we recognize that the adaptation of each species as a whole is not to the conditions of favorable seasons only, but is sufficiently broad to withstand the stress of every kind of possible danger that may occur during hundreds or even thousands of years, we are able to understand how it is that considerable divergences from the mean, or most perfect adaptation, are of no perceptible disadvantage during ordinarily favorable years. In such years it is the inexperienced young alone that are eliminated, while most of the adults continue to survive for many successive seasons.

ROBERT N. WINTER. IN LATE

Lincoln and Darwin

February 12, 1809

BY ROBERT WHITAKER

BORN on the selfsame day, wide seas apart,
The Nazarean statesman of the West,
Divinely sorrowful, divinely blest,
The travail of two races in his heart;
And he who stalked shy truth with perfect art,
Unfearing as the martyrs in his quest,
A modern prophet of the great unquest,
A voyager reshaping the world's chart.

Both freemen in themselves and making free,
Nor less the one a doer of great deeds
That he pursued the quiet paths of thought;
Nor less the statesman and the warrior wrought
To disillusion men of olden creeds:
Emancipators both all time to be.

THE GLEANER, CHICAGO.

Home-Seeking in Panama

BY DILWYNN M. HAZLETT

[Mr. Hazlett is an extensive traveler. He has lived for several years in South America and has visited various European countries, but he prefers Panama for residence to any other part of the world that he has seen. He will in a few months buy himself a plantation in Panama and establish a home, to which his wife and children are to follow. His eldest daughter, a young lady, will accompany him from the start. This will be his fourth visit to the Isthmus. We hope that after Mr. Hazlett has been on the Isthmus a year or so he will write another article for us as rosy in achievement as this is in prospect.—
EDITOR.]

WITHIN six days from New York, by a journey not nearly so arduous as has been made by many a Western home-seeker, the worn, impecunious, wage-earning city-dweller may still secure a farm of his own in a land where every one who is willing to work gets rich. When I say that this is in Panama, and that it is there, on the Isthmus, that I, who have traveled thru Italy and France, have found the pleasantest spot I ever knew, and intend there, for the pure joy of the

place, to sink my small possessions in a plantation which shall be my home for the rest of my days, the statement usually provokes an argument. There are so many people ready to talk against Panama when they have never seen the country.

Knowing Spanish almost as well as my own tongue, I was able, when I went to Panama in 1905, 1906 and 1908, to put myself immediately in touch with the native people. The trouble with many tourists is that they expect to find every-

BLASTING AT BAS OBISPO.

View before the blast was fired. Four holes with a depth of 78 feet were drilled into the rock on the west side of the Canal.

BLASTING AT BAS OBISPO

Three hundred and fifty pounds of dynamite. The amount of black powder used was 6,600 pounds and the rock displaced amounted to 22,000 cubic yards.

thing just as it is at home. If that were so, the country they visit would not be foreign. The Panamanians are not accustomed to our way of living. They never make butter, for example, and they use no lard. The Panama planter could import a churn, I suppose, and make butter if he chose, for there are milch cows and plenty of good milk. Lard, too, comes now in tin cans into the cities of Panama and Colon, at a pretty high price. But olive oil and palm oil

one-tenth of the cultivation there that they require here. The farmers do not plow the ground when they plant corn, nor do they cultivate it afterwards, and yet each year three or four fine crops of corn are raised on the same piece of ground.

Not even when they plant for sugar-cane is any stirring up of the ground needed. I remember a certain field of sugar-cane in which I took much interest, from season to season. The cane

EXCAVATION FOR SPILLWAY AT THE GATUN DAM.

from the native trees are sweet and wholesome and abundant. Why not use them? We have simply to accustom ourselves there to things as common articles of diet which are necessarily luxuries in the States.

Nor do I intend to fly in the face of Panama usage by carrying an American plow to my plantation. There are now no plows in Panama, and I am not going to use them any more than the rest of the people do. The soil of the Isthmus is so fertile and the moisture is so abundant that fruits and vegetables do not require

was first planted eighteen years ago, and every year since that time a fine crop of cane has been taken off. The stripplings of the stalks are allowed just to fall to the ground; they make a perfect carpet between the rows of cane, keep down the weeds, and also help to retain the moisture in the soil. This is absolutely all that is done, but that same sugar-cane contains by government analysis *four times as much saccharine matter* per ton of cane as is contained in our best Louisiana cane.

More remarkable opportunities appear

ONE OF UNCLE SAM'S GROCERY STORES

to exist in cotton. In our country the cotton plant has to be renewed annually, but in the Isthmus of Panama you will see growing in the woods cotton trees 15 feet high, with as fine bolls of cotton hanging from the trees as are to be found anywhere in the world. If in Panama cotton were to be cultivated, one cannot understand why the plant would not take on this tree form and save the time and expense of annual planting. This is one of the subjects of investigation in the United States Government Experiment Station in Panama.

The objectors spoke most against the climate, when they tried to discourage me from Panama. My visits were made in the wet seasons of 1905, 1906 and 1908, for several months each year. The wet season extends from April to November. This period for its reputed heat is the time most dreaded; the dry winter (so called, altho there are two or three rains every winter) with its always green trees and green vines, and its flowers and vegetables fresh every day,

would attract anybody, but many persons are afraid of the summer by hearsay. I watched the thermometer faithfully in those summer months. The mercury never rose above 85 degrees, but ranged along from 74 to 85. Rains came about once a day, near the eastern coast, freshening the air delightfully. In July, for instance (except July of 1905, which was said to be exceptional, having only three rains in the month), the showers arrived usually at about 2 o'clock every afternoon, lasting for one or two hours. Sometimes they missed a day, and once in a while missed two days, and there was a little more rain on the Atlantic than on the Pacific side. The rest of the day was brilliant sunshine, and the air was delightful. I enjoyed the mere fact of being alive. My health was continuously excellent. I may add that I always wore the white linen suit of the Panamanians, and did not attempt to be comfortable in garments of tweed or broadcloth built for zero weather.

In looking at the death-rate reported

from Panama, one must remember that this represents a changing population, many of whom are not yet acclimated. Even without allowing this, the rate compares well with that of any city in the States. The percentage last October was only seven in 1,000, and last June was 12.35. If good living have anything to do with health, the Panama citizen can live well. By planting his garden and replanting at the right time, he can have a succession of radishes, cucumbers, lettuce, tomatoes and green corn, every day in the year. Tropical fruits are, of course, of an exquisite flavor undreamed of in the States. I have estimated that the living expenses of a family keeping house in the agricultural district of Panama ought to be only about one-half or one-third what they are in the States. Beef there is as plentiful as here, "spring" chickens flourish the year round, and as to fish it is claimed that the derivation of "Panama" is really "abundance of fish," for the waters on both coasts are filled with the finest kind of fish.

Intemperance is rare in Panama and

it will not be introduced with the incoming nation. I think our government control of the saloons in the Canal Zone presents a model for every community desiring temperance. Less drunkenness exists there according to my observation day after day, than among the same number of people in any State in the Union, not even excepting Maine or Kansas. The strictest regulations prevail and are enforced as to hours of selling, high license (fixed by the Commission at \$1,200 a year), the open argument of the bar, the prohibition of gambling devices, the refusal of liquor to minors, the moral character required of the saloon-keeper, and other matters tending to decency and sobriety. On Sundays the saloons are closed from noontime on; the closing on week-days is from 11 p. m. to 6 a. m. next day. This means an absolute lid, and woe be to the man who tries to lift it. If he violates this or any of the other rules, his license is revoked at once, and it will never be renewed. My personal testimony is that under no circumstances does the government permit the least in-

DINNER TIME AT A COMMISSION HOTEL, GORGONA.

fraction of its regulations for the saloons. There is no political influence nor pull that avails a saloon-keeper who breaks the law in the American Zone.

Nor is there any great amount of work for the police to do—a condition uncommon in a new country. Last May, out of the 38,000 employes of the government, 30,000 of whom were ordinary, dollar-a-day laborers, there were 504 arrests by the police. The average monthly number has decreased since then.

Going back a little into Panama from the villages of the American Zone, rich farm lands are to be secured, with titles from the Panamanian government, the prices running as low in some localities as 11 cents an acre. These cheapest lands are not lacking in fertility, but are remote; those most accessibly situated

sell as high as \$8 an acre. Other tracts vary between these two extremes. When I shall have become a Panama planter, I do not expect to pay for labor on my farm what our government pays to its day-laborers. A Panamanian day-laborer or "farmhand" in the interior is well satisfied with from 25 to 40 cents a day. This is his customary wage.

Thus the outlay for help is small, the sky and soil combine to bless all agricultural effort, and I believe there is an easier life ahead than the Southern planter of the States ever knew in his palmiest days. Panama is a country in which anyone who wishes merely to exist may lead a fairly comfortable life and do almost nothing, but a man of intelligence who is willing to work as we do here cannot keep from getting rich.

St. Louis, Mo.

One Way in the North

[The author of the following article, in her letter accompanying it, says: "If by any freak of fortune this article seems good enough to publish kindly withhold my name. If not, won't you find somebody who will present less clumsily the fact that there is a 'North' that Mrs. Harris does not understand?"—EDITOR.]

THE worm does turn. And some of us in the cold-hearted, narrow-minded, dollar-worshipping, pharisaical North, so often sketched by the gentle skill of Mrs. L. H. Harris, have played the unostentatious part of worm long enough. We want to turn. It is true that, in thus lifting up my pen, I am doing what no Southerner could do—I am breaking with tradition. For I belong to the silent North, to the people who do not make speeches; they only listen. They do not write articles; they merely read them. They are variously and picturesquely called "mudsills," "plain people," "the sinew of the nation," and the "great unwashed"; and they work, or fight, or vote, or die, as occasion demands, without answering.

Indeed, if this never reaches publication, I shall bear it calmly and unresentfully, for my people of the North are not used to self-analysis and self-defense, and rarely do we find among us "the pen of a ready writer." We are just ordi-

nary people, and if I say, at the outset, a few personal things, it is because my story so closely resembles that of many others that I feel it is typical.

My father, like almost all the ordinary boys of his neighborhood, "went to the war." He did not, like his brother of the South, buckle on his grandfather's sword, wring his father's hand, kiss his sweetheart, tear himself from the weeping slaves who begged to go with him, mount the thorobred that ate sugar lumps from his hand, and gallop away to glory. Truth compels me to state that the boys from my father's village rode gaily to the town nearest their prospective camp in a big wagon, singing with fervor the very unclassic ditty, "We'll hang Jeff Davis on a sour apple tree." There was grief at their going, but my people have never been accustomed to shed tears on the front piazza—and there was not always a front piazza on which to shed them. My father did have sufficient love of the heroic to have his pic-

ture taken—standing very straight, holding a rifle and “adorned as to his belt” with a huge pistol and a fierce knife! But the face above this warlike paraphernalia was very boyish and friendly. It was not hatred of his Southern brother that sent him into the fight.

From another village my mother’s brother went to the front, and so complete was the exodus from that place that my mother wrote for the school “Literary” a parody intended to edify a straggler who did not go soon enough.

But even the straggler reached the lines soon enough to serve three years.

With father, uncles and more distant kin all wearers of the blue, it is small wonder that “the war” (it was always “*the* war” to us, as if there had been no other!) was the Iliad of my childhood. Grant, Sherman and Sheridan were my heroes—with Lincoln’s figure looming ever larger, as “the wise years decide”—and no fairy lore was ever half so dear to me as the marches and counter-marches, the defeats and victories, lost and won at so terrible cost in that great conflict. The one name that I hated with a child’s unreasoning fury was that of Clement L. Vallandigham, and gladly would I have blotted him from Ohio’s history!

The seeds of sectionalism would have fallen on fertile soil had any one tried to sow them in my infant mind! But over against all narrowing influences was my father. Never once did I hear him speak unkindly or sneeringly of the Southerner. To my childish questions about the why and wherefore of the Rebellion came the unvarying answer, “They were brave men. We believed that we were right and they believed that they were right.” He never belittled the bravery of his one-time foes nor jeered at their religion. (How many Southerners have shown a like courtesy to their foes?) My people have long been Abolitionists—it was bred in the bone for generations—but I never heard them minimize the gravity of the negro problem.

My father saw again, in later years, the Virginia fields where he had gone as a “boy in blue.” I recall how gladly he spoke of meeting some ex-Confederates, and I know that the handshake and the

hour of reminiscence symbolized to him a true brotherhood—a sincere reunion of spirit. Did he seem to them like a nagging Pharisee? And yet his way of thinking about the South is the common way of his comrades who were at the front in the sixties.

Southern writers, keen and clear-minded as they often are, seem never to have realized that the money-grasping, dollar-worshipping citizens of the North are not soldiers nor the children of soldiers. The men of inflated fortune and collapsible conscience do not rush to the firing line when there is a call for troops. They did not do it in ’61. And I think we all remember that they did not in ’98. If we depended on the unco’ rich to be our defense in time of danger we should need to chain them to the post of duty, and even then they would probably vanish, carrying the uprooted post with them. The average Cræsus fears more things in heaven and earth than are dreamed of in the common man’s philosophy. You cannot make a soldier of him.

It would be quite as impossible to make a soldier of the degenerate son of the Cræsus. These men, whose excesses are the shame of the North, are not typical of any section. They are sometimes “prominent” in the newspaper sense, because it is not the way of the average Northerner to parade in print and rejoice when he beholds himself in headlines. My people of the North know that headline fame is “here today and gone tomorrow.” The Mellin’s Food baby or the Peruna portrait has more permanence. The Southerner, it seems, reads the headlines, decides that the North is morally rotten and spiritually hypocritical, and forgets—as in the days “befo’ de wah”—that there is a silent North that in time of peace works and in time of war fights—and does both honestly. It is slow of speech and reticent, but it has not forgotten how to stand by a principle, and, if need be, fall for it. It is sometimes my duty to teach history (for I am one of the daughters of Ishmael known as teachers), and never once have I used a textbook that did not give fullest credit to the bravery of the South and touch lightly the themes that might prolong a feeling of

bitterness in either section. Yet we of the North have our memories. Sympathy turns naturally to the conquered, but shall we forget the cost of the victory to the desolate homes of the North? The history I use this year gives a page of eloquent description to Pickett's charge, and dismisses Andersonville with a footnote. Surely this shows that we do not train our children to look only at the faults of the South. Does the Southern teacher praise Grant as generously as we praise Lee, I wonder? A few years ago a music teacher in the public schools—a born-and-bred Northerner of good old Massachusetts stock—said to me: "I do not like sectional songs on Memorial Day. I want the children to sing the truly memorial songs, that could be sung just as well down South. For we are one nation now." Is there an echo of that spirit from the schools of the South?

It is true that this silent, hard-working North has its follies. We have a childish faith that an elected politician will be a statesman, and that a good law will miraculously come forth from the statute book and enforce itself. This is why our laws are sometimes executed only in the hangman's sense of the word, and our civic righteousness is so often filthy rags. We have also an effervescing hope that the money-mad money-makers will some time have enough and be satisfied—as if the children of the horse-leech would ever cease to say, "Give!" And my peo-

ple have a persistent, stiff-necked optimism that makes them patient when the time for patience is past. We are veritable children of Micawber in the cheerful confidence that the future of this favored land is secure.

These are foolish habits of thought and we pay the penalty—in vested abuses that ride luxuriously on the "Limited," while reforms wait on the sidetrack. But despite these things, this great, silent North is sound at heart and decent of life. Its countless homes give their strength to the nation in the "common deeds of the common day." When disaster comes, and want and suffering follow, the heart of this so common people knows no dividing line between North and South, or East and West. But we have never learned to explain ourselves, and we have a puritanic tendency (from overemphasis of the doctrine of reprobation!) to conceal a virtue when we have it, instead of assuming it when we have it not.

We do not blame our sins on any other land or people. God shall judge them and us, and altho the eloquence of our prayers cannot rise high enough to save us, we dare rely on something "broader than the measures of man's mind." Not in argument, either with God or man, are we skilled in apology or defense, but once in a long while some one of us breaks the tradition of our silence to ask the scant justice of being understood.

CHAS.

Beside Life's Tide

BY ELAM F. DEMPSEY

You, Friend, and I have stood beside
Life's flowing and Life's ebbing tide;
Our hopes we've seen float out to sea,
While cruel storms beat pitilessly.
Thus stood we, Friend, uncrowned, forlorn,
When night came down upon our morn.

Thus stood we, while within there grew
A strength our faith from heaven drew,
And in that faith our souls abide;
God's ebbing is God's flowing tide!
Behold on it our hopes upborne;
The night has lifted from our morn.

And now, dear Friend, along the lea,
The sunlight and the quiet sea,
Tho in this peace there riseth not
The bond of loss and common lot;
Tho at his task each toils apart,
Each trusteth each, knit heart in heart.
You, Friend, and I have stood beside
Life's ebbing and life's flowing tide.

ELAM F. DEMPSEY

An Opera Festival

Under the modest name of "Special Performances" the Metropolitan Opera Company is announcing what practically amounts to an opera festival like those that have become so popular in Bayreuth and Munich, the only difference being that whereas those German festivals occupy all the evenings during a few weeks these Metropolitan special performances will be sandwiched in between the opera nights of the regular subscription season and will extend from February 20 to April 10. With the exception of Verdi's "Falstaff," which is to be sung on March 13, all the operas are by German composers. Beethoven's "Fidelio" was sung last Saturday; Mozart's "Figaro" and "Don Giovanni" are announced for Saturday evenings, February 27 and March 6, and Wagner's "Meistersinger," "Tristan," "Rheingold," "Walküre," "Siegfried" and "Götterdämmerung" for March 23, 30, April 5, 6, 8 and 10, respectively. "Die Meistersinger" and "Tristan" will begin at 5:30, with a long intermission for dinner, as they are to be given without cuts. The other operas will begin at the usual evening hours and will be more or less shortened, as usual.

The country as far west as the Mississippi has been placarded with announcements of these performances, and many, no doubt, will seize this opportunity to hear these masterworks, as interpreted by the best living singers and by such master conductors as Mahler, Hertz and Toscanini. The temptation to come to New York during these weeks will be the greater as the regular season at both houses will still be on, and thus a fairly

bewildering choice of operas is presented. In the matter of variety no other European city can offer anything equal to this opportunity; and as for the interpreters it is needless to say that nearly all of the world's greatest opera singers are at present engaged in New York. The difference between New York and foreign cities is illustrated by the fact that when Caruso sings in Berlin or Vienna three or four times the prices are quadrupled. Here he sings twice a week and there is no advance in the cost of seats.

German Opera Next Year

The opera festival is one of the plans of Mr. Andreas Dippel, who, as administrative manager of the Metropolitan, has done so much to restore the Wagner operas, including "Parsifal," to their former popularity. So strongly, indeed, has the tide been turned by him toward German opera that the Italianissimi have begun to clamor for the suppression of Wagner altogether, as the only way of prolonging the supremacy of Italian art. A rumor that there would be no German opera next season was promptly downed by the directors, who sent a note to the press saying that inasmuch as the report regarding the future position in the Metropolitan repertoire of German opera "is calculated to disturb and mislead that large portion of opera subscribers who, in common with most lovers of operatic art, admire German music, the Metropolitan Opera Company desires to state most emphatically and unequivocally that German opera in German next season will have as prominent a place in the repertoire as heretofore,

and that no change whatever is contemplated in relation to the personnel engaged in or to the manner and the matter of presenting German opera at the Metropolitan Opera House."

There is nothing new this month to chronicle regarding Italian opera. At Hammerstein's a German opera, "Salome," has drawn the largest audiences, and at the Metropolitan "Manon" was added to the French list. "Manon" did not arouse much enthusiasm, for several reasons: it is not one of Massenet's most inspired works; it is not big enough for the vast auditorium of the Metropolitan; the conductor had little conception of the delicacies and refinements of Massenet's music; and while the cast included the two most popular artists in the whole company—Caruso and Geraldine Farrar—they were not at their best.

The Sembrich Farewell

The last appearance of Madame Marcella Sembrich as a member of the Metropolitan Opera Company on the 6th of February was a historic event which will remain forever in the memory of those who were present. Women were moved to tears by simply reading the accounts in the newspapers of the demonstrations of admiration and affection showered on this occasion on the beloved prima donna; so it may be imagined how high was the emotional tension at the performance and the ceremonies of leave-taking which followed it. A reception was held the same evening at her hotel, at which some 200 celebrities were present, and on the following evening a number of prominent musicians and critics gave her a farewell dinner, at which more memorable scenes were enacted, one of the speakers being Paderewski; while Caruso spent the evening making caricatures of everybody and beating the drum for the dance which followed the dinner, in the early hours of Monday.

Madame Sembrich is known to many chiefly as a singer of florid music, such as is exemplified in the "Mad scene" from "Lucia." Her true pretensions lie, however, in her art of delivering a simple melody with beauty of tone and tender expression. For this reason she is the greatest of Mozart singers, per-

haps of all time, and her retirement from the stage will mean an irreparable loss. She is only fifty-one years of age, and her voice, in its proper sphere, is almost unimpaired. Why then does she leave the stage, where she is so much needed?

Chiefly, as she has herself admitted, because, after about three decades of service, she has become tired of always singing the old rôles. With the exception of Mimi in Puccini's "La Bohème" and Ulana in Paderewski's "Manru," there have been no new parts suited to her voice. She found that even the lighter Wagner rôles were too heavy for her, while Strauss and Debussy are leading into thickets, where she cannot follow. But opera is not the only kind of music in the world. The modern *Lied* or lyric song offers a wide field for the exercise of her rare art, and to that she therefore intends to devote herself. She returns to America next autumn for a long concert tour.

The Eames Farewell

Nine days after Madame Sembrich, another one of the leading prima donnas of our time bade farewell to the patrons of the Metropolitan Opera House, who had known her ever since December 14, 1891. Emma Eames made her début in her native country at the age of twenty-four, in the rôle of Juliet, which Gounod himself had taught her. Her Parisian triumph was duplicated here. The beauty of her voice was matched by the beauty of her form and face, and as against these her lack of skill in acting did not count for much. Her costumes in those early days were apt to be more beautiful than appropriate. Anton Seidel, who subsequently became one of her greatest admirers, once censured her severely on that score in a magazine article. Her singing was also generally held to be lacking in warmth and temperament.

Without losing any of the beauty of her voice, or the polish of her style, she gradually got away from the idea that an opera is a concert in costume. Her costumes became famous for their historic accuracy, and her dramatic talent showed a great improvement when she assumed the rôle of Desdemona, and still more so in the Wagnerian rôles of

Eva, Elsa, Elizabeth, and Sieglinde, which she impersonated enchantingly. Lack of sympathy with a certain conductor caused her, a few years ago, to give up the Wagner operas and devote herself to Puccini's, in whose "Tosca" she surprised her admirers by the astonishing realism of her acting and the passionate warmth of her singing. She is really at her zenith now, and her determination to leave the operatic stage was entirely the result of persistent ill health.

Decades hence opera-goers will tell a younger generation of the wondrous art of Emma Eames and Marcella Sembrich and of the rare treat of hearing them blend their voices in the letter duet in "Figaro" so marvellously that it was almost impossible to tell which one for the moment had the top notes. During her twenty years on the stage Madame Eames has appeared altogether in nineteen rôles. Like Sembrich, she will continue, for a time, to appear in concerts.

Unprofitable Popular Concerts

Every lover of good music sympathizes with Mr. Hermann Klein on account of his failure to make a success of his Sunday afternoon "Pops" at the new German theater. He faithfully kept his promise of providing good—often first-class—soloists and programs, from which dullness was sternly excluded; but the public did not appear in paying numbers, and the concerts had to be abandoned. Nineteen of them were given, at which twenty-six American singers, twenty-one American instrumental soloists, and ninety-three artists of various nationalities appeared. As all the music was sung in English, American composers had their innings; fifty-three of them were represented by seventy-eight songs, and altogether 344 compositions of various kinds were heard.

A Permanent Philharmonic

In failing to make ends meet financially, Mr. Klein shared the fate of most concert givers. The wail that it no longer pays to sing or play, except in the opera, comes from everywhere, in Europe as well as in America. The amazing success of Dr. Wüllner is an exception which emphasizes the rule by con-

trast. The orchestral societies, in particular, are in need of assistance. Time was when the Philharmonic Orchestra paid its members a handsome annual dividend. Its conductors, among them Theodore Thomas and Anton Seidl, got \$3,000 for their services. Today conductors of their prominence demand six or seven times as much—and they get it; but the orchestra has to pass around the hat. Thanks to a number of wealthy women, the Philharmonic is to be reorganized and placed on a permanent basis; the sum of \$80,000 a year, for three years, has been secured, and hereafter the players need not worry about their dividends, as they are to have a regular salary. Gustav Mahler has been secured as conductor for the first two years, and there will probably be two concerts a week from early in November to the end of April. It is to be feared that that is a greater number than the public will want, especially if the New York Symphony Orchestra also remains "permanent." The Boston Orchestra, to be sure, gives two dozen sets of concerts at home; but the Boston players do not have two grand opera companies to compete with them.

The Architectural League's Exhibition

The allied arts, decorative painting, sculpture and architecture, are well represented at this the twenty-fourth exhibition of the league, and it will be seen that they are in a healthy and flourishing condition. The authorities had the happy idea of bringing together examples and photographs of the work of the two veterans in the two first mentioned arts, namely, Mr. John La Farge and Mr. J. Q. A. Ward. To the former was presented a medal of honor. Mr. Ward's statue of Henry Ward Beecher at close quarters and without the accessory figures of children, holds its own as one of the most virile portraits in bronze in the country.

Among the architects who have distinguished themselves in competitions are Pell & Corbett with their design for the municipal group at Springfield, Mass.; and Palmer & Hornbostle, who won in the competition for a design for a college at Pittsburg. Trowbridge & Liv-

ington show photographs and modelled sections of the house of Henry Phipps, Esq., which was awarded a special medal for the best architectural work done in New York City in the last five years.

In the Vanderbilt gallery were shown competitive designs for the new municipal office building for New York by McKim, Mead & White, Howell & Stokes, and Carrère & Hastings. The latter firm also shows a model of the Bryant statue, which is to be executed by Mr. Herbert Adams and placed in Bryant Park, back of the new Public Library, and a model of the interior of the New Theater. Not the least interesting feature of the exhibition is furnished by the model shown in competition for a special prize, to be awarded to the best combination of the work of a sculptor, painter and architect. The subject given was "A Memorial to a Great Sculptor." Fourteen models were sent in, and the prize was awarded to August Jaegers, sculptor; Grace Johnson, painter, and Thomas R. Johnson, architect. Honorable mention was given to the work of Thomas Mott Shaw for his model and to Robert K. Roland for the decorative painting in connection with the model by Henri Crenier and Aymar Embury. This annual competition is likely to have a growing interest among the younger

men, and should in the future produce good results. Among individual exhibitors, Louis D. Vaillant has some charming color notes for decoration in Hotel Hermitage, New York.

A. A. Weinmann's model for Maryland Union Soldiers' and Sailors' Monument is excellent in workmanship, but the conception is almost ludicrous. It seems to present a female figure with helmet (War) and another, presumably Liberty, urging a young man to leave his peaceful occupation and defend his country; but the ladies in question seem to find it necessary to hustle and encourage him a good deal, and their facial expressions are far from dignified. The group is extensively padded and artificial. This latter defect runs thru a good deal of Mr. Weinmann's work, and we feel a lacking of any genuine emotional quality; so that in spite of the skill of his fingers, he rarely moves us.

Mr. J. S. Sargent has a number of sketches at the Knoedler Gallery, the record of an extensive trip on the continent. They are masterly studies in passing; brilliantly handled, sure records of color and light and shade, they never fail to convince and impart the exhilaration that sudden glimpses of form, color and sunshine convey to the trained perception.

A Great Spanish Painter

New York has been made to realize two things this month, of which most of its citizens were before unaware. One was the existence and charm of the building in West 156th street of the Hispanic Society, which Mr. Archer Huntington founded on good broad lines for the furtherance of our knowledge of things Spanish, and the other is the existence which he again has enabled us to appreciate of a mighty descendant of the seventeenth century artists of Spain in the person of Joaquin Sorolla y Bastida.

The work of Sorolla shows influence from the great naturalistic wave in French nineteenth century art but obviously Velasquez himself was very seriously studied by this modern master of other knowledge unknown to Velasquez. Knowledge of light and movement above all. No photograph can give a true idea of the brilliant technique of this man, whose eye seizes and whose hand fixes almost instantly all the movements and colors and characters to be seen in his country, especially by its seas. His vis-

ion is always clear, and poetic only as poetry dwells in his subject matter always; yet his things have other depth of splendidly virile achievements and of his school he has no rivals. In portraiture one is tempted to compare him with Sargent and to feel some similarity in points of view, but probably his best portraits are not here, while his best genre works are.

Never has the mother just after the birth of her child been so touchingly painted as in the large, quiet toned canvas, showing only the expanse of white covered bed, with the two heads appearing. The only darker spots, the mother's head turned in, are toward the wee mite, with eyes tightly shut. Seldom has the horror of deformity been so intensely painted as in the sad colored "Sad Inheritance," with its foreground group of crippled boys led down to the sea by the strong, stern priest, whom yet we feel is sympathetic, tho we can see only his back. A third large canvas, called in English "Oxen Preparing to Beach Fishing Boats," is as different again as possible, and such an absolutely true rendering of one of the sturdiest of

SWIMMERS.

Painting by Joaquin Sorolla y Bastida at the Hispanic Society.

activities for men, beasts and boats, that it fairly excites one, as would the scene itself. Then there are beautiful landscapes and many small sketches of the swimming and wading joys of young boys and girls he paints so often—merri-ly, gracefully, strongly, or in whatever mood the scene presented itself.

A portrait of Madrazo, the painter, in his garden is an exceedingly beautiful thing, but the large royal portraits lack sincerity, as it seems royal portraits must, tho a small one of King Alfonso is characteristic and consequently convincingly ugly. The exhibition will remain open until March 8, when it will be succeeded by a showing of work by another Spaniard, Zuluaga.

Other Exhibitions of the Month

February is generally the fullest of all months in art activities, and this month has been no exception. The Salmagundi Club has had its annual exhibition and sale, the proceeds of which are equally divided amongst the artists and the club. The Architectural League held an interesting festival on January 31, growing out of the present day interest in symbolic dancing. A beautiful procession, a lecture on Greek dancing, and some individual presentations of phases of the art entertained a great number of invited guests. The American Society of Miniature Painters has shown its annual collection at Knoedler's, with a high average of merit, as usual. Mr. Macbeth has shown groups of pictures by Henry W. Ranger and Paul Dougherty, two always strong painters. Mr. Dougherty is broadening his field successfully. At this gallery, from February 19 to March 4, will be a group of works by Arthur B. Davies, who is one of the greatest of living painter poets. At Mr. Montross's have been the annual showing of Messrs. T. W. Dewing and D. W. Tryon, always delightful in subtle beauty, and landscapes by Alexander Schilling, of much worth. At Bauer Holman's were beautiful textiles and Persian faience and antique glass, loaned from private collection. These, with the objects of art from the Duveen collection, which were sold at auction for \$177,460, gave lovers of these things a feast. Mr. Jacob H.

Schiff paid about \$40,000 for the set of Tissot illustrations for the Old Testament, which has been exhibited thruout the country.

Baltimore is enjoying its new Walters Gallery, opened early in the month. There are 990 pictures, and probably nowhere else in this country are there so few very poor ones, while the masterpieces by some of the greatest German, Flemish, Dutch, Spanish, French and Italian painters are many. Porcelains, jades, tapestries, furniture—all beautiful things—are there in great numbers also. Philadelphia is again seeing probably the best annual American exhibition with good things from nearly all the well known men and some new names; while Montreal, Canada, is coming into line with other American cities in the growing interest in art, with its progressive Art Association now presenting to the people a group of 500 modern French pictures, sculptures, ceramics, jewels and colored engravings, collected in France by a committee which included Rodin, Besnard, Frantz-Jourdain, and Lalique. The collection has been made as eclectic as possible, so that Canada has an opportunity of studying French art in all phases.

A Presentation Bowl

The silver bowl, of which the above is a picture, was presented to Dr. Paul Haupt by his pupils and friends on the occasion of the twenty-fifth anniversary of his connection with Johns Hopkins University as the head of its department of Oriental languages. Professor Haupt introduced the study of the Assyrian inscriptions into American universities,

and most of our Assyrian scholars have been his pupils. On the side of the bowl here shown is a copy of the lion hunt of King Ashurbanipal. Other designs are taken from Assyrian sculptures. On the lip of the bowl is the cuneiform inscription, "He found the secret, he revealed the mystery, he brought the account from the time before the Flood." This old text is made to apply to Dr. Haupt's edition of the Babylonian Epic of the Flood. The bowl was designed by the Samuel Kirk & Son Company, of Baltimore.

✱

The second international exhibition of pictorial photography, which was held at the National Arts Club February 2 to 20, was a distinct advance over a similar exhibition held at the club house seven years ago. Two hundred and fifty-five numbers were shown. The collection was a most excellent massing of modern pictorial photographic themes. The pictures in the exhibition were selected by a committee, of which Alfred Stieglitz was chairman, which is indicative of their high quality. The results obtained in many instances by mechanical means are certainly surprising to those who have not followed the recent progress in pictorial photography.

A retrospective and very interesting exhibition of the work of the Grolier Club since its foundation began at the Grolier Club House, No. 29 East Thirty-second street, on January 29th, and continues until February 27th, inclusive.

✱

The Drama

The theater is never fixt in its atmosphere; by the mere shifting of scene it can carry the audience hither and thither at will; it has inherent within it the ability to enrich experience and to quicken the imagination. In the one instance we see the value of a repertoire; in the other the moral, social and esthetic effect of the repertoire once it is established. But the only evidence of a repertoire in a playhouse today is to be found at the point where the one play of a long run *accomplisht* gives way to the other play, calculating on a long run to be. On Saturday night William Faversham, in "The World and His Wife," finisht his

engagement; on the Monday following Miss Julia Marlowe opened in Mary Johnston's poetic drama, "The Goddess of Reason." To strain a point, we might call Saturday and Monday evenings repertoire nights for Daly's Theater. We are carried from Spain to France on the same stage.

Never have we seen Miss Marlowe so possest of her richest poetic gifts as in the rôle of Yvette, a Breton maid of the troublous times of 1791. The lyric quality of her reading, the tender coloring of her girlish sorrow, the full power of her romantic passion, dominate scenes and passages which otherwise could not have been saved from their dulness. Miss Johnston's inventive attributes have failed her in this play form; we have seen her story over and over again; Irving gave us "Robespierre," Henry Miller "The Only Way"—and both of them of their kind were good; nor has "The Goddess of Reason" the claim to anything more than mediocre poetry of crude blank verse quality.

However that may be, the French Revolution is something of drama in itself, and the company gathered around Miss Marlowe adequately fills the canvas. It is a true source of pleasure to welcome such art as Miss Marlowe has at her command—a rich humanity and an intellectual force uncommon at present. Nowhere since Irving have we had more excellent stage scenes than "A Square at Nantes" and "A Judgment Hall in Nantes," where motion, color and constructive action bring credit to the stage director and to the management.

J. M. Barrie's name suggests piquancy; we are always sure that his angle of vision is wholesome, that he is human, clean and amusing. He escapes being over-mild and over-sweet thru his quaint humor. The odd title of the comedy in which Miss Maude Adams is starring,

JULIA MARLOWE
As "The Goddess of Reason," at Daly's.

STAGE SETTING FROM "THE GODDESS OF REASON" AT DALY'S

"What Every Woman Knows," by its very sound is full of a feminine curiosity which even men are sometimes known to possess; it were as difficult to indicate the plot as it were to catch the sunbeam dancing in and out among the clouds. You only know that there is a Scotch girl, the key to whose character is, "No one could love me who couldn't laugh at me a little"; that there is a hero who, intent upon learning, steals knowledge at night when the Wylies are abed, even as robbers steal silver from the drawer; that Maggie has three brothers as unique as herself, all intent on seeing her happily married. This is the status of the *dramatis personæ* on the night when John Shand, the hero, is "caught."

These brothers, whose shelves are lined with "ten yards of the most learned books in the language," which they can neither read nor understand, agree to educate this "thief," who is devoid of humor, provided he wed their sister after an allotted term of years. Shand is dogged, earnest, stolid in fulfilling his

part of the bargain; his intellectual capacity is sufficient to win him political posts, but his humor is lacking to make him realize that it is really Maggie who gives him what he most needs; even his speeches are permeated with her warmth, yet he does not realize it.

And so he falls into absurdities—what mortal would not if he could not laugh?—only to be saved in the end by the wife to whom he owes the larger part of his success. His love for her is gradually becoming humanized above the literalness of its Scotch demands, when Maggie puts the final touch. "Woman," she declares, "was not made from the rib of a man, but from his funny bone"—a fact which sends Shand into a roar of appreciation. After all, "the best of love and the test of love is laughter."

That funny-bone theory suits Shand, but it would not fit every man; however, the whole proposition is piquant, and as fresh as the May morning when laughter brings the man and his mate together. Miss Adams's personality, as usual, dom-

inates her shortcomings, for there is no doubt that if the public only loved this actress less, they would see how her individual charm just lacks an element of strength which makes her incapable of bringing out to the full her interpretation. In this respect Richard Bennett, as Shand, perhaps excelled her.

"The Dawn of a Tomorrow" is a very hopeful title for a play, and the rôle of Glad, as enacted by Miss Eleanor Robson, still more so. But Frances Hodgson Burnett will disappoint many readers of her novel of the same name when they see how trivial her dialog is, compared with the possibility which is in her underlying philosophy. Take a man whom science has decreed incurable; send him to the English slums, to Apple Court, where "the first thing you have to learn is not to jump when you are touched on the shoulder"—send him there, with every intention of killing himself, but suddenly brought in contact with a hopeful bit of humanity, lower in the scale than "Pippa," in Browning's poem, and a large opportunity presents itself for dramatization.

The interest of "The Third Degree," Charles Klein's latest play, is purely of the newspaper kind, close second in topic to Thomas's "The Witching Hour" in its telepathic scope, and perhaps reminiscent of Walter's "Paid in Full" in its Harlem realism. It deals with the police, who force a man, under strain, to confess to a murder when he is innocent; it considers very minutely the determined effort of that man's wife, who is of inferior social stock, to save her husband, tho every one is against her; it finally portrays how feminine persistency wins to her aid a lawyer of superlative force.

Nothing fundamentally big is emphasized, tho in parts vital sparks are emitted; Mr. Klein's arguments, even his characterizations, will not bear close scrutiny or close analysis; but, while the curtain is up, there is no gainsaying the fact that his story is interesting; his dialog is clever—not terse, or even tense, like Thomas's. Nevertheless, the piece is strongly acted by Mr. Edmund Breese as the lawyer and Miss Helen Ware as the wife; their distinctness of characterization is ably furthered by an excellent supporting cast; altogether, the piece may be safely considered "one of the successes of the season."

George Ade's "The Fair Co-Ed" is described as a "College comedy with music"; the scene is a Western college, where the only registered woman is Elsie Janis, who masquerades, dances, gives imitations, and utters those Ade-isms which represent a certain type of Indiana humor. In Bingham College, which is very much like every college, "every student is guilty until he proves himself innocent," the boys wear "passionate socks," and they are endowed with a foresight which a professor claims is not telepathy, but animal instinct. As an achievement, "The Fair Co-Ed" is not as distinctive as "The College Widow," tho it is of the same type, embellished with extras.

We wish, finally, to make note of William Collier in his farce entitled "The Patriot," which is interesting and clean. American frontier life and fashionable society life are thrown into contrast, and while of course exaggerated, afford healthy amusement in the situations which develop. The moralist might even be satisfied with the motive of the plot.

Initiative and Referendum in Oklahoma

BY L. J. ABBOTT

PROFESSOR OF AMERICAN HISTORY IN CENTRAL STATE NORMAL SCHOOL, EDMOND, OKLAHOMA

AT the recent election the voters of Oklahoma past upon five referenda or "State Questions," as they are officially designated. Four of these were defeated outright and one had a doubtful majority. The vote was

not a little disappointing, because from thirty to fifty thousand of the electors failed to express themselves either way upon any of the propositions.

Four of the five measures were submitted by the State Legislature and one

by initiative petition. Three were constitutional amendments, one a statute and one a mere question of state policy.

"State Question No. 1" had to do with the agency feature of the prohibition bill. Last winter the Legislature enacted an enforcement law in accordance with the prohibitory provisions of the enabling act and the Constitution. The law established agencies in all the county seat towns and in all other cities of over two thousand population. Friends of the measure argued that no prohibitory enactment could stand that did not make it possible to obtain liquor for use in the arts and sciences. But this provision of the enforcement law met so much opposition that the Legislature attempted to shift the responsibility for its continuance after November by providing for a referendum on the agency portion of the act. This was done, altho the Constitution clearly provides that emergency legislation is not subject to the provisions of the referendum. This was clearly extra-constitutional, and altho the bill was defeated by a considerable plurality, the courts have granted a writ compelling the chief dispenser and his agents in the respective towns to continue selling liquor.

The Oklahoma agency is in no way patterned after the South Carolina dispensary statute. Liquor in Oklahoma is never sold as a beverage by the State.

The law has the unqualified endorsement of all the temperance organizations in the State, and has been honestly and, we believe, successfully administered.

The second constitutional amendment provided for the "Torrens Land System." This method of transferring land is one of the pet hobbies of Speaker W. H. Murray. The energetic opposition of the abstract companies kept the

provision out of the Constitution during the session of the convention, in spite of the fact that Mr. Murray was then president of the convention. At the recent election this provision had a plurality of over thirty thousand. Yet it failed of enactment because fifty-five thousand electors were not enough interested or were too ignorant to vote either way upon the proposition, a majority of all votes cast at the election being required to enact a constitutional amendment.

The third provision for altering the Constitution concerned the location of the capital. The enabling act required that the State capital should remain at Guthrie until 1913.

This provision was, perforce, accepted by the Constitutional Convention, but is resented by other cities with capital aspirations and also by the Democratic majority thruout the State. Guthrie is the strongest Republican municipality in the commonwealth, and its large colored population makes it especially obnoxious to ardent negrophobes. The constitu-

HON. W. H. MURRAY

Speaker of the first Oklahoma State Legislature and president of the Constitutional Convention. Much of the progressive legislation of the new State is due to his influence. He is the especial champion of the Torrens Land System, and to his sickness during the campaign is probably due the fact of the defeat of the measure. Mr. Murray is an inter-married Chickasaw and is known as "Alfalfa Bill" in Oklahoma because of his numerous speeches at farmers' institutes in advocacy of this forage plant as a remunerative crop.

tional amendment was an open effort to vary the terms of the enabling act, and, because of this, was of doubtful legality. But an aspiring young legislator from a rival city succeeded in getting the matter before the people in the form of a referendum. It received a larger affirmative vote than any other proposition, but it also lacked by over twenty thousand the necessary majority of all votes cast. So the capital will probably remain where it is for the present.

The fourth referendum was merely to express an opinion upon a State policy. It is known as the "New Jerusalem," and is a scheme to build a new and perfect city as a State capital. When the matter was first broached in the State Legislature its enemies dubbed it the "New Jerusalem" and the name stuck. The argument following the printed bill distributed by the State for the enlightenment of voters explains that "it is proposed that the State shall select a capital site, at some point centrally located. By so doing and profiting by the sale of lots, it could be built and beautified without expense to the State, and the name commonly applied to it would be realized indeed and in truth." As this was merely the expression of an opinion upon a State policy the forty thousand plurality it received is regarded as having carried it; altho it, too, fell short of a majority of all votes cast. Doubtless the Legislature at its next session will attempt to secure a site for such a model city.

Question No. 5 was the only referendum presented by initiative petition. It was a statute to sell the school lands. Ever since the organization of the Territory in 1890 the tenants of these public lands have clamored for their sale. The lessees, because of their zeal and solidarity, have controlled both political parties for years. Had the Federal Government allowed the lands to be sold previous to statehood this magnificent school endowment would have been squandered long since, just as it has been in all of the States of the Middle West. But joining old Oklahoma with Indian Territory (which was given money in lieu of lands) has given the State such a large population not directly interested in the sale of the public domain that the bill of the lessees' lobby was defeated in

the State Senate. Immediately on the adjournment of the Legislature the lessees initiated the already discredited measure. The politicians of both parties very generally sided with them because of a servile cringing to their eight thousand votes, yet they were decisively beaten. In fact, the bill was defeated by almost a clear majority of all the votes cast—this, too, in spite of the fact that all of thirty thousand electors failed to vote either way upon the measure. This certainly was a victory worth while, for it leaves Oklahoma with a larger college and common school landed endowment than is possessed by any other commonwealth in all the world.

There is no denying that Oklahoma's first experiment with the initiative and referendum has not been entirely satisfactory. It has one of the lowest percentages of illiteracy of all the States in the Union. It probably has the smallest percentage of foreign-born citizens. Yet one voter in every nine paid no attention to any of the "State Questions." This is generally ascribed to the thirty thousand negro voters of the commonwealth. The negroes, however, are not all illiterate, nor are they the only ones who failed to vote upon the various referenda. The fault lies partially with the ballot. One can vote a straight party ticket by merely putting his X in the circle under the "rooster" or the "eagle." There is no way to vote upon referendum propositions in such wholesale fashion.

The remedy seems to be to abolish the pictures at the head of the ticket, and to require the elector to vote upon every proposition upon the ballot in order to have his vote counted. But even if it remains as it is few Oklahomans would think of abolishing direct legislation. It is a wholesome restraint upon the Legislature, and besides if these five measures had been voted upon at a special, instead of a general, election, each majority would have registered the opinion of by far the greater portion of the intelligent voters of the State, and every measure would have been settled exactly as the people intended it to be, for at a special election the sluggish and unintelligent would have no way of blocking the will of the great majority.

Literature

The Cradle of Civilization

THE study of men is of a higher rank and more important than the study of rocks, or mosses, or crabs. We are, therefore, glad that the Carnegie Institution does not give all its attention to biology or geology, but also regards anthropology, ethnology and archeology worthy of consideration. Its chief work in these lines thus far has been directed to prehistoric man as his remains can be found in the central plateau of Asia. Prof. Raphael Pumpelly, a distinguished geologist, had in previous years made special studies of the geology of Mongolia and Turkestan, and his investigations had led him to the conclusion that in these highlands was a peculiarly hopeful field to discover the beginnings of human culture. These magnificent volumes,* following one of four years ago, give the fruit of these studies.

Very briefly the following are his conclusions. A vast central sea once occupied the center of Asia. It was surrounded by chains of mountains and had no outlet to the ocean. The Caspian is the chief remnant of those waters. From the end of the Glacial period there has been a gradual drying up of the region, and this process is still going on, and the lakes are decreasing in size. There has been a succession of waves in this desiccation and vast spaces now desert were inhabited from ten to two thousand years ago. Of the mounds which represent the sites of ancient cities Professor Pumpelly selected Anau, an oasis in the desert of Turkestan, and made careful excavations, sifting the earth and labeling every object found, whether of flint, potsherd, bone or metal, to the depth of over sixty feet to the virgin earth, and thus discovering the succession of culture. The lowest stratum represents a long-headed race which inhabited the region 8,000 to 10,000 B. C., following the

Glacial period. They had no glazed ware, no burnt bricks, no stone weapons, no gold, silver or tin, no domesticated dogs, goats or camels, but they had wheat and barley, and unglazed hand-made pottery with geometrical designs; they had spindle whorls and so wove cloth: had some knowledge of copper and lead, and began to domesticate the ox, sheep and even the horse. In the next period they had flint sickles, turquoise and lapis lazuli heads, and domesticated the goat, camel and dog. Even in the third period there were no celts of stone or metal. Indeed, they were shut in from the rest of the world by their mountains, until the drying up of their region forced them out into India, to the south, and into Asia Minor and Europe, in successive vast waves of migration.

These and other conclusions are supported by careful and thoro investigations by experts whose work fills up the larger part of these volumes. One discusses the earthenware, another the bones of men and animals, another the wheat and barley, and another the geologic relations. It is a very important conclusion that the earliest inhabitants were divided into two classes, one agricultural and the other hunters, contemporaneous, and that close after the Glacial period the two principal grains were known, and even horses as well as sheep and pigs domesticated and probably carried with the people in their migrations westward, where they then learned the use of stone and bronze weapons.

But who were these long-headed people, so different from the round-headed Chinese? Were they Aryans? Professor Pumpelly does not venture to say, but we gather that he believes that the Aryans came from this region. Much further investigation and excavation are necessary to reach safe conclusions. These volumes with their wealth of illustrations are a worthy counterpart to the magnificent series of volumes on Susiana edited by DeMorgan, and we heartily congratulate the Carnegie Institution on the happy choice of its field of investiga-

* *Excavations in Turkestan. Discoveries of man, his tools, and his culture in the central plateau of Asia. By Raphael Pumpelly, director of the expedition. In two volumes. (Carnegie Institution.)*

tion and its good fortune in securing the service of Professor Pumpelly; and we hope that further explorations will be carried on, if not by him at least by his son who devoted his attention to the physiographical elements of the great problem.

New Sermons and Addresses

THE pastor of the Broadway Tabernacle preaches to multitudes of people every Sunday. But he has a much larger audience, many of whom have never looked upon his face and who know him only thru his books. Many a preacher has cherished his "Quiet Hints to Earnest Preachers," and many "earnest people" have enjoyed his "Quiet Talks" who will never hear his voice. To all such and to many others this last book of Dr. Jefferson's¹ will be welcome. It is not a studied treatise tho it is full of the evidence of hard study. Its rhetoric is not perfect, tho there are in it passages of rare beauty. The close of his introductory chapter, to go no further, is singularly felicitous in expression. There are repetitions, too, and even some of his titles are not sufficiently distinguished from others. But we venture to believe that none of his hearers cared, and we are willing to believe that none of his readers will care. The book is about Jesus's character, and it is written by a man who believes in Him and who has studied widely about Him and who knows what others have said and thought about Him. He believes that the supreme mission of the Christian clergyman is to help men to fall in love with the character of Jesus. It is a book for believer and skeptic, for men and women of all shades of religious belief. Conciliatory without being compromising, it succeeds in presenting the character of Jesus in all its attractiveness, without sacrificing any truth. He sounds all the winning notes but does not blink His requirements.

Robert Speer has always found time, ever since seventeen years ago he published a little book of studies in the Gospel of Luke, to work and to write on subjects not intimately connected with his business of being a hard worked secretary of

a great Board of Foreign Missions. His latest volume² is like Dr. Jefferson's noted above in that it gives the impression of being just what it is—a series of devotional addresses not too carefully prepared for publication, by a man of rich spiritual experience and of adequate scholarship. Our devotional books so-called are frequently twaddle—full of strained exegesis and of cheap sentiment. Not so this one. One feature of Mr. Speer's books of addresses has always been his aptness in quotation of good poetry—he has seemed marvelously well read in the Christian poets old and new.

For some reason in *The Master of the Heart* his choice does not appear to us to be so happy as in some of his other books. But we read him just the same and we like him and we recommend him.

The Reverend Dr. Farrar presents to us a story of the organization of a congregation of children in his parish which he called *A Junior Congregation*.³ He thinks that this work has been the leading feature in his ministry. A chapter is devoted to showing the need for such a work and discussing this plan for meeting it. Then follow sample sermons for a year. The sermons are not very good. Neither are they very bad. The chief merit about them is that they must have been interesting. They are not too condescending nor are they too learned. Dr. Farrar does not talk down to children and they must have understood him. But it surely was hard work. The amazing fertility of resource—the gymnastics in illustration show the precariousness of the ground on which the preacher stood. Other preachers will wonder and admire. Whether they will imitate will depend on their capacity.

The Way of Perfect Love. By Georgiana Goddard King. New York: Macmillan & Co. \$1.25.

Like a pageant, in which the figures are but the medium for the visions of color and of grace, move the scenes of Miss King's dramatic poem. Real life it is not, but a series of pictures, each in itself exquisite, and full of subtle beauties of phrase and allusion. The deft in-

¹THE MASTER OF THE HEART. By Robert E. Speer. New York: Fleming H. Revell Co. \$1.00.

²A JUNIOR CONGREGATION, 1884-1908. By James M. Farrar, pastor of the First Reformed Church, Brooklyn, N. Y. New York: Funk & Wagnalls. \$1.20.

¹THE CHARACTER OF JESUS. By Charles E. Jefferson. New York: Fleming H. Revell Co. \$1.50.

terpretation at the close of the volume it were well to read first, since the string on which to thread the pearls is for most a matter of moment. But the value of the poem is quite aside from whatever may be the chosen parable, and lies in the delicacy and carefulness of its workmanship and in the wealth of its fancy. The gay chat of the handmaidens; the wistful songs of the three spinners; the street cries, by which the city square is skilfully peopled; the single lines packed with imagery by a vivid word, perhaps; these are their own excuse for being. In a book of plays for marionettes, published some years ago, are to be found charming forerunners of Messer Piepowder's lyrics. Let one of these many praises of the wide sky and the long road show their beauty:

"All the wide, various world one uses.
In lonely farms, where shepherds keep:
To lie all night among the sheep:
On the warm-smelling earth next tide;
The third the kindly hearth beside

"In little towns; or, four-deep, share
The church steps on the city square;—
. . . . among themselves
What women talk by tens and twelves
Above the nuzzling babe; to know
What tanned men brood on, all the slow
Hot noontide 'neath the berried hedge;
Yea, what the wren says in the sedge,

This is the wisdom, this the part
Of dusty foot and restless heart."

The Higher Life in Art. A Series of Lectures on the Barbizon School of France. By John La Farge. New York: The McClure Company. \$2.50.

Mrs. Scammon, widow of John Young Scammon, left at her death a fund to the Art Institute of Chicago for lectures upon the history, theory and practice of the fine arts. In May, 1903, Mr. La Farge delivered the first course of Scammon lectures, but their publication has been delayed until the present year. Of all American painters Mr. La Farge is best fitted to treat of the higher life in art and of the artists of what he would prefer to call the Fontainebleau rather than the Barbizon school. It is from these men that our best American artists have caught their inspiration. The six lectures that compose the book open with the author's account of the conflicting ideas represented by such men as

Ingres and Delacroix fifty or more years ago, and of his own interest and acquaintance with the art of France at that period. He gives illustrations of the early promise of Chassériau and the genius of Géricault and of Delacroix, the forerunner of the Fontainebleau artists. The third lecture is wholly devoted to Millet. The author denies that Millet had socialistic tendencies. He says that the impulse "that created these pictures came from long inheritance of hard work, accepted in a religious disposition of mind," . . . "in acceptance of labor and suffering as the lot of many and, indeed, as a divine gift." Decamps, Diez, Rousseau, Dupré, Daubigny are all well characterized, and the closing chapter is given to Corot. In summing up Mr. La Farge bids the students of his audience to look "to these men for the principles rather than sometimes the practice of their work. For, of course, they, like all men of the nineteenth century, almost without exception, painted not as well as they ought to." The full-page illustrations, of which there are more than sixty, are well chosen and are arranged in groups, each artist's work by itself. To a picture lover the book is full of charm and to an art student it overflows with helpfulness.

Priests of Progress. By G. Colmore. New York: B. W. Dodge & Co. \$1.50.

This is an anti-vivisection tract in the guise of a novel. As a story it is of no interest and as an argument it is of no importance, for it consists of the usual series of garbled quotations and misinterpretations on a thread of fiction. The vivisectioners may, at times, show too little regard for the feelings of animals in their search for truth, but on the other hand the anti-vivisectioners at times show too little regard for both truth and the feelings of human beings in their desire to save animals from suffering.

Richard Mansfield: The Man and the Actor. By Paul Wilstach. New York: Charles Scribner's Sons. \$3.00.

Joseph Jefferson once outlined the pathetic character of the actor's transitory art; it was *apropos* of Charles Burke's words in his own version of "Rip Van Winkle": "Are we so soon

forgot when we are gone?" Indeed, this whole attitude is applicable to the fate of Richard Mansfield, who dared much and risked more for the sake of an unselfish ambition. We say this in spite of the vagaries of temperament, so sportively treated by reporters during his lifetime. Mansfield was what he willed, in the face of the theatrical conditions around him. The only monument so far worthy the endeavors of a great actor—great in the sense of realizing the dignity of a profession—is the recent biography from the pen of Mr. Mansfield's literary adviser. Mr. Wilstach has brought to his task all the necessary grasp of facts that go to make an excellent record; besides which, his familiarity with the many-sided personality of the man, assured him a point-of-view which no other person could have had, outside of the immediate family. The chronicle of Mansfield's life as here given is not brilliant, tho it is painstaking and sympathetic. Nothing has escaped Mr. Wilstach in the interpretation of the rôles, but he has, in his writing, failed to identify the actor with the part. To some extent this fault was inherent in the work of Mr. Mansfield; it was only occasionally that genius slipped the sheath of personality and stood on its own ground. Such moments as the personality of "Ivan the Terrible," or as the prosperity of "Peer Gynt" off the coast of Morocco, completely enveloped the actor in his art. Henry Irving assumed nearly seven hundred rôles during his stage career; in mere bulk this far exceeds Mansfield's record. In fact, when one considers that Mansfield, the actor, as he is familiar to American theatergoers, did his work in less than twenty-five years, calculating from Chevrial in 1883, the vividness of his portraits so indissolubly identified with him, is more than noteworthy. It would be hard for many reasons to conceive of others tampering with "Cyrano" now that Coquelin and Mansfield are gone. In detailing the professional side, Mr. Wilstach has not omitted consideration of the personal phase. Here he was aided by Mrs. Mansfield, who held letters revealing the depth of sentiment, imagination and loyalty which marked Mansfield, the man. A careful reading of this biography, the identification of its many anecdotal references with the personality of the actor,

will not fail to give a certain magnitude to Mansfield, as an admirer sees him. It is difficult, in biography, to mingle the spirit with the fact. Mr. Wilstach has taken cognizance of the nervous tension of the actor, of his overwhelming individualism. But he has done it in the manner of a record, not with the surety of a characterization. Notwithstanding, the book is an important contribution to dramaturgic literature, and is written in rare devotion and sincerity.

The Winterfeast. By Charles Rann Kennedy. New York: Harper & Brothers. \$1.25.

On Winter Night's Feast, October 14th, 1020, the tragedy which hounds and hunts a lie reaches its culmination in the home of Thorkel, a Viking of Icefirth, Iceland. That truth is the only safe foundation upon which to build a home and its happiness is the thesis of the new play by Charles Rann Kennedy. During twenty years the fatal lie has slept, but its awakening brings terrible retribution upon the old viking and the household he loves. That the innocent must and do suffer because of unrighteousness in those nearest them is no new message, but in *Winterfeast* it is clothed in all the persuasiveness of poetic drama. The idyllic scene between the young lovers in the fourth act, as they prattle playfully together, unknowing of their impending fate, is full of beauty. The scene that follows is as full of hateful passions. The fierce thirst for vengeance, the "blood-hate in the heart," which cries for recompense, seems so removed a part of that far-off time that it is difficult to win sympathy for it enough to understand these savage people. The tragedy is too complete, and it repels the modern spectator to have, at last, left on the stage only the evil priest and the man whose lie has destroyed all the rest. Yet his punishment is greater than theirs. There will not be the popular appeal in *Winterfeast* that there was in "The Servant in the House," which Mr. Kennedy brought out last year; partly because the public prefers comedy to tragedy, a happy ending to a hopeless one, but partly, also, because it has not been trained by the drama, as usually presented, to loathe a lie and to see the grim justice in its relentless recompense.

Literary Notes

....One of the beneficent products of the Red Cross is a little volume on how to prevent accidents and what to do for injuries and emergencies. It is entitled *American National Red Cross Text Book on First Aid and Relief Columns*. The author is Major Charles Lynch. It is a compact and handy manual, well illustrated and practical. (Philadelphia: P. Blakiston's Son & Co. \$1).

....Again from the educators we have a little book from Nicholas Murray Butler, president of Columbia University, entitled *The American as He Is* (Macmillan, \$1.00). The book is the series of lectures delivered before the University of Copenhagen and is a dispassionate statement from the best point of view of the American as a political type, as apart from his government and in his intellectual life. The book makes little pretense at telling anything new, but is given rather as an explanation to foreigners who may have heard bad things about us and wish to be corrected by one who stands in high authority.

....Hugh Black is an optimist as to the American college student. In his new volume of University Sermons, *The Gift of Influence* (Fleming H. Revell Company), he writes: "No one can know intimately the mass of students without being struck by the ready response they give to every high thought and every generous passion. No one can despair of the future who knows the splendid material the colleges of the land contain, and how eagerly men long to attempt great tasks. Men are anxious to know how best to invest their lives, and never before was there such keen desire to find a place to serve."

....In a little book of 89 pages Dr. Riddle, who is professor at the Western Theological Seminary of the Presbyterian Church at Pittsburgh, tells the simple yet intensely interesting story of the newest English revision of the New Testament. Most of the material has already appeared in different forms, but it is valuable to have the facts over his signature. The *Standard Revision* is a magnificent monument of American scholarship and its story ought to be familiar to all students of the Bible. This little book should be on every study table. Dr. Riddle's temper is admirable. In the description of the University Press's unauthorized American Revision he is almost too restrained. Perhaps he is right, however, as little harm can be done. (Philadelphia: Sunday School Times Co. 75 cents.)

In *Principles of a New England Education*, by Dr. William A. Mowry (Silver Burdett, \$2.00), we find a complementary school sketch of Dr. Mowry and a somewhat less sketch of education, now that on the present time. The writer being in the state of things concretely, and from the beginning, does not seem to question the idea that all is for the best, and whatever is in educational matters is right. It is the work of a teacher and teachers must necessarily be enthusiasts. To one outside of the profession it seems a somewhat clamorous and also monotonous ring as

of the school-bell, and even if the text would allow it, the series of portraits of the author would never let us forget that the teacher was standing at the door. Many educational matters are touched upon and discussed, the different kinds of schools, the educational periodicals, and something of legislation. The treatment, however, is without buoyancy. A book to be studied rather than one to be read.

....From the Press of the Atlantis, New York, we have in Greek a small book by Spiridon Paganeli, entitled *From the Akropolis to the Altis*. It might best be called a reverie on a journey from Athens to Olympia. The author notes with rapture every phase of his journey, passing those magnificent shores which bewitch every one who has once tasted their charm. He touches on many a loved spot before he reaches his goal, intent on weaving a beautiful web of history and fable. He who has once felt the charm of such a journey is bewitched like the lotos-eaters. The author is already caught. In his enthusiasm he writes in what is practically classic Greek, so that the classical student of Greek could with slight difficulty converse with him. A large body of his own countrymen, however, would not be able to understand him. Eleven good illustrations are given, the best being the "Hermes" of Praxiteles and the "Nike" of Paionios.

Pebbles

ONE difference between the man and the woman is that the man isn't particular about having them wrapt in tissue paper and tied with holly ribbon.—*Atchison Globe*.

GUEST—I see that you have counted up my bill wrongly; fourteen marks, instead of thirteen.

Waiter—Well, I thought perhaps you might be superstitious.—*Mcgendorfer Blatter*.

JUDGE (sternly, to Pat and Mike, who have been arrested for fighting)—Now, which one of you took the initiative?

Prisoners (in unison)—Begorra, sir, not I; wan of the bystanders must have swiped it.—*Yale Record*.

"THERE are some spectacles," said the lecturer, "which one never forgets."

"I wish you could tell me where I can get a pair of them," exclaimed an old lady in the audience. "I am always forgetting mine."—*Chicago News*.

BANKS—I had a new experience yesterday, one you might call unaccountable. I ate a hearty dinner, finishing up with a Welsh rabbit, a mince pie, and some lobster à la Newburgh. Then I went to a place of amusement I had hardly entered the building before everything swam before me.

Binks—The Welsh rabbit did it.

Bunks—No; it was the lobster.

Bonks—I think it was the mince pie.

Banks—No; I have a simpler explanation than that. I never felt better in my life; I was at the Aquarium.—*Judge*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Americanization of Panama

THERE are now two strips of Americanism stretching from the Atlantic to the Pacific. One is 2,500 miles long and 1,200 miles wide. The other is forty-five miles long and ten miles wide. The little strip has been under the control of the big one for five years and is already as much like it as if it had always belonged. For 350 years the isthmus of Panama was under the influence of the Spanish; for twenty-five years it was under the influence of the French; yet it is now more American than it ever has been Spanish or French.

Man has great difficulty making a permanent impression on tropical geography. He cuts down forests, digs ditches and builds cities, but when he goes away Nature begins to clean up after him, and soon has things tidy again after her own fashion. The ditches are filled in and the scar of the city is obliterated.

No spot in the new world has had so much money spent on it with so little to show for it in the end as this little neck of land between the two great continents. Of the treasure cities of Spain for which four nations fought, hardly

enough remains to identify the sites. The golden highway thru which the wealth of Ind and Cathay and the tribute of the empire of the Incas flowed to the Escorial has been lost in the jungle.

The \$400,000,000 expended by the French in Panama would have left few traces if we had not stepped in to complete their work. The notch in the Culebra Hill would have been filled by the creeping clay and the dredged channels would have been closed by the silt of the Chagres and the Rio Grande; the houses were rotting away and the machinery rusting in the jungle.

Are there any reasons for thinking that our occupation of the Isthmus will be any more lasting? There are some. The conquest of the tropics by men of our race does not seem so hopeless as it did a few years ago, when Benjamin Kidd wrote that the white man could live in the torrid zone only as a swimmer under water by frequently coming to the surface to breathe. We now at least know what our real foes in the jungle are. They are not the savages and the snakes, not the heat and the humidity, but microscopic animals and plants that can be fought with the weapons of science, altho they outnumber us billions to one. All around the equator there are now experiment stations, where attempts are being made to grow northern races, and among these none is more successful than the one we have established in the region that has the worst reputation for disease and death. The thermal equator passes very near to Panama and on the Atlantic Coast the rainfall is 140 inches a year. The Spanish of the sixteenth century could not maintain a permanent population at this end of their inter-oceanic highway. As soon as the galleons had sailed away for Spain the city of Nombre de Dios was deserted, for it was believed that men could not live there the year round nor children be born. The tactics employed in the twentieth century for the conquest of the tropics are different from the old. The Northerner now does not want to get acclimated. He endeavors to make over the climate to suit him. Instead of getting used to the heat he sets up an ice machine and an electric fan. Instead of becoming immune to the fevers by hav-

ing them he screens the mosquitoes out of his house. Instead of making slaves do his hard work or getting sunstruck trying to do it himself he does it by machinery. The more rainfall the more horse-power; the more horse-power the more comfort. The richest region in the world is the tropics, and there are many indications that man will not merely make raids upon it, but will occupy it.

Of course, our people in Panama have no idea of spending their lives there. Pioneers rarely do. The forty-niner had no other ambition than to make his pile quick and get out of the State his descendants are now so proud of. The settler on the rich plains of Kansas was never contented until he had gone back to the States and seen with his grown-up eyes the steep and stony hillside farm where he was born. The Australians, native-born for three generations, calls England "home." So when we hear the Americans of the Zone talking about "not being there for their health" and "getting back to God's country," we know that they are not quite so homesick as they think they are.

Our occupation of the Zone is not temporary. It would be safe to say that more white Americans will be living on the Isthmus in twenty years than are there now. Besides those employed in the management and extension of the canal, locks and railroad, and the repair and provisioning of ships, thousands will be engaged in commerce, agriculture and manufacturing. For Panama will eventually be the crossroads of the world's trade routes. Here the railroad connecting the American continents by land will meet the water routes connecting Europe and Asia. The Gatun lake will be an international port better fitted than any other for the exchange of goods from all parts of the world. It will be a perfectly calm and sheltered harbor of fresh water, affording unlimited dockage along the 200 miles of its shore line, where the largest ships afloat may transfer their goods to warehouses or to each other as rapidly as modern hoists can handle them. The new Lake Gatun will have many bays and branches reaching far up into the interior, opening up for settlement a vast area of the richest land in America. On the hills of its islands

and peninsulas there is place for innumerable farms and cities, shops and factories. Tropical agriculture has hitherto been the chance bounty of Nature. What can be done when scientific methods are applied to it cannot be estimated. We can only guess at it by trying to solve the proportion; as the corn of the Indians is to the corn of the white farmer, so is the banana of the Panamanian to the banana of the future. If, as now seems probable, the tropics are to be opened to civilization of the highest grade, it will mean an unprecedented and incalculable increase of the wealth and population of the world. That is why we are especially interested in this little experiment at transplanting Americanism to Panama.

The New Mescal Religion

WE shall soon find out whether, in the religious statistics to be issued before long by the Census Bureau, the new Mescal religion, or, as it is sometimes called, the Mescal cult, will be included. It will be difficult to collect the statistics of it, for its adherents may be counted in other religious bodies, and they are to be found among the less civilized Indians of our Southwestern States and Territories.

Mescal is a sort of tablet shaped somewhat like a peppermint drop; it is also an intoxicant; it is also a god, or the Supreme God. It is made by slicing off the top of a sort of solid globose cactus that grows in Mexico and the adjacent section of the United States. This is dried into a hard brown tablet which is chewed by the Indians. Chemists find in it four kinds of alkaloids, to which they give names which only chemists would understand. They are all new, and have peculiar toxic properties, much like those of *Cannabis Indica* (hasheesh) and strychnin. Some are weak and one is very strong. This mescal, when chewed, produces visual and most pleasurable hallucinations. It has been investigated by Dr. Wiley, of the Division of Chemistry at Washington, also by Dr. S. Weir Mitchell, and Dr. Havelock Ellis, and several German chemists.

If a person chews two or three of these tablets he begins to see most bril-

liant colors in fantastic arrangements. His mind is exalted with lovely imaginations, and he feels himself strangely inspired. It is an intoxication of a peculiar sort, which has less of the after effects than opium, hasheesh and kindred substances. Of course one might become addicted to it, but the supply is not so large as to be a very great danger, and the taste of the drug is extremely disagreeable.

But mescal is not merely a combination of toxic alkaloids interesting to the chemist. It is also the basis of a new religion which is spreading rapidly among the Indians. It is a composite or eclectic religion, the principal rite of which is to chew mescal and get the intoxication of it, much as in the ruder forms of the Greek religion, with their bacchic rites. They display the Catholic crucifix and the Protestant Bible, and they believe the Father, Son and Holy Spirit to be present in the mescal, particularly the Holy Spirit, which is the agent in the mescal of inspiration. The cult has its meetings for the desired vivid experiences, and the adherents separate themselves in large part from the old religions. They have the missionary spirit, and in one case they chartered a number of cars to go north to another tribe and give them the new blessing. Indeed, so rapidly and so far has the mescal cult extended that it has already reached the Canadian border.

What can be done about it to prevent the demoralizing result sure to follow such intoxication? Not a great deal, we fear. Legal measures are not easy to apply. To interdict interstate commerce in the drug would have no effect where it is carried by hand across State lines. The Government does not like to interfere with any religious or racial customs unless they affect morals very sharply. Even the sun dance, with its atrocious immoralities, has not been entirely suppressed, and some ethnologists do not want it suppressed. This seems to be one of the cases in which moral suasion will be the chief agency for good, a method which works slowly with the Indians in the matter of alcoholic liquors.

The peculiar interest in this case attaches to the fact that here the Indians

have actually, within a very few years, invented a new religion, with a new god. What it will amount to it may take years to discover.

Agricultural Colleges and Their Adjuncts

THE Government had no idea, when Agricultural Colleges were created, that that simple bill assigning to the States a certain portion of public lands would seriously affect our whole system of education. This came about naturally; future progress will probably evolve in the same way. The remarkable development of Agricultural Colleges into a commanding position, with their adjuncts, the Experiment Stations, has brought us blunt against the problem of industrial education in our secondary schools. These schools, under the old system, became feeders for the colleges, and in doing this nine-tenths of the boys were forced to leave school before graduating, in order to secure elsewhere fitness for business or work. Here the Commission on Country Life meets us with plain talk, and its recommendations are admirable, but unfortunately it gives us no plainly defined plan. Does the Davis bill, now before Congress, do better? It is at least something definite, and must be accounted with.

Here, however, is something definite along the educational line, and it is to be heartily approved. The report says that each State College of Agriculture should be empowered to organize a complete department of college extension, so arranged as to touch every person on the land in the State. The work should be informative and inspiring, including lectures, bulletins, reading courses, correspondence courses and other methods of teaching the people at home and on their farms. This scheme should be so arranged as to forward not only agriculture in the technical sense, but all the interests of country life. Added to this, there should be State and National Conferences on rural progress. Much of this is already materialized, in a somewhat chaotic form.

The Commission is more original in this than in any other point that it con-

siders, the upbuilding of country life as a unit. It holds that rural teachers are not alone responsible, but that clergymen, physicians, editors and others should unite with the farmers in studying the rural question. We must in some way unite all institutions, all organizations, all individuals having any interest in country life, into one great campaign for rural progress. Massachusetts, with President Butterfield, is working along this line efficiently. In a general way this brings our religious and moral and social life into a unitary form, and we have really only one end in view—that is, a nobler, wiser and more wholesome as well as prosperous home life.

Highway improvement is rationally reported on by the Commission, in connection with the improvement of our streams; and there is great emphasis to be placed right here, from the fact that in some of the States the farmers are being robbed of their water rights in the name of public improvement. In France there is a much more sane effort to make the water power of the country contributory to farm life, selling it cheaply to the ruralist to furnish him heat, light and power.

The tariff is fairly brought to judgment for its destruction of our forests, in the name of protection, for its waste of our water power, and its general result in building huge corporations that rival the Government, and for its influence in corrupting legislation. The report is, however, nowhere more clear than in its recommendation of postal savings banks and parcels post. This is demanded almost unanimously by farm organizations, by granges and by individual farmers. We believe that, so far as the report touches these points, it echoes the sentiment of the real people of the United States. Corporate or local interests may be opposed.

As for co-operation among farmers, the President and the Commission both talk somewhat in generalities. They both overlook the fact that co-operation is by no means a new thought in rural life. The Plymouth colony was a communistic affair—a "community"—doing most of its work and holding most of its property in common. The Russian Duma is

just now abolishing the mir or village corporation, which has enslaved the Slavic race to antiquity. Some degrees of co-operation in production do not abrogate individualism, and we are doing a great deal of farm work at present in this co-operative manner. We will doubtless adopt some new methods of co-operation, especially in marketing, but the very soul of country life is individual action, a free swing of personal initiative. The other plan makes communities; this plan makes men.

What we do want, however, is that sort of co-operation which comes under the head of education. The education of a countryman never ends. He is at school every day of his life. Let him find this out and stay plastic; learn his lessons; keep in touch with Nature and God; in touch with the agricultural colleges and experiment stations, and every way be a teachable pupil. When a man has pledged himself to an organization he has yielded a certain measure of his volition, and of this he should be chary. In some stages of co-operative society we find the Night Riders—a farmers' organization to enforce co-operation.

The "Recall" of the Mayor of Los Angeles

THE proposed "recall" of the Mayor of Los Angeles brings to mind the very rapid growth of the movement for the insertion of recall provisions in recent charters. Robert Treat Paine, Jr., in a comprehensive paper read at the Pittsburgh meeting of the National Municipal League, called attention to the fact that the papers read before the league in 1905 and 1906 described the principles of the recall as first devised by Los Angeles and later adopted in Pasadena, Fresno, San Bernardino and San Diego, also the first use of it in Los Angeles in the removal of a councilman. Since then a number of other California towns (whose charters were adopted prior to 1905) have inserted in their charters provisions for the recall. The popular votes on the adoption of these provisions have been strongly in their favor, a late one being 22,945 to 5,597 in San Francisco in November, 1907, where it was proposed by an in-

initiative petition. Oregon on June 1st, 1908, by a vote of 58,381 to 31,002, under an initiative petition, amended her constitution whereby she becomes the first State to render every public officer subject to the recall by the voters of the State, or of the electoral district from which he is chosen. Some of the more recent Texas charters provide for the recall, as does the Des Moines modification of the Galveston plan.

The proposal of the Municipal League to have Mayor Harper, of Los Angeles, recalled, represents the most advanced application of the provision thus far had. The Municipal League, with the co-operation of several other civic organizations, has undertaken the recall of Mayor Harper because the league alleges he has made unfit appointments to office; because he has failed to keep his personal promises as well as election pledges; because he has used the offices at his disposal to pay political debts; because he has been a party to marketing the stock of several corporations in which he and members of his police commission were large holders and promoters among the very people like the owners and keepers of saloons and assignation houses, whom the police commission is expected by the charter to regulate and control; because during the past two years gambling has existed unchecked for long periods of time and certain saloons and lodging houses have been allowed to do about as they pleased while others have been held rigidly to the law; because thuggery and house-breaking have been carried on to an intolerable degree; because the State is about to spend \$25,000,000 in the Owens River Aqueduct enterprise, and that the makeup of the board which has in charge the expenditure of this money is a matter of vast and imperative importance to the taxpayers.

The executives of the league officially state that from the way the work has started out there seems to be no reasonable doubt but that the recall will be made operative and an election for Mayor Harper's successor will be presently held. At that election Mayor Harper may be a candidate, but it is contended by those who seem best to understand political conditions and the trend

of public sentiment that he has no chance whatever of re-election.

The whole movement will be watched with close interest everywhere throughout the country, and if the recall should succeed, as the league officials seem to think it will, a new standard of official responsibility will have been established.

Is It Free Speech?

THE Most Rev. William H. O'Connell is the Catholic Archbishop of Boston, succeeding the venerable and beloved Archbishop Williams, who was sometimes thought to rule with an easy silken glove, altho the Church made great progress in his days. The present Archbishop was not one of the three asked for by the clergy, but he was a favorite at Rome, and is a man of vigor and ability. His glove appears to be of the mailed order.

He has lately purchased *The Pilot*, of Boston, the oldest Catholic paper in the country, a paper which has enjoyed the distinguished editorship of J. Boyle O'Reilly and J. Jeffrey Roche and Katherine E. Conway. There are other Catholic weeklies in Boston, *The Sacred Heart Review* and *The Republic*, the latter edited by laymen. Perhaps even the former does not come under the very sharp warning which the Archbishop has lately given priests as to what they should put in print. But he has given the whole Church a fair warning in the address he made at the late synod of the diocese, when six hundred priests were in attendance. The Archbishop called especial attention of the priests to the duty of supporting the official journal. "The diocesan paper," he told them, "is as much a necessity as a church"; and it "is as much the duty of a priest to work for its widest diffusion among the people as it is to build and support a school." Failure to do this duty was threatened with punishment:

"Therefore, here in Synod, I desire solemnly to publish that the duty of every priest of this diocese to maintain, assist and spread the influence, helpfulness and support of *The Pilot* is one binding in conscience, and that neglect to do so after this solemn and legal warning will be accepted and interpreted as a flagrant neglect of duty. If in order to spread and diffuse this official organ it is necessary to draw

upon the funds of the parish, this may be done to a prudent degree."

But how about other Catholic journals not owned by the Archbishop? Will they not be crowded out? Possibly, but what of that? At any rate, they must mind their p's and q's, or they will get into trouble. So the Archbishop plainly tells them:

"There is one and only one official organ of the diocese. All other papers, magazines, journals, reviews and calendars, whether for parochial or general distribution, on sale in any way, controlled, printed or edited in this diocese by priests of this diocese, must have before further publication under penalty of suppression the written permit of the Archbishop, with the added understanding that all such printed matter is subject to all the conditions imposed by the laws of the Holy Office, and that for good and sufficient reason the Ordinary may at any time call for the discontinuance and suppression of such papers and calendars."

That is plain talk. We trust that *The Sacred Heart Review*, edited by Jesuits, and *The Republic*, heard it with due meekness. And if any priests have in any measure "controlled, printed or edited" that journal, they will speedily withdraw. Both of those journals are, we believe, religiously and ecclesiastically sound, but they are warned that they will suffer if they offend their superior, at the penalty of "discontinuance and suppression."

And who is it that thus issues these threats? and in what country is it? He is an official set over them whom they did not choose, imposed in preference of those whom they did ask for; and this is in the United States, a country which boasts of free speech and a free press.

We know perfectly well that the Archbishop has no legal power to inflict so extreme a penalty; he has only ecclesiastical power. But ecclesiastical power is tremendous. It can take away a man's livelihood, can destroy his property. The authority is directed solely at those who have chosen to rest under it. It is freedom to go out and say what you please; but not free speech within the body. We make no complaint of the possession or exercise of authority over those who want it. What we do object to is the frank arrogance of such a threat, which has called out the guarded comment of one or two Catholic journals in other cities.

Liberia

SOME twenty years ago, France having claimed the island of Madagascar, the third largest island in the world, with three or four millions of population, the native queen sent a commission to Great Britain and the United States to protest against the destruction of its sovereignty and to seek protection. They were received as curiosities, not as statesmen having a valid appeal. The Christian civilization of Madagascar had been created by Englishmen, but Englishmen felt no interest in the protection of their pupils and wards. Americans took even less serious interest, if possible. The most important experiment of the creation of a native African state was allowed to be suppressed. The commission went back in despair; the Queen Ranavalona II was deposed by the French and the island was reduced, after a long and bloody war, to a French colony ruled by a French Governor-General. It is a very sad story.

Last year a commission was sent by another independent African nation, that of Liberia, to Great Britain and the United States, asking protection. As a state Liberia was the creation of American citizens, as Madagascar had been of British citizens. But Liberia had enjoyed no such advantages as Madagascar had enjoyed. She had not been guided and instructed by trusted foreign teachers. The settlers in Liberia were ignorant slaves, not free and brave warriors, and they were let alone. Even mission work was very feebly conducted. Liberia grew, but the government was never efficient and there has long been trouble with the better governed neighboring British settlements of Sierra Leone and the French, whose possessions surround it to the east and in the hinterland. As an independent nation Liberia is in most serious danger of occupation and absorption, and another minor experiment of African self-government may be ended by superior force.

But the Liberian commission, altho the public showed no interest in it, is having greater success than that sent by Queen Ranavalona II. President Roosevelt recognizes that the United States has a special historical interest in Liberia, and he has asked Congress to appropriate \$20,000 for the expense of an American commis-

sion to visit Liberia, investigate its condition and recommend what can be done to preserve its independence. On that commission he will appoint Dr. Booker T. Washington and two other men of the highest financial and political ability, men who have had experience in colonial reconstruction, to make a most thoro investigation of the causes of Liberian weakness and the needed remedies. This will not mean American administration, for we want no African colonies, but their influence will, it is to be hoped, be effective in securing more honest efficiency of government; and we shall thus have notice given to the world that it will not please the United States to have Liberia gobbled up by any one of the greedy European nations. Madagascar must not be repeated. It is time that Liberia should be helped and guided, and if need be protected, while learning to walk alone. We thank the President for adding this to many other acts of his which initiate a worthy public policy.

The Easiest Way, or the Best

THE collector of curiosities in social psychology should not overlook two specimens now on exhibition in Greater New York. Neither of them, perhaps, would command the attention of the *connoisseur* if it were displayed by itself. It is their contemporaneousness and juxtaposition that make them interesting.

The people who rightly object to vulgarity on the stage are chiming in with certain stage managers in demanding a stage censor. These managers want a censor for the same reason that the successful *entrepreneur* in general wants a trust. A censor could be made useful to those theaters which object to what they are pleased to regard as irresponsible competition. The moral reformers want the censor because they are quite sure that he would represent their sense of propriety.

Simultaneously with this demand for the stage censor sounds the appeal of some other excellent people, who have discovered how to suppress or to enervate the vicious dance hall. They have found out that legal prohibitions and police supervisions of various familiar kinds are unavailing. The evil must be

dealt with by a voluntary organization of moral forces, and, what is perhaps more convincing, by putting up some good money for the maintenance of dance halls that shall be attractive, bright and reputable. Young people will dance, and neither policeman nor ecclesiastic has ever been able to prevent them very long at a time. The vast majority of them are wholesome, clean-minded creatures, who have no inherent objection to common decency. They will presumably congregate in halls where the ordinary proprieties of life are observed and liquor is not sold, if they have a chance.

To one who is familiar with the history of moral reforms, it must occur that we have in these two movements fairly good examples of the easier way and the better way of trying to accomplish substantial good. It is always easier to delegate one's moral responsibility than to live up to it. It is even easier for some people to live up to it after they have delegated authority to somebody else to coerce them into righteousness. We suppose that there are some thousands of men and women in this city who could get along fairly well without witnessing coarse spectacles on the stage if none was presented, but who find it quite impossible to resist the seduction, so long as the billboards blossom and the footlights are turned up.

Unfortunately, this plan leaves much to be desired from the point of view of effectiveness. It is difficult at the best to find public servants for any function who are entirely satisfactory. It is enormously difficult to find them to enforce rules of conduct pertaining to matters upon which people differ and where, at the best, it is nearly impossible to draw the line between the permissible and the tabu. Such cases offer large opportunities for graft and favoritism; and, if by rare good fortune, these can be eliminated, there always remains the possibility that a censor's judgment will satisfy nobody. An amusing example of the last circumstance has been afforded by the history of precisely that current play whose offensiveness has stirred up the people who want a censor. This play, it appears, exactly as it is presented on the New York stage, without expurgation or

addition, was past and authorized by the censor of Great Britain.

A deeper and more comprehensive reason for regarding the voluntary action of the public as the best control of those forms of conduct which do not involve violence, trespass, or obtrusive nuisance which the offended individual cannot by his own efforts escape from, or peaceably abate, lies in the fact that voluntary action is the democratic way, while governmental action is an authoritative way, which, to the extent that we learn to depend upon it, impairs our normal and healthy democratic impulses. There is a large realm of interests in which governmental action is necessary. Lazy human nature is disposed to delegate to it a good many things that perhaps might better be kept within the realm of self-help.

The South African Union

It is only a few years since the Boer War, and the four chief provinces of South Africa then in bitter battle, Cape of Good Hope, Natal, the Orange River State and the Transvaal, have by their delegates agreed on a plan of union, as one nation, to be called South Africa, and to be a constituent part of the British Empire. British and Dutch, the soldiers who fought to the death against each other, have joined in this pact. For this result, so surprising, they are indebted to the generous terms under which Great Britain trusted its conquered foes, giving them immediate self-government.

It is not certain that the four colonies will accept the plan of union, but it is probable that they will. It is the result of compromise, and the advantage of union is so great that those who do not like all the provisions will probably think it best to yield, in the hope of later legislation. Our own Constitution could not have been adopted if amendments had not been promised.

Amendments may be easier in South Africa, for this is an enabling act and not a fixt constitution. Great Britain has no written constitution, only a succession of laws. The South African Parliament can change these provisions at any time by a new law; that is, if the Crown consents.

An American would not like this new constitution, if one may call it so; it is not democratic enough; it is too centralizing; it gives too much power to the Crown.

There is a Governor-General appointed by King Edward, at a salary of \$50,000 a year. He appoints eight Senators, and each of the four colonies elects eight more, making forty in all. These Senators hold office for ten years each. The lower House of Assembly consists of 121 members, elected on the basis of population, and their term of office is five years. The Governor-General appoints Cabinet officers, who shall be members of an Executive Council, and shall have right to speak, but not vote, in either House of Parliament. All financial bills must originate in the House of Assembly, but it cannot originate or "pass any vote, resolution, address or bill" appropriating any money, unless first recommended by the Governor-General. This would seem to make his power little less than autocratic.

The central power of the Governor-General extends to the four constituent provinces. They cannot choose their own Governors, but each has an Administrator appointed by the Governor-General. And their several legislatures, called Provincial Councils, can originate or pass no bill appropriating money, except as it has been recommended by the Administrator.

The judges of the Supreme Court of South Africa, and the judges of the provinces, are all appointed by the Governor-General. It thus seems that the authority of the provinces is made as slight as possible.

The conservative character of this constitution is seen not only in the length of service of legislators, ten years for Senators, five years for Assemblymen, and three years for members of the provincial councils, but in the conditions for election a Senator must be a British subject of European descent (not a native), and be worth \$5,000 of unencumbered real estate. If any member of either House becomes insolvent his seat is vacated.

We observe the fact that all members of the Parliament or of the provincial councils must be white men of European

descent. We suppose that would shut out an Armenian or a Siberian Jew. But the act goes much farther. It denies the right of suffrage to negroes, except in so far as in the Cape of Good Hope a certain number of educated and land-holding natives have been allowed to retain their right to vote. This privilege allowed in the Cape of Good Hope has been a great bone of contention in framing this constitution; and the three other provinces seem to have yielded only on the compromise that the Parliament can by a two-thirds vote withdraw the right of suffrage from these natives. Considering that the natives outnumber the whites three to one in the Cape of Good Hope, two to one in the Orange River State, ten to one in Natal, and nearly five to one in the Transvaal, not to speak of Rhodesia and the other protectorates where the natives are twenty to one, there is likely to be a change of conditions before the end of this century. The only provision made for the care of the natives seems to be that four of the eight Senators appointed by the Governor-General shall be selected "on the ground mainly of their thoro acquaintance by reason of their official experience or otherwise with the reasonable wants and wishes of the colored races in South Africa." That is something. There is a possibility that they will have four friends in the Senate; but they have no voice in expressing their own wishes. We are not surprised that this entire act, which occupies seven solid columns of the *London Times*, finds no room for any statement of human rights to life and liberty. The contrast between the American Constitution and the South African is very marked; ours says the negroes shall vote; the South African definitely says they shall not.

We knew that the Britisher dearly loves a king, and even a lord; but we admit some surprise that the South African, who has no hereditary peerage and no established Church, so dearly loved the King's shadow, and could make it rule over Parliament, and could so little value the rights of the people, that he would formulate a constitution which would make 12 Senators a quorum in a body of 40 members, and 30 a quorum

in the Legislative Assembly of 121 members; which would allow the Governor-General to veto any law of Parliament or of the provincial councils, and forbid the provinces to provide for anything above primary education. Under our Constitution every authority and right belongs to the States which is not delegated to the National Congress; in South Africa everything will belong to the Union and its Parliament that is not specially assigned to the provincial councils; and Parliament and provincial councils are under the will of the Governor-General. That is loyalty gone to seed.

The Return of the Fleet The mighty American war-fleet has returned in safety, has provoked no war, but has rather been a sort of peace envoy, giving occasion for public declarations of determined, if armed, amity. Even the attitude of Japan was more than irreproachable; it was most cordial and assuring, so those officers who went with suspicion have returned with confidence. Nevertheless, we do not rejoice that the fleet made this monster demonstration of our naval efficiency. We have proved that we have a good fighting machine on the ocean; we have not proved that we have a peaceful commercial marine. In that we are shamefully weak. Congress is much more anxious to build battleships than to build steamships for trade. There is more courtesy in showing your open hand to your neighbor than your clenched fist. There is something essentially bullying in making a display of one's readiness to fight. When gentlemen meet for peaceful purposes they leave their pistols at home. We want to end war with all its terrors, and fighting men with all the exercise of authority and subserviency involved in their business. The soldier's etiquette is not the freeman's etiquette; the soldier's ambition is not the Christian's ambition. General Sherman properly characterized war, and we want heaven. Now let the fleet stay at home in modest retirement, and let the country give itself to more profitable industries and amusements, and let Congress spend our money in better ways than in creating the strongest navy but one in the world.

The Prohibition Party

Mr. John G. Woolley, formerly the Presidential candidate of the Prohibition party, and its chief orator, who has been around the world in the interests of prohibition, has announced that henceforth he will work for temperance in one of the old parties. He has been none too soon in making the discovery that the Prohibition party has been an unimportant and not always a helpful factor for the suppression of the liquor traffic. It has never gained a victory. Its work has been done thru the other parties, Republican in the North and Democratic in the South. It has done something by keeping up a constant discussion, and it has attracted a great many more non-voting women than voting men. Mr. Woolley says that the party reached its purpose in bringing the liquor question to a national issue, and its usefulness ended there. It could secure no legislation. Having past its usefulness there is no further necessity of keeping it alive.

Such a man as Senator Tillman is understood perfectly because he says frankly what he believes, and from him we understand his less voluble class. He says he does not want compulsory education in South Carolina because then the negroes will learn to read and become voters, and this would be a blow to white supremacy. If others oppose the law we can conclude what is their reason. This maintenance of negro subordination has many phases. From Texas it is reported that the Negro Teachers' Association has approved the separation of the races on steam and trolley cars, and only ask that what is called the Jim Crow cars be made equal to those for whites. We do not believe the report. They could not have done so, even tho supported by State taxes. They can only have submitted and asked for equal accommodations.

The settlement of the question of the capital of the new Union of South Africa, by having two or three capitals, Cape Town for the meeting of the Parliament, and Pretoria as seat of the executive department, and the Appellate Division of the Supreme Court at Bloemfontein, is a temporary expedient of

which we have had experience. Hartford and New Haven were the two capitals of Connecticut, and Providence and Newport of little Rhode Island; but in both cases one capital was later dropt. Pretoria will be central, as the new provinces to the north are added.

In 1820 Mr. Milne published a "Retrospect" of the first ten years of Protestant missions in China, and by a stretch of faith he anticipated that when in 1907 a century should have elapsed there might be a thousand Protestant Christians in China. At that date there were about 200,000 communicants representing 750,000 souls, and nearly a million more Roman Catholics.

The engineers who went with Mr. Taft to Panama seem to be satisfied with a lock canal. We do not pretend to contradict them; but we wish they had found the sea-level canal feasible. We take the liberty to say that when President Roosevelt referred to those who advocate the sea-level canal as "in reality attacking the policy of building any Canal at all" it sounds like intolerance of those who differ from him.

Kings are more precious now they are more useless. The court, the cabinet and the parliament of Spain united in beseeching King Alfonso not to run automobiles or fly in aeroplanes. We wonder what would have happened to a loyal subject of Richard Cœur de Lion who ventured to remonstrate with him for risking his neck by jousting in the lists.

It is good to see bank presidents and cashiers in Pittsburgh compelled to confess bribery, and convicted therefor. Such a storm clears the moral atmosphere, and hereafter, for some years, banks will not bribe the city Council to be made depositories of city funds.

An article in *The Library* (London) treats of simplified spelling from the printer's standpoint, and concludes that the silent letters in English words cost about \$100,000,000 a year, half of it in printing. But a great many people care most for the useless furbelows.

INSURANCE

Education in Life Insurance

IF life insurance teaches anything it is thrift. This idea is set forth by President L. G. Fouse in his thirtieth annual report to the Fidelity Mutual Life Insurance Company of Philadelphia, Pa. Some men have argued against insurance on the ground that they could save money quite as well by depositing weekly a fixed sum in a savings bank, so that at the end of a term of years there would be an accumulation equal to or perhaps superior to the face of an insurance policy. In practice this idea does not always work out and the old line insurance policy has certain advantages that a savings bank account never has had and never will have. A savings bank will, for example, never pay to a depositor more than the amount of principal he has deposited plus interest according to the profits made by the bank. An insurance company often pays the face of a policy even though but one infinitesimal premium may have been paid on it. The insurance company can do this because their business is calculated upon the basis of the possibility of their being called upon to do so whereas a savings bank is not organized in this way. Time was when there was a prejudice against insurance because its workings were improperly understood. Never has there been a time in the history of life insurance when such rapid strides were making toward educating the general public as to the value and operation of the life insurance principle. Rich men as well as poor men have made use of life insurance as a safe and sure method of providing for their dependents. By means of such insurance an estate is created that is not liable for a burdensome inheritance tax, and the money goes without discount or tax directly to the person named in the policy in accordance with the contract entered into between the insuring company and the policy-holder. In view of the beneficence of life insurance and of the thrift which it more than any other modern device both fosters and encourages, it does seem strange that the custom of not only taxing it, but taxing it heavily, should show an ever-growing tendency in the several States of this great country of ours.

Federal Insurance Supervision

DARWIN P. KINGSLEY, president of the New York Life Insurance Company, made a ringing and very interesting speech before the students of the University of Missouri at Columbus, Mo., on February 16th. The address was a plea for Federal supervision of interstate insurance as against the too often conflicting requirements of forty-six different State superintendents. Mr. Kingsley said in part as follows:

The problem which faces the management of an active insurance company today is, how it may profitably, effectively and peacefully serve masters in forty-six States. The problem is unsolvable. Under the present practice of insurance supervision there is no remedy. But there is elsewhere a remedy, and to many people it seems to be the only remedy—Federal supervision of interstate insurance. I by no means think that Federal supervision would bring in the millennium, but it would be a long step away from the chaotic and destructive tendencies which have developed under the existing plan.

Touching upon the question as to whether or not insurance is commerce the speaker said further:

While the Supreme Court has several times flatly said that insurance is not commerce, I think it by no means impossible that later on it may take a different view. I am not sure that it has not already done so. Insurance is business. It includes the purchase and sale of contract rights which have become an almost indispensable factor in business, in credit, and in traffic. It is a business that from its very nature is most secure when widely distributed and it naturally and inevitably has become an interstate business. It is a business which from its character requires a reasonable measure of Governmental supervision and at the present time it is more extensively supervised by governments than any other class of business. There is perhaps no business in which efficiency and economy are so much promoted by uniformity of legal requirements everywhere; no business that is more easily embarrassed, harassed, and rendered inefficient and unprofitable by conflicting laws and conditions.

But the Supreme Court has said that it is not commerce. The transportation of goods and passengers is commerce and all the means used as instrumentalities thereof are commerce. The sale of goods by sample by drummers is commerce, but the sale of life insurance policies by agents is not commerce. A telegraphic message relating to a life insurance policy—or any other kind of business—is commerce, but the policy itself, sent by mail or otherwise, is not commerce. If a company talks to an insured in a neighboring State over the telephone the talk is commerce, but the subject of the talk is not."

Financial

Prices in the Steel Trade

JUDGE GARY, of the Steel Corporation, gave notice on the 19th that "the leading manufacturers of iron and steel" had determined to protect their customers and to sell at such modified prices as might "be necessary in order to retain their fair share of business." This meant an open market in the steel trade. Underselling by independents has left the great Corporation very little business. It now gives up the attempt to maintain prices and joins the scramble for any order that is in sight. The effect upon the market for securities has been depressing, notably with respect to the shares of corporations engaged in the iron and steel trade, and of railroad companies that are closely related to the steel industry. Thus far, however, other railroad shares have been but slightly affected.

In undertaking to maintain prices at a high level after the panic, the Steel Corporation and those who stood with it in a "gentlemen's agreement" were defying economic law. There were some arguments on their side, but only a rapid recovery from panic depression could have made the attempt successful. A brief period of depression might have been bridged over, but a long one compels an adjustment of prices to conditions. This time there was added an impending revision of the tariff. After Mr. Carnegie asserted that the industry needed no protective duties, it was seen that Congress could not avoid making a large reduction of the tariff on steel. That, the public reasoned, would mean a reduction of prices. For that reduction buyers are waiting, so far as they can. Business in steel has been declining, and the smaller manufacturers have been making all kinds of concessions to get such orders as could be found. At last the Steel Corporation has decided to fight for its share.

If the Corporation fights with vigor, some of the smaller concerns will suffer. Perhaps there will be bankruptcies, and eventually an increase of the great com-

pany's holdings by absorption. The effect upon business generally can scarcely be favorable. Price-cutting will not greatly stimulate consumption so long as tariff revision is pending. Wages may be affected, altho the rates for skilled labor in the steel mills are in most cases fixt by agreements made for twelve months at the beginning of the year.

What the business interests of the country need now most of all is prompt action upon the tariff. In Washington they are saying that, altho the special session begins on March 15th, the new bill will not become a law until July, and possibly not until August. There will be no good excuse for three or four months of debate and wrangling about this revision. A patient suffers if quarreling nurses withhold from him the medicine he needs. The beginning of the session should not be deferred until March 15th. Congress should take up the work at the earliest possible moment and should carry it forward to completion as speedily as a reasonable allowance of time for discussion will permit.

....Valuations of the franchises of railway, lighting, telephone and other public utility corporations in New York City, for the special tax, as made for 1909, amount to \$486,213,500, against \$492,492,970 in 1908.

....An attempt will be made to enforce the provisions of the Interstate Commerce law forbidding discrimination in rates by the prosecution of a conductor on the New York, New Haven & Hartford road for selling transportation to certain passengers at much reduced rates for cash, which he retained.

....The Oregon Legislature has adopted a resolution for a constitutional amendment that will permit the State to construct and own railroads. It was asserted in debate that E. H. Harriman had prevented the development of the central part of Oregon, and that the construction of a road by State authority was needed.

Survey of the World

The Discharged Negro Soldiers

The compromise bill for a settlement of the controversy over the negro soldiers who were discharged on account of the affray in Brownsville, Tex., in August, 1906, was past by Congress last week, with very little debate. Action was first taken in the Senate, where the vote was 56 to 26, Mr. Teller being the only Democrat joining the Republicans in the affirmative. In the House, four days later, the vote was 210 to 101. There was a brief discussion, in which the bill was supported by several Northern Democrats and by Captain Hobson, of Alabama. The latter said:

"This three minutes' speech will cost me a contest in my district and may cause my defeat for reelection. I wore the uniform of the United States for eighteen years, and I have never known a case where an officer or an enlisted man was punished at all severely without a court of inquiry. I know that he is not allowed to be punished to the extent of thirty days' imprisonment without a court martial. When these crimes were committed at Brownsville, the President should have ordered all officers and men to remain within the barracks and should have ordered a court of inquiry, followed by a court martial, and should have established the guilt and punished the guilty there. But he did not. He has scattered the guilty and the innocent to the four winds and prevented the execution of justice.

"I saw the black men on San Juan Hill; I have seen them before Manila. A black man took my father wounded from the field of Chancellorsville. Black men remained on my grandfather's plantation after the proclamation of emancipation, and took care of my mother and grandmother. The white man is supreme in this country; he will remain supreme. That makes it only the more imperative that he should give absolute justice to the black man, and we ought not to make a party measure of this."

The bill authorizes the Secretary of War to appoint a court of inquiry which shall

make an investigation and shall report within a year the names of those who were discharged and are found qualified for re-enlistment. Those who return to the army are to have pay and allowances from the date of their discharge.

✱

Legislation at Washington

An attempt will be made to pass in the House the Ocean Mail Subsidy bill which was past in the Senate a year ago. A favorable report has been ordered by the House committee. It is believed that the proposed increase of mail pay, amounting to about \$3,700,000 a year, would cause the establishment of new steamship lines to South America, Japan, China and Australia.—At the beginning of the present week action had not been taken in the Senate committee upon the sub-committee's sharp report concerning the President's course with respect to the purchase of the Tennessee Coal and Iron Company by the Steel Corporation. If the full committee should approve the report, it is said, this would suggest impeachment, and it is realized that in a matter pointing toward impeachment the House should take the first step. A minority of the sub-committee has prepared a report, in which the President is exonerated. In the House a futile attempt was made last week to authorize the prosecution of the Steel Corporation. The vote was 83 to 113. In the debate, the foremost of the President's defenders remarked that for political reasons his foes were trying "to kick the lion who is departing."—Now that the Senate committee has laid aside the bill for the admission of New Mexico and Arizona to the Union as States, it is asserted that many reports were re-

ceived by the committee to the effect that prominent officers of New Mexico who have recently been promoting the bill in Washington had harassed and sought to restrain agents of the Department of Justice who were seeking evidence relating to extensive land frauds in that Territory. Statements said to have been made to the committee by these agents are published. This testimony appears to have convinced the committee that the admission of New Mexico should be postponed. — Senator Hemenway's term expires on the 4th, but, by vote of the Appropriations Committee, he is to continue the investigation of the secret service, and complete the work which, as chairman of a sub-committee, he began some weeks ago. His salary will be equal to that of a Senator. — The House has persisted in its opposition to the Senate's increase of the President's salary to \$100,000, and has voted, 168 to 141, for \$75,000, with the added provision that the \$25,000 allowed for traveling expenses be withdrawn. — Some time ago the President sent to Congress the long report of the Homes Commission, relating in part to the need of improvement in the housing of the poor in Washington, and to various social questions. Senator Tillman has introduced a resolution asking the appropriate committee to ascertain whether one ought not to be excluded from the mails. He asserts, as does Senator Bailey, that parts of it are of such a character that they should not be published and put in circulation. — The House has ordered from Mexico to be sold the shares of Mr. Butler, secretary of the Panama Canal Commission, who is detained at the Isthmus. — Upon a point of order, the House has stricken from one of the appropriation bills a provision authorizing the President to advertise for proposals for raising the wreck of the "Maine." Mr. Douglas, of Ohio, who opposed the project, said that if commercial interests were involved, Cuba should raise the wreck; if justice required such action, Spain should do the work. He thought we ought to forget the "Maine." If the wreck should be raised, the controversy over the cause of the explosion might be renewed. — In the House, last week, Mr. Cook, of Colorado, bitterly attacked

the President, even going so far as to call him "a crack-brained egotist." A committee has been appointed to report whether his speech should be expunged from the official record.

Immigrants from Japan By a vote of 28 to 7, on the 26th ult., the California Senate adopted an anti-Japanese resolution which had been prepared by Mr. Burnett, chairman of the Committee on Federal Relations. In the long preamble it is said that the interests of California can best be safeguarded by so extending the Chinese exclusion law that it will be applicable to "other Asiatic people," and that "the people of the Eastern States and of the United States generally are of erroneous impression as to the real sentiment of the people of the Pacific Coast relative to the Asiatic question." The essential part of the resolution is as follows :

"Resolved, by the Senate and the Assembly jointly, that we respectfully urge the Congress of the United States to maintain intact the present Chinese exclusion laws; and, instead of taking any action looking to the repeal of said exclusion laws, to extend the laws and provisions thereof so as to apply to and include all Asiatics."

Both houses have passed a bill providing for an enumeration, by the State Labor Commission, of the Japanese residing in the State. — The Nevada Senate, on the 24th ult., adopted a resolution (already adopted in the House) excluding all aliens and foreigners from the public lands of the State, and asking the national government to exclude from the public domain and the forest reserves "all sheep and cattle not owned by citizens of the United States." — In Hawaii, the House has adopted resolutions commending Japanese residents and expressing approval of President Roosevelt's opposition to anti-Japanese legislation on the Pacific Coast. Action upon the resolutions in the Senate has been postponed. — During a debate in the House, at Washington, last week, Congressman Hepburn, of Iowa, asserted that the admission of 500,000 Chinese for household labor would be beneficial to the country. His position was attacked by Mr. Hayes, of California, and others, some of whom held that the exclusion law was not broad enough.

Cases of Municipal Corruption

Two of the men recently arrested in Pittsburg, following an exposure of municipal corruption there, have been convicted. The charge against W. W. Ramsey (president of the German National Bank at the time of the investigation) was that he had paid to Councilman John F. Klein a bribe of \$17,500 to secure the passage of an ordinance making this bank a depository for city funds. At the trial, A. A. Vilsack, who had been cashier, became a witness for the prosecution and made full confession. Following the conviction of Ramsey, the case against Klein was taken up. Ramsey became a witness and told the whole story of the bargain made with this councilman and of the payment of \$17,500. The jury was out only twenty-eight minutes. Before the beginning of these trials ten men were arrested for attempting to bribe those who were to act as jurors. It is said that a fund of \$100,000 had been raised and that those who controlled it were seeking to bribe the entire panel of sixty men.—In San Francisco, Michael W. Coffey has been found guilty of receiving from the street railroad company a bribe of \$4,000 for his vote in the board of supervisors in favor of granting to the company an overhead trolley franchise. Coffey was a member of the board that was controlled by Mayor Schmitz and Abraham Ruef. With all of his fellow members except two he confest to the grand jury, and, in return for immunity, promised to tell the whole story in court. At the first trial of Tirey L. Ford, general counsel for the company, he broke faith and declined to repeat what he had said to the grand jury. Therefore he was prosecuted. The jury required only thirty minutes for deliberation.

Trust Decisions

At the beginning of the second trial of the rebate case against the Standard Oil Company, in Chicago last week, a ruling of much importance in favor of the defendant was made. At the first trial, a fine of \$29,240,000 was imposed, being \$20,000 for each of 1,462 carloads of oil. It was held by the Appellate Court that the carload had improperly been used as the unit of offense.

At the present trial, the Government contended that each of the shipments should be the unit. As there were 500 shipments, a fine of \$10,000,000 would thus be permitted. On the other hand, the court was asked by the company's counsel to rule that all the rebate transactions were only one offense, or that the unit should be each settlement. Judge Anderson has decided that the settlement shall be the unit. As there were 36 settlements of the freight account, the fine to be imposed, in case of conviction, cannot exceed \$720,000. The Government has argued heretofore that under such a ruling the law becomes ineffective, because rebate settlements can be made so infrequently that the highest possible fine will fall far below the profits of the unlawful transactions. Judge Anderson rejected the original panel of 150 jurymen because 60 per cent. of them were farmers and only three were residents of Chicago. He directed that the new panel should include a good proportion of business men.—The Supreme Court has sustained the imposition of fines amounting to \$126,000 by the Circuit Court in New York, in the cases in which the New York Central Railroad Company was found guilty of granting rebates to the Sugar Trust. It also upholds the Anti-Trust law of Arkansas in a case involving a fine imposed upon a packing company.—Arkansas began suit, last week, against Swift & Co., the Cudahy Packing Company and three other similar companies for violation of this Anti-Trust law, asking for penalties amounting to \$16,500,000—Following the recent decision of the Supreme Court in the Waters-Pierce Oil Company case, Texas has amended its Anti-Trust law, increasing from \$50 to \$1,500 per day the fine that may be imposed, and making the longest term of imprisonment twelve instead of five years.

Venezuela It was reported some weeks ago that ex-President Castro desired to return to Venezuela, and had promised, if he should be permitted to come back, to lead a quiet life there upon his estates near Puerto Cabello. A few days later it was announced that the High Federal Court at

Caracas had formally deposed him from the Presidency, having found him guilty (in a suit brought by the Attorney-General) of instigating the attempt to assassinate Vice-President Gomez, who was ruling in his place and who is now President. Castro, now living in Dresden, and in good health, publishes a statement, declaring that he is innocent. It is incredible, he says, that he should have sought to cause the assassination of Gomez, and he insists that there can be no evidence against him. Special Commissioner Buchanan, who was so successful in his negotiations with Gomez, returned to Washington last week. He says that Gomez is an honest and able man, who is striving to undo the wrongs for which Castro was responsible. A general arbitration treaty between the United States and Venezuela will soon be negotiated.—Because of reports of uncasiness in Central America, due to the military activity of Nicaragua, the State Department at Washington asked that naval vessels be sent to Amapala, on the west coast. On the 26th ult, two armored cruisers started for that port. The news or warning came from the secretary of the United States Legation in Nicaragua.

Cuba and Porto Rico

In a message to the Cuban Congress, President Gomez asks for the immediate organization of a national army and for an appropriation of a little more than \$1,000,000 to be expended upon the equipment of 5,000 soldiers of a permanent army and 5,000 rural guards.—It is stated in Washington that the cost, to the United States, of intervention was \$6,102,958. By an act of Congress the President was authorized some time ago to receive from Cuba, on account of this expenditure, such amounts as in his judgment the Cuban Treasury might be able to pay without embarrassment.—Carlos Garcia Velez has been appointed Minister to the United States, displacing Senor Quesada. It is asserted in Cuba that Velez and his brother publicly threatened to oppose the Government unless this office were given to him.—A bill pending in the Cuban

Congress, forbidding aliens to acquire land in the island, is the subject of much discussion. Reports from Havana say that it is not approved by President Gomez, and that he thinks it will not be past; but it is supported by the newspaper which is regarded as his organ. Such a prohibition could not affect present holdings. The discussions shows a considerable public sentiment in favor of such legislation. American holdings of real estate are very large, and some fear that an increase of them will enable American capitalists and corporations to control the insular government.—In the Porto Rican House of Delegates, last week, nine members united in presenting a resolution providing for a confederation of Porto Rico, Cuba, Santo Domingo and Hayti as the West Indian Republic, with national and state governments similar to those of this country. The House, in secret session, decided to take no action upon the proposition.

Senator Root and Peace

Last Friday evening the Peace Society of the City of New York gave a banquet to Senator Root in recognition of his conspicuous work for international peace while Secretary of State. It was one of the most successful dinners ever held in New York City from every point of view, the speakers including, besides Secretary Root and Mr. Joseph H. Choate, who presided, President-elect Taft, Governor Hughes of New York, and the Ambassadors of Great Britain, Japan and Brazil. Mr. Choate, in introducing Mr. Root, said that:

"The Peace Society of the City of New York has tendered this banquet as a just tribute to Mr. Root, because they think in the last four years he has done more to promote the peace of this nation and of all the other nations than any other living man."

The most significant sentences in Mr. Root's address, aside from his eulogy on Japan and his attack on "the rowdies in Nevada and California who insulted our great sister nation across the Pacific," were as follows:

"Peace can never be, except as it is founded upon justice. And it rests with us in our own country to see to it that the idea of justice prevails, and prevails against the interested ex-

hortation of the politician, against the hot temper of the fop and the inconsiderate. If we would have peace, it is not enough to cry 'Peace! Peace!' It is essential that we should promote and insist upon the willingness of our country to do justice to all countries of the earth. In the exercise of those duties in which the Ambassadors of Great Britain, of Brazil, and of Japan have played so great a part in the last few years in Washington, the great obstacle to the doing of things which make for peace has been not the wish of the diplomat, not the policy of the Government, but it has been the inconsiderate and thoughtless unwillingness of the great body of the people of the respective countries to stand behind the man who was willing, for the sake of peace and justice, to make fair concessions.

"It is their justification to themselves. The least of these three causes of war is actual injustice. There are today acts of injustice being perpetrated by one country upon another; there are several situations in the world today where there is gross injustice being done. I will not mention them because it would do more harm than it would good, but they are few enough. By far the greatest cause of war is that suspicion of injustice, threatened and intended, which comes from exasperated feeling. Now feeling, the feeling which makes a nation willing to go to war with another, makes real causes of difference of no consequence. If the people of two countries want to fight, they will find an excuse, a pretext, find what seems to me sufficient cause in anything. Insult, contemptuous treatment, bad manners, arrogant and provincial assertion of superiority, is the chief cause of war today.

"If you would help to make and keep peace, stand behind the men who are in the responsible positions of government, ready to recognize the fact that there is some right on the other side."

The other speakers devoted most of their attention to recounting the services of Mr. Root in the cause of peace. Mr. Taft gave Mr. Root the credit of making him President, for he said:

"It fell to my lot to be invited into a far distant country, where, if I had not gone, I should not be here; at least that is the way it fell out. And I owe the fact that I went there to the clear, lucid, forcible statement and advice of the guest of the evening, who pointed out to me that as between the course that involved risk and pioneering and doubt and that which was comparatively easy, it was the business of a man who believed himself strong enough to take the rougher course, if it seemed to anybody whose opinion he had respect for, that it was his duty to do so."

As many ladies were present as gentlemen at the dinner, and it is thought this may revolutionize public dinners in the future in New York, which have been in the past altogether too much masculine affairs.

The suffragettes of England have scored a point in getting numbers of women of title and high social position to serve on the "danger duty" brigade. On the 24th one procession after another was sent out from the headquarters at Caxton Hall to present a petition to the Premier, who had refused to receive them, and in spite of the fact that the police are using rougher methods than formerly in repulsing them there were no lack of volunteers. Altogether 28 arrests were made that day, including Lady Constance Lytton, sister of Lord Lytton, and daughter of a former Viceroy of India; Miss Daisy Solomon, daughter of the ex-Premier of Cape Colony; Miss Una Duga, niece of Viscount Peel; Mrs. Pethick Lawrence and Mrs. Catherine Elizabeth Corbett. All of them took with the greatest cheerfulness their sentence of one month isolated imprisonment on ordinary prison fare. The suffragettes who had served their time were received by the usual street procession in spite of the snow.

Pensions for Laboring Classes in France

A bill for the establishment of a system of old age and invalid pensions and insurance has been drawn up by a Senatorial committee under M. Cuvinot, and will probably be adopted by both houses, altho there doubtless will be some changes in its form. The proposed French system goes farther than the one recently adopted in Great Britain, and reduces the age to sixty-five instead of seventy years. It incorporates many features of the German workingmen's insurance laws. The first article states that laborers and employees of both sexes in manufactures, commerce, labor unions, liberal professions and agriculture, and domestics attached to the person, will receive, when they attain the age of sixty-five years, an annuity of \$24 a year. They will have the right, in addition, to an old age pension, and, in cases of necessity, a pension for disablement. The annuity allowance is formed by compulsory contributions by employers and a supplementary contribution by the state. The annual payment by the employers will be \$1.80 for

each laborer or employee over nineteen years of age, and half of this for those under that age. The old age pension is constituted by compulsory and optional payments of the interested parties and increased by state appropriation. The compulsory payments are 60 cents a year between fifteen and eighteen years, and \$1.40 per year from eighteen to the age when the pension is received. The assessments are payable monthly. The person insured will receive an annual card, on which are to be placed the pension stamps representing payments made, and a personal book in which are written each year the compulsory and optional payments made and the corresponding values. In case of a failure at the end of the year to pay one or more of the monthly instalments the employer is obliged, upon an official notification, to deduct from the wages the amount of the delayed payments in preference to all other creditors. The Government will set aside each year a sufficient amount to liquidate the pension claims at the age of sixty-five years, and this will be entered in the books of the person insured. The money contributed by the state will amount to one-third of the payments, compulsory and voluntary, made by the insured person. Payments made during marriage by one of the couple will be divided among them equally, together with the one-third contributed by the state up to the maximum of \$20 for each of the two parties. Any insured person may at the age of fifty-five claim his pension, but the sum contributed by the state will be reduced correspondingly. Any insured person who is disabled by grave injuries or premature infirmities not intentionally brought about which render him absolutely and permanently incapable of labor will be entitled to the insurance allowance regardless of age. Foreigners may take advantage of this law only in case they come from countries which by a treaty guarantee equal privileges to French workingmen resident there. All these pensions, allowances and insurance are inalienable and nonassessable. All certificates, notarial acts and other documents are delivered free without stamps or registration fees. All questions relating to the administra-

tion of this act will be referred to a council under the presidency of the Minister of Labor and composed of two Senators and three Deputies elected by their colleagues; two Councillors of State elected by the Council; two delegates from the Supreme Council of the mutual insurance societies; four delegates from the Supreme Council of Labor, two elected by the employers and two by the workers; two members chosen by the Supreme Council of Commerce and Industry, one from each party; two members chosen by the Supreme Council of Agriculture, one from the employers and one from the employees; two persons distinguished by their knowledge of insurance, one chosen by the Minister of Labor and the other by the Minister of Finance. Farmers, tenants and land owners who employ laborers outside the family are obliged to make the compulsory payments like other employers. If they employ habitually only members of their own family they may admit them to the privileges of the law like other employees.

The Balkan Problem

In spite of the clearing of the situation by the agreements between Austria and Turkey and between Bulgaria and Turkey, there is still a danger of an outbreak in the spring, and during the past week the air has been full of alarmist rumors of an inevitable conflict between Austria and Servia. It has been announced that Austria is preparing a punitive expedition to be sent into Servia unless that country abandons its warlike preparations. This, however, has been officially denied by Baron von Aehrenthal. He admits the gravity of the situation, but declares rumors of inevitable war are devoid of all basis in fact.—A new cabinet has been formed at Belgrade composed of the leaders of all the political parties in order to put Servia in a state of defense, and arms are being distributed to the troops, among which are mentioned five new types of dynamite bombs for artillery and hand use. It is not expected that Austria would go so far as to annex Servian territory even if Austrian troops invade that country, but were the matter to be allowed to go so far there will be difficulty in preventing Austria from seriously crippling

the little country which stands in the way of her Mediterranean ambitions. Negotiations between the European Powers for the purpose of averting hostilities have been active, and it is anticipated that a joint note will be soon prepared and presented to Servia, constraining that country from demanding any territorial compensation for injury to her interests done by Austria and offering such trade concessions as Austria can be induced to make. The note will be prepared at Berlin and sent to Paris for approval and transmission to Russia and Great Britain. The Czar is turning a deaf ear to the Pan-Slavists, who demand Russia's interference in behalf of the Balkan States.—Ferdinand of Bulgaria, who took advantage of the Turkish revolution to declare himself Emperor or Czar on October 5th at Tirnova, has not yet received the recognition of his new title by the Powers. France and Great Britain have declared in response to Bulgaria's request that in their opinion this recognition should be the collective act of the signatories of the Berlin Treaty. Ferdinand was received by Russia at the funeral services of the Grand Duke Vladimir with royal honors.—The new Grand Vizier, Hilmi Pasha, was given a vote of confidence by the Chamber of Deputies after he had outlined the ministerial program as a continuance of the existing foreign policy and of the internal reforms in progress.—An earthquake on February 16th destroyed a number of houses and killed some thirty persons at Sivas, a villayet on the northern frontier of Asiatic Turkey. The shocks were felt in the Balkan States and Hungary. The earthquake which was recorded by the seismographs of European and American observatories on January 23d had its center of disturbance in the province of Luristan, Western Persia, in a sparsely populated district. Sixty villages, however, are reported to have been destroyed and the number of lives lost is estimated at 5,000 to 6,000.

The Opium Traffic The International Opium Commission, which opened at Shanghai February 1st, closed on February 20th without having

done all that was expected of it. The recommendations so far as they go are satisfactory, but the opposition of the British delegates to any radical and effective proposals prevented their adoption. The conference was called by the United States and was participated in by seven nations—America, Great Britain, Germany, France, the Netherlands, Japan and China. It was presided over by Bishop Charles H. Brent, of the Philippines, and was opened by an address from Viceroy Tuan-fang. He claimed that the cultivation of the poppy had been already largely reduced and that the consumption of the drug had been diminished by one-half. The reform which, according to the Imperial edicts, was to be accomplished in ten years, seemed likely to require but three. The Chinese report, which was later presented by Tong-kai-son, hardly confirmed this optimistic view. He estimated that out of China's population of 400,000,000, of whom 50,000,000 are adult males, the total number of smokers is 13,456,000. The total native production of opium was calculated at 34,800 tons in 1906, when the first decree against it was issued, and at 21,860 tons in 1908, but the figures were admitted to be untrustworthy. The Imperial edict of September 20th, 1906, was followed by eleven regulations in the same year, a second edict on June 26th, 1907, and two decrees in March and April, 1908. The commission formally expressed its confidence in the sincerity of the Chinese Government in its efforts to suppress the use of opium and resolved that it is the duty of all countries to adopt necessary measures to prevent the shipment of opium and its derivatives to any country prohibiting such drugs. The anti-opium societies of England are bringing pressure to bear upon the British Government to stop the production of opium in India and its exportation into China, but the opposition points out that India was not in 1906 responsible for more than a seventh of the opium consumed in China, that the loss of the revenue from it would seriously embarrass the Indian finances, and the Royal Commission of 1893 made a thorough investigation of the question and came to the conclusion that "the common use of opium is a moderate use leading to no ill effects."

and that "no extended physical and moral degradation is caused by the habit." Sir Frank Swettenham inquires in the *London Times* how Great Britain would like to have an international commission to consider the expenditure of \$900,000,000 annually by the 40,000,000 people of Great Britain for drink, or the killing of negroes by shooting, hanging, burning in the United States, which "offends the moral conscience even when it is done in moderation." The Shanghai commission called attention to the fact that morphine is being clandestinely introduced into China to a dangerous extent, and that the anti-opium remedies extensively employed all contained this or other derivatives of opium. The Japanese report good progress in their efforts to eradicate the opium habit in the island of Formosa, which they acquired from China in 1895. Opium traffic was then made a Government monopoly, and it was sold only to habitués, who were registered. In 1900 Formosa had a population of 2,840,873, of whom 165,752 were licensed opium smokers. In 1907, with a population of 3,193,708, the number had decreased to 127,477. The amount of opium sold has, however, increased. This is accounted for by the increased amount used by a smoker as he grows older.

Manchuria and Korea

A private letter, which, according to Pekin reports, has been written by the regent, Prince Chun, to President-elect Taft, is remarkable on account of its naïve opinion that the Japanese will soon withdraw from Manchuria and will ultimately retire from Korea. A lasting peace can, in his opinion, be secured only thru the renunciation by Japan of all control of the mainland. Prince Chun states that the reforms decided upon by the Government will be carried out, and that the dismissal of Yuan Shih-kai was entirely a personal and family matter and does not indicate any change of the internal or external policies of the empire. The letter says that the Government is determined to eradicate the use of opium and that the assistance given by the United States is contributing to this goal. —The reports of Japanese commerce and emigration to

Manchuria do not indicate any immediate intention of evacuating that country. Last year the number of ships entering the port of Dairen (formerly Dalny) was 526, with an aggregate tonnage of 980,244 tons. The corresponding figures for ships that cleared was 482 and 1,002,834. The number of Japanese subjects entering that port during the year was 28,555 men and 11,360 women. The departures were 27,385 men and 5,559 women. The fact that such a large part of the women remained is taken as proof that the Japanese in Manchuria are setting up households of their own. In Korea Japan will have spent by the end of next year about \$100,000,000, and has constructed in that country 641 miles of well equipped railroad. The Government of Korea has been completely reorganized by the Japanese and efficient departments of administration, finance, defense, currency, banking, commerce, communications, public undertakings, agricultural and industrial, sanitation and education, have been established. —Prince Ito, the President-General of Korea, has contradicted the interview emanating from Viscount Sone, the Korean Home Minister, who asserted that the American missionaries were encouraging the revolutionary element in that country. Prince Ito states that during a recent tour of inspection which he made with the Emperor of Korea he found the American missionaries entirely in sympathy with the present administration and co-operating with the Regency in its efforts to enlighten the Koreans. The Prince gave assurance that the Christians of Korea shall continue to receive equal treatment and encouragement. —Russia is getting into further trouble with the Chinese and foreigners at Harbin on account of the taxes and regulations imposed by the railway authorities on the people of that city. The owners of several Chinese stores and warehouses have refused to pay the taxes demanded and have closed up or moved away their establishments. The American and British ministers at Pekin have notified the Russian Legation of the necessity of compliance with the obligations of the treaty at Portsmouth. The Russian Foreign Office states that the matter is not under its control, but is in the hands of the Ministry of Finance.

The World of Life

BY ALFRED RUSSELL WALLACE, LL.D., F. R. S., ETC.

[This concludes the paper begun last week on "The World of Life as Visualized and Interpreted by Darwinism," by the co-discoverer with Darwin of the theory of evolution by natural selection.—EDITOR.]

Nature of Adaptations.—Before going further it will be well to give a few facts illustrating the nature and amount of the *adaptations* that are present everywhere, and on which the whole existence of living things depends.

It is an obvious fact that animal life of every kind depends on the vegetable world for its very existence, and it can also be easily perceived that it is on the overwhelming variety of plants that the corresponding variety of animals has been rendered possible.

Tho so well known it may be well to recall here Darwin's striking example of the complex relations and interactions of animals and plants in which he showed that cats may determine the abundance of a plant which has no direct relation with them whatever. The common red clover is fertilized by humble-bees almost exclusively and without these insects little or no seed is produced; field mice destroy the nests of humble-bees and feed upon the larvæ; cats feed upon the field mice. Hence where there are plenty of cats the field mice are destroyed, the humble-bees then increase, the red clover is well fertilized and produces plenty of seeds. Thus without cats there would be a great scarcity both of humble-bees and of red clover.

No doubt there are hundreds of such complex relations of which we know nothing, but I will here ask your attention to a few of the broader adaptations of familiar plants and animals to each other.

Most persons, especially those who have gardens, occasionally see with horror the leaves and buds of their fruit trees devastated by various kinds of caterpillars, while every one has noticed in certain years the oak trees almost denuded of leaves by insect enemies. Many garden crops, and even grass itself, are sometimes destroyed by wire worms and various other insect larvæ which burrow in the soil and devour the roots. And

we are apt to look upon all this defacement and destruction as we do upon epidemics in the animal worlds. They seem to us to be inflictions which we should be much better without, and are inclined to wonder why trees and shrubs, herbs and flowers, should not be allowed to develop in their full and beautiful luxuriance of foliage and flower. Yet all this destruction and disfigurement arises from a little exceptional increase of an absolutely essential portion of the life-world, without which some of its most beautiful features could not exist. To show how this is we need only consider what takes place in our own country every spring and summer.

At that delightful season our gardens and hedgerows, our copses and woods, are thronged with birds both resident and migratory, which are building their nests and rearing their young. A considerable number of these thrushes, warblers, tits, finches and many others are so prolific that they have two or three or even more families every year, so that the young birds reared annually by each pair varies from four or five up to ten or twenty, or even more.

For when we consider that the parents of these are all common birds and must exist in our islands in numbers amounting to several millions each, we can partially realize the quantity of food required to rear say five or ten times this number of young birds from the egg up to full growth—and the whole of the food they consume consists of the various caterpillars and other insect larvæ, with occasionally small worms and mollusks. Even the common sparrow, tho one of the great army of specialized seed-eaters, feeds its young on caterpillars.

In numerous cases (both by old and recent observers) many of these birds have been closely watched while feeding their young, with very interesting results. A *chiff-chaff* fed its five young ones almost incessantly from morning

all night. She brought small caterpillars, spiders, and flies at the rate of four times in five minutes.

A pair of *blue tits* with a large family worked for sixteen hours a day at mid-summer, and it was estimated that they brought in that time about 2,000 caterpillars or small grubs.

A pair of *marsh tits*, with a crowded nest of young ones, always went and came together, their mouths filled with small green caterpillars for their chicks.

Flycatchers sit on a dead branch near the nest, from which they catch flies, etc., in the air, and bring them to their young at intervals of from two to five minutes, while a wren brought them food 278 times in a day, or about every three minutes for fourteen hours.

The abundance of nests in all suitable places may be indicated by the fact that Mr. Kearton found nine species of birds with nests and young in a small copse in Hertfordshire, all within fifty yards of each other; while in another case three nests—a tit's, a flycatcher's and a wood wren's—were only ten or fifteen yards apart. Yet all these found sufficient food for their young and for themselves in the immediately surrounding trees and bushes or among the herbage below them.

And this vast destruction of insect life goes on for months together, and the supply never seems to fail. When the parent birds leave the nest in search of food they may be seen to fly to some adjacent bush, hop about it rapidly, and then perhaps fly off to another, where, finding what they require, they soon get a throat full of small caterpillars and return to the nest; but unless the numbers of such insects are enormous, and their development from the egg goes on day by day, week after week, month after month, it would seem to be quite impossible for the many millions of these small birds to succeed in finding the required daily supply without fail. For if they had to go further away, or the caterpillars required much longer searching for, the young would soon die of starvation or of cold, or be devoured by stronger birds or small arboreal mammals during their parents' absence.

What a wonderful perfection of adjustment there must be in these little creatures, what acuteness of vision,

rapidity of motion and parental love, enabling them to keep up this constant search for food, this extreme care and watchfulness of their nests and young, on the continuance of which day by day for several weeks the very existence of those young depend.

But all this would be of no use unless the insect tribes were so abundant, so varied and so omnipresent as they are, and also unless vegetation was everywhere so luxuriant, and its productive power of leaves and buds so superabundant, that the destruction of a considerable proportion of it by insects rarely produces permanent injury to the individuals, much less to the species.

Here, then, we see that what we term insect pests when they are a little more abundant than usual in our gardens and orchards do not exist solely for themselves, as an apparently useless part of the scheme of Nature, but are and have been thru the geological ages absolutely essential to the original development and continued existence of the most wonderful, delightful and beautiful of the living things around us—of our garden pets and song birds. Without the myriad swarms of insect life everywhere devouring the new and luxuriant vegetation, the nightingale and the lark, the red-breast and the wren, and the fairy-like tits and gold-crests, would disappear forever.

This seems to imply—and in my opinion does actually imply—that the lower forms of life originated and were so abundantly developed as the necessary forerunners of higher forms; just as we must, I think, look upon plant life as not being an end in itself, but an essential step toward the origination and development of animal life. Of course, it will be said that any such conclusion is unscientific, and further, that it is anti-Darwinian. But I deny the accuracy of both statements. Darwin no doubt declared that natural selection acts, and can only act, for the good of the species, and that the view of some writers that many structures or characters were "created for the sake of beauty, for our delight, or for the sake of mere variety," would, if it could be proved true, be "absolutely fatal to my theory." In this, as a general rule applicable to all or

many species, I agree with him. I still maintain that, given the fundamental properties of living protoplasm and the hidden powers of life, natural selection affords a full and sufficient explanation of *how* all the varied forms of organic beings were developed. But we may hold this view and yet maintain that the great facts of nature, viewed in their entirety, compel us to recognize a power and a purpose in the vast world of life, that the organic forces and laws are its manifestations, and that without this conception of purpose and foreseen result the whole cosmic process becomes unmeaning and unintelligible.

A Vision of the Earlier World.—By the help of the fragmentary tho at intervals very abundant records preserved for us in the rocks, we can picture to ourselves an earlier and an ever earlier world, always, as now, teeming with life, but, as we recede into the remoter past, with life of a somewhat lower type, and manifested thru somewhat less numerous and less varied specific and higher forms.

Always and everywhere these forms were being slowly modified, so as to keep them in constant adaptation with the slowly changing environment, both inorganic and organic.

The great gaps in the series of classes, orders and families of the animals and plants now existing are satisfactorily explained by the continuous increase of specialization and of perfect adaptation, which necessarily led to the dying out of the less specialized and less well adapted forms. But, anomalous as it may seem, a considerable number of the most highly specialized forms of past ages also died out; and this again was a necessary result of the process of evolution, because, having become specialized in adaptation to local and temporary conditions in an ever-advancing world of life, when those conditions changed, when new and more powerful enemies or competitors were developed, and when the climate and vegetation became less congenial, these specialized and often huge and unwieldy forms could not longer exist in competition with the newer and higher types and therefore diminished in numbers and became extinct.

That such extinction did occur even in

quite recent geological times is shown by the very interesting case of the American Continent. When that continent was discovered no animal of the horse tribe inhabited it. Yet not only are the remains of fossil horses abundant there but a long series of fossil remains have been found showing the process of development of the modern horse (or of one hardly distinguishable from it) from a small four and five toed animal in the early tertiary beds of Northwest America; while the last of the series—a true horse—has been found fossil all over both North and South America in the very latest deposits. Then, with apparent suddenness, the whole race became extinct. The fact is indisputable, tho the causes that led to the extinction are still unknown; but as numerous other large quadrupeds of very varied types became extinct about the same time, it seems probable that the cause was some great and rather sudden change of terrestrial conditions, such as of climate, or the flooding of great areas by subsidence, which led to the widespread destruction and consequent impoverishment of mammalian forms in America as compared with the Old World.

A Common Objection Answered.—Perhaps the best way of explaining how natural selection actually works will be by quoting one of the common objections to it and showing how the actual facts of nature afford a sufficient reply to it. The most common of all the objections to the action of survival of the fittest in the production of new species rests upon the strange belief that variation is a *rare* phenomenon, that favorable variations occur *singly* and at long intervals, and therefore can have no effect in producing any important change.

As a rather recent example of this objection we may take its statement by the late Lord Salisbury in his presidential address to the British Association at Oxford in 1894.

After describing how the most diverse races are produced by artificial selection, he continued:

"But in natural selection, who is to supply the breeders' place? Unless the crossing is properly arranged the new breed will never come into being. What is to secure that the

two individuals of opposite sexes in the primeval forest, who have been both accidentally blest with the same advantageous variations, shall meet, and transmute by inheritance, that variation to their successors? Unless this step is made good the modification will never get a start; and yet there is nothing to ensure that step but pure chance. The law of chance takes the place of the cattle breeder or the pigeon fancier. The biologists do well to ask for an immeasurable expanse of time, if the occasional meetings of advantageously varied couples, from age to age, are to provide the pedigree of modifications which unite us to our ancestors, the jelly-fish."

Here we have it plainly set forth that advantageous variations occur singly, on *rare* occasions, and *remote* from each other; and that even when they do occur, unless by some lucky accident a male and female should accidentally find each other "in the primeval forest," nothing happens, and the "advantageous" variations are swamped in the general mass of the species supposed not to vary. And this British Association address was spread all over the civilized world; and almost all the newspapers and a majority of the "general readers," firmly believed that Darwinism is and was—as a recent writer has termed it—"an unsuccessful hypothesis," and altogether played out!

What totally false idea of Nature such critics must have, both as to the numbers of individuals in every common, widespread and dominant species, and as to the nature and amount of variation, to imagine that the very existence of the organic world during each period of changing conditions should have been dependent on the chance meetings of single individuals; that, having millions, even hundreds and thousands of millions to her hand, Nature should be dependent on a few scattered individuals only!

Let us recur for a moment to the numbers of individuals in most of the common species. The "Brambling"—one of our rather common autumn and winter migrants—comes to us often in immense flocks of from upwards to 100,000 individuals each. It breeds in the Arctic regions, feeding its young on the myriads of mosquitos and other flies that often darken the air in those regions, and in early autumn spread southward over all Europe and a great deal of Asia, only a kind of small overflow of the migrating stream coming to us. On the

Continent the numbers have been occasionally estimated. In Lorraine, in 1765, about 20,000 were killed every night for many nights in succession, and in 1865, in Luxembourg, a single flight was estimated by a French ornithologist to have numbered sixty millions of birds. What must have been the numbers spread over the whole of Europe and much of North Africa and Asia? Probably a thousand millions would be below the mark. And with these all *varying*, in every part and organ, to the large amount shown to exist in every common species which has been measured, and with such very slow changes of the environment as we know to occur, there is hardly any conceivable modification that could be required to bring such a species into harmony with the new conditions, but such as would easily be effected in even a few generations.

It must be remembered also that Nature does not act by preserving favorable variations in such characters only as we can observe and measure, but in their results, as shown in faculties and powers of action; and as regards any such faculty or power, the whole adult population of every species can always be divided into two nearly equal portions, those which possess the faculty in a *greater* or a *less* degree than the mean value. Thus if a new enemy comes into a country, and can be avoided or escaped only by a combination of watchfulness and speed (or any other combination of characters) then the whole mass of a species will consist of those which possess the combination in a degree above the average, or below it. In countries like Europe or North America there will be many hundred millions of each sort; and we can hardly suppose that the new enemy could at once exterminate even the less adapted half. The better adapted would almost wholly escape, and would thenceforth by producing their like increase the adaptation of the whole species year by year till only a moderate toll could be taken by the enemy. And it must always be remembered that the enemy would not limit its attacks to one species only, but would, for a number of years, find an ample supply of food by capturing the young and the less-adapted members of perhaps a score or even a

hundred species inhabiting the same country, so that there would be ample time for the better adapted portion to raise its standard year by year, owing to the regular elimination of the less fit in regard to this special enemy. The enemy would itself bring about the adaptation to the new and somewhat less favorable environment its presence had created.

Now I cannot imagine any state of things to which this reasoning will not apply. No living thing can continue to exist which is not sufficiently adapted to all the recurring phases of its environment, inorganic and organic. The completeness and generality of the adjustment is indicated, as Darwin has pointed out, by the average number of individuals in a species and the extent of the area it occupies; and it is the populous and widespread species which vary most, and which, under changed conditions, give rise to several divergent new forms, or species, each of them often adapted to fill some special place in the economy of nature.

It follows—not as a theory but as a fact—that whenever any advantageous variation is needed, it can only consist in an increase or a decrease of some power or faculty already existing, and variations of these powers or faculties do actually occur in every dominant species, not by ones or twos, as the popular critics assume, but at least by millions and in most cases by hundreds or by thousands of millions.

What midsummer madness, then, is this often repeated tale of the *one* or *two* superior individuals meeting by chance in the primeval forest!

Again: what ignorance and prejudice is displayed by Lord Salisbury's reference to "our ancestors the jelly-fish." That is merely the clap-trap of the special pleader; for no biological student has ever claimed that the jelly-fish was in the line of our ancestry, or that the earlier portions of that line can be pointed out. Nor is it any way pertinent to the matter in hand which is, the origin or derivation from other pre-existing species, not their actual line of derivation from the very earliest forms of life. Such a reference is also dishonest, because the critics accept evolution, and

only deny or doubt the adequacy of the Darwinian explanation. But any and every mode of evolution implies a succession of gradual changes, however brought about. The only problem we have to solve is how, at every period whether late or early, the required successive variations could or could not have been effected thru heredity, variation and survival of the fittest.

Hardly less remote from the actual facts and processes of nature which are effective in originating new species are those modern studies termed Mutationism and Mendelism, which deal only with some of the rarer forms of variation occurring chiefly under the influence of domestic cultivation.

Yet the students of these strictly limited phenomena, which have rarely been found under natural conditions, sometimes claim for them an important part in the development of the entire organic world, comparable with that of universal variation and unceasing elimination of the least adapted portion.

Protective Colors and Mimicry.—Among the innumerable subjects of interest presented by living things which are only intelligible by means of the facts and processes which I have endeavored to set before you, are those of Protective Coloration and Mimicry among the higher animals, and the endless modifications of flowers and fruit so as to benefit the former by securing cross-fertilization and the latter by aiding in their wider dispersal.

In every department of nature color is one of the most variable of all characters, and it is this variability, together with the enormous importance to all insects of concealment from or protection against their innumerable enemies, especially in tropical countries, that has enabled those minute and striking resemblances to be brought about that were long the greatest puzzle to the naturalist who had the opportunity of conserving them in their native haunts.

The facts I have put before you with regard to the universality of variation, enormous powers of multiplication, and incessant weeding out of the unfit, afford a complete explanation of the whole phenomena of color, in all its variety and beauty, while no other adequate explana-

tion has ever been set forth, or even attempted.

The Dispersal of Seeds.—As regards flowers, fruits and seeds, volumes have been written on them; but here, too, there is, so far as I know, no other adequate explanation of the facts. The various forms of flowers have, it is true, been attempted to be explained by the direct action of the environment, especially by the visits of insects, but the explanation is verbal rather than real, and usually begs the question at issue. As regards fruits and seeds this mode of explanation is still more hopeless. Kerner tells us that one-tenth of all flowering plants possess fruits or seeds which attach themselves to birds or quadrupeds, and thus get widely dispersed; and the special modifications to secure this end are exceedingly various and very curious. Hooks and darts of special forms, as well as sticky exudations, are frequent, but it is impossible to suppose that contact of the ripe fruit or seed, after growth is completed with hairs or feathers, should in any way *cause* the production of such an instrument within the tissues of the future flower.

Neither is it possible to explain how the wind-vanes, or delicate membranes or tufts of silky hairs which so often enable seeds to be carried for very long distances thru the air, could possibly be produced by wind pressure either in the opened flower or after the growth of the seeds had ceased, and they became detached from the seed vessel. But the known facts of variations and natural selection explain the whole gradual process of modification without difficulty.

There is one other case of seed dispersal and protection that I have not seen mentioned in botanical works, but which seems to me very interesting and suggestive. There are many fruits or seeds of shrubs or forest trees, whose very purpose seems to be to supply food to mammalia, and yet have a certain amount of protection against being eaten, since to be eaten is to be destroyed. Such are the various nuts with hard shells, whose green color before maturity and brown when ripe and fallen seem calculated to avoid detection, the various chestnuts, whose fruits are green and sometimes prickly but the ripe seeds

brown, like the dead leaves among which they lie; and especially the great variety of acorns, which are produced in such enormous quantities and which attract many mammals, especially wild swine to feed upon them. Now, these various seeds are all rather large, nearly globular or oval in shape, with very smooth and firm outer coatings so as not to be readily injured, except by being actually eaten. If these were not attractive as food to some large animals they would lie where they fall, and until the parent tree died hardly one of them would have a chance of coming to maturity. But when a herd of swine or of cattle, or wild horses come to feed upon them, and are then disturbed by some danger and rush away, a certain number of these nuts will be kicked along the ground to a considerable distance in various directions, and thus have a chance of reaching a spot where some other tree has been blown down and left a space in which an oak may have a chance of growing. But there is yet another advantage to the species whose seeds are fed upon. In the repeated rush of animals, some of these large seeds will be trampled into the soil, especially where there are damp or muddy places, and these will be hidden from succeeding droves and will really be planted, so as to have every opportunity of germinating. Now, the productiveness of these nut-bearing trees is so enormous and their life so long, that it will be clearly advantageous to the species to have all but one in ten thousand, or even one in a million, seeds devoured if in the process the odd ones here and there get an additional chance of growing into a tree, and thus secure the continuance of the species when some tremendous hurricane or enormous increase of insect enemies or any other cause had destroyed large areas of forest. This is, I think, one of those cases which enable us to perceive how the enormous productivity of Nature, which so often seems to us pure waste, may yet, like everything in the organic world, have its use and purpose.

A somewhat similar case is that of the habit of squirrels, marmots, rooks, jays, nutcrackers and other birds of concealing fruits or nuts in hollow trees or by

burying them in the earth. These are intended for winter stores, but from various causes are not always used, and thus seeds are dispersed and have an opportunity of spreading which they would not otherwise have had.

A friend of mine, having in successive years seen rooks actually burying acorns in a pasture field near to which there was not a single oak tree, searched the spot the following spring and found several young oaks springing up.

In concluding this very incomplete exposition of the fundamental facts which alone render organic evolution intelligible, I must again impress upon you the enormous scale upon which Nature works. It is for this purpose that I have put before you a number of figures (not easily accessible to the general reader), in order to give some idea of the superabundance of life, whether in its endless diversity of types and of specific forms, or the overwhelming numbers of the individuals comprised in all the more dominant species.

It was also necessary to show by direct evidence and illustration the universality of variation pervading every part and organ, every form of action, every sense, instinct and emotion; and further, that these variations are not "infinitesimal," as so often stated, not even small in proportion to the mean value, but of such amounts as are easily to be seen even without measurement. Everyone knows that no two of his friend's children are so much alike that the difference cannot be at once perceived when they are together; and this is true throughout nature.

The enormous powers of increase, year by year, and the complex relations and interactions of all the various plants and animals that live together in each considerable area, complete the series of facts which, taken together, render "natural selection" inevitable. And the reason why this great principle is not seen and recognized by every observer is, firstly, because it has not been systematically looked for, but mainly perhaps because it only occurs on a large scale under permanently changed conditions of the environment. There are, however, several cases in which it *has* been clearly seen at work—in the rabbits of Porto Santo, the

mice upon an island in Dublin Bay, the sparrows in the Rhode Island blizzard, and the crabs in Plymouth Sound—all briefly described in my "Darwinism."

Again, we must always remember that where *we* observe or experiment with tens or hundreds of individuals, Nature carries on her work with millions and thousands of millions; that whereas our observations are only intermittent and for short periods, Nature acts perpetually and has so acted thruout all past geological time; and, lastly, that while we are concerned with one or two species at a time, and to a large extent ignorantly and blindly, she acts simultaneously on all living things—plants as well as animals—that occupy the same area—and always in such a way as to preserve every advantageous variation, however slight, in all those which are destined to continue the race and to become, step by step, modified into new species in strict adaptation to the new conditions which are slowly being evolved.

It is only by continually keeping in our minds all the facts of nature which I have endeavored, however imperfectly, to set before you, that we can possibly realize and comprehend the great problems presented by the "World of Life"—its persistence in ever varying but unchecked development thruout the geological ages, the exact adaptations of every species to its actual environment, both inorganic and organic, and the exquisite forms of beauty and harmony in flower and fruit, in mammal and bird, in mollusc and in the infinitude of the insect tribes, which have all been brought into existence thru the unknown but supremely marvelous powers of *Life*, in strict relation to the great law of usefulness, which constitutes the fundamental principle of *Darwinism*.

Arising out of the general survey of the World of Life I have endeavored to lay before you, are two somewhat important and interesting conclusions which may be briefly indicated.

There is, I think, a certain necessary analogy and correspondence between the individual organism of the higher animals and plants, and the vast complex whole—the organic world as we now find it. This has arisen from the continuous development of both under the same

general laws of heredity and variation, guided towards increasing complexity under the great law of survival of the most useful. For it is certain that just as each species varies and has become modified as a whole in adaptation to the external environment, so does each bodily organ, structure, tissue, and cell vary and become modified in order that each may fulfil its proper function in strict adaptation to all other structures in the same body.

The two phenomena are thus closely connected; are in fact the same phenomenon exhibited in a different field of action. We know that as we go back in time both organic life as a whole and the structure of the highest forms in each order or class, were simpler and less developed than they are now. We conclude that at the dawn of earth life all organisms were, as some are still, single cells, and that the process of development was towards a greater and greater complexity of structure, together with a correspondingly greater variety in the outward form and mode of life.

The result was the successive occupation of every place in nature, so soon as it became available—first the water, then the shores, then the land and then the air itself, till finally, but not till a comparatively recent period in the whole life-history of the earth, every place and station became occupied with highly developed types specially adapted to them. Then began a series of more minute adaptations to more specialized conditions, the progress of some of which we have been able to trace, such as that of the four-toed Eohippus to the living one-toed horse tribe, the primeval deer with short, simple horns to the branching antlers of the moose and the red deer, and many others.

In the middle or later stages of these final developments we ourselves began our earthly life, in what is not only a more perfect world than it had ever been before, but at or very near to the limit of possible development in vegetable and animal life. The horse and the camel, the deer and the antelope, the cat and dog, the pigeons and poultry, the lark and the thrush, the eagles, the humming birds, the parrots and the birds of paradise, all seem to have reached the high-

est development possible in their several orders and families, both in perfection of structure and in adaptation to the uses or enjoyments of man.

We are thus, in a very real sense, the "heirs of all the ages." We find ourselves in a world of greater variety, greater beauty, and greater interest than has ever existed before. We have powers and capacities which enable us to study, to enjoy, and to some extent to understand this glorious world, and we should hold ourselves under a solemn moral obligation to preserve as far as possible every manifestation of life not positively injurious to us, and to check that reckless destruction, whether for pleasure or profit, which is now so prevalent.

We should look upon this great treasure house of living things as a trust which we hold for posterity, and those who pride themselves upon their advanced civilization should so order their lives and their laws that, while cultivating the soil to its utmost capacity, a sufficient area should always be left in a state of nature, both for esthetic enjoyment, for health, and as a reserve for the preservation of as many forms of life as is possible.

The second and most important conclusion is this—that altho known facts, when fully examined and reasoned out, are adequate to explain the *method* of organic evolution, yet the underlying fundamental *causes* are, and will probably ever remain, not only unknown, but even inconceivable by us. The mysterious power we term life, which alone renders possible the production from a few of the chemical elements such diverse fabrics as bone and skin, horn and hair, muscle and nerve and brain cells; which from identical soil, water and air manufactures all the infinitely varied products of the vegetable kingdom—the thousand delicious fruits for our use and enjoyment, the endless woods and fibers, gums and oils and resins, to serve the purposes of our ever developing arts and manufactures, will surely never be explained, as many suppose they will be, in terms of mere matter and motion.

But beyond even these marvels is the yet greater marvel of that ever-present organizing and guiding power, which—

to take a single example—generation after generation, and even year after year during the life of the individual, builds up anew that most wonderful congeries of organs, the bird's covering of feathers. Not only is a feather a miracle of complex structure, in every minutest part adapted for most important and even vital ends, but it may be safely stated that no two feathers on any bird are absolutely identical, varying in contour, in curvature, in rigidity, in size, by almost imperceptible gradations, so that each fulfils its special purpose. And beyond this, in the great majority of cases, these feathers are adorned with colors which are infinitely varied, and which we can so often perceive to be of use to the individual, the sex or the species, that we conclude all to be so. But to produce the result of well-defined and very constant colors, shades and patterns on the outer surface of the bird, each feather has to be colored on that portion of its

surface which is not overlapt by the adjoining feathers *at the time when the color is needed*, and this is invariably the case.

Every attempt to explain these phenomena—even Darwin's highly complex and difficult theory of pangenesis—utterly breaks down; so that now even the extreme monists, such as Haeckel, are driven to the supposition that every ultimate cell is a conscious, intelligent individual, that knows where to go and goes there!

These unavailing efforts to explain the inexplicable, whether in the details of any one living thing or in the origin of life itself, seem to me to lead us to the irresistible conclusion that beyond and above all terrestrial agencies there is some great source of energy and guidance, which in unknown ways pervades every form of organized life, and of which we ourselves are the ultimate and foreordained outcome.

BROADSTONE, WINBORNE, ENGLAND.

After February

BY JOEL BENTON

WHEN Winter's strength begins to wane
In snow-edged February,
And greenery comes to tree and plain,
And suns and breezes vary—
While woodland birds their songs renew
I banish care and sorrow;
For whether Maud or Madge I woo,
My love shall win tomorrow.

Blue eyes or black, or brown, or grey,
And curls, with them down-falling,
Will bring young Eros on his way;
I hear his urgent calling;—
So whether Madge or Maud be true,
Or both become contrary,
Some pretty maid I shall pursue
In beckoning February.

Since hearts beat high, and Spring is near.
And buds begin to glisten,
I feel the spurring atmosphere—
I pause, I thrill, I listen;
Hark now! some step among the leaves
Seems like rare music falling.
A sense, that no true heart deceives,
Whispers that Love is calling.

'Tis Claribel, her face aglow,
With voice (a rivulet's laughter)
Who comes, where buds adjoin the snow
And kisses shall come after.
I plead—she smiles. At once I know
No wicked elf can vary
The trustful troth we plight. And so—
All hail to February!

POUGHKEEPSIE, N. Y.

PRINCETON UNIVERSITY

by EDWIN E. SLOSSON

PRINCETON is the most interesting of American universities to study just now, because it is in what Professor De Vries call a "mutation period." Oenothera Lamarckiana cannot be compared with it for novelty and rapidity of transformation. Nor can other universities of the day. To find anything equal to it we must go back fifteen years to the time when Harper built the new University of Chicago out of the ruins of the old, or forty years to the time when Eliot took hold of Harvard.

At every one of the fourteen universities I visited I was met by the remark: "You have come to us at a critical moment. This university is just now in a transition stage." No doubt the remark was to a certain extent true of all. It should have been more true than it was for in some cases the transit was so slow that I was not able to detect it. But there is no question about Princeton. Evolution is proceeding there as Darwin said it did not, *per saltum*. It is going forward by leaps and bounds, not in numbers, but in much more important

ways, in developing new forms of college life and training.

What I like about Princeton is that it has an ideal of education and is working it out. It is not exactly my ideal, but that does not matter to anybody but me. The remarkable thing is that here is a university that knows what it wants and is trying to get it. Many universities seem to me to be drifting. Some of them are trying in vain not to drift. Some of them are bragging about the speed they are making, when they are really being borne along by the current of affairs and not keeping up with it at that. But Princeton is steering a pretty straight course toward a port of its own choice, regardless of wind and current, perhaps even heading a trifle up-stream.

The fault of American universities in my opinion is their dead level of uniformity and conventionality. They imitate one another and where they cannot imitate they pretend to have imitated. Yet educational psychology has not become so exact a science that it can be regarded as certain what studies should be taught, in what order and how. If some educational revolutionist were to arise and assert that the whole curricu-

GREAT AMERICAN UNIVERSITIES.—This is the third of a series of articles on the present condition and future prospects of the larger universities of the United States by one of the editors

of THE DAILY PRINCETONIAN. The articles will appear as follows:

lum should be inverted, that we should begin with metaphysics and ethics and end with geography and arithmetic, nobody could prove him a fool, and if he were given a few millions and a free hand he might prove that he was not.

But I am wrong in using such wild words in connection with Princeton's educational novelties. They are not revolutionary or chimerical. In fact Princeton

have said that it was the loss of personal relationship between instructor and student, resulting in ill-adapted and careless teaching on the one side and in diversion of interest on the other. Teacher and pupil were not even on opposite ends of the same log. They were at opposite ends of a telephone working only one way. Now Woodrow Wilson is bringing them together by means of his preceptorial system. It may not be the only way

WOODROW WILSON.
President of Princeton University.

has shown its originality chiefly in going ahead and doing what others have always said ought to be done. Almost every educator if asked what was the main fault of our large colleges would

or the best way, but it is one way. It is something that ought to be done and he is doing it. It is therefore worth while to watch him.

Everybody agrees, as I said, that in-

structor and student ought to be brought together. The real question is, Where? It is like arranging a royal visit. Shall they meet on the territory of the one or of the other, or on a neutral strip, where neither of them is at home? Usually, whenever it was decided by the powers that be in a university that there should be "a personal relation" established it meant that the instructor was to go the whole distance. He was to "take an interest" in his students, which meant practically that he was to attempt to ingratiate himself by talking with them about the things in which they were interested. The docile professor, moved by his conscience or the Powers, inserted in his prayer the petition, "Make me a child again, just for tonight," and spent an arduous evening trying to talk athletics, class politics and campus gossip in a genial and informal manner with the boys. They parted after such a function with mutual feelings of kindness and contempt; kindness because the effort to make one's self agreeable never fails altogether of producing an effect, altho not always the effect intended, contempt on the part of the boys for a man who displayed so gross ignorance about such important matters, contempt on the part of the professor for those who regarded such matters as important. Would it not be better to reverse the procedure and induce the students to cultivate the acquaintance of their instructors, to become interested in the interests of the faculty? Is not this, in short, what education really means? It involves, however, the change of the center of gravity of student life, of giving them an entirely new conception of the purpose of a college course.

The prevailing philosophy of the day I found expressed in illuminated mottoes or golden texts on the walls of student rooms, East and West, of which one of the favorite forms is:

Don't Let Your Studies Interfere With
Your Education

The students of earlier days had more aspiring and conventional resolutions

upon their walls, but perhaps they did not succeed in carrying them out any better than those of the present. The college world reflects in miniature, like a drop of ink, the world outside, and this is simply a manifestation of the dominant tone of the age, the affectation of an inverted hypocrisy which has come as a reaction from the priggishness of a previous generation.

In this perverse conception of the aims of a college course I see the malign influence of the alumni. When "the old grad" sits by the open fire of the commons or fraternity house and the young men gather around in an attitude of discipleship that they rarely show to their official teachers, what does he talk about? Is his conversation apt to be of a character that could be called edifying? Does he help along what the president and faculty are trying to do with these boys or does he counteract their influence? What sort of an idea would they gather from his stories of the college life of his day, about the educational influences which have contributed to his successful career?

The favorite lie of the old grad is "nothing I learned from books was any help to me." And he acts in accordance with this by throwing the weight of his influence, money and applause mostly on the side of the various activities which divert the undergraduate from his books. Consequently college life became increasingly pleasant, luxurious and alienated from legitimate collegiate aims. No one has better described this condition of affairs or has done more to remedy it than President Wilson. The college to which he was called as president was popularly known as "the pleasantest country club in the United States," but that is not the kind of institution he wanted to preside over. His "Report on the Social Coordination of the University,"* exploded like a bombshell on the peaceful Princeton campus and shook its historic buildings to their foundations. The alumni promptly put a stop to the agitation of his proposal to substitute "residential quads" for the upper-class clubs, and in deference to their protests he consented to lay the motion on the table for a time and give them a chance to work out a

**Princeton Alumni Weekly*, June 12, 1907.

remedy for the conditions in their own way. His description of these conditions is worth quoting because it applies in some degree to many other or all other colleges, but not every president has had the courage to point it out so plainly:

"We realized that, for all its subtle charm and beguiling air of academic distinction, Princeton, so far as her undergraduates were concerned, had come to be merely a delightful place of residence, where young men, for the most part happily occupied by other things, were made to perform certain academic tasks; that, altho we demanded at stated times a certain part of the attention of our pupils for intellectual things, their life and consciousness were for the rest wholly unacademic and detached from the interests which in theory were the all important interests of the place. For a great majority of them residence here meant a happy life of comradeship and sport interrupted by the grind of perfunctory 'lessons' and examinations, to which they attended rather because of the fear of being cut off from the life than because they were seriously engaged in getting the training which would fit their faculties and their spirits for the tasks of the world which they knew they must face after their happy freedom was over."

President Wilson seems to have taken a hint from modern medicine, for he proposed to cure Princeton by injecting into its system an antitoxin from Oxford and Cambridge, which have long had the disease in its most virulent form. He imported from the English universities their system of tutors, their plan of separate residential colleges, their architecture and some of their men, but adapted all four to American conditions.

The adoption of the title "preceptor," over which there was much discussion, is indicative of this process of adaptation. "Tutor," having come in America to mean crammer or coach, was not suited to the dignity and importance of these new instructors, who were not expected to assist the students in doing their required work, so much as to induce them to do work that is not required. They were to be neither lecturers, drillmasters nor examiners, but teachers in the primitive and genuine sense of the word. The aim was, in short, a revival of the lost art of teaching.

The preceptors have the rank and title of assistant professors and may give courses of their own in the graduate school. The latter privilege is somewhat illusory, for the graduate students are so few at Princeton that there would not

be one apiece if they were divided evenly among the preceptors. The addition of so large a body of new men to the faculty—they now number fifty-six and the other professors seventy-three—facilitated the adoption and carrying out of the later reforms. It seems likely that President Wilson, in the course of his researches in English government, came across some reference to the advantage an incoming party gains by the creation of new peers.

It was hard to find suitable men for this new profession, because our universities have not been turning out teachers. There has been but little demand for them hitherto. If a professor happened to be inclined to take a personal interest in his undergraduate students he had to be careful how he indulged in this fad publicly, for he was liable to be suspected of incapacity for research. It was also dangerous to one's reputation for scholarship to profess a knowledge of more than one subject or fraction of a subject, and to admit the ability to teach any other even to elementary students. This necessitates one radical departure from the English system, where the same tutor may instruct a student all thru his course. At Princeton, as a rule, a different preceptor has to be provided for each course, even in such allied subjects as history, politics and economics. The distribution of the preceptors at present is: Classics, 12; English, 10; Modern Languages, 10; History, Politics, Economics, 10; Mathematics, 6; Philosophy, 5; Art and Archeology, 2; Geology, 1. The preceptorial system has not been extended to the sciences in general, for it is primarily an attempt to secure for the humanities the benefits that the sciences have enjoyed in the "elbow instruction" of the laboratories. It has had, however, an interesting reflex influence on science teaching. Scientific professors everywhere have found it easy to get three or four times as much work out of the students as their colleagues on the literary side of the faculty could for their courses, which are nominally equivalent. When the latter complained, the reply of the men of science was practically, "Well, why don't you get the students interested in your subjects, too, so they will hang around your seminar rooms all day, as they do

around our laboratories?" and the way in which they said it implied, "You know you can't." At Princeton it is the other shoe that pinches. The scientists complain that the preceptorial studies steal all the time and the students get so much interested in them as to neglect their sciences. They also demand more assistants, so as to give more personal attention to their students, and they are getting them. In most chemical laboratories there is one demonstrator to a

ate carries five courses at a time of three hours a week each. Two of these hours consist of the ordinary lecture or classroom work; the third is devoted to the preceptorial conference. In this the students meet at any convenient hour of day or evening in the study of the preceptor in groups of three to six, and more or less informally discuss the subject matter of the course. The preceptor is not expected to attend the lectures or to follow the course from day to day, but to

NASSAU HALL

Built in 1754 and occupied by the Continental Congress in 1783

group of students from eight to twenty, and the best he can do is to keep walking around and see that the students do not light the hydrogen generator prematurely or cut a stick of sodium under water. At Princeton there is one demonstrator to every five or six students, and he stays with them, quizzing, explaining, giving them problems and seeing that they know what they are doing and get it right in their notebooks.

The working of the preceptorial system is in general this: The undergradu-

ate give the students such drill and personal assistance as they most need and to guide and encourage them in collateral reading. The preceptor shifts his students from one of his groups to another until those of like mind and capabilities are brought together, and he may employ very different methods with the different groups and vary the amount and character of the work as he pleases. The conferences are intended to be regarded as opportunities rather than tasks and the student is expected to keep his date with his pre-

ceptor as he does a business or social appointment. The preceptor has nothing directly to do with the student's grades, altho he may debar him from examination if he regards his work as unsatisfactory. The best thing about the preceptorial relation is probably the opportunity it affords for unforced friendships to spring up between older and younger men. For this purpose it is superior to freshmen receptions, faculty-student baseball games, afternoon teas by faculty dames, advisers' evenings, class parties and similar mixing devices in vogue elsewhere. The student under the preceptorial system has at least had the opportunity to form the personal acquaintance of a number of cultured and scholarly men, and of conversing with them repeatedly and informally on the subjects with which they are most conversant. This is more than can be said for the opportunities afforded by our other great universities. The love of learning is contagious rather than infectious. It is conveyed mostly by personal contact, rarely thru the medium of buildings, furniture, clothing or books. A boy at Princeton has a good chance of catching it sometime during the four years if he is at all susceptible. That is all there is to it anyway.

Obviously whether a preceptor is a

good thing or not depends on whether he is a good preceptor. Many brilliant lecturers or distinguished investigators would not do in that capacity. He must have tact and kindness as well as scholarship. He must know boys as well as books. Every effort is being made at Princeton to keep the system flexible, to give the preceptor an opportunity to work out his own methods, to prevent him from becoming merely another cog in the educational machine. Some of the professors say they do not want to have a preceptor "coming between" them and their students. Some preceptors are more popular than others and the students want to be assigned or transferred to them. Sometimes the "personal relation" fails to develop according to program. One student was unable to tell the president the name of his preceptor, altho he did know where his room was.

But the preceptorial system on the whole works very well. Everybody agrees that it has made a great improvement in studiousness. A man who talks shop at the club tables is no longer whistled down. The library is much more used than formerly and for voluntary reading in lines suggested by the conferences. Still the students do not work so hard as they do at a university like Columbia, where student activities

THE HEAD OF THE PHILOSOPHIC SOCIETY.

THE GYMNASIUM.

Containing a main hall of 166 feet by 101 feet clear space, a trophy room, swimming pool and committee rooms.

are not so numerous and attractive. This is, of course, a personal opinion, insusceptible of proof. It may be disbelieved by those who know less than I about it or contradicted by those who know more.

The preceptorial system is a new broom and sweeps clean. The men who are "creating this new rôle" are conscious that they are being watched by other universities with emotions of mingled hope and fear; hope that the system may be just what is needed to make collegiate education effective; fear lest they too will have to put in preceptors and where can they get the money for it? The real test of the system will come in later years, when the preceptors get old, and lazy, and tired, and mechanical, and no longer able to tell apart the young men who file thru their studies in unending line. And what sort of men will the preceptors be when the system becomes old and commonplace? Will they be young and inexperienced men, just out of college, not interested in their duties, waiting for a chance at "something bigger" elsewhere or taking the job as a "grubstake" to keep them alive while they are writing a book or working out a scientific discovery that will make them famous? If so, they have the same faults as the younger instructors elsewhere. On the other

hand, if a man is contented to remain a preceptor all his life, teaching the same elementary studies over and over to a handful of students, living on a small salary, probably in a students' dormitory, a celibate and recluse, will he be the most inspiring and profitable of associates for young men? But this is borrowing trouble from the future.

Having decided that the students are to study something, the next thing is to decide what they are to study. On this point Princeton has also very definite ideas, and, unlike Harvard, does not regard it as an unwarrantable interference with personal liberty to impose them on the student. The faculty, believing that they know more about the proper sequence and correlation of studies than the students who have not taken them have arranged three well-defined courses of four years, leading to the degrees of A. B., Litt. B. and B. S., in which most of the work is prescribed or emphatically advised. This leaves the student little opportunity for the desultory "strolling" or "tasting" which some educators regard as one of the main benefits of a college course. That is, the student at Princeton, in the place of free election of particular studies, has the option of different groups.

Latin is required of all students, both

for entrance and in the Freshman year. Only those who take Greek can get the Bachelor of Arts degree. "The degree of Bachelor of Science is open to those who concentrate in one of the mathematical or scientific departments during the Junior and Senior years, and the degree of Bachelor of Letters has been constituted to be open to those who concentrate in one of the departments in philosophical, political, literary or other humanistic studies." After completing his Sophomore year the student may choose the department in which he will do his main work for the remaining two years. He has the option of any one of the following eleven departments, for which his previous work has prepared him: I, Philosophy; II, History, Politics, Economics; III, Art and Archeology; IV, Classics; V, English; VI, Modern Languages (Germanic or Romanic Section); VII, Mathematics; VIII, Physics; IX, Chemistry; X, Geology; XI, Biology.

The Litt. B. degree looks to an outsider like a monument erected on the field of a drawn battle. There does not seem to be any pressing need for another degree, so long as nobody can tell the meaning of those we have. But for the

kind of education for which it especially stands, a modernized humanistic training, there is an urgent demand. The new degree, in spite of its comparative lack of academic prestige in this country, has grown in popularity since its introduction at Princeton, as the following table shows:

Degrees conferred in the different undergraduate departments of Princeton since 1905, when the new degree of Litt.B. was first given:

	A.B.	Litt.B.	B.S.	C.E.
1905.....	168	9	52	31
1906.....	143	25	34	29
1907.....	143	51	30	34
1908.....	124	53	18	28

Candidates for degrees, registered January 1, 1909:

	A.B.	Litt.B.	B.S.	C.E.
1909.....	151	55	20	4
1910.....	127	37	21	5
1911.....	104	94		8
1912.....	148	143		69

The undergraduate figures of the last four lines above are not exact, for some students are not classified and others will change or drop out. The candidates for the degrees in science and letters are not differentiated until their Junior year. Apparently the new course has drawn from both the A. B. and B. S. courses those who did not care for either the classics or the sciences, but took them because they had to. Probably some allowance must also be made for those who entered the new course on the expectation that it would be easier than the others, in which they have doubtless been disagreeably disappointed. Students in their choice of studies are apt to be guided rather by their prejudices than by their preferences. The remarkable popularity of the course in civil engineering, as shown above, is in part due to the fact that it was the only way to get thru Princeton without Latin. This year a second language is added to the entrance requirements and no conditions are allowed in mathematics and this rule, to quote the president's report

"would seem to be having the desired result, namely, that of keeping out of the C. E. Department men who have no serious purpose of studying engineering and of diverting them to the B. S. Department, where they more properly belong."

The modern college president, unless he avoids responsibility by letting the students seek their own level, has to keep pacing back and forth along the dams ready to stop up any weak point before the flood breaks thru.

THE NUMBER OF STUDENTS IN THE DIFFERENT DEPARTMENTS OF PRINCETON UNIVERSITY FOR THE PAST TWENTY YEARS, 1888-1889 TO 1908-1909.

Year.	Liberal Arts.	Science.	Humanities.	Engineering.	Architecture.	Law.	Medicine.	Total.
1888-89 ..	141	46	111					667
1889-90 ..	141	41	113					667
1890-91 ..	141	41	113					667
1891-92 ..	141	41	113					667
1892-93 ..	141	41	113					667
1893-94 ..	141	41	113					667
1894-95 ..	141	41	113					667
1895-96 ..	141	41	113					667
1896-97 ..	141	41	113					667
1897-98 ..	141	41	113					667
1898-99 ..	141	41	113					667
1899-00 ..	141	41	113					667
1900-01 ..	141	41	113					667
1901-02 ..	141	41	113					667
1902-03 ..	141	41	113					667
1903-04 ..	141	41	113					667
1904-05 ..	141	41	113					667
1905-06 ..	141	41	113					667
1906-07 ..	141	41	113					667
1907-08 ..	141	41	113					667
1908-09 ..	141	41	113					667

In the years 1888-89 and 1889-90 the total number of students in the university was 667. In the years 1908-09 and 1909-10 the total number of students in the university was 1,347. The increase in the number of students in the university is due to the fact that the university has been able to attract a larger number of students from all parts of the country. The increase in the number of students in the university is also due to the fact that the university has been able to attract a larger number of students from foreign countries. The increase in the number of students in the university is also due to the fact that the university has been able to attract a larger number of students from the United States. The increase in the number of students in the university is also due to the fact that the university has been able to attract a larger number of students from the United States. The increase in the number of students in the university is also due to the fact that the university has been able to attract a larger number of students from the United States.

DISTRIBUTION OF STUDENTS IN PRINCETON UNIVERSITY, 1907-08.

This group system of undergraduate courses has, as I say, been very carefully worked out at Princeton and should be studied by all who are concerned with such matters. It insures a certain amount of concentration and correlation and yet allows considerable adaptation to the tastes and needs of the individual. It is, so to speak, like buying a ready-made suit of clothes in a well-ordered department store where a dozen standard sizes are kept in stock and slight alterations are made without extra charge to please the customer. As we saw from the examination of the records of the Harvard Seniors, the free elective system is equally abused in opposite ways; about 15 per cent. elected courses that were too narrow and the same number courses that were too scattering as judged by the common idea of a well-balanced education. Both these extremes would be prevented by the Princeton scheme.

It should also be borne in mind that the "free elective" system is after all not true to its name. When one comes to analyze it closely in a particular case it diminishes almost to the vanishing point of a hypothetical tho comforting potentiality like the freedom of the will. The student cannot always study what he most affects, for it may have as a prerequisite a course which he has neglected or for which he has a personal repugnance. Or there may be a conflict of hours, and President Eliot himself sug-

gests the judicious manipulation of the time-tables to prevent unwise combinations of courses.* It therefore happens sometimes that a student whose first two years at college are prescribed may have in his last year a greater range of selection than one who has had no restrictions from the beginning. That is, under the free elective system the Senior may have less real freedom of choice than the Freshman, while under the partially prescribed system the most freedom of choice is given to Seniors who can most judiciously use it.

But the fault of the Princeton system, as well as of all other attempts that I know anything about to secure a well-balanced education by making compulsory certain studies or groups of studies, is that the subjects are chosen according

STUDENTS IN PRINCETON UNIVERSITY FOR THE LAST TWENTY YEARS.

*University Administration, p. 133.

to their nominal and traditional signification, or to give every department a fair chance at the students, and not according to their real educational value. One cannot tell anything about the character of the training given by a certain course from its name or department. Their names come mostly from the chance of historical development or connection with a particular profession. Whether a study trains the eye, cultivates the memory, stimulates the imagination, improves the taste or inspires the soul depends not so much upon the subject matter as upon the way it is taught. The complementary distinctions of studies as technical and cultural, humanistic and scientific, practical and theoretical, historical and logical, represent real and very important differences, but the separation cannot be made by general rules based on catalog classification. A study may completely alter its character in a few years, as has physiology; may pass suddenly from the right to the left wing of the faculty without changing its name or department, like psychology. So, when we read in the Princeton catalog, for example, that a junior who elects to concentrate in chemical studies takes

"31a, 32a. Chemistry.

33, 34. Chemistry.

31, 32. Physics.

A course not in Division D.

An elective."

it does not necessarily mean that four of his courses give the same sort of mental discipline, two of allied nature and two of a very different character. Chemistry 33, Qualitative Analysis, is partly manual training. Chemistry 31, Advanced Inorganic and Theoretical, has in it much mathematics and some metaphysics. These two chemical courses are about as far apart as could well be, and if his "course not in Division D" (Science and Mathematics) is Philosophy and his "elective" is Calculus he will find them overlapping his Theoretical Chemistry much more than if he had been permitted to elect Botany, from which he is debarred because it is classed with Chemistry in Division D. I have no fault to find with this group of studies even in this case, but merely wish to call attention to the fact that a rule like this which provides for a distribu-

tion of studies in different departments, does not insure a variety of mental training, altho it does have the advantage of introducing the student to different fields of human thought. A man who knows Tom, Dick and Harry has probably no more diversified acquaintance than if he knew three men named John.

All this may seem trite and trivial, but it is not. The longest and most acrimonious sessions of faculties and committees are generally those devoted to the combinations of courses, and their length and acrimony are, it seems to me, chiefly due to the failure to keep in mind the fact that two studies having different names may be more alike than two studies of the same name. The same lack of discrimination of actual education values vitiates much of the discussion between the advocates of cultural and technical training. It is a mere matter of chance that stenography is not taught as a recondite branch of linguistics, in which case it would be admitted to the most select universities instead of being scorned by them on account of its being in trade.

Some classicists have argued that Latin should be adopted as an international medium of communication, instead of Volapük, Esperanto or other made-to-order language. It is lucky for them that their recommendation is not likely to be adopted for they would at once lose their present honorific position in the faculty. Latin would become as utilitarian as it was in Roman and medieval times, and would be taught in the business colleges to clerks and typewriter girls. Nothing would then be heard of its unique disciplinary, logical and cultural value, and all decent universities would refuse to accept it for entrance.

The chief advantages of the Princeton plan of semi-prescribed courses as contrasted with the Harvard system of free electives are the economy and convenience of keeping students together, and the assurance that all the students in a particular class have had the same preparation for it. As a corollary of this we find another marked departure from Harvard principles, the teaching of the same subject in a different way for students who have had a different preparation or who want it for a different purpose. For

example, there are three classes in elementary physics: first, for students who want it as a deep foundation for advanced work in the physical sciences, second, for engineers who need a practical familiarity with it, and, third, those whose main interests lie in humanistic lines and take physics as a culture study.

A segregation of students, according to their ability and industriousness, is effected by the new honors system. This was first introduced in the department of mathematics and physics two years ago, and having proved a success is this year

preferable. President Eliot is emphatic on this point:*

"Almost every course of instruction largely resorted to in colleges where the elective system is broad contains graduates, members of all the college classes, and special students all mixed together. When a scientific school makes part of the institution, some of the scientific courses will also be resorted to simultaneously by members of all the different classes. This mixing of students of different ages, and different academic status, is an unqualified advantage, provided that all are united in a common purpose to master the course they are attending together. The younger student from a lower class is stimulated by the older men with whom he associates, and if all the attendants

"HORSEING."

The freshman crew practises on the grass at the dictation of sophomores.

adopted by the classical department. I have called attention to similar movements in Harvard and Yale but Princeton seems to be working out this, as it is its other ideas, in a more thoroughgoing and consistent fashion. There are two very interesting features about this movement, first, the question of the advisability of separating the good students from the poor, and second, the adaptation of instruction to the needs of those who are not to be specialists.

The Harvard theory is, or rather was for as we have seen it is being modified, that classes of diversified elements are

are qualified to pursue the study to advantage, the older men suffer no harm."

Even with these two provisos, which in practice cannot be guaranteed, it is a very sweeping statement to say that diversity in a class is "an unqualified advantage." It seems to me rather that advantages can be seen in both plans, and that is why I am glad to have Princeton test the question by carrying out the opposite of the Harvard theory in a consistent and systematic way. The preceptorial system, the segregation for conferences, Special Honors and the

*University Administration, page 139.

Proseminaries as well as the rigid entrance and course requirements, and the dormitory and commons regulations, are all working to the same end, to the formation of small, homogeneous groups of students and the adaptation of instruction to the individual.

Each class is divided into five groups at the end of the first term, according to their grades, and students who have completed their Sophomore year with an average standing in their classical courses not lower than the third group may enter the Honors Course in the Classical Humanities for their final two years. They have special classes provided for them that the *οἱ πολλοί* may not enter, such as the Pro-seminary; they have a greater range of election and are not so strictly bound by the rules of compulsory attendance on classes, etc. If they fail to do satisfactory work they lose these privileges and are reduced to the ranks.

Here is another indication that the line of cleavage in the American university will be between the Sophomore and the Junior year, for students at Princeton are for the first time treated as true university students when they become Honor men. At Harvard all are given the freedom of the university from the moment they enter its gates, whether they are worthy or unworthy. President Jordan would prefer to have no Freshmen and Sophomores at all at the university, and no Juniors and Seniors except those who are well qualified and in earnest. Princeton separates out those deserving of university privileges, keeping the others in the institution, but under a collegiate *régime*. If President Jordan gets a chance to try his plan we shall see three very pretty experiments going on at the same time.

The second interesting feature of this Honors system is that it indicates a tendency toward a mutual approachment of the classicists and scientists; the kind of a reconciliation that is genuine and lasting, wherein neither party budes from its own ground but each holds out a helping hand to the other, or, at least, to the world outside the fold of the specialist. The fault with our system of education, from the bottom up, is that it is too exclusively preparatory. It is

everlastingly preparing students for things that the most of them are never going to do. The high school prepares for college, but few of its graduates go there. The college prepares for graduate research, but few of its graduates take it up. The medical schools aim to make investigators instead of doctors; the theological seminaries turn out more theologians than pastors. Now, I am willing to admit that the selection and training of the few who are capable of extending the bounds of human knowledge are so important to society that the interests of the many might well be sacrificed to them, but I submit that it has not been proved that it is necessary to make this sacrifice in order to get the highest grade of men at this highest grade of work, and further, that it has been proved that under the present system we are not getting the highest grade of men into research. Consequently I am interested in all attempts to get the specialist to doing something besides making more specialists; that is why I am going to quote a passage from the Princeton catalog which seems to me better reading than catalog literature usually is:

"The purpose of the Honors Course is not philological or scientific, but literary, historical, political, artistic and philosophical. The aim is to make clear thru lectures, preceptorial conferences, and intimate personal work in the Proseminary the fundamentally valuable lessons of antiquity for modern thought and life. The reading of selected masterpieces of the ancient writers, with abundant help given to the student in the way of explanation and criticism, is a necessary part of the course. In this reading the student will be guided as closely as possible along the line of his special aptitudes and desires. So far as practicable, the members of the Honors Course are assigned for their reading and conferences to instructors of their own choice. Certain parts of the reading will be slow and critical, but it is also intended to develop the practice of fluent and copious reading, particularly in the fields of history and literature."

It would have been a great setback to science and therefore to civilization in general if this program had been adopted and lived up to by the classicists of forty years ago, for if it had been they never would have been ousted from their educational monopoly.

From the physical side I find a similar indication of good will toward all men,

tho less adequately exprest as befits a non-literary department.

Every university should have a Department of Applied Humanities and a complementary Department of Humanized Physics, and the benefits of these departments also should be extended as freely as is practicable to those who need them most, that is, to those whose main work is in another field. Princeton seems to have a good start toward this and it is to be hoped that when the university has a few thousand technological students they will not be entirely ignored by the classical departments. When Mr. Wilson assumed the presidency it was commonly supposed that he was opposed to scientific education especially of a utilitarian nature, but he either was or is a broader-minded man than his critics at that time thought him. His first efforts were devoted toward building up a strong classical school and toward making the training in the classics attractive and profitable to the students. Having accomplisht this—at least I do not see what more can be done—he has turned his attention toward providing for those who persist in demanding a different kind of education. The greatest development of Princeton, as of Harvard, will next be in scientific and technological lines, both graduate and undergraduate. Whether any “McKay millions” are in sight for it or not I do not know, but, if we may judge of the hight of a structure from the breadth of its foundations, the extensive preparations now being made would give rise to such a surmise. We have seen the Massachusetts Institute of Technology hunting from New Jersey to California for a classical man for president, a striking illustration of the tendency I have discussed above. Schools of applied science budded on to a classical college like Princeton may be expected to produce a new variety, which will be worth cultivating elsewhere. An indication of this appears already in the announcement that the pure and applied sciences are to be kept under one head. I have criticised Harvard for making a pronounced distinction between them in starting its new graduate schools and have tried to show how the maintenance of this separation has been an injury to Yale, so I am glad to quote President Wilson in support of this view. In recommending in his re-

port of January 1st, 1909, the creation of a new officer of the university, a Dean of the Departments of Science, to have oversight of the departments of pure science as well as of the present technical schools of civil and electrical engineering and the future school of mechanical engineering, he says:

“By this broad title I would seek to ignore the antithesis which has been too sharply, not to say artificially, set up between pure and applied science. There is a difference, of course; but the two things should never be separated, and the line which divides them is nowhere, should nowhere be, distinctly traceable. It is our purpose to unite them in all that we do at Princeton for the promotion of scientific professional study, embodying from the outset the newer spirit now observable in the scientific professions.”

As at Yale, the majority of the Princeton graduates go into those branches of business and public service for which as yet no well-defined system of professional training has been provided by either institution. According to the decennial reports of the classes of 1895 and 1896 the vocational distribution of the graduates is approximately as follows:

	Class of '95. Per cent.	Class of '96. Per cent.
Business	43	43
Law	21	19
Ministry	10	9
Medicine	8	8
Engineering	5	4
Teaching	4	8
Public Service	2	5

Of course Law includes many whose occupations are not strictly legal, tho I do not mean that they are illegal either. During the last five years half of the graduate students at Princeton have specialized in the department of history, politics and economics and about the same proportion of undergraduates have elected such courses. Of 104 men in the diplomatic service of the United States over 10 per cent. have Princeton degrees, three of them heads of legations and eight secretaries. It remains to be seen whether the universities which are now providing special courses for such positions will succeed in producing men better qualified for them.

Princeton has been included in this series somewhat arbitrarily because I wanted to call attention to the new things it is doing in the way of collegiate instruction. It is not among the fourteen foremost universities of the United

States if we take as the criterion age, size, wealth, cosmopolitanism, publications, graduate students, professional courses or public services. It is the youngest of these universities, having borne that title less than thirteen years. It has the smallest annual income, except Johns Hopkins. Last year Princeton's income was \$411,910; the University of Minnesota had 50 per cent. more, Harvard and Columbia more than four times as much.* Princeton is the smallest of these fourteen universities, except Johns Hopkins, having about a third the number of students of collegiate grade of Harvard, Michigan and Columbia. Princeton University has no schools of law, medicine, pedagogy, commerce, agriculture, mechanic arts, forestry, dentistry, pharma-

press and supports no scientific, technological or humanistic periodicals. It serves no State in an administrative or advisory capacity, and carries on no experimental investigations at the request of the people. Such things as these have become so associated in the American mind with the word "university" that the right of Princeton to call itself a university has often been questioned.

The question hitherto has been an idle one, as useless as to discuss whether a certain man has a right to put Esq. after his name or Prof. before it. But now three influential bodies are engaged in defining the word "university" with all the solemnity of the Académie Française at work on the dictionary. These are the Carnegie Foundation for the Advancement of Teaching, the National Associa-

THE TIGER INN
One of the new upper-class club houses

cy, veterinary science, art, architecture, or music. It has no summer session, conducts no extension work, gives no evening courses and has no correspondence department. It has no university

* For example, in 1911, Columbia had the largest income in the United States, and Princeton the second largest.

tion of State Universities and the Association of American Universities. They are pretty well agreed altho the Association of State Universities goes much farther than the other two in its specifications, but this I shall discuss later. Princeton was one of the charter mem-

bers of the Association of American Universities and is therefore not required to submit its claims to the tests now imposed upon applicants for admission. This Association was formed nine years ago of the following fourteen universities: California, Catholic

There are this year seven students so qualified in the school. The Civil Engineering course of four years is altogether undergraduate. These are all the professional or technical schools connected with Princeton. The Theological Seminary in the same town is somewhat

THE IVY CLUB.
One of the new upper-class club houses.

University of America, Clark, Chicago, Columbia, Cornell, Harvard, Johns Hopkins, Stanford, Michigan, Pennsylvania, Princeton, Wisconsin and Yale. It was intended at first as a somewhat exclusive and informal organization for private consultation between the heads of these institutions, but the demands of other universities for admission, and the refusal of Dutch and German universities to recognize the degrees of any American institution except these, forced the Association to adopt objective standards of admission. The Association now requires a university to have suitable entrance conditions, a strong graduate department and at least one professional school having a combined arts and technical course of five years. Princeton barely qualifies for this last requirement by its School of Electrical Engineering. This gives only two years' work, but requires a bachelor's degree for entrance.

ostentatiously kept at a distance. It is not as nearly allied with the University as Union Theological Seminary is with Columbia. The number of Seminary students taking incidental graduate work in the University has been falling off of late and is this year forty-three.

The total number of students doing regular graduate work in Princeton University in 1908-9 is therefore forty-eight, half of whom are Fellows. Twelve are in the Department of History, Politics and Economics. The Department of Classics, one of the strongest in the country, with twenty-two men, not counting related departments, has only five graduate students.

But it is not profitable to spend more time in attempting to define Princeton's status, because Princeton is not static. If it is not a university now it is going to become one in the fullest sense of the

word. At present the metamorphosis has only affected externals. Princeton is still a college in spirit. The graduate and professional students are too few to exert any decided influence over student life. The absence of older men, of men who mean business, who are tremendously set on something, gives to the place an air of leisure and of youth. I know that there is hard studying done there, that the students are noted for strenuous athletics, but they do not make much fuss about it, they do not seem hurried and worried. The machinery does not rattle and bang as it does in some universities. I do not know that I ought to mention such intangible impressions. Tho they are very real to me they can be only hazily exprest and not substantiated at all.

The students at Princeton struck me as being more boyish than elsewhere. This is not a reproach. I do not think youthfulness necessarily objectionable in youth. They seemed like Peter Pan, not quite grown up and not quite wanting to. I believe that Eastern students are, as a rule, a trifle younger for the same grades than in the West, but that is not it. The Easterners are more advanced in their studies, more carefully trained, more sophisticated, yet it does not seem to me that the Westerners could at any period of their lives have been so youthful in spirit as the Princetonians. The Westerner is in dead earnest, if not about his studies, then about getting out of them. The Princetonian does not seem to care whether school keeps or not, but this is not a cynical affectation of indifference; it is the natural indifference of irresponsible and careless boyishness. I cannot say exactly what gave me this impression. Perhaps it was the way they trooped into the back seats of Marquand Chapel and grabbed their certificates of attendance for the "spotters" at the door; or the air with which they wore their yellow slickers (it rains every day at Princeton. I know, because I was there a week); or else it was their habit of whittling their desks, and talking and laughing during the lecture in a carefully modulated undertone. At the baseball game—it was Syracuse, I

believe, they were beating—some students in black caps crept up under the shelter of the grandstand to get out of the rain, and the other students whistled them off and they went home. I askt why, and they said they were Freshmen. I askt why again, and they did not answer. I did not see the "horsing" of the Freshmen. It is thought to be amusing. It is a sort of hazing with the brutality eliminated. It must be done publicly and in daylight, and without the laying on of hands. Any upper classman can interfere if he thinks a Freshman is being abused, and by a word release him from his Sophomore teasers. "The Freshmen like it," I was told, and my informant added conscientiously, after a moment's reflection: "Not, perhaps, at the time, but afterward. It teaches them to know their place." Doubtless, but what is their place? Are they the playthings of those who have a year's advantage, or members of a democracy where all are free and equal? What sort of training for citizenship do they get by living for four years where the lines are so sharply drawn between the classes that a Freshman cannot cultivate a friendship with a Sophomore, or a Sophomore with a Junior without being suspected of improper motives, and where a man has to be careful from the start to be seen always with the right set or he will be shut out from an upper-class club and practically shut out from university life?

These clubs are institutions peculiar to Princeton, which thought to get rid of the Greek fraternity evil by making all students sign the following pledge:

"We, the undersigned, do individually for ourselves promise, without any mental reservation, that we will have no connection whatever with any secret society, nor be present at the meetings of any secret society in this or any other institution so long as we are members of Princeton University, it being understood that this promise has no reference to the American Whig and Cliosophic Societies. We also declare that we regard ourselves bound to keep this promise and on no account whatever to violate it."

But the clubs that have grown up are as luxurious, engrossing and exclusive as fraternities. They are, however, different in some important respects. A student, not at Princeton, explained to me the essential distinction, and I will

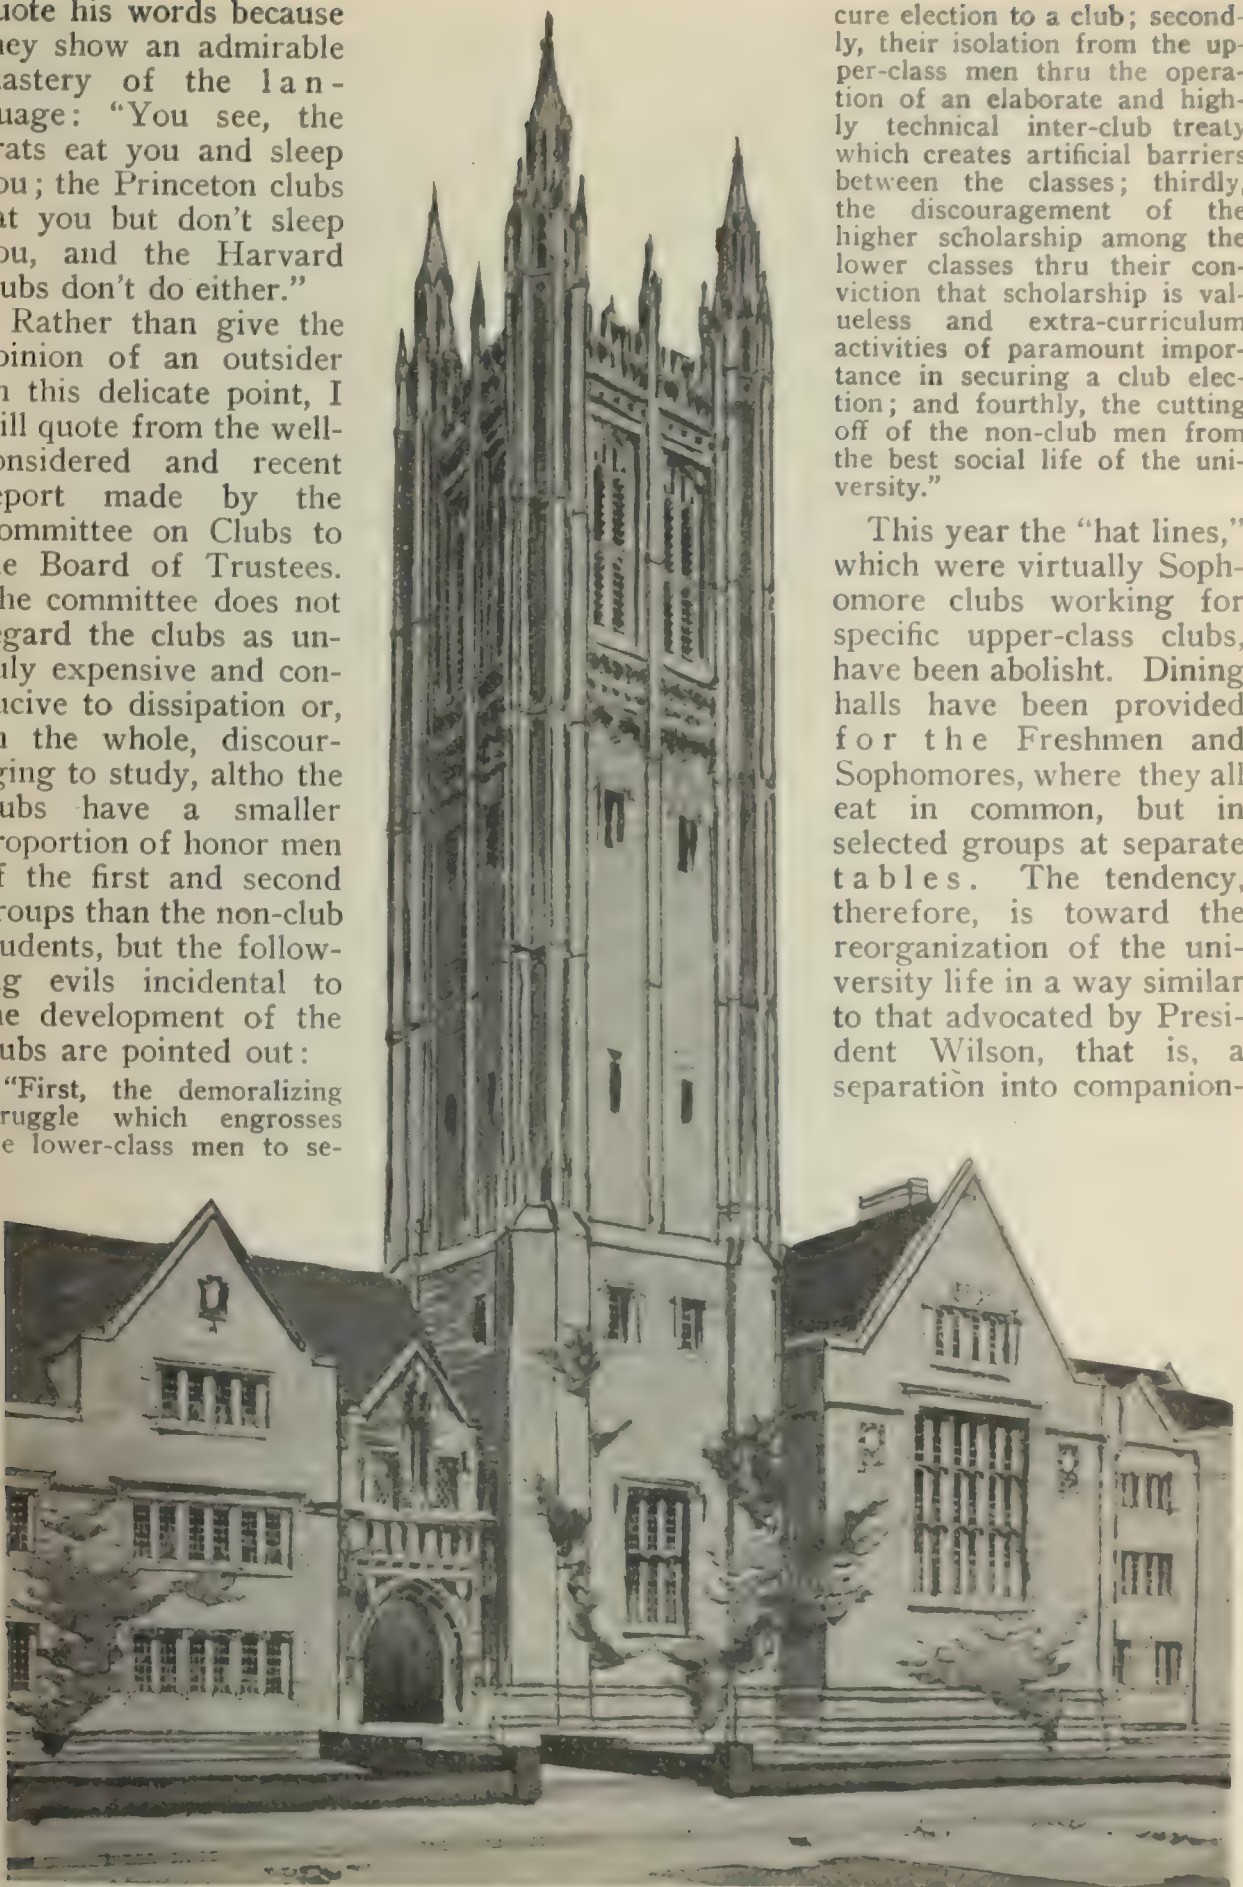

quote his words because they show an admirable mastery of the language: "You see, the frats eat you and sleep you; the Princeton clubs eat you but don't sleep you, and the Harvard clubs don't do either."

Rather than give the opinion of an outsider on this delicate point, I will quote from the well-considered and recent report made by the Committee on Clubs to the Board of Trustees. The committee does not regard the clubs as unduly expensive and conducive to dissipation or, on the whole, discouraging to study, altho the clubs have a smaller proportion of honor men of the first and second groups than the non-club students, but the following evils incidental to the development of the clubs are pointed out:

"First, the demoralizing struggle which engrosses the lower-class men to se-

cure election to a club; secondly, their isolation from the upper-class men thru the operation of an elaborate and highly technical inter-club treaty which creates artificial barriers between the classes; thirdly, the discouragement of the higher scholarship among the lower classes thru their conviction that scholarship is valueless and extra-curriculum activities of paramount importance in securing a club election; and fourthly, the cutting off of the non-club men from the best social life of the university."

This year the "hat lines," which were virtually Sophomore clubs working for specific upper-class clubs, have been abolished. Dining halls have been provided for the Freshmen and Sophomores, where they all eat in common, but in selected groups at separate tables. The tendency, therefore, is toward the reorganization of the university life in a way similar to that advocated by President Wilson, that is, a separation into companion-

ARCHITECT'S SKETCH OF MEMORIAL TOWER.

The dominant feature of the new group of dormitories, of which part has been built with the gift of Mrs. Russell Sage.

able groups, not too large for acquaintance, not so small as to be cliques.

The aim of Princeton is homogeneity. Harvard's ideal is diversity. The Harvard students are gathered from all over the world, admitted under all sorts of conditions and given the most diversified training. A State university, altho in a way more local in its constituency, cuts a slice down all the way thru its particular jelly-cake, taking in part of every layer, except sometimes a bit of the frosting falls off. But Princeton practically offers one particular kind of college training to one rather limited social class of the United States. Its entrance requirements, which are high, narrow in range and exclusively by examination, its tuition fees and expensiveness, its limited range of election, its lack of professional schools, its rules and customs, its life, traditions and atmosphere, shut out or fail to attract the vast majority of potential students.

In the first place half the human race is excluded on the ground of sex, a congenital defect for which they are not in the least to blame. Princeton is the only one of these fourteen great universities which does not in some way provide for the educational needs of women. Negroes also are shut out by reason of their race, another injustice in which Princeton is unique among the universities. Nothing is said about this in the catalog, but I think I am safe in saying that if a negro, presuming upon this omission, should present himself for entrance he would be so strongly advised to go elsewhere that he would go. Princeton has no share in the international movement which is sweeping over the country. Harvard, Yale and Cornell have twenty-five or more Chinese apiece, but never one has Princeton. The Princeton students, I believe, support some of their graduates as missionaries among the Chinese, but apparently they do not like to have them around. There are thirty-three Japanese in Columbia; one at Princeton, in the graduate school. Cornell has thirty-two students from South America; Pennsylvania has thirty-seven; only one at Princeton, and he has an English name. The Christian tradition of Princeton, the exclusiveness of the upper class clubs and the prejudices of the students keep away many

Jews, altho not all—there are eleven in the Freshman class. Anti-Semitic feeling seemed to me more dominant at Princeton than at any of the other universities I visited. "If the Jews once got in," I was told, "they would ruin Princeton as they have Columbia and Pennsylvania." Sixty-six per cent. of the students of Princeton come from the three States of New York, Pennsylvania and New Jersey.

That there are certain educational advantages derivable from association with a greater diversity of students than obtains at Princeton is undeniable, but it is also true that the university avoids some evils and difficulties by thus limiting its field, and is able to do with a homogeneous body of students many things that are impossible to a city or State university. I have talked about some of them, but I must mention another because it is one of the institutions of which Princeton is most justly proud, that is, the honor system.

The "honor system" must not be confused with the "honors system," altho there seems to be more connection between the two words at Princeton than elsewhere. At Harvard I saw a crowd of students going into a large hall and, following them in, I found I could not get out, that no one was allowed to leave the examination room for twenty minutes. The students were insulated, the carefully protected papers distributed, and guards walked up and down the aisles with their eyes moving like the searchlight of a steamer in a fog. Nothing like this at Princeton; the students are on their honor not to cheat and they do not, or but rarely. Each entering class is instructed by the Seniors into the Princeton code of honor which requires any student seeing another receiving or giving assistance on examination to report him for a trial by his peers of the student body. In all universities it is customary to trust certain classes, but in no other of the fourteen did I find so complete a reliance on student honesty. I do not think the plan would be practicable in the long run with a very large and heterogeneous collection of students. It is probable that Princeton will lose this and some other fine features of its student life as the university grows and

becomes more cosmopolitan. The semi-monastic seclusion of the country village cannot be long maintained. There is as yet only one branch railroad leading to it, but the automobile and the trolley have brought near to it the distractions of New York and Philadelphia and those of Trenton nearer still. In spite of those alumni who think that Princeton ought to remain a college just as they left it, like a museum specimen in a sealed glass jar; who call the P. G.'s "hangers-on" and "Seminoles"; who talk of "the crime of '96," when East College was removed to make room for the new library, Princeton is bound to expand and take a more active part in the business of what some university men are fond of calling "the extra-mural world."

The metamorphosis of Princeton from a college into a university is most interesting to watch because of the clear-sighted and systematic way in which it is being accomplished. It is like looking over the shoulder of an artist, the gradual realization that the dabs of different colored paint which he is scattering apparently haphazard over the canvas, I mean the canvas, belong just where he put them and are coming together to make a complete picture as he, and nobody else, saw it before he began. The greater Princeton is an artistic achievement. There seems to be nothing accidental, nothing forced about it, altho there must be, since chance and necessity enter into all plans human. One department after another is taken up and strengthened; first, the classics, then physics, next, I believe, biology. Princeton does not undertake to do so many different things as other universities, but what it does undertake it does exceptionally well.

The unfolding of its plan can be seen best in its building. They say that the new buildings under construction last summer represented an expenditure of nearly \$2,000,000. That is not so remarkable as the fact that the campus was improved by them. I know of universities where every new building, no matter how much it costs, makes the campus look worse. I have seen buildings where the architect seemed to have had a spite against the men who were to oc-

cupy them and where the men who occupied them certainly had a spite against the architect. But the new Princeton buildings are both artistic and inhabitable. They are harmonious and yet individually interesting. As soon as you turn your back on the little railroad station there is a noble arch in front of you that invites inspection and entrance. On each side of it, fencing in the campus, is a long irregular line of dormitories stretching from the gymnasium up the hill to the corner where a tower, 140 feet high, is to crown the group; low, comfortable-looking residences they are, with separate entries, each leading to a few rooms. I do not know exactly what the architecture is, but I should call it the Cosy Gothic Style. On the opposite side of the campus is a similar group of dormitories, these for graduates, with cloistered courts, unprofaned by undergraduate feet and noises, and a Fellows' garden wherein may walk in the cool of the evening the graduate students, discoursing, if they would not shock the architecture, on themes no less lofty than those

"Of Providence, Foreknowledge, Will and Fate, Fixed fate, free will, foreknowledge absolute."

The new physical and biological laboratories are monumental refutations of the common opinion, founded unfortunately on common experience, that buildings cannot be both beautiful and commodious. These buildings are designed from the inside. They are fitted to their purposes, to the preceptorial system, to the combined lecture-laboratory, to the unit table and tray. Scientific men in other institutions who are housed like hermit crabs in shells that do not fit them will appreciate the advantages of having an architect who considers the purposes of his edifice.

In this visible form President Wilson is working out his ideal of the American university, an ideal which is best expressed in his own words:

"Our colleges should conceive of themselves as organizations into which young men are received as into a family of free persons bound together by common obligations and common privileges, living together, teacher and pupil, in an intercourse of common advantage; its main object, study; its diversions diversions, not occupations; its sport sport, not competitive business; its society a free society of equals, not a congeries of rival social groups."

NEW YORK CITY.

America's Welcome Abroad

BY REAR-ADMIRAL SEATON SCHROEDER, U. S. N.

[Admiral Schroeder, appointed to the Naval Academy from South Carolina, graduated in 1868, and has since been in constant service. He served with distinction in the war with Spain, was for a while Naval Governor of Guam, and in the cruise about the world commanded the Third Division of the Second Squadron of the Atlantic Fleet. He is the author of a history of the "Fall of Maximilian's Empire." Having just returned from the most memorable cruise his account will be of great interest.—EDITOR.]

THE story of the welcome accorded to the great white fleet by the various countries visited in the course of the recent voyage might be epitomized in simply saying that our motto at the outset of the cruise was, "Now let good digestion wait upon appetite," and at the end of the cruise, "Now let indigestion wait upon satiety."

However, thruout those fourteen months, there were forces at work other than those that have to do with mere creature comforts. The enterprising newspapers of the day have kept the world so well informed as to everything that took place (and even possibly a little more) that there is little left to be said as to actual occurrences. But it will ever be a lifelong source of gratification to hark back to one sweet, continuing note that made its music felt thruout all the hospitable attentions lavished upon us, the note of an unfeigned heartiness of welcome in all lands, by all peoples, in all ways. No selection had been made of friendly countries to visit; there had been no picking and choosing of ports where cordiality would be most confidently anticipated. We went everywhere, from the northern hemisphere to the southern, from the western hemisphere to the eastern, all named to vie with one another in a glad acclaim.

When first we girdled the southern

half of our own continent, and understood the significance of the wealth of good feeling displayed, we realized how smooth had been made the way by that great American statesman who had completed his mission but a short time before, whose straightforward tongue had proclaimed the new diplomacy, whose personality had won for us the love of those who were to be our hosts. I can but hope that we did not mar the tale he had told so well. In that southern continent no possible vehicle of greeting was left unharnessed. When shallowness of

channel forbade the big ships entering the harbors of one country of the eastern coast, a squadron was dispatched to the high seas to intercept us and salute the flag of our commander-in-chief as we past; and it must be said that that was done with a skill and an exhibition of good sea manners that left nothing to be desired. Also, when excessive depths

prevented the fleet from anchoring off a metropolis of a country on the western coast, there was spread before our eyes a gigantic word, "Welcome," framed upon the green hillside in living letters of white-uniformed sailors. What appealed perhaps most forcibly to at least a portion of the fleet was the personal conducting by an officer of that same country's navy, of our torpedo flotilla thru sheltered interior channels for miles

REAR ADMIRAL SEATON SCHROEDER, U. S. N.

and miles further than would otherwise have been possible, saving them just that much storm and stress upon the open sea—surely a most tangible form of practical hospitality.

Thence we past on to other climes and to a people with whom we have the sympathy born of a common language, common aims, common methods. Under the Southern Cross, in a remote part of that great empire upon whose flag the sun never sets, this sympathy was well voiced in a song prepared to our special intention, the refrain of which was clothed in these words:

"The same old blood,
The same old speech,
The same old songs
Are good enough for each."

Nor in that island continent was there lacking generous allusion to the great heart-cry of the American captain, Tattall, who, fifty years before, had proclaimed that "Blood is thicker than water," as he took his ship in and stood side by side with his kinsmen of that other country who were so sore beset.

Later on in the cruise we were greeted in no less fraternal fashion by other branches of that same stock, with the same open-handed and open-hearted admission to home and fireside not easily forgotten.

Then came we to another people, another race; a country which today gracefully and gratefully acknowledges its debt to Perry and Townsend Harris, who carried to them America's message of invitation and appeal half a century ago. All have read of the greetings extended to us by that youngest of modern nations, whose warmth and enthusiasm of welcome were unsurpassed by that of any corner of the globe. I call upon all good Americans not to let any germ of doubt enter their minds as to the whole-heartedness of that greeting. The unstudied eloquence of careless attitude revealed at every turn cannot be controverted by a distant view possibly tinged with prejudice. A safer guide will be in the dispassionate judgment of intelligent and sentient observers, who have the opportunity to see and the discrimination to weigh what they see. When it is said that thousands of school children lined the hedges along the highways and

waved in unison the flag of the stars and stripes and the flag of the rising sun, it has been retorted, "That is easily done by imperial command." So it is. When it is said that hundreds of children sang "Hail Columbia" in the squares, and that myriads of torches flashed in the processions at night, it has been retorted, "That is easily done by imperial command." And so it is. But when crowds lining the thoroughfares are five, ten, even fifteen files deep, day after day, at all hours from morning until late at night, upon every occasion of the American guests being taken about the capital; when men and women and children surging on the outskirts of those crowds, striving to see over those in front but hardly possibly seen themselves, are smiling with lips unmistakably framing the "Banzais" that rend the air in one continuous thundering chorus—no such retort is possible. If such a thing there be as generous spontaneity, seek it in those gatherings. Come what may in the distant future, with its possibly conflicting interests, or antagonisms, or what you will, there is in that Far Eastern empire today no popular feeling toward America other than one of respect and cordial friendship. Let us trust that this may not be checked by anything or anybody.

(So convinced am I of the sincerity of those demonstrations that I hardly have felt called upon to allude to the one startling incident, when our respected commander-in-chief was, together with his division commanders, hoisted aloft at a naval banquet in the sturdy arms of our supposedly undemonstrative hosts.)

Still one more land did a part of the fleet visit in that ancient Orient, a land whose civilization far antedates our own, and whose present standards differ from ours, not infrequently to our disadvantage. In that Flowery Kingdom, so singularly destitute of available harbors, partly thru the inscrutable agency of Nature and partly from causes less easily discussed, a port was selected far from any emporium whence could be obtained the means of extending a welcome conforming to the customs of the expected visitors. To that haven were transported with unstinted lavishness the resources of distant cities, to the end that the visitors might be entertained in a fashion

prevailing in the Western world; and the warmth and royal prodigality of that welcome was astonishing to even our seasoned hearts (and digestions). We were also further honored in that the reception fleet was under the command of that veteran flag officer, Admiral Sah, who upon more than one occasion had made the most of his opportunity to befriend America's ships — once when threatened by Nature's forces, once at a time of the surging of human passions. All honor to that people, who, undismayed by seemingly insuperable initial obstacles and by subsequent destructive typhoons, gave expression to their country's friendship in a way that at least has rendered the first squadron of our fleet hopelessly jealous of the more fortunate second squadron, whose lucky star took it to that land of champagne—and sharks' fins.

Quitting these interesting scenes, with a typhoon or two thrown in by way of variety, and after tarrying in our own recently acquired waters long enough to keep alive the skill in the peculiar arts of our profession upon which we rely for maintaining "peace on earth, good will among men," we were spread along the classic shores of the Mediterranean, wherein one division had the opportunity to do what lay in its power in aid and comfort to that sorely distressed people whose misfortune has aroused the sympathy of a united world. Amid the dreadful scenes of that fearsome cataclysm the American seaman's hand was as ready and as powerful in kindness as it has ever been found to be in conflict, and another nation has been strengthened in its affection for the great republic of the western continent.

Our offices were extended also in other directions. Another division of the fleet, sheltered in a magnificent harbor upon the Tropic Sea, had the opportunity to convey an informal expression of felicitations to an old empire upon the accomplishment of an important step in governmental evolution; and upon sailing from that land of the star and crescent,

we brought away ten Young (with a capital Y), exponents of the new constitutional *régime*, who, anxious to perfect themselves in their chosen profession, the navy, had, with their Government's leave, paid us the compliment of seeking to familiarize themselves with our methods. I may perhaps be pardoned in thinking that they could not have come to a better school. And from what I hear I gather that those apt observers and accomplished gentlemen are not leaving any stone unturned in their researches, and also that they are loyally appreciative of the welcome extended to them.

And so has ended a somewhat unique cruise—unique in its extent, unique in its singularly successful achievement, unique in its propaganda of good will.

I wish that I might stop here. I wish that I might stop with the words "peace" and "good will" as my closing expression, the lingering savor of which must ever be most sweet to even the sternest warrior. But misunderstandings must be avoided and prevented. We have fellow countrymen just as conscientious, just as earnest, just as patriotic as any, who doubtless would ask in all sincerity: "If all these love feasts be as described, why build more battleships?" The answer lies in the teachings of history, in the inexorable logic of past events. It would be futile to attempt here to marshal all the axioms drawn from the world's experience in human nature. From the far-back days of the great Covenanters comes to us the sagest of all advice: "Put your trust in Providence—and keep your powder dry." We do put our trust in Providence. And we do put our trust in our statesmen, both at home and abroad; we know what they are. And we do put our trust in our battleships as an effective handmaiden to diplomacy. We will see that they are keyed up to the proper pitch. We will see that our guns remain powerful and under proper control, and behind those guns we will keep the men who have proved their right to be there.

HAMMON RIDGE, VA.

Condonation

BY ALFRED AUSTIN

POET LAUREATE OF ENGLAND.

Now that wise Time hath shown me I was
wrong,

I to its stern arbitrament submit.

Long have I lived, but Time hath lived more
long,

And many an eon more hath mellowed it.

It hath seen Princes crowned, and Kings dis-
owned,

Forsaken Rituals, desecrated fane

Goddesses scorned and demigods dethroned,

Hillocks of wounded, holocausts of slain.

Entombing hatreds in the nerveless grave,

It hath condoned rebellion and wrong,

Embalming only memory of the brave,

The friends of Freedom and the sons of Song.

So whether I have ill or rightly striven,

Be all my faults forgotten and forgiven.

ASHFORD MANOR, KENT, ENGLAND.

A Defense of Missouri

BY THE HON. CHAMP CLARK

[We are glad to print, exactly as received, the following indignant article of protest from the leader of the Democratic party in the House of Representatives. Missouri is not guilty of having enacted the fraudulent laws confessedly intended to disfranchise negroes, and we did not mean to be so understood. Representative Clark is one of the most distinguished of the Democratic leaders who opposed the bill reducing the salary of the Secretary of State, but he and his State are not responsible for the laws enacted in so many States to evade the Constitution. We regret that our language seemed to include him in criticism meant to apply to others. As to the concluding portion of the Hon. Champ Clark's communication we refrain from speaking.—EDITOR.]

The Editor of The Independent:

It is written, "Thou shalt not bear false witness against thy neighbor," and yet that is precisely what you do on pages 378 and 379 of the issue of your periodical of February 18th. In speaking of the fight against the efforts of Congress to make Senator Knox eligible for the Secretaryship of State by overruling the Constitution by legislative enactment, you say *inter alia*:

"But it then came to the House and the Democratic leaders, the Hon. Champ Clark, of Missouri, and the Hon. J. Sharp Williams, of Mississippi, and their followers oppose, and the bill may fail to pass the House; or, if it can pass by a party vote Senator Knox may not think it wise to accept an office whose tenure is thus declared to be tainted. The objection they make is, that this provision is nothing less than an evasion of the distinct provisions of the Constitution. It is an act simply intended, to get around the Constitution, and after a law has been past making him ineligible, trying to sneak him in under another law enacted for his personal benefit.

"It is beautiful, we say, to see such devotion to the Constitution from such a source. They are horrified at the idea of evading the Constitution—these men who have been doing their best to evade it all their political lives. They represent States which have enacted laws whose sole purpose, frankly expressed a thousand times, freely admitted when those laws were under discussion, openly announced within the last few days in the Senate by Mr. Tillman, was to annul the provisions of the Constitution which give equal rights to all citizens. Those laws are defended still by these members of Congress. They think they have been shrewdly devised to accomplish what the Constitution forbids, and they glory in the evasion. And these are the men who now make their indecent expression of their intense loyalty to the Constitution of the United States! Pah!"

Hon. John Sharp Williams and Senator Tillman, whom you name along with myself, are amply able to take care of themselves in a controversy with you or with anybody else without any help from me; but I desire to say that, so far as the State of Missouri and myself are concerned, there is not a syllable of truth

in your assault. I haven't much money, but I will give one hundred dollars in cash to any charity you may name if you will prove that I have ever tried to evade the Constitution or that the Legislature of Missouri, when Democratic, has ever "enacted laws (or a law) whose sole purpose . . . was to annul the provisions of the Constitution which give equal rights to all citizens." Missouri has the best and fairest election law of any State in the Union, a law which I introduced in the Legislature in 1889, and with the passage of which, after a bitter fight, I had much to do. It is based on the best Australian model and stands today as I introduced it except that it has been amended in the light of experience so as to more thoroly guard the secrecy, sanctity and absolute freedom of the ballot. Among its other provisions is one to the effect that not more than one-half the judges and clerks at any precinct shall belong to any one party. I cannot comprehend how anything could be fairer than that. Can you? The only qualifications on suffrage in Missouri are that the voter shall be a male citizen, native born or naturalized (or shall have taken out his first papers), and shall be at least twenty-one years old, and shall have resided in the State at least one year, and in the precinct at least sixty days, and shall not have been convicted of certain specified crimes.

Every qualified male in Missouri votes if he chooses; votes as he pleases; and, what is more, his vote is honestly counted. All this applies to white and black alike. There is no attempt except the usual arts of electioneering, as practised all over the country, to control anybody's vote, and absolutely no effort whatever among Democrats to coerce a voter. As a matter of fact, there is not as large a percentage of stay-at-home voters among the negroes as among the whites, for the

reason, I think, that the right of suffrage is comparatively new with them, while it has been the heritage of the whites for generations. The only attempt at coercion of voters in Missouri during the thirty-four years that I have lived in the State was on the part of Republicans to compel their employees to vote for the Republican candidates for the Presidency and for Republican candidates for Congress. The worst case of the kind was in 1896, when the employees of great corporations were forced to vote the Republican ticket, on penalty of losing their bread and butter.

Since Missourians in 1870 emancipated themselves from the domination of as conscienceless a gang of carpet-baggers and scalawags as ever plundered a State, there has been no attempt in Missouri, directly or indirectly, to disfranchise anybody, black or white, except for conviction of crime. The test oath of the Drake Constitution disfranchised between fifty and one hundred thousand of the best citizens of the State, among them many Union soldiers. The successful crusade to abolish that beastly test oath in order to re-enfranchise the citizens was led by such Republican Union soldiers as Major-Generals Frank P. Blair and Carl Schurz, Brigadier-General John B. Henderson, and Colonels David P. Dyer, George W. Anderson and B. Gratz Brown, whose names are still held in reverence by all decent folks in Missouri, without regard to politics. General Frank Blair, who commanded a corps in Sherman's march to the sea, and who won the *sobriquet* of "the Marshal Ney" of that army, a man whom so good a judge of soldiers as General Grant pronounced to be one of the two best volunteer officers in the Union armies, would not take that test oath, saying he could not do it without committing perjury. The Radical election judges—all the judges and clerks were of one party then—would not let him vote. He sued the judges, and finally a Republican Supreme Court of the United States held that test oath to be unconstitutional, and therefore void and against the spirit of our institutions.

The very fact that Governor Hughes has been making a great fight to have the New York Legislature adopt a primary election law which is almost a

replica of the Missouri primary election law proves that Missouri is ahead of New York in the fairness of her election laws. So you would do well to take to heart the scriptural injunction to remove the beam from your own eye before you endeavor to perform a surgical operation on the optics of Missourians to remove a mote.

One fact proves beyond peradventure your deliberate intention to be unfair, and it is this: You select Hon. John Sharp Williams and myself among Representatives for lambasting and at the same time neglected to state that twenty-six Republican Representatives voted with us on the Knox matter, and that the best speech on the floor of the House against the preposterous performance of overriding the Constitution by a legislative enactment was made by Hon. James R. Mann, of Illinois, one of the ablest of living Republicans, a man whose honesty and fidelity to duty are proverbial.

President Ulysses Simpson Grant had some vogue in his day. He nominated A. T. Stewart, the merchant prince, for his Secretary of the Treasury. All men gladly admitted Stewart's pre-eminent fitness for the place, but the Senate, overwhelmingly Republican, refused to confirm him because a statute barred him. Grant, with his military glories fresh upon him, wanted a Congress, overwhelmingly Republican in both branches, to repeal the statute, but it peremptorily refused to do it. That was only a statute, mark you, which Congress had authority to repeal. Now comes the present Congress endeavoring to override the Constitution by a mere statute because Judge Taft wants Senator Knox in his Cabinet! And you, who assume to be a great public educator, a preacher of civic righteousness, a *censor morum*, stand by consenting, as did Saul at the stoning of Stephen. Ay, more; you go farther and cast a handful of mud at Stephen, because, in this case, Stephen possess the conscience, courage and patriotism to observe his oath of office and to stand by the Constitution!

One of the greatest discouragements to a man in public life is that every descendant of Ananias and Sapphira assumes that he has *carte blanche* to lie about all public men.

Literature

The Negro

AN intelligent and unbiased observer, Mr. Ray Stannard Baker, has visited the places, North and South, where the negro problem could be studied at first hand, and has recorded his observations and conclusions.¹ His account of the Atlanta race riot in September, 1906; of the social conditions out of which it grew and of the revulsion of feeling that followed it, is graphic and illuminating. The nameless dread on the part of the white population for some days preceding the riot, the constant incitement by sensational newspapers, the outbreak with its murderous violence to industrious and inoffensive negroes, are strikingly portrayed. The reaction, too, is fully related. After the storm, the better element took hold of affairs and brought about an immediate betterment of conditions. A committee of prominent citizens published a report in which the rioters were unsparingly denounced, a Civic League was formed, and a movement was begun which has since succeeded in closing every saloon in Georgia.

Mr. Baker does not mince matters regarding the injustices suffered by the blacks. The police courts have long been a source of oppression. A tardy recognition of this fact in Atlanta has caused the Civic League to employ a lawyer for the purpose of looking after the interests of arrested negroes. In few or no places are there proper educational facilities for the blacks, wherever "poor whites" and blacks are found in the same community there is a particularly strong race feeling growing out of economic competition; and the system of hir-

ing out convicts to labor (a system which brought into Georgia's treasury \$354,000 in a recent year) is relentlessly used against the negro.

In the rural districts of the Black Belt Mr. Baker finds a somewhat general fear and dread of the negro. As a laborer he is often shiftless and incompetent, a wanderer from place to place, without industry or ambition. Yet he finds that the quality of labor is very often dependent upon the character and attitude of the landlord. Good landlords develop industrious and thrifty laborers. Espe-

FROM BAKER'S "FOLLOWING THE COLOR LINE."

¹ *Following the Color Line*, by Ray Stannard Baker. New York: Doubleday, Page & Co. \$1.00.

cially significant are the accounts which he gives of interviews with two prominent Mississippi planters. "The secret," says one, "is to treat the negro well and give him a chance." The result of good treatment by this planter has been most encouraging. With the other it has been equally so. "The white people down here," he says, "have simply got to take the negro and make a man of him; in the long run it will make him more valuable to us."

There is a great wealth of material in Mr. Baker's book, which needs to be studied by every one who would form a well-based opinion on racial conditions in the South.

The tone and temper of Mr. Stone's book² cannot be too highly praised. It is the attitude which is disappointing. Mr. Stone is a Mississippi planter who has given years to experimentation with and study of this problem. He writes with a fervent and an unfaltering conviction of the correctness of his views, yet with an unflinching courtesy to his opponents. His view is but little different from the traditional one of the slaveholder, and nothing affects it. The asserted absence of crimes against white women by negroes in the Yazoo Delta is ascribed by him "to the persistence of the same relative status between the masses of the two races that existed when the one was master and the other slave." It is only in localities where the negro has risen above the status of a slave that he ventures to commit such crimes. Mr. Stone finds no such happy experience in trusting his negroes as do the two planters of the same section instanced by Mr. Baker. To him the Southern negro has lost ground, and increasing numbers of Southern people are coming to the conclusion that they must render themselves independent of the negro by substituting white labor. Space does not permit us to give more than a mention of the mass of data which this book contains; nor of the conscientious care with which this material is employed in argumentation. But the viewpoint is hopelessly reactionary and cannot win its way.

We observe in these two volumes the

constant misspelling of the word *color*, by the insertion of *u*, as if it were old French and were pronounced like *colure*, which is a term in astronomy. Such spelling is affected and offensive.

Mr. MacCorkle, who is an ex-Governor of West Virginia, has a good deal to say about the negro in his series of valuable papers on Southern questions.³ He accepts the localization of the negro in the South as a permanency, and dismisses all kinds of colonization talk as idle. The Southern whites want and need the negro, he maintains. Considerable space is given to a record of Southern efforts for negro education. The repression of the negro vote is admitted, but the author maintains that the best Southern opinion insists only upon an intelligence qualification, and wishes to disfranchise the ignorant white as well as the black.

Dr. Flack precedes his study of the adoption of the Fourteenth Amendment⁴ with an account of the struggle over the Civil Rights and Freedmen's Bureau bills. The arguments made on the amendment on its passage thru Congress are summarized, and a review of its reception by the people generally and by the various Legislatures is given. There is plenty of evidence of a patient and devoted industry in the preparation of the work; but the standpoint is biased and the treatment often unfair.

Three Good Stories

If you are a bachelor, not merely a single man, but a bachelor beyond recall, choose the new novel by Mr. Lucas.⁵ A more whimsical story of the sterilized life of a perfect gentleman was never written. Usually when a man writes about himself, it is in the manner of a Rousseau or a Falstaff, but the hero of these experiences is not a hero at all. He is simply a gentleman with an iota subscript, a mere bookmark of a man, who would be as uninteresting as

³SOME SOUTHERN QUESTIONS. By H. WOODLEY and MacCorkle. New York: G. P. Putnam's Sons. \$1.75.

⁴THE ADOPTION OF THE FOURTEENTH AMENDMENT. By Horace Edgar Flack. Baltimore: The Johns Hopkins Press. \$2.00.

⁵OVER REMERTON'S. By E. F. LUCAS. New York: Macmillan Co. \$1.50.

²STUDIES IN THE AMERICAN RACE PROBLEM. By Alfred Holt Stone. New York: Doubleday, Page & Co. \$2.00.

any other of this type if it were not for the inimitable kindness and humor with which he turns the pages of lives about him. He returns to England at the age of fifty-five, after spending years in

store, and regarded as a providential location for a man who does not know that his step-niece is in love with him, but thinks that his interest is entirely absorbed in ancient volumes. And he ac-

E. V. LUCAS.
Author of "Over Bemerton's" (Macmillan's)

a counting house at Buenos Ayres, unmarried and unincumbered by a single vice, such as men are apt to bring home with them from foreign parts. He is persuaded by a beautiful and angelic step-niece to take up his abode "Over Bemerton's." This is an old book

tually does make our acquaintance over the contents of a "Chinese Biographical Dictionary." He quotes from it, and, looking up over his glasses, comments with such irresistible wit that the spell has fallen upon us before the end of the chapter. Afterward he walks abroad.

with his thin arm hooked gently in that of the reader's, reconstructing the London of his youth and comparing it with this noisier place. He involves himself with equal primness in the lives of a few interesting people, about whom he tattles so shrewdly that presently we realize that he is giving a better impression of the English suffragette, for example, in the character of his other step-niece, Drucilla Wynne, than we shall have again before all suffragettes have past to join their fore-mothers and the movement has its paragraph place in history. There are equally revealing comments upon other half-familiar English types. And all the while, the bachelor himself is slipping into favor with us, and we become positively indignant at his really exquisite literary expression of a personal humility. But after all it is so fine that it must be rarer than that rude assertive thing we call self-respect. But the greatest charm of the performance lies in the fact that the author appears to have written in so leisurely manner as if, being a single man, without family demands upon his resources, he is in no hurry to turn his book over to the publisher.

By way of contrast, Mr. Ollivant's novel may come next.² For it has none of the bachelor-bloom of Mr. Lucas's story, altho not a woman appears in the book. The time is 1804, when Napoleon was massing his army to invade England. The hero is an Irish gentleman, serving the Emperor because he hates England with the ancient hatred of the unconquerable Irish. The scenes are laid off and on an obscure bit of English coast, convenient to the French. Lord Nelson figures occasionally in the large background of the story, which is the sea. He is represented as the weathercock of England's fate, to whom every character in the book looks with adoring faith. The period covered by the events recorded is less than three days, and it is beyond question the most thrilling sea tale of the year, if not of the years. Above all, it is a masterly interpretation of a form of courage and virtue and sentiment that shall pass with the passing of wars and military heroes. Every page is stained with blood and il-

luminated with glory—not the sane, commercially purchased, peace-guarded glory of our own times, but that coronal of manhood that once showed so barbarously and brilliantly in deeds of daring. A poor reviewer, whose words have been tamed by the times, can give no idea of the poetry, the fury and charm of such a tale. But one thing remains to be said—the author has restored the God-idea to its proper place in fiction. For some years we were without it, except in the religious novel where it has always been only crudely exprest, and we felt the loss. For, whatever has been or shall be said of the God-idea theologically, it is absolutely essential to the highest art. The trouble is that only a great artist may aspire to it, and we have had very few of these since the days when they wrote poetry and painted Madonnas. But from the fact that Mr. Ollivant has literally laid the theme of his story upon such an idea, we may infer his ability. He is a great novelist, because really he is a great poet, a great painter with the color of the sea, and the thrilling breath life in his words. The spirit of his book is elemental, belonging to Genesis, and to poetry and to the hearts of brave men, who have a patriotic rather than an ethical notion of right and wrong.

Mr. Anthony Partridge's story³ is as startling as it is dangerously suggestive. The idle rich should avoid it as offering a peculiar temptation to them in particular. The spirit of enterprise, of adventure, lives in us all. Wealth and the consequent lack of natural incentive to achievement may pervert it, but does not destroy it. And this is the premises upon which Mr. Partridge has based his plot. "The Distributors" are a group of men and women, belonging to the wealthiest and highest social rank in London. They band themselves together for the original purpose of exploring the mysteries of life and death. They are called "the Ghosts," and to be eligible one must have become thoroly wearied of life. This, the author represents in the terms of dramatic conversation, is really the logical state of thoughtful men and women who are born so rich and fortunate that nothing remains for

²THE GENTLEMAN. By Alfred Ollivant. New York: Macmillan Co. \$1.50.

³THE DISTRIBUTORS. By Anthony Partridge. New York: McClure Co. \$1.50.

them to accomplish for themselves. Exploring psychic mysteries is a common and tame pastime, after all, and soon palled, so by way of diversion and excitement the Ghosts made a practice of robbing rich, stingy people of their jewels and other valuables, which they disposed of and then distributed the money anonymously to needy charitable institutions. The story deals with the social furors these robberies occasioned and with the hairbreadth escapes of the philanthropic criminals. The sequel indicates that their terror of detectives is greater than their boasted indifference to life, and that the effect upon their characters was to produce the usual criminal consciousness.

Poems. Hymns of Nature and Songs of the Spirit. By Mrs. Merrell E. Gates (Mary C. Bishop). 16mo, pp. xv, 224. New York: Fleming H. Revell Company. \$1.25.

Over two hundred of Mrs. Gates's short poems are gathered in this volume. She was a writer of verse and prose, largely on religious themes and for the religious press. The spirit of them, with their love of nature, is shown in these lines:

"Over the farm-fields plowed,
Swiftly a swallow flew;
Over the bird hung a cloud,
Over the cloud shone the blue,
And over the blue was God."

But not all are thus frankly religious. Take such a purely nature poem as "The Fisherman and the Stream." The fisherman lover says:

"She leads me thru winding mazes;
She trips down the green hillsides;
She cuts a path thru the daisies,
She comes, but she never abides."

Of the thirty hymns we would choose "Rise on the Shadowed Nations," or perhaps one to "The New Womanhood." The spirit of the poems is gracious, and the expression true, and the volume will be a treasure to many friends of the author.

The Making of Personality. By Bliss Carman. Boston: L. C. Page & Co. 30-30.

In his latest book of essays Mr. Carman expounds what he calls "a triumistic or unitrinian philosophy." There is much about the beauty of the trained body, the

sorcery of the hand, the poise of the chest and foot; how to walk, to stand, to dance to the music of life, and, to be perfectly just, a little, too, about manners and morals, albeit the latter are to be the blossoming of the personality and never ascetic or achieved by painful effort. Our ancestors thought otherwise, but we are to seek the kingdoms of art, of beauty, of "abandon," and of joy, and in the hope that righteousness will be added unto us, trouble our heads little with self-discipline, while giving all our energies to self-development. It is a Greek ideal, unashamed of its pagan egoism.

Early Christian Hymns, Translations of the verses of the most notable Latin writers of the Early and Middle Ages. By Daniel Joseph Donahoe, author of "Idyls of Israel," etc. New York: The Grafton Press. \$2.00.

The translations contained in this volume, of one hundred and sixty Latin hymns, were all made during the past four years, and more than one version is occasionally thrown in for good measure. Judge Donahoe began with the Whitsuntide hymn, "Veni Sancto Spiritus," known as the "Golden Sequence." Then, falling in love with his work and urged by his hymn-loving friends, he continued until he had put into verse all the hymns in the Roman Breviary. Nearly seventy of these, together with fifty more drawn from other sources, down to the time of Thomas à Kempis, might lead the devotions of Protestant and Catholic alike, a very large proportion of them having been already rendered into English verse by such translators as Palmer, Mant, Chandler and Neale, and a fair proportion being now in use in Protestant Churches. Judge Donahoe has included also about fifty from the Roman Breviary, generally of later or unknown origin, that are more distinctly Roman Catholic in character. His versification is correct and metrical, sometimes cramped and formal, as is the way with most translations, but, again, spirited, as in the Everlasting Sabbath, "O Quanto Qualia," which is almost as free and fresh as one of Neale's best. A short biographical sketch introduces each Latin writer. The book will interest students of hymnology.

Roman Holidays. By William Dean Howells. New York: Harper & Bros. \$3.00.

The leisurely and reminiscent in travel talk has never been more delightfully exemplified than in *Roman Holidays*, by Mr. Howells. It is Rome revisited by the author after forty years, and the past and present shade into each other by such delicate nuances, such imperceptible vanishes of the tip of the brush, that we can only be humbly grateful that we are the fortunate sharers of his double wealth of former and later reminiscences. In such work as this we have the author at his best, which is better than we always realize, because it is so delicately done. Skilled art looks easy, unless we have labored at it ourselves and we fancy some of our younger men may dream that they can write like the genial incumbent of the Easy Chair until they try it. At least such is our inference from the fact that they do not do it. It is not reasonable to expect the ripe wisdom nor the mellowed style of seventy, from the crude art of—say—seven and twenty. Yet we seem to remember that the young consul at Venice, in 1861, had a very pretty style of his own!

Meat and Food Inspection. By William Robertson, M. D., D. P. H. London: Bailliere, Tindall & Cox.

Two classes of people will be interested in this statement of conditions in meat and food inspection in England. We have a large number of people now living on country estates who want to know how to avoid the dangers of impure food, especially meat, for themselves and for others, and who care to have some of the principles of prophylaxis at least in this matter clear in their minds. In his preface the author, who has had large experience in the public health departments of England, declares

"that the laymen of intelligence who gives the subject close study can also be trusted to form a judgment as to the fitness or otherwise of meat for human consumption." "It is not suggested that the place of the physician or veterinary surgeon should be usurped, but there is room for the layman to do good work."

The information conveyed in the book is thoroughly practical and as a rule so lacking in technicality that any one interested in the subject can understand it. The second part of the book is taken up with

the English pure food laws and their enforcement. This is of interest to public health officials of this country at the present time, because it shows just what efforts are made to get around the pure food laws in England and just what excuses and pleas may be expected in justification of their violation, and what the decisions of the English courts in the matter have been.

The Fly on the Wheel. By Katherine Cecil Thurston. New York: Dodd, Mead & Co. \$1.50.

The author of "The Masquerader" needs no introduction to American readers. The scenes of her new novel are laid in an old Irish town, and she has given an admirable interpretation of modern middle-class social life in Ireland. The book is unique in this particular, for, as a rule, the Irish do not figure as proper drawing-room characters in fiction until they have matriculated as citizens and politicians in some other country. The interest of the story centers about the fate of a beautiful girl who is apparently innocently possessed of wrong inclinations. She is what she is in spite of circumstances. She has a heart that burns its way wilfully to what is worst and weakest in men. The end is frightful and the reader closes the book with the disagreeable feeling of having seen something beautiful providentially perverted and destroyed—which is by no means an orthodox impression for an author to produce.

John C. Calhoun. By Gaillard Hunt. Philadelphia: George W. Jacobs & Co. \$1.50.

This biography of John C. Calhoun belongs to the "American Crisis Series." Calhoun did more than any man of his times, according to the author, to create a national spirit. But when the Civil War was imminent, his position as a loyal Southerner was directly opposed to this spirit. He was for the South, and the South's contention against the larger coming mind of the nation. This circumstance renders him one of the tragic figures in the history of that period. And Mr. Hunt has given an interesting interpretation of the man and the situation.

Literary Notes

....A handsomely printed and illustrated volume on the *History of the Sage and Slocum Families*, including the allied families of the late Russell Sage and Mrs. Margaret Olivia (Slocum) Sage, and tracing lines of descent from Mayflower ancestors, has been prepared by Henry Whittemore, of New York.

....Wallace Nelson Stearns, Ph. D., presents fragments from *Græco-Jewish Writers*, accompanied by a brief introduction, notes and bibliography. (University of Chicago Press, 1908, 75 cents.) Seven pages of introduction treat of the interval between the classical period and the Christian Era, where "lie centuries of literary development and linguistic change." The Septuagint affords a mine in which the author has delved with excellent discretion. Sophocles would be bewildered by the change in language. The literary seats, too, have changed. Antioch, Pergamon, Alexandria have superseded Athens in large measure. Demetrios (222-205 B. C.) was one of the first to use the changed medium. Herod the Great broke down the Jewish religion and a language appeared which was neither Jewish, Greek nor Barbarian, but it made its way. The Alexandrian Jew, the Greek, and the Hebrew, used largely the same jargon to express their thoughts.

....Of the new Lincoln books the most notable is the smallest; Percy Mackaye's *Ode on the Centenary of Abraham Lincoln*, delivered last month before the Brooklyn Institute and published by Macmillan at 75 cents. Its irregular rime and meter are well suited to its subject, and both thought and feeling find original expression in such lines as these:

"He was the madstone to his country's ire,
 His name the banner of our nation's pride,
 Aile, true, he was a madman, but a good one,
 Restored to its bough the storm-unrested bird,
 Or raised the wallow'd pig from out the mire.
 And he who used to wear the English crown
 And tackled Euclid with a wooden spade,
 And excavated Blackstone from a barrel
 To hold moot trials in the gloaming, made
 By lighted shavings in a cooper's shop,
 He is the madman, too—this R. B. Mackaye,
 Himself a rail, clean-grained, of character
 Self-hewn in the dark glades of Circumstance
 From that deep-hearted tree
 Which grows in our own's bosom,
 Reforests age on age,
 Perpetual in strong fecundity."

—Lyman Whitney Allen's *Abraham Lincoln* (Putnam, \$1.25) is also a good poem, or rather series of poems. It received the thousand dollar prize offered in 1895 by the New York *Herald* for the best poem on America and now appears in its fourth, the centennial edition.

—A third personal volume in the same series is *Our American Holidays*, by Walter, author of "The Woodcarver of 'Lympus," telling how a humble Vermont home received the enlistment of Henry and the birth of Lincoln. (Little, Brown, \$1.00.)—In that convenient series of volumes on "Our American Holidays," edited by H. H. Webster (Little, Brown, \$1.00), the latest is *Lincoln's Birthday*, a collection of the best songs that have been and about Lincoln and his time.

Pebbles

CORPULENT SUITOR (on his knees)—If you will not accept my offer, at least help me up.—*Meegendorfer Blaetter*.

A PRETTY school teacher, noticing one of her little charges idle, said sharply: "John, the devil always finds something for idle hands to do. Come up here and let me give you some work."—*Judge's Library*.

HE—If you refuse me I shall blow out my brains.

SHE—Impossible.

HE—Maybe you don't believe I have a pistol.

SHE—Oh, I dare say you have the pistol, all right.—*Philadelphia Record*.

"I AM going to see your father about you," said a teacher to a boy who had exhausted her patience.

"If you do you'll never come back."

"Why?" demanded the teacher.

"'Cause pa's dead."—*New York Tribune*.

A POOR lady the other day hastened to the nursery and said to her little daughter:

"Minnie, what do you mean by shouting and screaming? Play quietly, like Tommy. See, he doesn't make a sound."

"Of course he doesn't," said the little girl. "That is our game. He is papa coming home late and I am you."—*Everybody's Magazine*.

A MAN who was "wanted" in Russia had been photographed in six different positions, and the pictures duly circulated among the police department. A few days later the chief of police wrote to headquarters: "Sir, I have duly received the portraits of the six miscreants. I have arrested five of them, and the sixth will be secured shortly."—*New York Sun*.

CRIMSONBEAK—Do you know Theodore Roosevelt?

YELLOW OCHRE—No. Never heard of him.

CRIMSONBEAK—Never heard of President Roosevelt?

YELLOW OCHRE—No! Who is he?

CRIMSONBEAK—Why, his name will go down in history with that of Washington.

YELLOW OCHRE—George or Booker?

A PRIVATE, anxious to secure a leave of absence, sought his captain with a most convincing tale about a sick wife breaking her heart for his presence. The officer, familiar with the soldier's ways, replied:

"I am afraid you are not telling the truth. I have just received a letter from your wife urging me not to let you come home because you get drunk, break the furniture, and mistreat her shamefully."

The private saluted and started to leave the room. He paused at the door, asking: "Sor, may I speak to you, not as an officer, but as mon to mon?"

"Yes; what is it?"

"Well, sor, what I'm after sayin' is this," approaching the captain and lowering his voice. "You and I are two of the most iligent liars the Lord ever made. I'm not married at all."—*The Mirror Times*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Theodore Roosevelt

ON this day Theodore Roosevelt ceases to be President of the United States. In the case of most other Presidents, one has been required to review his administration; in the case of President Roosevelt, no matter how notable his administration has been, one must consider and weigh the man. In the case of George Washington, what he did for his country is supreme over his admirable personal character. In the case of Abraham Lincoln, we love to remember the quality of the man even as much as his monumental work in regenerating the nation while preserving the Union. Something like this is the feeling of the country toward the character of Theodore Roosevelt, which in thought almost dominates his services to the country.

Unlike Abraham Lincoln, Mr. Roosevelt was born in the purple of wealth and opportunity for education and privilege. But, unlike most sons of rich parents, he had in him the genius of democracy. He had wealth, but he craved fellowship with the poor. He had culture, but he could make friends of untrained strength. He had the large heart which made him one with hunters

and cowboys. He could admire their sort of training, their superiority. Lincoln was a man born from the people; Roosevelt chose to be of the people. His democracy is as radical as Lincoln's, but the fruit of principle and will rather than of birth. Would that other rich men could teach their children democracy as he has taught his by example, precept and training.

The next quality of Mr. Roosevelt to be considered is his devotion of himself to the service and benefit of the people. But this is something that cannot be considered apart from that outreaching breadth of his thought which made him feel and search for opportunities to serve. His ethical nerve center kept its hungry tentacles moving in every direction to find something to feed on. Scarcely was he thru with his professional studies before he sought service in the State Legislature. There every chance that came to him he took. Two years later he was candidate for Mayor of New York, with no chance of election, then for five years United States Civil Service Commissioner, in which position he did admirable work; then for two years President of the New York Police Board—hard work and little glory; then for a year Assistant Secretary of the Navy, before the Spanish War, and then resigning to do soldier's duty as Colonel of a Rough Rider regiment; then for two years Governor of New York, and then shunted off from re-election by being made candidate for Vice-President, so that he might not continue civil service reforms as Governor. Unwillingly he took the place, but it was duty, and that self-sacrifice gave him the opportunity to succeed to greater opportunities of service than could fall to the Governor even of the Empire State, and to smite harder blows at political and social evils than those which his enemies had feared from him at home. And during all this strenuous public life he found time to write a dozen books of history and forest life.

And this brings us to his career as President. The notable thing about his two Presidential terms is the multitude of things he has said and done, not in the ordinary routine of official service, but from the initiative of his own brain.

He has let nothing drift. He has waited for no occasion to force his hand. He has been on the masthead looking for foes to fight or friends to help. The world has come to look on him as its mentor and leader. Who but he would have uttered the world's voice that the war between Russia and Japan must end, and summoned the combatants to parley for peace at Portsmouth? Who but he, a rich man's son, dared to tackle the combinations of wealth, and compelled them to cease their unfair competition with their weaker competitors? That has been a long and a hard fight, and Theodore Roosevelt has been the principal champion in it, himself the leader of both parties, and most opposed in his own. He has demanded a square deal, and we have loved him for the enemies he has made. It would have been vastly easier to keep quiet, and let natural selection and the laws of trade work their prettiest and worst, but he wanted the just thing done, and done by law, and he deserves the credit.

These labors of war and peace and business have had many ramifications, in which he has had to originate and direct, but they have not been enough to exhaust his energy. He has taught us to honor the strenuous life. He has emphasized domestic duty and the evil of race suicide, and his has been the example of the head of a pure, simple, faithful and fruitful home. He has purified the civil service of the nation as well as its business methods and its domestic life by example and precept and rule, and the whole country is better for what he has done; and even railroads and corporations confess that what he has compelled them to do has been for their good also.

He has protected our forests, urged a simple life, ended a mischievous conflict with coal-miners, investigated agricultural conditions, and swiftly turned, as the chance came, to foreign interests, Hague Conference, open door in Manchuria, gunboat diplomacy, Central American federation, naval enlargement, Panama Canal, South American good will, and a hundred other matters we cannot take space to mention, until he has made himself the dominant forceful factor in both continents.

He has been persistent as well as strenuous, has written more messages and made more addresses and traveled more miles than any other President, and talked more sermons on honesty and faithfulness until not a few were tired of them; but the good common people have accepted them and believed in him as their spokesman for whatever is fair and square and right.

Of course he has made mistakes, but we have no use for a man who makes no mistakes; one mistake out of three things done leaves one to the good. A man makes no mistakes who does nothing—which is the greatest mistake of all.

The amazing thing about Mr. Roosevelt is the multitude of his interests, and the energy with which he finds so many things to do. A distinguished alienist who did not like his vigor declared that he had incipient softening of the brain, and dared to print it. We have actually heard it declared that it must be that his excessive activity was due to stimulants. But such a prodigious amount of approved labor has required both cool and quick judgment and sound mental poise; and it has held the loyalty and admiration of an extraordinary family of official advisers who share his honor. Governor Hughes has well expressed the sentiment of the country:

"An administration is drawing to a close, a virile, strong, aggressive administration destined to be illustrious, an administration which has impressed the American people with the necessity for the correction of obvious evils and has stirred American conscience. All honor to the great man who lays down the power conferred upon him by a free people and who has so nobly represented many of its highest impulses and aspirations."

William Howard Taft

At twelve o'clock today William Howard Taft ceases to be a private citizen and becomes President of the United States. At the same hour Theodore Roosevelt lays down the highest honor and power of any man in the country and perhaps on the earth, and becomes a private citizen. So suddenly, so absolutely, does the will of eighty million people, with a sort of divine decree, set up one and cast down another.

But the people's will has set up Mr.

Taft not as the foe but as the friend of President Roosevelt and his policies. They have taken the man who was Mr. Roosevelt's choice and one of Mr. Roosevelt's Cabinet. Mr. Taft was President Roosevelt's most responsible executive officer, and it was he that had the task of carrying out the President's most important work as the United States developed from an American nation into a colonial empire. Nine years ago he was sent to the Philippines to inaugurate civil government there; three years later he was made Secretary of War, which meant Secretary of Colonies; in this office he went to Cuba to quiet the insurrection; he was sent to Rome to adjust the Philippine Friars' evil; and again to Cuba and to Porto Rico to study conditions there; and more than once to Panama to consider the Canal question and to harmonize matters between the United States and Panama; and again back to the Philippines and to Japan on business of harmony and peace. He has been the President's Envoy Extraordinary all over the world, Secretary of War, by title, but Secretary of Peace in fact, whose business it has been by gracious tact to bring peace out of discord, order out of chaos, our first Proconsul.

The Presidency is the first elective office that Mr. Taft has ever occupied, and he has been in office the largest part of his active life, but always by appointment. He has not sought office, but his unusual combination of character, ability, judgment, strength and genial tact has made him sought for executive service. A high position was expected of him from his college days. His chief quality is not tact, altho in that he is unsurpassed. Tact and Taft differ but by a letter and not at all in reality. He has all the ability to please people that President McKinley so pre-eminently possessed. He knows how to do a difficult thing, a disagreeable thing, with positiveness, and yet so as not to give offense. In this he differs from Mr. Roosevelt, who utters himself with less care whom he may hurt. We do not expect President Taft to end his term with Congress impatient or resentful. Whoever meets him is attracted to him. He has a certain lovable *bon-homme* which marks him the friend of the world, and of you in particular.

And yet this is not his chief quality. It gilds, but does not mask, a solid, stern, purposeful body of principles, which are puritan and republican, and which embrace all that Mr. Roosevelt means by the square deal. What Mr. Roosevelt has stood for in the way of justice for all and the suppression of unfair privilege, Mr. Taft stands for equally. In resistance to the caste prejudice of color and race he has, in the Philippines, does more in act, not in word, than any other man since Lincoln. He has insisted that socially and politically the brown man shall be treated just like the white man. Americans there, in military and civil life, did not like it, but he had his way, and the Filipino believes in Taft. Japanese and Chinese and negro will find him the friend of equal opportunity and treatment for all. But he will do it all, and will have his own way in it, so graciously, with so much good will for all, that it will not give offense. He has what Cardinal Gibbons credits him with, an iron hand in a silken glove.

We expect of him a peaceful, progressive and fruitful administration. We expect his party and the Democratic party in Congress as well, to be on good terms with him. We expect the recovery of prosperity. We expect the establishment of sympathetic relations with the people of our colonies, and a period of organization and increased self-government. We expect at home no weariness with the work of correcting and punishing the wrongs to which President Roosevelt has aroused the nation, but effectual work will be done to make the political atmosphere as well as the commercial conditions more healthful.

Mr. Taft has the judicial temper, a temper which rests on justice and does not run to extremes. We do not recall that he has given the world one epigram, and epigrams are the expression of unjudicial emphasis. He has made himself the wordy champion of no special cause, for he has not chosen to stress one good cause above others which he maintains. He was made for a judge, and President Roosevelt offered him the post which he most wished, of Justice of the Supreme Court, but told him he much preferred he should take in hand the harder task of creating civil government in the Philip-

pires. Against his will he took it, as an act of unwelcome duty, and it made him President. We believe his administration will be one of the most beneficent, if not most dramatic, in the history of the United States.

The Shame of Wesleyan

THE trustees of Wesleyan University, of Middletown, Conn., have surrendered to the demands of its male undergraduates and have voted that hereafter girls are to be excluded from that institution. For thirty-six years a policy of equal rights has prevailed, but in recent years the boys have made a systematic effort to get rid of the girls and at last they have succeeded. They have vindicated their manhood and demonstrated that they are the stronger sex.

For it is not true that women are the equal of men in all respects. There are two weapons which men, or those who presume to call themselves men, may use against women, and in the use of which decent women are not their match; these are brute force and insult. The second of these weapons has been freely employed by the male Wesleyans in their long campaign against the opposite sex. Women have been socially ostracized; have been excluded from class meetings and class exercises to which they had an equal right; they were not admitted to societies or alumni associations; the dormitory, "the Quail Roost," was daubed with paint at night after class banquets, and in all possible ways the women were given to understand that they were unwelcome. Nine years ago the trustees made a concession to the anti-feminists by passing a resolution limiting the women to 20 per cent. of the total number of students, and since then the efforts of the P. D. Q. Society—it is explained to the public that these initials stand for "Put Down the Quails"—has been directed toward keeping down the number as far below the limit as possible. If they could get hold of the name of any presumptive female student they would write her a letter warning her of the sort of welcome she would receive. By these tactics the proportion of women was kept down to about twenty per cent., and now these are to be worked out until the

last co-ed is gone. In the 1908 catalog the Highest Honors are divided equally between the sexes, and in the Honors list there are two young women to thirteen young men. No wonder they want to rule the women out of the competition. In Tufts College the Phi Beta Kappa is practically monopolized by the weaker sex, and there, too, is heard a cry for protection by the passage of a woman's exclusion act. It is well that it is coming to be generally understood that the only way that men can escape the humiliation of being occasionally beaten by women in any field of work is by arbitrarily ruling them out. This clears the air of dubious questions and makes plain the moral issue at the bottom.

Of course the closing of Wesleyan will be no material loss to feminine education. We do not see why any girl should want to go there or any decent boy either so long as the present feeling prevails. No mother would want her son to go where he would learn to despise her sex. If one does not like coeducation there are plenty of purely masculine colleges where sex prejudice is not so violent. But Wesleyan's educational facilities are seriously impaired by this action. It cannot claim to give a Christian education, because the fundamental principle of Christianity is justice combined with chivalrous treatment of the weaker members of society. It cannot claim to give a liberal education, for its students and graduates have shown themselves conspicuously deficient in this quality. In fact, the institution has no right to the honored name it bears, and the trustees should in fairness pass another resolution changing it. We suggest that it be called the Nietzschean University or the Schopenhauerean University, to indicate its present anti-Christian and anti-woman (the words are almost synonymous) tendency.

The policy of coeducation is an open and debatable one, not to be decided by a fixed rule, but according to the circumstances of each case. The degree to which it is safe and profitable for the two sexes to be allowed to associate depends upon the prevailing manners and morals of the locality and the times. In some parts of New Caledonia it is regarded as improper for a brother and sister to eat

together. In some parts of New England it is regarded as improper for a brother and sister to study together. There are degrees in heathenism, but it is shocking to find any form of it outcropping in a Christian institution. Another departure from Methodist principles was demanded by the Wesleyan boys at this same meeting, and tho the trustees postponed action on it, they will doubtless ultimately yield on this point also. The boys want the use of the new gymnasium for their dances. This, too, is a question on which it is not safe to be dogmatic. We do not venture to decide whether it would be a wise change at Middletown or not. But we believe we are safe in saying that if a line has to be drawn in either case it would be better to have segregation in the ballroom and coeducation in the classroom. There are always dangers and difficulties wherever boys and girls come together, but in our opinion they are less where they study together and waltz separately than where the opposite policy prevails.

Germ and Living Conditions

THE announcement that Mrs. W. K. Vanderbilt, Sr., was about to erect a number of apartment houses for the use of tuberculous patients is an index of that newer phase of our relations to disease and its causative agencies which has come in as the result of recent studies in nosology. It represents a movement that cannot be praised too highly, and that while founded on the broadest of common sense principles has the backing of the latest scientific advance. We have heard much in the last quarter of a century or more of germs as the cause of disease. There is no doubt at all that for most of the ordinary ills of humanity germs are directly responsible. The more the subject has been studied, however, the more fully it has come to be appreciated that there is always something else needed besides the germ before a disease develops. Germs may be present, they may even find a favorable avenue of entrance into the individual's tissues, and yet under certain circumstances they may not cause the disease, or may cause only some slight symptoms and then be overcome by the normal resistive

vitality. Immunity to disease, vital resistance, is an extremely important factor. If this is not lowered, if the individual is not predisposed in some way, there are many even serious diseases that will not affect them.

Tuberculosis, because of its universality, its power to affect all races and all ages, and all sorts of individuals, might be supposed to be a distinct exception to this rule. It is, on the contrary, perhaps the best exemplification of it that we have. One of the most interesting and beyond all doubt one of the most valuable communications made to the recent International Congress on Tuberculosis, which held its sessions in Washington last October, was that from the Russian Surgeon - General. This distinguished military sanitarian declared that the investigations made in the Russian Army left no doubt that practically every individual over the age of thirty had at some time had tubercle bacilli active in his tissues, or that they were actually active at the moment. The bodies of adults who had died from other diseases than tuberculosis, when carefully examined, showed traces of this activity of the tubercle bacillus, which makes it very clear that the individual has had the bacilli at work in his tissues, tho he may have walled it off. Of course this was not absolutely new, for the investigations of Villemin, of Cornet, and especially those carried on in Vienna some thirty years ago, made it very clear that the great majority of people either have or have had tuberculosis. The German expression which represents this fact is very well known, and deserves to be recalled, "*Wir sind alle am Ende ein bisschen tuberkulös*" ("All of us taken by and large are a little tuberculous").

How is it, then, if practically every one has had tuberculosis at some time or other, that only one in eight dies of the disease? This is the most interesting question at present occupying experts in tuberculosis, and of course there are many answers. It is evident that seven-eighths of humanity are quite capable of resisting the invasion of the tubercle bacillus to any extent, even after it has secured a foothold in their tissues. This is extremely important, because it is the natural immunity and resistance to dis-

case that physicians have in the modern time come to look to as their greatest aid rather than drugs and remedies. Long ago Hippocrates emphasized the *vis medicatrix nature*—the curative power of nature, and tho there have been many times since his day when physicians would not trust it, or even abused it roundly, the more we know of medicine the more do we realize what a wonderful insight into healing processes is represented by this expression. What is the reason for the resistive vitality and the immunity of seven-eighths of mankind?

Even here the mystery is not as deep as it might seem to be. Apparently it is not because of the possession of any special virtue that these seven-eighths are able to resist so well, as that their reaction against the disease is not hampered by unfavorable conditions. To take but a single striking example. It has been found that in many of the polishing trades, where men are engaged in polishing various metal objects by holding them against a rapidly revolving wheel, the workmen die so rapidly from tuberculosis that it is quite impossible to maintain a death benefit fund. Five years is practically the limit of life, and the men die from tuberculosis. Readers of THE INDEPENDENT will remember the discussion of this subject by the walking delegate of one of these unions some time ago in our pages. The polishing must be done with a very rapidly revolving wheel. If the wheel were to revolve away from the workman the objects would be snatched out of his hands. It must turn toward him, then, and that compels him, unless special arrangements are made for carrying away the dust, to breathe in a great many dust particles during his working day. The special protective arrangements are not made, because they are costly, while human life is cheap, and so these men, tho they are the average workmen of the city and are usually in quite good health when they begin, are carried off so rapidly by tuberculosis that any ordinary system of assessment for death benefits breaks down under the burden of the number of deaths that inevitably take place after the workmen have been engaged for a few years in these trades.

Here is a case where the normal re-

sistive vitality is completely broken down by conditions of work and of life. The hyperemia produced in the lungs by the presence of these dust particles favors the growth of the tubercle bacillus, and so the men are not able to resist it. Just this same thing has been found to occur among other workmen who breathe in dust to a considerable degree. Sweat shop workers, mill workers, miners where the mining is very dry, all of these people have a lowered resistive vitality for tuberculosis. Whenever men live in crowds closely packed together with insufficient air, then their normal resistance to tuberculosis is very much lowered. Tuberculosis is a germ disease, but only that favorable conditions for the growth of the germ are produced by certain unfortunate conditions of life and work, the germ itself would have very little power over mankind. It is true that where frequent doses of inoculation of the tubercle bacillus are given to people, as for instance has been found among the washerwomen of Paris who wash the clothes of many tuberculous people, or the scrub women in the large buildings in London, whose employment brings them in contact with expectorated tubercle bacilli every day, even normally healthy individuals fail to resist, but even here living conditions have much to do with the lack of resistive vitality, and the amount of contagious material of course breaks down resistance in spite of its saving reaction.

In the present crusade against tuberculosis and the precious diffusion of information with regard to the disease, there is a tendency in the minds of some people to exaggerate the role played by the germ of the disease over the predisposition in the individual produced by unfavorable conditions. This would be extremely unfortunate, for it would call attention away from the most important phase of the causation of consumption. The direct causation by the bacillus is not near so important a factor as the indirect predisposing influence which lowers the resistive vitality of the individual. Probably every adult in New York, certainly nine-tenths of them, have or have had tuberculosis. Seven-eighths of all of them are quite able to resist it if they only have the opportunity to live a rea-

sonably normal life, and only a very few are so susceptible to it as to be in serious danger if their living conditions and working circumstances are not very unfavorable. The movement, then, that would make the habitations of the poor, and especially those afflicted with tuberculosis, better is a great step in the right direction. If conjoined with the corresponding movement, of which there are also many signs above the horizon, to make working conditions better, it would constitute at the present moment the best possible safeguard against the further increase of the disease, and would gradually lead to its obliteration—a consummation devoutly to be wished.

A Married Priest

WE have had this week the report of an American priest who ventured to marry. If we are to believe the story told of him his record has not been reputable; but quite otherwise was the career of a distinguished French priest whose life-long marriage has come to public knowledge since his death.

M. Houtin has just made public in a volume, "*Un Prêtre Marie*," the curious fact that a French priest—an honorary Canon to boot—was a married man. Charles Perraud was drawn into the priesthood chiefly thru love of his brother, Adolphe, who died Bishop of Autun and a Roman Cardinal, after enjoying the honor of being one of the forty Immortals. A strong affection also for the Abbé Henry Perreyve helped Charles's decision. Perreyve died still young, professor at the Sorbonne. All three were members of the Paris Oratory under the famous Gratry, whose philosophic ideas Orestes Brownson so strongly attacked. Gratry was outspoken in his opposition to the Vatican Council, and only when nearing death did he give a sort of milk and water acceptance of Papal Infallibility. When challenged as to the same dogma, Charles Perraud answered that the Vatican Council decreed it, but created no standard by which to gage when the Pope was defining *ex cathedra*.

Those leaders of thirty-odd years ago were a different set from the recent Modernists. Nowadays the ancient claims of the Church are ignored; higher criticism

accepted and followed, the development of the Church explained as an ordinary human growth; harmony between her and science sought after. Père Hyacinthe, however, Gratry, Perreyve, Charles Perraud and countless more in France, together with Doellinger and his school in Germany, regarded the old traditional status of the Church assured—perhaps unassailable. Celibacy, of course, came up among those men. Perraud asked Père Hyacinthe to consult Doellinger on the subject while on a visit. The German historian answered that a married priest was unknown in ecclesiastical history; quite a sweeping statement, and correct only when seen thru Hildebrand's spectacles. He past over in silence the widespread evil of concubinage. Henry Perreyve died of a broken heart, because he thought that as a priest he could not marry the woman he loved, while Gratry, "in 1870 and '71, that is, a short while before his death, had a great affection for a lady whom the Bishop of Autun [Cardinal Perraud] knew well, and this affection would have ended in marriage if the lady in question had consented." In his turn, Loyson openly married his wife in London, while Charles Perraud secretly wed his choice, a widow, named Duval. The history is curious.

In July, 1872, she received communion from his hand. After mass she went into the sacristy, where he gave her a blessing which both regarded as the seal of their union. This idea of marrying one's self was not original with Perraud. Urbain Grandin, curé of Loudon, performed the same ceremony *at night* in his parish church of St. Peter's, taking to wife a Mlle. Madeleine de Brou. The honeymoon of the Perrauds was past at Brussels, whence the husband informed Père Hyacinthe of the step. In reply he got a severe condemnation, not of the marriage, but of the way it was done and of the double life it entailed. Writing in April of last year to M. Houtin, Père Hyacinthe again renewed his disapprobation of Perraud's secrecy. "I blamed my friend; I pitied him; I loved him none the less; I will add, I almost venerated him." In a chat many years later on Perraud said to Hyacinthe: "Perhaps if I were in your place I would

have done as you did, and perhaps if you were in mine you would have acted as I did." Charles Perraud wisht to remain a priest; hence the secrecy, which extended even to his correspondence, in which himself figured as X and his wife as Z. His love for his brother was also a great reason for secrecy, but perhaps the main cause was that he was weak-kneed—"faible"—as Père Hyacinthe put it.

For five years after his marriage he did very little; gradually he resumed active work, and from 1880 to 1887 he was at the hight of his renown, specially as a preacher. His brother had created him an honorary Canon of Autun's Cathedral; he was, moreover, president of the council in charge of the work in behalf of incurable children. But he shone as a preacher. In the provinces, at La Rochelle, Orléans, Grenoble, Rheims, Lyon, Autun, he delivered courses of sermons. In Paris he faced large audiences at St. Ambroise, La Trinité, Ste. Clotilde, The Madeleine, St. Roch. In the last named he was publicly applauded.

The marriage, however, was unhappy; not indeed as far as man and wife were concerned, but because of her illness, his own severe headaches, but chiefly because of the double life. In his travels thru the provinces, in his goings to and from the churches of Paris, his wife, publicly known as his housekeeper, always traveled with him. This failed not to stir up much jealousy among the devout female sex.

In 1887 Madame Perraud died at Pau, after receiving the rites of the Church at her husband's hands. Shortly before her death he had said to her: "We have followed our conscience, but perhaps we have deceived ourselves. Do you wish to confess to another priest?" "No," was her reply; "we have done well, and I will never give my confidence to any other priest than yourself." When in her agony, he recited a very devotional litany of the dying, composed by a Marchioness of Audelarre. "Merciful Jesus, be merciful to me," is the response after every aspiration.

Charles Perraud survived his wife five years, dying in 1892. His sorrow cropped out in his sermons. Less and less he ap-

pealed to his hearers to lead a Christian life, while more and more he labored to console them—or perhaps rather himself—in the care and cark of life. His afflicted heart poured itself out in a touching work entitled "Meditations on the Seven Words of Our Savior Jesus Christ upon the Cross." "This book," writes Houtin, "is his masterpiece, the testament of a lifelong desolation."

When dying, January 18th, 1892, Charles askt his brother, Cardinal Perraud, who stood by his dying bedside to the last, to read the same touching litany which five years before the dying man had recited for his agonizing wife.

In conclusion, it was Père Hyacinthe Loyson who turned over to M. Houtin the documents from which this life was written. The author terms it a study in history and religious psychology. He might have added: a conquest of nature. Here then is a new phase of Modernism, quite beyond that which Pius X inveighs against, altho in his encyclical the Pope speaks of Modernists who desire the suppression of clerical celibacy. Loisy, against whom Sarto leveled his hardest blows, in his "Simples Reflexions" points out that he himself never exprest any opinion about it:

"Not that I do not believe that it is bound up with the rest, but because, being part of a general plan of government and ecclesiastical action, it can only be usefully discussed and settled after the others."

Charles Perraud differed from Loisy not only by his marrying, but also by the fact that as far back as 1869 he had drafted a memorial, addrest to the Vatican Council, urging the discussion of clerical celibacy. The argument against celibacy is that it has so often led to a greater moral evil, altho a less evil from the standpoint of Church government than clerical marriage.

Champ Clark's
Denial

It is with peculiar pleasure that we print this week the indignant and not wholly courteous letter from the Hon. Champ Clark, leader of the Democratic minority in the House of Representatives. Even its belligerent tone does him no discredit, altho his reference to Ananias and Sapphira might have been spared as among gentlemen. We like it

that he resents so angrily the suspicion that he or his State has any share or sympathy with those statesmen and those States that try to pervert the Constitution of the United States and annul its positive provisions by excluding a class of citizens from the right of suffrage. His letter sets him and his State of Missouri in a separate class from those statesmen and those Southern States that have enacted and defended laws whose express and belauded purpose it was by their administration to shut out negro voters, but not one white voter. Missouri and her distinguished representative deserve high honor for resisting the Southern tide of injustice and fraud, and maintaining the democratic right of all citizens equally under the Constitution. Indeed Missouri is more a Western than a Southern State. We would further have Congressman Clark understand that we have, and have had, no word of condemnation for those Democrats and Republicans who have honestly believed that the bill repealing the increased salary of the Secretary of State was an evasion of the provisions of the Constitution. There was a technicality there in which honest men might differ. We did not care to defend the amendment, altho we hold with those who believe that the repeal of the law is no evasion. There is no principle violated, no increase of salary for the benefit of a salaried officer who voted for it. It is not like the case of Mr. Stewart, in whose behalf it was proposed to repeal both law and principle at the same time. But we were not attacking those who opposed the amendment to a law just past, but were criticising those who were so virtuously strict in straining at a gnat while swallowing a camel; and we regret that we appeared to include the Hon. Champ Clark and his State in this criticism. That criticism belongs to others. Mr. Tillman said in the Senate:

"We have our educational qualification in South Carolina, but we know how to handle that. There never was a negro enfranchised under it, and never a white man disfranchised." And the *Atlanta Constitution* comments thus:

"Just the same thing as was promised for the Georgia law on the same subject. Tersely, that is the truth of it, no matter how much we may try to conceal or suppress it."

Congressman M'Call's Warning

Mr. M'Call, of
Massachusetts, is
one of the most

independent Republicans in Congress, and does not hesitate to follow his own judgment and differ from his party and his President. He is needed where he is, but the trustees of Dartmouth College wanted him as its president, a layman worthy to follow an unbroken succession of ministers. It is to Congressman M'Call's honor that for the high purpose of service he gave himself to the task of politics, and he does not think it right to lay it down even to be the leader of hundreds of young men in college; but the pessimistic view he takes of public affairs is not one we would have impressed on college youth. He says in his letter to the trustees:

"This is not the place for political discourse, but perhaps I should say to you that the crisis I referred to is in my opinion full of peril to our institutions, and how soon the movement is to begin toward sanity and safety I do not know. I am far less concerned by particular theories than by general methods of government—methods which have been carrying us swiftly toward a condition under which limitation upon governmental power would be done away with and favoritism and caprice of an autocrat would take the place of constitutional restraint. And some chance barbarian as an autocrat might overturn our temples and do more harm in the direction of uncivilizing the country than all our colleges together could possibly repair."

It is to us incredible that any sound mind could see danger either of our people choosing such a barbarian for President, or submitting to the violent overthrow of our institutions.

Two Wise Men In an issue which contains an important article by Alfred Russel

Wallace, it is appropriate to quote the opinion of this veteran scientist on one of the practical questions of the day as expressed in a recent letter published in the *London Times*:

"As long as I have thought or written at all on politics, I have been in favor of woman suffrage. None of the arguments for or against have any weight with me, except the broad one, which may be thus stated: 'All the human inhabitants of any one country should have equal rights and liberties before the law; women are human beings; therefore they should have votes as well as men. It matters not to me whether ten millions or only ten claim it—the right and the liberty should exist, even if they

do not use it. The term "Liberal" does not apply to those who refuse this natural and indefeasible right. *Fiat justitia, ruat cælum.*"

We publisht lately the severe rebuke given by the Boston *Pilot*, Archbishop O'Connell's official paper, to the women who wish the suffrage. A very different notion is exprest by Cardinal Moran, the distinguisht Australian Archbishop, who says in a letter which we quote from the *London Tablet*:

"What does voting mean to a woman? Does she sacrifice any dignity by going to the poll? The woman who votes only avails herself of a rightful privilege that democracy has gained for her. No longer a mere household chattel, she is recognized as man's fellow worker and helpmate, and credited with public spirit and intelligence. As a mother she has a special interest in the legislation of her country, for upon it depends the welfare of her children. She knows what is good for them: just as much as the father, and the unselfishness of maternity should make her interest even keener than that of man, who is naturally more self absorbed. It is natural for every woman to look forward to the day when she will mold the future of young children, and she should deem it one of the grandest privileges of her sex that she can now help to choose the men who will make the laws under which they must live and exert her purer influence upon the political atmosphere of her time. How can she sacrifice any dignity by putting on her bonnet and walking down to the polling booth? Women think nothing of transacting ordinary commercial business, of working alongside men, of playing their part in the practical business of life. They do not mind going to the box office of the theater to purchase tickets for the play. There is very little difference between doing that and putting their vote in a ballot box. The men about booths show them every courtesy, the officials are anxious to make things easy for them, and the whole business of voting will not occupy more than five minutes. The woman who thinks she is making herself unwomanly by voting is a silly one."

Cardinal Moran has had observation of woman's suffrage in Australia and speaks from knowledge. He is a somewhat different man from his uncle, Cardinal Cullen, who lived most of his priestly days in Rome, and identified liberalism with atheism and anarchy.

Dr. Theodore L. Cuyler, the oldest contributor of THE INDEPENDENT, and one of the great pulpit leaders of the last generation, died on February 26th. at his home in Brooklyn. Tho other preachers excelled Dr. Cuyler in eloquence and theological lore, none had a more attractive

personality or a readier pen. His prolific writings have appeared in all the best religious papers of the land and have been eagerly read by millions of Christians. For many years he used to send us a religious article every month, invariably written on both sides of the paper. Of late years the infirmities of age lessened his output, but he was always ready to heed a request, and only last November he sent us his reminiscences for our "Sixtieth Anniversary Number," telling of his friendship for the founder of this paper and how Lincoln told him he read THE INDEPENDENT. He always took an active interest in public affairs, and in both Church and State was one of America's foremost citizens. Thus passes the last of that brilliant galaxy of Brooklyn preachers which made "The City of Churches" the religious center of the land — Beecher, Budington, Storrs, Talmadge and now Cuyler.

Dr. Wallace on Theism Dr. Wallace, whose important paper we conclude this week, is no materialist. He follows in the line of the poet Gray, who wrote his own epitaph:

"Too poor for a bribe, and too proud to importune,
He had not the method of making a fortune,
Could love and could hate, so was thought somewhat odd;

No very great wit, he believed in a God."
But no one can deny that Dr. Wallace is a scholar even if he does believe in a God. In this article expounding natural selection he yet "recognizes a power and a purpose in the vast world of life," without which "the whole cosmic process becomes unmeaning and unintelligible." His conclusion is:

"The irresistible conclusion that beyond and above all terrestrial agencies there is some great source of energy and guidance, which in unknown ways pervades every form of organized life, and of which we ourselves are the ultimate and foreordained outcome."

The point of the argument is that in the processes of life provision is made anticipating what will later be needed, but as yet is not needed, and which mere survival of the present fittest could not supply; and this requires foresight and purpose on the part of an overseeing Intelligence. The conclusion is valid if the facts can be substantiated, as Dr. Wallace believes they abundantly are.

Insurance

New York's New Superintendent of Insurance

FOLLOWING the withdrawal of the name of Frederick A. Wallis from consideration as Superintendent of Insurance for New York, notwithstanding the clean bill of health given him by the State Senate following a public hearing in which he cleared himself of the charges of rebating, Governor Hughes nominated for the office William Horace Hotchkiss, of Buffalo. Mr. Hotchkiss was confirmed by the Senate as Insurance Superintendent without opposition on February 17th, for a term of three years at a salary of \$7,000 per annum. Mr. Hotchkiss was born at Whitehall, N. Y., September 7th, 1864; he is a lawyer of Buffalo and is president of the American Automobile Association. He is a graduate of Hamilton College, but has not heretofore been connected in any way with the insurance business. Since McKinley's time he has been United States referee in bankruptcy for the Western District of New York.

One of the first acts of the new insurance superintendent was concerned with the Washington Life Insurance Company. Under a plan formulated by Mr. Hotchkiss the proceedings looking toward the appointment of receivers for this company have now been discontinued and the affairs of the Washington Life will be administered by the State Insurance Department pending the determina-

tion in the courts of certain disputed questions.

Results of the Armstrong Investigation

THE Armstrong investigation revealed many abuses. It showed that money was wasted under the old order in many ways: excessive salaries, inordinate commissions for new business, writing deferred dividend policies, buying and selling securities thru syndicates, and other entanglements with Wall Street alliances. Thanks to the reforms which the investigation inspired, the various insurance companies have "cleaned house." Their commission rates to agents have been much reduced, their home office expenses (including salaries) have likewise been reduced, they issue only annual dividend policies, they have had no connection with syndicates, nor do we believe they have

any but strictly legitimate relations with Wall Street. If the annual reports of the companies for 1907 and 1908 are compared with previous years, much improvement will be noted, including increasing dividends to policyholders, thus reducing the net cost to the latter. There are, however, among the Armstrong laws several that are regarded by conservative and careful life underwriters, who suffered no criticism of their methods during the investigation, as hindrances to the progress of the companies, and, to that extent, the policyholders' interests.

WILLIAM HORACE HOTCHKISS,
Superintendent of Insurance.

Steel and Securities

PRICES of iron and steel were very uncertain thruout last week, except the price of rails, which appears to have been held firmly at \$28 a ton. This high and artificial rate continues to be maintained by agreement. If the prices of other steel products are to remain at the new and lower level, that of rails also should fall. Railroads will not pay the present price unless compelled by their needs to do so. The Steel Corporation has been diligently seeking orders at large concessions, and is said to have made rates which the independents could not meet. This aggressive policy has been effective in various ways. There are signs that the independents now desire to reach an agreement with this powerful interest. But we venture the prediction that no agreement will restore the old rates. Business will not support them, and within a few months the new and lower tariff duties will make it impossible for the manufacturers to exact them from consumers.

Following a sensational decline in the stock market on the 23d, there have been fluctuations, the net result of which at the end of the week was only a slight loss for railroad securities, as a rule, and the recovery of a considerable part of the reduction in Steel shares and those of other metal combinations. Copper stocks were deprest by reports of an open market in copper, and the coal railroads (Reading, especially) suffered because of rumors or expectations that the Supreme Court would decide against them in the cases under the commodities clause of the Rate law.

Revision of the tariff may compel that readjustment of prices which has been required by prevailing conditions but has been prevented in many industries mainly by the power of combinations. It is the duty of all who can exert any influence upon members of Congress to urge that the revision be made without delay. There are Senators and Representatives who talk of the tariff session running into July or even until August. Judge Taft hopes that the work will be

finisht by June 1st. He will be disappointed. But surely the new tariff bill should be a law before the end of June. There should be an emphatic popular protest against a postponement of final action beyond that date.

....The Manitoba Government, which bought the telephone system in that province a year ago, announced on the 26th ult. a large reduction in charges. Business telephones are to be \$25 instead of \$50.

....It is said that the Grand Trunk Pacific will build a city at Melville, in the province of Saskatchewan, for its western headquarters, and that its yards there will be the largest between Winnipeg and the Pacific Coast.

....George G. Henry, who for two years has been vice-president of the Guaranty Trust Company, recently resigned and has been elected vice-president of the Union Trust Company, of which John W. Castles is president. Mr. Henry is a Yale man and has been connected with the banking houses of Spencer Trask & Co. and Potter, Choate & Prentice.

....A long contest relating to several copper companies whose mines are in Michigan was ended last week, when the Calumet and Hecla acquired, for about \$8,000,000, a controlling interest in the Osceola, Tamarack, Ahmeek, Seneca, Isle Royale and Laurium companies, heretofore known as the Bigelow properties. Albert S. Bigelow retires from the copper mining field.

....After deducting \$1,252,399 for dividends, the Associated Merchants Company had a surplus of \$20,648 for the year ending on January 31st, and a total surplus of \$1,662,429. Speaking, in his report, of the pending tariff revision, President John Claflin says:

"That disturbing condition removed, we should soon enjoy a fair measure of prosperity. It is gratifying to note that the net income of the year 1908 would have enabled us to pay extra dividends at the rates of 1907 without encroaching on our surplus. Trade improved gradually thruout the season now ended, and we have no doubt that the year 1909 will prove more profitable than 1908."

The Independent

VOL. LXVI NEW YORK, THURSDAY, MARCH 11, 1909

No. 3145

Survey of the World

Inauguration of President Taft

Judge Taft went to the Capitol, on the 4th, in a driving snow storm, and took the oath of office in the Senate Chamber. For the first time since the beginning of Andrew Jackson's second term the ceremony did not take place in the open air. The storm began on the preceding day, with a heavy fall of rain. This was followed in the night by snow and sleet. Thousands of telegraph poles went down, Washington was isolated, and railway trains were greatly delayed. The train bearing New York's Seventh Regiment was thirty-one hours on the way. Arriving too late for the grand parade, the regiment was reviewed by President Taft on the morning of the 5th. This storm was more severe, in the neighborhood of Washington, than any other similar disturbance since the blizzard of 1888. Telegrams were sent to New York by way of Atlanta, Memphis and St. Louis. The Weather Bureau had predicted for Inauguration Day fair weather, with sunshine and a temperature ranging from 35 to 40 degrees. Visitors who made their way to the capital with so much difficulty experienced much delay and discomfort in returning to their homes, for the regularity of the railway service could not be restored quickly. In the Senate the movement for deferring the inauguration until the last Wednesday in April has been revived. —On the evening of the 3d Judge Taft attended a reunion of 800 graduates of Yale. With Mrs. Taft he dined with the President and they were the latter's guests at the White House thru the night. After the oath had been administered, on the following day, by Chief Justice Fuller, the new President delivered his inaugural address. At the close

of it, Mr. Roosevelt took him by the hand and after a brief conversation left the Capitol. The ex-President was at once escorted to the railway station by nearly 1,000 members of the New York County Republican Club. At a little after one o'clock the next morning he reached his home in Oyster Bay, where he is now preparing for his hunting trip in Africa. He intends to sail from New York on the 23d inst. Heretofore the retiring President has sat with his successor in the carriage on the way back to the White House from the Capitol. This time, Mrs. Taft sat with her husband, and Mrs. Sherman with the new Vice-President. Later in the afternoon, President Taft, wearing a heavy fur coat, reviewed the long inaugural parade. In the evening he attended the dinner of the members of his Yale class and afterward was for a time at the Inaugural ball, which was a brilliant and highly successful affair. To the Senate, on the 5th, he sent his Cabinet nominations, as follows:

Secretary of State—Philander C. Knox, of Pennsylvania.

Secretary of the Treasury—Franklin MacVeagh, of Illinois.

Secretary of War—Jacob M. Dickinson, of Tennessee.

Attorney-General—George W. Wickersham, of New York.

Postmaster-General—Frank H. Hitchcock, of Massachusetts.

Secretary of the Navy—George von L. Meyer, of Massachusetts.

Secretary of the Interior—Richard A. Ballinger, of Washington.

Secretary of Agriculture—James Wilson, of Iowa.

Secretary of Commerce and Labor—Charles Nagel, of Missouri.

These nominations were promptly confirmed. William Loeb, Jr., President Roosevelt's secretary, was nominated to be Collector of Customs at New York.

and this nomination was confirmed on the 6th. Mr. Loeb displaces Collector Fowler, who had three years of his term remaining. Judge Taft was informed some time ago that Collector Fowler had sought to prevent his nomination by appealing to the labor element in New York and by exciting opposition because of his judicial decisions in labor cases. The Collector denies that he did this. Secretary Dickinson said in Chicago last week that he was a Democrat and always had been one, altho he had never voted for Mr. Bryan. Ex-Secretary Straus will succeed Thomas J. O'Brien as Ambassador to Japan. Dr. William D. Crum (a negro), Collector at Charleston, whose recent renomination had not been confirmed, has resigned, in order, as he says, to save President Taft all possible embarrassment. The special session of Congress, for tariff revision, will begin on the 15th.

His Inaugural Address

At the beginning of his inaugural address, President Taft undertakes to make the maintenance and enforcement of the reforms initiated by Mr. Roosevelt "a most important feature" of his administration. These reforms "were directed to the suppression of the lawlessness and abuses of power of the great combinations of capital invested in railroads and in industrial enterprises carrying on interstate commerce." Much has already been accomplished:

"To render the reforms lasting, however, and to secure at the same time freedom from alarm on the part of those pursuing proper and progressive business methods, further legislative and executive action are needed. Relief of the railroads from certain restrictions of the anti-Trust law has been urged by my predecessor and will be urged by me. On the other hand, the Administration is pledged to legislation looking to a proper Federal supervision and restriction to prevent excessive issues of bonds and stocks by companies owning and operating interstate commerce railroads." He intends to submit, in December next, definite suggestions for needed amendments of the Anti-Trust and Interstate Commerce laws and for certain desired changes in the executive departments directly concerned in the enforcement of these statutes:

"It is believed that with the changes to be recommended by the Commission on Interstate Commerce, the

of that measure of stability and certainty in respect to those things that may be done and those that are prohibited, which is essential to the life and growth of all business. Such a plan must include the right of the people to avail themselves of those methods of combining capital and effort deemed necessary to reach the highest degree of economic efficiency, at the same time differentiating between combinations based upon legitimate economic reasons and those formed with the intent of creating monopolies and artificially controlling prices."

Revision of the tariff, he says, is a matter of most pressing importance. It should secure an adequate revenue and afford to labor and to all industries protection equal to the difference between the foreign and the American cost of production, with provision for maximum and minimum rates. Changed conditions, "it is thought," will permit reductions in certain schedules and require an increase of few rates, if any. Business halts, awaiting revision, and the bill should be passed promptly. In making a tariff bill, "the prime motive is taxation and the securing thereby of a revenue." Pointing to the large deficit, he says it must not continue. If it be impossible to secure sufficient income by import duties, "new kinds of taxation must be adopted," and "among these" he recommends "a graduated inheritance tax, as correct in principle and as certain and easy of collection." Reasonable economy is commended, but expenditures really needed to make government effective should not be cut off. He speaks of new demands upon the Treasury for necessary investigations and projects which involve large expenditure, also of the cost of maintaining a proper army, a proper navy and suitable fortifications. He desires to reiterate all the reasons heretofore presented by Mr. Roosevelt "in favor of the policy of maintaining a strong navy as the best conservator of our peace with other nations, and the best means of securing respect for the assertion of our rights, the defence of our interests, and the exercise of our influence in international matters." While favoring such instrumentalities as The Hague Tribunal and arbitration treaties for the promotion of peace, we must be armed and prepared for war, to prevent other nations from taking advantage of us. Such preparation is needed for the protection of our

PRESIDENT ROOSEVELT AND PRESIDENT-ELECT TAIT ARRIVING AT THE CAPITOL.
MARCH 4, 1900.

interests in controversies likely to arise in the Orient. Speaking of the admission of Asiatic immigrants, he says we should take every precaution to prevent or to punish outbursts of race feeling against foreigners. There should be legislation giving the Federal Executive power to enforce in Federal courts the treaty rights of aliens. In a paragraph concerning the currency, reference is made to the work of the Monetary Commission. A proper Postal Savings Bank bill, he says, should be past by the incoming Congress. Free trade with the Philippines would increase our exports. He hopes Congress will see the wisdom of an effort to establish new steamship lines by the use of mail subsidies. The substance of his remarks about the Panama Canal was recently published. The lock type has been selected. We must now hold up the hands of the nation's agents authorized to do the work, and "not keep up a fire in the rear." In Porto Rico and in the Philippines, our Government is upholding the traditions of civil liberty and doing work which redounds to our credit as a nation.

The South and the Negroes

A considerable part of the address has for its subject the political condition of the negroes. The new Pres-

ident says he looks forward with hope to increasing the already good feeling between the South and other sections of the country:

"My chief purpose is not to effect a change in the electoral vote of the Southern States. That is a secondary consideration. What I look forward to is an increase in the tolerance of political views of all kinds and their advocacy thruout the South, and the existence of a respectable political opposition in every State; even more than this, to an increased feeling on the part of all the people in the South that this Government is their Government, and that its officers in their States are their officers."

This leads him to some remarks about the negro race. The Fifteenth Amendment, he says, ought to be observed, and "the tendency of Southern legislation today is toward the enactment of electoral qualifications which shall square with it." In time, it will be enforced fairly and justly. It is clear to all that the domination of an ignorant and irresponsible element can be prevented by constitutional laws which shall exclude from voting both negroes and whites who have not the proper qualifications:

"The danger of the control of an ignorant electorate has therefore past. With this change, the interest which many of the Southern white citizens take in the welfare of the negroes has increased. The colored men must base their hope on the results of their own industry, self restraint, thrift, and business success, as well as upon the aid and comfort and

sympathy which they may receive from their white neighbors of the South. There was a time when Northerners who sympathized with the negro in his necessary struggle for better conditions sought to give him the suffrage as a protection, and to enforce its exercise against the prevailing sentiment of the South. The movement proved to be a failure. What remains is the Fifteenth Amendment to the Constitution and the right to have statutes of States specifying qualifications for electors subjected to the test of compliance with that amendment. This is a great protection to the negro. It never will be repealed, and it never ought to be repealed. If it had not been past, it might be difficult now to adopt it; but with it in our fundamental law, the policy of Southern legislation must and will tend to obey it, and so long as the statutes of the States meet the test of this amendment and are not otherwise in conflict with the Constitution and laws of the United States, it is not the disposition or within the province of the Federal Government to interfere with the regulation by Southern States of their domestic affairs."

There is now in the South, he says, a stronger feeling than ever in favor of the industrial education of the negroes. Their progress since the days of slavery has been marvelous:

"Any recognition of their distinguished men, any appointment to office from among their number, is properly taken as an encouragement and an appreciation of their progress, and this just policy shall be pursued. But it may well admit of doubt whether, in the case of any race, an appointment of one of their number to a local office in a community in which the race feeling is so widespread and acute as to interfere with the ease and facility with which the local government business can be done by the appointee, is of sufficient benefit by way of encouragement to the race to outweigh the recurrence and increase of race feeling which such an appointment is likely to engender. Therefore, the Executive, in recognizing the negro race by appointments, must exercise a careful discretion not thereby to do it more harm than good. On the other hand we must be careful not to encourage the mere pretense of race feeling manufactured in the interest of individual political ambition."

In conclusion, he reviews Mr. Roosevelt's efforts in behalf of labor legislation, saying he hopes to promote further legislation of this character, and arguing in favor of a liability law for Government employees. He also repeats the opinions which he forcibly expressed during the campaign, concerning injunctions in labor disputes, and denounces the secondary boycott. But the conditions under which a temporary injunction ought to issue, he says, can be and should be defined in a statute to prevent abuse of the process.

The Anthracite Coal Miners

The three years' agreement with the anthracite coal miners in Pennsylvania will expire on the 31st inst. It has been understood for some time that the miners' union would demand that the union be recognized, that the operators collect union dues by withholding these from the wages paid, that the new agreement be for only one year, that wages be increased, and that certain other concessions be made. The assertion was published last week, probably by authority, that the operators (or mine-owners) would grant none of the demands, would insist upon a renewal of the present agreement for three years more, and would shut down on April 1st, with the intention of keeping the mines closed until a settlement should be reached. With a stock of nearly 10,000,000 tons of coal on hand, it is said, they are prepared for such action, and would prefer to stop work for a time. President Lewis, of the union, has discussed the matter with President Baer, President Truesdale and other officers of the railroad companies, and arrangements have been made for a conference, to be held on the 11th, between these officers and the officers of the union. The leading independent operators will also be represented. About 160,000 persons are employed in the anthracite mines, but less than one-third of them, it is said, are now members of the union, in good standing.—A reduction of 10 per cent. has been made by the Lackawanna Steel Company, at Buffalo, and one of about 10 per cent. by the Reading Iron Company.

More Panama Libel Indictments

Additional indictments in the Panama Canal libel case were reported, on the 4th, by a Federal grand jury in New York. These are against the company that publishes the *New York World* and Caleb M. Van Hamm, managing editor of that paper. It is charged that the defendants are guilty of criminal libel, and that the libellous statements were circulated on the Government's grounds at West Point and in the New York post office. These specifications, it is held, enable the Federal Government to apply the State law. According to the indictments, the persons injured were

Theodore Roosevelt, William H. Taft, Charles P. Taft, Douglas Robinson and William Nelson Cromwell.—Joseph B. Kealing, of Indianapolis, for the last eight years United States District-Attorney, resigned on the 2d, because he was unwilling to assist the Department of Justice in its efforts to bring to Washington, for trial, Delavan Smith and Charles R. Williams, of the Indianapolis *News*, recently indicted at the capital. In a letter to the Attorney-General, having said that it would be his official duty to assist in the removal proceedings, he continues as follows:

"In this case I have made a careful investigation of the law applicable thereto. As to the guilt or innocence of the defendants on the question of libel, I do not attempt to say. If guilty, they should be prosecuted, but properly indicted and prosecuted in the right place, viz.: At their homes. It is only with the question of removal that I have to do.

"I am not in accord with the Government in its attempt to put a strained construction on the law, to drag the defendants from their homes to the seat of the Government to be tried and punished, while there is a good and sufficient law in this jurisdiction, in the State court. I believe the principle involved is dangerous, striking at the very foundation of our form of government. I cannot, therefore, honestly and conscientiously insist to the court that such in the law, or that such construction should be put on it. Not being able to do this, I do not feel that I can, in justice to my office, continue to hold it and decline to assist."

He asks that his resignation be accepted not later than the 15th, in order that President Taft, for whom he has "the highest respect and admiration," may have time to name his successor. Mr. Kealing has been notably successful in prosecutions, and in one case he secured the conviction of a bank officer who had been his intimate friend. In the campaign preceding the Republican national convention, and also at the convention, he was an active supporter of Vice-President Fairbanks, opposing the nomination of Judge Taft and criticising the course taken by the latter's political representatives.

British Poor Law Commission

One of the most complete and thoro studies that has ever been made of the question of pauperism is that which has just been completed by the Royal Commission on Poor Law and Relief of Distress, of which the first vol-

ume, containing the conclusions and recommendations, has just been published. The commission was composed of twenty-one members, three of them ladies, comprising an ex-Cabinet Minister, a Roman Catholic bishop, three clergymen of the Church of England, three professors of political economy and various persons engaged in official and unofficial philanthropic and social work. The investigations of the commission have covered more than three years, during which evidence of 1,300 witnesses had been taken and more than 800 personal visits of inspection paid. The evidence when published will occupy more than forty volumes. The volume now published consists of 1,250 folio pages and contains a majority report signed by fourteen commissioners and a minority report by four. The commission recommends the reorganization of the British Poor law, including the change of name to that of "Public Assistance"; the abolition of the direct election of guardians; the abolition of the small unions or districts; and the establishment of a single responsible authority in each community, and the substitution for the workhouse of more scientific and systematic methods of relief. The commission finds that in spite of the immensely increased expenditures, and on the whole better methods, the number of paupers, particularly of able-bodied men, has increased in the last thirty-five years, even leaving out the last three years of exceptional hard times. In the whole of England and Wales the number of indoor able-bodied paupers has increased by 21 per cent. and the outdoor by 49 per cent. In metropolitan districts the increase of indoor paupers has been by 38 per cent. and of outdoor by 137 per cent. In London alone 15,800 more paupers are being maintained than in the eighties. Notwithstanding that nearly \$300,000,000 a year has been spent on poor relief, education and public health, the army of those dependent upon the community for subsistence does not diminish. The commission finds that workhouse life has a deteriorating effect and is becoming increasingly resorted to by those who wish an easy and care free life. The outdoor relief, on the other hand, results in many cases in keeping paupers living in unsanitary,

filthy and immoral conditions. There is a great waste in voluntary charitable efforts owing to the want of organization and proper methods. There are too many small miscellaneous charitable trusts; for example, in the diocese of Ely there is a separate organization for managing on the average every \$100 of income. Under modern industrial conditions wealth and wages have increast, the cost of living has diminisht, and conditions of the workshop have improved, but the stress of machinery and of competition, on the one hand, demands a higher skill than our system of education produces and, on the other hand, rejects or ejects the workman with increasing frequency at an increasingly early age. The tendency is to create an immense body of casual workmen, and there is no satisfactory method by which their labor can be applied where and when it is needed. Great stress is laid by the commission on the importance of a reform of elementary education, in which manual work, physical drill and industrial training should predominate. The tendency of the present public school system is to prepare boys for clerical employment instead of skilled trades. Boys should be kept longer in school, at least until the age of fifteen, and hindered from entering uneducative and "blind alley" occupations, which pay comparatively high wages to boys fresh from school, but lead nowhere. A national system of labor exchanges should be establisht as a substitute for the present inadequate methods of distributing labor thru advertisements and private agencies. The commission does not favor insurance against unemployment such as the proposed French law calls for, but would have the unions which provide for all the members of their particular trades assisted by State subsidies. Labor colonies are to be preferred in general to work-houses.

The Balkan Question

The probability of a conflict between Austria-Hungary and Serbia has apparently been lessened by the disposition evinced by Serbia to withdraw her claim of territorial compensation or at least to place her interests unreservedly in the

hands of a conference of the Powers. On March 2d the Russian Minister at Belgrade called on the Servian Minister of Foreign Affairs, Mr. Milovanovitch, and gave him advice to that effect, stating that Servia could not rely upon the support of the Powers in her demands. He was followed by the British, French, German and Italian Ministers with the same counsel from their Governments. According to the reports, the action of the Servian Cabinet during the next few days was vacillating and contradictory, as indeed was natural, for the Cabinet was instructed by the Servian parliament last January to insist upon territorial compensation and the autonomy of Bosnia and Herzegovina, and had put the country on a war footing, and had induced Montenegro to do the same. Yet, on the other hand, to go contrary to the united opinion of the Powers and to attack Austria single-handed would give that country just the opportunity she wants to crush Servia. Servia's territorial demand was for a strip of Southern Bosnia, which would connect her with Montenegro and so give access to the Adriatic. Montenegro demands that Austria restore to her the port of Spezia, which was very unceremoniously turned over to Austria by the Congress of Berlin. By the complete annexation of Bosnia and Herzegovina, which had been placed under the control of Austria by the Congress, Austria has frustrated the ambitions of Servia to form a federation of the Balkan states. But the Powers show no disposition to interfere with Austria in making permanent and formal the possession of the two provinces somewhat hazily authorized by the Powers at Berlin. Now that the question of territorial indemnity is practically relinquisht by Servia, Austria is working to prevent the calling of a new conference altogether, or at least to settle the matter with Servia directly, so that the conference, if called, would have nothing to do but to ratify the agreement and no vext questions would be reopened. The provisional commercial treaty with Servia expires on the 31st of this month, and Count Forgach, the Austro-Hungarian Minister at Belgrade, has announced that his Government is not willing to enter into any

negotiations for its renewal so long as Servia maintains its present irreconcilable attitude. It is intimated that Austria-Hungary will grant valuable commercial concessions if Servia will abandon her appeal to the Powers and settle all the questions at issue immediately by direct agreement.

The Italian Election The election for members of the Chamber of Deputies held on March 7th resulted in the satisfactory majority for the present administration. Premier Giolitti is returned as representative of the unfortunate district of Messina and his Ministry will have the support of about 350 Deputies, against some 158 votes of all the opposition parties. There were no very important issues on which to appeal to the country, and the recent earthquake disaster had to a certain extent sobered the country and induced a feeling of unity and responsibility in the electorate, so the election was in most places peaceful. The Government was able to announce in its campaign address some creditable achievements. Altho the expenditure had increased by \$50,000,000, the revenue had also increased by \$42,500,000. The national debt has been converted into a more economical form, the railways have been nationalized, taxation lowered and the condition of the industrial classes materially improved. The novel feature of the campaign was the greater participation of the Catholics than at any time since 1870. The Pope suspended the *Non expedit* restriction in seventy-two constituencies, including three in Rome. As a result the Clericals will nearly double their representation in the next Chamber, having probably some fourteen seats. In Rome, however, the Anti-Clerical party, which last year elected a mayor, triumphed in five constituencies. Woman suffrage for the first time played a part in Italian elections, and in Sardinia a number of votes were cast for Signora Grazia Deledda, altho she was ineligible as a candidate.

Foreign Notes Augustin Birrell, in a speech at Bristol, expressed his disappointment at the reference to the increase of armament in President Taft's inaugural. It was a miserable pity, he said, that America was to join

the ranks of the great armed nations, thus shattering some of humanity's greatest hopes.—The Daylight Saving Bill, a private bill, but supported by Winston Churchill, president of the Board of Trade, passed its second reading in the House of Commons by a vote of 130 to 94. The bill provides for putting forward the clocks twenty minutes on four successive Sundays in April, and reversing the process on four Sundays in September, in order to induce people to get up and go to bed earlier in the summer months.—In a by-election in Glasgow, the Unionist candidate, W. Scott Dickson received 7,298 votes against 5,185 cast for the Liberal, Gibson Bowles, the most severe defeat that the Government has yet experienced.—The guard at Yildiz Kiosk mutinied against the Young Turks and refused orders from the Committee of Union and Progress. The rebellious battalion was replaced by a more loyal one.—A meeting of the students at Warsaw University, called to consider changes in the examination system, was broken up by the Russian police, aided by infantry, and 178 students were arrested and may be deported. In the Duma the Government was arraigned for interference with the right of free speech. During the past year 73 newspapers have been suppressed and 120 fined a total of \$50,000.—A shocking state of public opinion in Portugal was revealed by the carnival celebration in Lisbon. Many of the masqueraders were made up to represent the chief actors in the drama of the assassination of February 1st, 1908—the late King Carlos and the Crown Prince, Queen Amelia, Prince Manuel, and regicides Costa and Buissa. Coffins carrying the assassinated King and Prince were carried in mock funeral procession thru the streets. The re-enacted scenes of the assassination were applauded by the people and the masqueraders defended against the police. Stones were thrown from the streets and windows, and the police were not able to subdue the mob by revolvers and swords. Finally the troops were called out and over two hundred arrests were made. The attempt to celebrate the anniversary of the assassination by a demonstration on the 1st of the month was frustrated by the police.

President Taft's Cabinet

President Taft's Cabinet

BY WILLARD FRENCH

THE Cabinet of the new President is an interesting study. With the President himself a judge, it was but natural that his selections should be more or less from the legal profession and that they should comprise men from the front rank. More than half of the new officials have accepted portfolios at great personal sacrifice, financially, while for Knox, who could easily command a hundred thousand dollars a year at the bar, there had to be sliced four thousand from the amounts paid his colleagues, to make him constitutionally available.

There are but two members of the new Cabinet who are not lawyers, at least by graduation, and five are leaders at the bar in their respective States, thoroly grounded not only in the law, but in its modern evolutions in connection with the social, corporate and industrial problems of the day. That they have most of them have been great corporation lawyers, President Taft considers—not without reason—to be strongly in their favor for the great work bequeathed to him of controlling corporations. He has directly aimed to have about him, for consultation, men who are a match for Milburn, Cravath and the rest.

The only men who are not lawyers are the venerable Secretary of Agriculture, James Wilson, of Iowa, who has been in the Cabinet ever since 1897, and George Von L. Meyer, who now holds the position of Secretary of the Navy, also coming from President Roosevelt's Cabinet, in which he was Postmaster-General.

Secretary Wilson holds the championship for long Cabinet service, and no one who appreciates his signal worth and ability in his distinctive field will fail to congratulate the agricultural interests of the country that he is to continue in the department where he has made such a success during the past twelve years. Secretary Wilson was born in Ayrshire, Scotland, in 1835. When a boy he was brought to America, and grew up as a farmer, in Iowa. But, to being himself a practical farmer of rare ability, he adds

the reputation of a wise and conservative legislator, won in six years' service in Congress. The two combined have made him the guiding genius of American agriculture, since the beginning of McKinley's first administration. He again becomes the only bearded member of the Cabinet. His white hair and snowy beard, cut Lincolnesque, remain, *pro bono publico*.

The other who is outside the law, Secretary George Von L. Meyer, is a Boston man, born in the City of Cities, in 1858. He was born to a fortune—being the son of a wealthy East India merchant, and is creating fame, having been Speaker of the Massachusetts Legislature and Ambassador to Italy and Russia before he came into Roosevelt's Cabinet. He is unobtrusive and democratic, but an inherent gentleman, a quiet but energetic executive and a keen financier. Every one likes Secretary Meyer. It would be against the dogmas of his life to allow any one to dislike him. He does not look it, but one would go far to find a more ardent sportsman and outdoor athlete. Exercise is a kind of religion with him. The fifty-two years rest lightly on his shoulders and he can not only outride, but outwork most of his associates. He was a member of the class crew at Harvard, and has medals for running. He has many qualities which will prove effective in the Secretary of the Navy.

Frank H. Hitchcock, who follows Mr. Meyer, as Postmaster-General, is another Harvard man—New England born and Boston bred—and another champion athlete. He was a '91 man and won the university heavyweight at boxing. But he looks it more than his predecessor. They are both tall men, but Hitchcock's broad shoulders and heavy chest indicate the muscular development. He is the bachelor of the Cabinet, son of a clergyman, and student of ethics at the feet of Cortelyou, who took him thru the Department of Commerce and Labor, thru the campaign of four years ago, and the Post Office Department. It is little won-

der that he mastered the art of saying nothing, but sawing wood, and that he won out in the last campaign, as Chairman of the National Committee, and carried off the spoils thereof, the Postmaster-Generalship. He is forty-two, with light hair and beardless face, which, in spite of his size, establish him as the Cabinet baby. It should not be forgotten, however, that his generalship, during the campaign, also won for him the sobriquet of "Steam-Roller Man."

Secretary Knox, the chief adviser, is a man to whom Cabinet duties are not new. Since his sudden appearance before the world as McKinley's fortunate choice for Attorney-General, he has sat at the Cabinet table of two Presidents and served in the Senate with such profound ability as to make himself one of the best known men in America—all since 1901. He was born in Brownsville, Penn., in 1853, and practised law in Pittsburg till 1901. He had made such a signal success of it that he came to Washington with the reputation of a great corporation lawyer. He has never attempted to evade it, but says, frankly, that he considers the abstract fact of being a corporation lawyer a compliment to the lawyer, and that it is what a lawyer does for a client, not who the client is, which should be the criterion of his integrity. He had served but a short time as Attorney-General when the most aggressive advocates of Federal control of corporations were fully satisfied, and today the nation hails the fact that the affairs of state will rest in his hands. He was no random selection on the part of the President. He has sat beside Taft before at the Cabinet table. Roosevelt and Root vacating their seats has simply had the effect of shoving Taft up to the head of the table, with Knox still at his right hand. They are tried friends, there, and understand each other. It is well known that Knox's influence in the former Cabinet was conservative and restraining. President Taft knew what he was doing when he appointed Knox as Secretary of State. He did not want it. He preferred to remain in the Senate, where he was already a tremendous power. Twice Mr. Roosevelt offered him a position on the Supreme Bench, but he declined it to remain in the Senate. Secretary Knox is by far

the smallest man in the Cabinet, but he is superbly built and carries himself with such dignity and deliberation that, except by contrast, one does not notice it. The extremes meet, however, when Taft and Knox are side by side.

The remaining five members are new in the administration, but colossal in repute. George W. Wickersham, of New York, who occupies Knox's former position, as Attorney-General, was born in Pittsburg, in 1848. He has been the law partner of Henry W. Taft. As counsel for leading railroads he has gained a wide reputation as an expert in railroad law. Those who know him best predict an administration distinguished for actual accomplishments along the lines of the great battles which have thus far only been begun. He is a born fighter, and has given up a practice worth a hundred thousand dollars a year to fight out these battles which were smilingly left as a legacy by Charles J. Bonaparte. Bonaparte took it as a joke. Wickersham is a man very likely to take it in earnest. He has made his success in life by taking serious things seriously. When he was a young man he came to New York to make his fortune. He noticed an advertisement for a clerk in the law office of Strong & Cadwallader, and immediately applied. He had some difficulty in obtaining the position, which simply roused his determination to have it. Once there he adapted himself so successfully to his surroundings that he soon became chief clerk, and in 1893 was made a member of the firm. His face, with stern eyes, firm jaw and heavy lips, as well as every characteristic motion, and method of conversation, bears out the impression of insistent pertinacity.

Judge Jacob McGavock Dickinson, of Tennessee, the Secretary of War, is another scholar at the bar, of much the same intent as Attorney-General Wickersham. He was born in Mississippi, in 1852, and was Assistant Attorney-General under Cleveland. He has been president of the American Bar Association and general counsel for the Illinois Central Railroad. When a boy he went with his family to Nashville, and after graduating at the Cumberland University, took a degree in the University of Leipsic before he began practising law.

He has served several terms as Supreme Court Judge in Tennessee, and was attorney for the Alaskan Boundary Commission. One of his proudest attainments, in his own estimation, is the Belle Meade Farm, one of the famous stock farms of the world, formerly owned by General Jackson. He is an exceptionally pleasant man to meet, cordial and democratic, with a keen sense of humor, continually betraying itself in his eyes and lips. He is quiet and unassuming, but has given ample evidence of his Tennessean ability to fight when fighting is the proper thing. He is of Democratic family, environment and proclivities, but—as he puts it—the Democracy of the old school, as opposed to the theories of recent date.

Richard A. Ballinger, the new Secretary of the Interior, from the State of Washington, was born in Iowa, in 1849. He has practised law in Arkansas and in Alabama, but in 1899 struck out for the West and established himself in Seattle, where he has been Mayor and Commissioner-General of the United States Land Office. He, too, is a Harvard man—the Harvard Law School—which suggests the thought that, tho a Yale man himself, Taft has selected the majority of his Cabinet from Harvard. Secretary Ballinger's great work has been the codification of the laws of the State, but it was his bold, determined course in dealing with the delicate questions connected with the General Land Office which suggested his exceptional adaptability as Secretary of the Interior.

Charles Nagel, the new Secretary of Commerce and Labor, is another appointment which is particularly interesting as placing the right office and the right man together. Secretary Nagel is from Missouri, tho he was born in Texas, sixty years ago. His father was a strong Union man during the Civil War, which influence followed him thru his education in St. Louis and at the University of Berlin. He has been president of the

City Council of St. Louis and managed the Taft campaign in Missouri, being practically in charge of the Western headquarters. He is the man of whom Roosevelt once spoke as a "parlor politician," but their acquaintance had not lasted long before he demonstrated a decided political ability which made him one of the Administration's trusted advisers in Missouri matters. By both Roosevelt and Taft he was looked to, more and more, and has the credit of having outwitted the Cannon and Hughes movement in Missouri, and won the State for Taft at Chicago. He is a keen-eyed, quiet man, with thick gray hair and a robust mustache over firm lips. The "parlor" part is suggested by a certain characteristic gentleness which disappears when other qualities more in keeping with the eyes and lips are encouraged by conditions.

The last and most difficult post for the new President to fill was the Secretary of the Treasury. He selected Franklin MacVeagh, of Illinois. Thru his acceptance Chicago has lost one of her leading merchants. In deference to the law that the Secretary of the Treasury must not be an importing merchant or a bank officer, Mr. MacVeagh was obliged to abandon his wholesale grocery business and sever his connection with the Commercial National Bank. The Secretary of the Treasury was formerly a Democrat and supported Cleveland, but later became an enthusiastic supporter of Taft. He has lived in Chicago since 1865, where he has held many social positions of great influence; but his only appearance for political office was in 1894, when he was Democratic candidate for United States Senator. The Secretary is a Yale man and graduate of the Columbia Law School. He began the practice of law in New York, but ill health forced him to abandon it, and going to Chicago he turned his attention to the building up of the great wholesale grocery business.

WASHINGTON, D. C.

The Western Republics of South America

Chile, Bolivia and Peru

BY JOHN BARRETT

[This is the third in our series of six articles on "Opportunities in Latin America," by the Director of the International Bureau of American Republics. The first appeared in our issue of December 3d and discust Brazil, the second in our issue of January 14th and discust Argentina, Uruguay and Paraguay. Next month Colombia, Ecuador and Venezuela will be discust, followed by Central America and the West Indies. This series is intended to show the opportunities for bringing into closer touch all the New World by bonds of commerce, friendship and peace.—EDITOR.]

THE South Pacific, since the days of Magellan and Drake, has been the theme of poetry and romance. We North Americans love to rehearse the story of Pizarro conquering Peru, but we forget that the genius of a Californian, Meiggs, first showed the world how to pierce the Andes with a steam railway. While we boasted of the brav-

ery and daring of the New England fishermen who sailed the Antarctic for whales, we ignored the pleadings of the Yankee, Wheelwright, whose vision of a steamer thru the Straits to Chile found substantial credence only when he took the plan to England. We are today building the Panama Canal, the greatest engineering feat of modern times, and yet we

LLAMA PACK TRAIN, SAN MATEO, PERU.

have confessedly but a faint conception of the path to which it leads or the goal toward which we aim.

Chile, Bolivia and Peru are three of the great republics of South America which lie on the new pathway thru the ocean. It is high time that North America recognized the energy and potentialities of these progressive countries, that the natural ties which ought to bind us together should be strengthened by a vigorous friendship, and that the immense opportunities in that portion of the earth should be shared by us in the march of productive progress.

If Brazil, Argentina, Uruguay and Paraguay, on the eastern side of the Andes, and washed by the Atlantic, are destined to become deciding factors in

drink; gold and silver as a medium of exchange and in the arts, copper and tin as essentials in so many phases of industrial development, the other metals useful in a thousand ways in applied science, the nitrate salts for prime necessities in both peace and war—all these and much more are today supplied in high proportion from this part of South America. Deprive the world of the nitrate of Chile, the tin of Bolivia and the copper of Peru, and there would occur a disturbance in our business machinery which might have very serious consequences.

Chile has an area of 291,544 square miles, not so very much smaller than the combined area of California, Oregon and Washington. The coast line of the

CORRUTELER, SANTIAGO, CHILE

the food supply of mankind, Chile, Bolivia and Peru have equally their part to play in furnishing other elements necessary for the growing commerce of the twentieth century. The complicated metal and financial life of the world must have something besides food and

republic is 2,700 miles, and if the southernmost point were placed at San Diego, Cal., its northernmost tip would reach to the middle of Alaska. With the greatest width 250 miles, the country narrows in one place to only 100 miles; yet within this extended strip of territory Nature

has crowded a diversity of wealth to meet the growing demands of civilization, and here, too, man has displayed such commendable energy that the nation has become a homogeneous entity

miles long, with an average width of only 31 miles, but with an approximate area of 18,000 square miles. Here are the chief centers of permanent and growing population, and here are the thriving

CONGRESS HALL AND PARK, SANTIAGO, CHILE.

and has developed a productive power admired and respected by every one who is privileged to obtain an intimate acquaintance with it. Geographically the country is by nature divided into three zones: the northern and more arid, but nevertheless a very rich section, where as yet very little grows, but whence comes so much of the nitrates that add to the fertility of the earth's surface; the central section, famous as one of the garden spots of the world, where is situated the longitudinal valley crowning which is the capital, the city of Santiago; and the southern section, extending to Punta Arenas, on Magellan Strait, where are the forests, the beautiful inner channels of the Pacific, and the newly utilized pastures for cattle and sheep.

The real Chile of today is best seen in the wonderful longitudinal valley, 580

farms, producing all the products of the temperate and subtropical zones, where the grape, the orange and the apple are found together. This valley supplies the inhabitants of the whole country and has a surplus to export. Wheat and barley are shipt to Europe, and when all the land is brought under cultivation, even allowing for a population far above its present 3,500,000, the excess over the needs of the nation will prove a source of profit to the fortunate owners. What may be called the Chile of the future lies south of the valley. The timber to be found here is one of the treasures of South America, only to be compared to the forest riches of our American Oregon. The rapid rivers pouring down from the adjacent Andes provide inexhaustible power for turning all the wheels of whatever industries will be

established here, and the newly opened areas of the Chilean Patagonia have already given substantial evidence that

exchange between various parts of the country has been one of the causes of Chile's progress in industrial life, while

A VIEW OF THE TOWN AND MOUNTAIN OF POTOSI, BOLIVIA.

they will add mightily to the pastoral wealth of the republic.

The extensive nitrate fields of Chile are at the north. The deposit of this salt is one of Nature's most interesting phenomena, not completely explained by theory or science. For 450 miles parallel to the coast, but separated from it by an intervening range of hills, is a district furnishing saltpeter for export at the rate of nearly 2,000,000 tons a year. Every ton of this must leave the country by sea, and for almost every ton carried away another ton is imported to be consumed; this importation consists of food, clothing, machinery and building material. As the country here and further back in the interior develops, the supply must increase in quantity, and the opportunity for commercial expansion become proportionately greater.

The length of Chile is of appreciable advantage to the republic. The products of every zone can be grown here, and the stimulus to traffic resulting from the

it will be of still more importance as the nation's plans for thru transportation are matured. The Pacific Ocean has been and to some extent always will continue to be the great highway of travel from north to south; Chileans are by nature and by inheritance seamen; they always live close to salt water, but they do not believe in being contented with their maritime excellence. Chile intends to have a railway stretching from Punta Arenas, on the Strait of Magellan, thru the central valley, clear to the extreme north of its domain. Already there are nearly 3,000 miles in operation, including several lines traversing the country from east to west, but under construction there are over 600 miles, and nearly 1,500 are planned and will be brought into use as rapidly as the active policy of the Government can be carried out. All this will add immensely to the accessibility of hitherto almost unused territory. When it is remembered, therefore, that the distance from north to

south falls little short of our own great transcontinental systems, it will be recognized how important a neighbor Chile is in the union of American republics.

Bolivia offers another field full of interest and opportunity. This republic can make the proud boast that among all the nations of the world it is almost the only one without a foreign debt. Moreover, the country has entered

running directly into La Paz. This capital city is the heart altho not the center of the republic, and from here a survey of the country should be made.

Bolivia has an area of 729,000 square miles, and is therefore as large as all the States east of the Mississippi and south of the Ohio, with a good slice of Texas thrown in for full measure. To assume that all Bolivia is one vast mountain,

SUSPENSION BRIDGE OVER THE RIVER GRANDE ON THE POST ROAD BETWEEN SUCRE AND COCHILABAMBA, BOLIVIA.

upon such a far-reaching and practical scheme of expansion that its industrial productiveness will astonish the world when the means of rail and river communication are established.

Bolivia is by no means so isolated as tradition would imply. For years a railway has carried traffic up and across the Andes to Lake Titicaca, the natural boundary between Bolivia and Peru, but within the last year another railway has been opened from Antofagasta, in Chile, westward to the interior plateau, where connection is made with the Bolivian line

from which nothing comes but rock and precious metal, is to ignore the great diversity of soil and climate with which the country is blest. This has been called the "Mexico of South America," and historically speaking there is justice in the phrase. Geographically speaking also there is truth in it, because Bolivia, like Mexico, has been shown to possess some of the most fruitful agricultural regions on earth, and over much of the area of the country the climate is so healthful that no one need fear any physical ill from living there. Moreover,

certain natural conditions are very favorable to settlement and colonization. When this is realized, and when the projected means of transportation become a working fact, Bolivia will be a home for many more than the 2,267,000 at present constituting its population.

Avoiding unnecessary details, it should be observed that Bolivia is divided into three climatic zones; the first is the mountain region, the second the valley, and the third the vast slope to the east which ends in the water system tributary to the River Plate.

The mountains are the pride, the source of the ancient and present riches, and the Tibet-like roof-of-the-world. Here are the snow-clad peaks of the Cordilleras, the still active volcanoes, and most of the cities known to history, such as La Paz, Potosí and Oruro. Here, too, are the famous mines of silver, from which at one time came one-third of the world's supply; the famous tin mines, which place Bolivia second among the producers of that metal, the output for one year being \$18,000,000; the copper mines, second only to those of the Lake Superior region in the United States, together with innumerable deposits of gold, hardly worked because of costly transportation. Here also is Lake Titicaca, the highest navigable body of fresh water, and here is a great plateau of about 40,000 square miles at an elevation of 11,000 feet above the sea. This valley swarms with life, it has a large agricultural and pastoral industry, and is as contradictory of the tropics as Alaska is of the Arctics. The climate would be quite homelike to the North American. Other valleys lie to the south and east, some more, others less fertile than the central plateau, disproving nevertheless the belief that the country is barren.

But if stronger proof were needed, it can easily be found in the immense territory stretching east from the foot of the Andes and belonging to the great drainage basins of the Amazon and the Paraná. This whole region is rich in possibilities. Rubber, and of excellent quality, grows along the lower rivers, but in the uplands, at an altitude of between 1,100 to 5,300 feet, are productive fields for coffee and fruit trees. Although this tree will grow wherever rubber

does), from which cocaine is derived; cinchona, which is by no means a product lost to Bolivia, and a wonderful species of cotton that will, in time, rival Mexico's staple.

To connect these various zones and to develop thereby not only foreign markets, but also a healthful tide of immigration, is the aggressive policy of the Government of Bolivia. It is not merely a project. It is almost an accomplished fact. Last year the railroad between La Paz and Oruro was opened for traffic, across the plateau where before hard and tedious stage coaching was the only means of travel. From Oruro trains are now running down the mountain side to Antofagasta, in Chile.

Thus there are already two ways to reach the heart of the country, the older line being from Mollendo, in Peru, to and across Lake Titicaca. But construction has not stopt at this. From Oruro rails are rapidly being laid southward toward the frontier of Argentina, to meet the line already advanced from Jujuy, in that neighboring republic; it is probable that within a few months trains will be able to carry freight and passengers along the old highway that in other days had felt the tread of the Incas and the Spanish conquerors as they traveled from Lima overland to the Rio de la Plata. Nor is this by any means the whole of the policy. In agreement with Brazil, Bolivia is instrumental in pushing that remarkable railroad around the Falls of the Madeira River just across the northern border. When this is finished—and the pluck of the present contractors will not let it fail—Bolivia will possess an outlet and an inlet for her rich northern areas, hitherto commercially inaccessible. Then rubber and coffee, cacao, coca and cotton can be transported profitably thru the Amazon to foreign markets. And there is yet another key ready to unlock the doors of this wonderful storehouse of Andean treasures. A line is planned almost directly eastward to reach Asunción, the capital of Paraguay. This may not come at once, but it is no more chimerical than was the dream of the early fifties, in the United States, of a line across the Rockies to the Pacific. To fail to understand the future of this region is the misfor-

tune of those whose vision is limited by an eighteenth century industrial horizon.

Peru lies north of Chile and west of Bolivia. Here the old Spanish conquest reached its fullest flower. In Lima, the nation's capital, is the oldest university in the western hemisphere. But he who thoughtlessly assumes that opportunity ceased when Pizarro looted the land of the Incas, or when the battle of Ayacucho ended forever the European domination, makes a mistake too ridiculous to be taken seriously.

Peru has one unique distinction over

with a saving in distance of 7,000 miles. Scarcely 400 miles, some of this, to be sure, presenting difficult engineering, separate the headwaters of the Peruvian Amazon from the centers of export on the Pacific. Can any one doubt but that a few years will see this mountain barrier crost by a railway, and the commerce of a vast interior stimulated toward those markets that offer the greatest rewards in trade? It is practically a race to see which influence will become the stronger; an industrial struggle to determine whether the Amazon

CHICAMITA CANAL, PERU.

The cultivable lands on the coast of Peru exceed 49,000,000 acres, but on account of the lack of water only about 3 per cent. of this acreage is under cultivation. Peruvian capitalists are building irrigating canals thru these coastal lands, which will naturally bring about a complete transformation of this zone.

all the other republics of South America. It has a commercial outlet over both the Pacific and Atlantic oceans. On the east of the Andes, 2,300 miles from the mouth of the Amazon, is the seaport of Iquitos, from which the products of the country are carried without transshipment to New York and to Europe; on the Pacific is a coast line of 1,600 miles, from which steamers carry freight to Japan, around the Horn to Europe, and when the Panama Canal is finished, can pass direct to New Orleans or New York

outlet or that thru the Canal will be the deciding factor in the growing productiveness of Peru.

There is an unfortunate misconception about the configuration of this beautiful country. The area is 713,000 square miles, larger than that of all the Atlantic States from Maine to Florida. The population is about 4,500,000, and the land lies wholly within the tropics. But these statements explain very little of the climatic conditions existing here. The Andean Cordilleras affect the tempera-

ture quite as much as does the degree of longitude, so that all climates and all products can be found within the confines of Peru. There are hot lands along the coast, temperate lands in the valleys, and cold regions higher up; and in like measure the sugar, rubber and cotton of the lower areas give place to the corn and other cereals of the inner valleys. A third zone is that called *Montaña*, which is really the land of tropical forest and plains extending from the eastern slope of the Andes to the basin of the Amazon. This by itself comprises more than one-half the total extent of the country, but when it is once brought under cultivation and the expected colonization settles into practical life, agriculture in Peru will rival the minerals in adding to the sum of the nation's wealth.

Copper, silver, petroleum and gold are at present the paramount products of Peru. The mineral resources have attracted more attention than the agricultural, but in the long run agriculture will play an important part in the country's prosperity. The Incas knew this, and even today the remnants of the ancient irrigation canals are used for enriching the soil of the coast regions. More substantial projects are proposed by the Government, and investigations have been made, with the result that 2,500,000 acres may soon be brought into active use. Together with such encouragement to agriculture, and a hearty support to sincere efforts at colonization, is combined the Government's policy of fostering railroads. A surveying party has just completed an inspection of a route from Cerro de Pasco to the Ucayali River, tributary to the Amazon; 1,200 miles of new lines have been made ready for construction within recent years, new branches and feeders have been projected, and the 1,250 miles in operation give access to almost every corner of the republic.

The cities of these three republics have been left until the last, because they deserve a separate paragraph, and because they are so illustrative of the phase of progress that marks their entry into the twentieth century. In Chile, Santiago, the capital; Valparaíso, the chief seaport; Valdivia, Concepción and Punta Arenas are as thoroly modern as most

of the centers of our busy American life. In Bolivia, La Paz, the capital, possesses the charm of both the old Spanish center of aristocracy and culture, and of an active industrial city of the present day. In Peru, Lima, the capital; Callao, the contiguous seaport; Mollendo, the international landing stage for Peru and Bolivia; Arequipa to the south, the location of the Harvard Observatory; Piura to the north, toward which the Amazon trade will some day pass—are cities in which an American can find a social life quite as satisfying as it need be. There are many other cities and towns of a second rank, where an industrial energy has more recently made itself felt, but they offer on that account an attraction to those who desire a still unfinished field in which to develop.

The essential wants in these three countries are capital and labor. In the industrial openings offered by their ambition to use their natural resources lies the great opportunity for the young men of America; but this work cannot be accomplished all at once, nor is it a matter of a few dollars. The man who looks only at the present, and who wishes to earn merely the day's wages, can do little in this part of South America.

The International Bureau of the American Republics must not be held responsible for those misguided wanderers who are found in all countries—too many, alas! in South America—and who assume that because a land is strange it must therefore be full of opportunity for employment. Men without funds should stay at home. These are the countries of big schemes, of mighty projects, of unlimited possibilities. Here it is energy, a trained mind, imagination and capital that count. They want the financier who can show them not only how to connect their separated units, but will do it. They invite the engineer who will show his confidence in them by devising a practical plan to build their needed railways, to navigate their mighty rivers, to harness their rushing streams so as to utilize their power for light and motive force, and to bring a verdure to places hitherto parched and arid. This requires capital. Their own natural resources will ultimately pay any price that these industrial undertakings will cost,

but the man who today and now shows his courage and his confidence by such investments will reap a splendid reward before his generation has past away.

Another phase in their modern life is shown in their purchasing power. The large cities mentioned, with a score of smaller ones, are ready to buy from the factories of the world, but they have tastes of their own; they are not imitators nor wearers of discarded fashions, and they want the best.

Ask any man who has traveled down the west coast of South America and he will tell of his delightful experiences, not only as a tourist, but as a merchant. If it is mining machinery he has to sell, he will find a market; if it is tools, or mechanical devices, or the product of

our looms, they will buy if these articles are first class and meet the requirements of the people. Of course, there is competition, but no one need fear poor success if he attacks the markets sincerely and conscientiously. But half-hearted methods will not answer. Mere advertisement must not be trusted too far. Personal solicitation is necessary and in the long run pays. We Americans must adopt this method and learn what experience has shown the world over, that this is the vital spark between sentiment and business. Once let the South Americans understand that we are aroused to the opportunity, and the friendship between us and them will be established on a firm and durable basis.

The Vanguard

BY JESSIE WALLACE HUGHAN

'Tis ours to haste thru the desert waste, where the hearts of the strong men fail;
'Tis ours to blaze thru the hidden ways, when night has swallowed the trail;
To charge the hight in the first wild fight, when lances meet in the fray;
And count the cost by the leaders lost at the end of a losing day.

We hark the cry of the souls that die, and we cheerily spur to aid;
We meet the scorn of the tyrant's horn with a challenge as unafraid;
And our flag is bright, as in God's own light, with a white cause new from birth.
Till we pass it on, with its luster gone, and bearing the seal of earth.

Sometimes we hear from the distant rear the song of the ordered lines,
Where the camp fire glows and the wassail flows and the golden booty shines;
And they jeer in scorn at the vanguard worn, with its scattered ranks and slow,
As they march abreast with a shining crest, in the way that we bid them go.

And the rest is sweet to our lonely feet in the world of the beaten track,
And the fireside cheer sounds friendly clear when comrades call us back;
But we march to greet with the trumpet's bleat and the sound of the signal drum
The first pale streaks on the mountain peaks in the land of the kingdom come.

NEW YORK CITY.

Tariff Revision and the Consumer

BY JESSE F. ORTON, A.M.

[This article is a revision of a paper prepared by Mr. Orton for the Tariff Day on the program of the Association for the Advancement of Science at Baltimore last December. As secretary of the Tariff Committee of the New York Reform Club, Mr. Orton attended the hearings before the Ways and Means Committee held in Washington before the opening of the present session of Congress. His testimony before the committee and his Baltimore address attracted wide attention in the newspapers. Mr. Orton is a lawyer with thorough economic training received at the University of Michigan and Cornell University.—EDITOR.]

EX-REPRESENTATIVE Charles H. Grosvenor, of Ohio, while addressing the Ways and Means Committee on tariff revision December 2d, used this language:

"It is an unfortunate reference that is constantly being made to the wants and anxieties of the consumer. . . . The prosperity of the consumer goes hand in hand with the prosperity of the manufacturer."

We have long been accustomed to the view that the consumer's interest is a subordinate one. But now mere reference to the consumer is "unfortunate"; perhaps it will soon be criminal, or at least an act calling for social and business ostracism.

The Standing of the Consumer at Washington.—The majority members of the Ways and Means Committee did not in terms echo General Grosvenor's sentiment, that the "wants and anxieties of the consumer" should be tabooed, but most of them showed their sympathy by action thruout the hearings. Representative Boutell, of Illinois, from the very first, set out to ascertain from witnesses what effect the lowering of duties would have on the man whom he termed "the ultimate consumer"; and this phrase soon became a standing joke with the committee. One would have thought that surely there could not be, among the constituents of these Congressmen, a single person so insignificant and vulgar as this same "ultimate consumer" must be. As most of the witnesses were protected manufacturers, they easily agreed that the consumer would not be helped by any reduction of duties, but the wicked importers would take all the benefits. When witnesses thought duties should be increased, as they frequently did, they were sure that consumers would not feel the "infinitesimal" burden that would be added, if indeed any were added.

There seemed to be a sort of division of labor among the committee members,

that the misguided consumers of the country had no need for "anxiety," that they could not be helped by removing taxes or harmed by putting taxes on. Unfortunately, a few tax-paying goats were mingled among the tax-eating sheep that appeared before the committee; and their answers were not satisfactory to Mr. Boutell. They were very sure that the consumer is hurt by taxing the things he must buy and that he would be relieved by a reduction of taxes; but the good Representative from Illinois quickly forgot these discordant notes and went on calmly stating, day after day, that the unanimous opinion of the witnesses was that the consumer would not benefit, etc., and expressing a hope that, before the hearings closed, the committee's attention might be called to some schedule in which reduction of duty would profit "the ultimate consumer."

In showing up the folly of the consumer in supposing that he had an interest in tariff revision, Mr. Boutell had an able assistant in Representative Gaines, of West Virginia. Mr. Gaines delighted in attempting to prove that the duty, if it were all added to the selling price, would add very little to the cost of any particular article. For example, the duty on hides meant only a few cents on a pair of shoes or a carriage top, and the duty on iron and steel meant only a trifle for each wagon. Plainly, it was his opinion that the consumer who would object to this small increase of cost was a very penurious fellow, one chronically disposed to find fault. Mr. Gaines and some of his colleagues found it convenient to include in their reckoning only the added manufacturer's cost traceable to the duty. They pointed, for example, to the 10 cents added to the cost of the average pair of shoes by the duty on hides, ignoring the profits which the wholesale and retail dealers must make on the 10 cents, by which the increase in

cost to the wearer of the shoes is made much greater.

There proved to be at least one member of the committee who would not dignify the consumer's standpoint by the merest mention, Representative Fordney, of Michigan. The word "consumer" does not appear to be in his dictionary. He knows only the producer, and regards as a blessing any duty whatever which prevents the importation of goods and compels their production in this country, no matter what may be the cost of producing them here. Yet here and there, among the majority members, there appeared some evidence of an appreciation of the rights and interests of the consumer. This rare phenomenon was most noticeable in Representative Crumpacker, of Indiana, and Representative McCall, of Massachusetts, with an occasional gleam of light from Representative Hill, of Connecticut.

This general disregard of the consumer's interest did not appear to be based on the old claim that the consumer does not pay tariff duties, but rather upon the idea (1) that these taxes are small; (2) that the consumer derives great benefits from the tariff system, and (3) that if the taxes were removed, monopoly would prevent the consumer from getting the benefit. It seems to be generally admitted now that the consumer, not the foreigner, pays the tariff. Mr. Willis L. King, representing the Jones & Laughlin Steel Company, when asked if the consumer pays the duty, said: "I think that is true. I am glad that he pays it."

The Explanation.—To a certain extent, of course, neglect of the consumer by the people's representatives at Washington is the result of a peculiar economic belief, the acceptance of the protective theory, by which undue emphasis is placed upon the function of production at the expense of the correlative function of consumption. But, as a theory, protection is not directly responsible for all the indifference to the consumer. Honest and consistent protection, assuming that there may be such, would not in every case forbid the consumer to purchase cheaply abroad. It would, before taxing the importation of an article, give some consideration to the question whether the article can be produced in

this country with reasonable advantage. In like manner, honest protection would give to producing interests only such a duty as would enable them fairly to compete with foreign producers, not an excessive duty which would exclude the foreign article and enable manufacturers in this country to exact, by combination or otherwise, unreasonable or monopoly prices from consumers.

It cannot be doubted that Congress has departed very widely from that protection which, by way of comparison, may be called honest and consistent. That this is the inevitable result of the system of protecting private industries is my own belief; but that it is a necessary consequence of that system, conjoined with our unrepresentative scheme of government, I think no observer at Washington can fail to see. Not only do selfish private interests nominate and elect Congressmen and influence their course in regard to legislation, but Congressmen themselves do not blush to have it known that they are personally and pecuniarily interested in the levying of certain tariff duties for which they vote as public legislators, and for which they work and lobby with all the skill at their command.

If we had a high and honest standard of public morals in Congress it would be much easier to get an honest tariff, and the consumer would not be plundered as he is now. Whatever may be said of the personal character of Congressmen, I venture to say that the established moral code in Congress, recognized as governing in public or official matters, is lower than that which prevails in most city councils. Here is the proof. There are few city councils in which a member is allowed to vote upon any contract or other question in which he is known to have a pecuniary interest; and in many cities all members of the council are absolutely forbidden to have any pecuniary interest in any contract awarded by that body. In Washington it is common gossip that, out of the nineteen members of the Ways and Means Committee who will frame a new tariff, various ones are pecuniarily interested in this or that schedule; that one is interested in tobacco, another in olives, a third in lumber, and so on.*

Some of the pecuniary tariff interests

and earthenware, machinery and implements generally. A real attempt to apply this rule impartially would free consumers from much tribute now paid to monopoly, but it would not stop the injury which results from protection given to industries that are not well suited to this country. In the wool-raising industry we have an example of those that should be removed from the protected list on the ground that the duties are a burdensome tax upon the people and there is no prospect of developing a supply at all adequate to the needs of the country.

That these changes and others of a like character would bring great relief to the consumers of the country, the whole people, I think cannot be doubted by any one who does not ignore the ordinary laws of trade. If the Ways and Means Committee or Congress believes that the relief intended for consumers would be absorbed by trusts and combinations, by the thwarting of the laws of trade, these lawmakers should be reminded that their proper function is to find a remedy for acts in restraint of trade, not to use fear of these wrongful acts as a pretext for continuing oppressive burdens on the people.

If duties were reduced, as nearly as might be, in accordance with the test relating to cost of production, using cost figures that now obtain, it would be found that in the near future further large reductions could be made in accordance with the same rule. This is true on account of the extent to which present costs, in almost every industry in this country, are increased by the tariff duties themselves, making materials and labor more expensive than they would otherwise be. Reductions in one industry will make reductions possible in other industries, until finally we may get down off the unnatural level of prices caused by the extraordinary tariff rates of the last few decades. When we get down to natural conditions we shall probably find few industries that cannot, without protection, compete in our home market with foreign producers.

The claim is sometimes made that the burdens imposed by the tariff are, for the most part, borne by the rich and well-to-do; in other words, that the taxes are laid upon luxuries. I deny

that this is true, either as to the revenue which actually goes into the public treasury by collection of duties on goods imported, or as to the much larger revenue which goes into private coffers by collection of monopoly prices made possible by the tariff wall. Tariff burdens bear heaviest upon the poor, and the forthcoming revision ought to mitigate, if it cannot remove, this disgraceful condition.

In the choice of subjects for tariff taxation the poor are not favored. The common necessities of life, materials for supplying the three elemental needs of man—food, clothing and shelter—are weighed down with oppressive loads of taxation. If the burden seems lighter upon articles of food than upon materials used for clothing, shelter and fuel, it is because on many food products the duty is wholly inoperative. The discrimination against the poor and those of moderate incomes is greatly increased by the extensive use of specific duties and by the clever way in which they are made to conceal oppressive taxes upon the cheaper articles or upon the cheaper grades of the same article. If we examine the actual *ad valorem* rates paid on all imports, we find that in many cases the cheap grades, purchased by the poor, bear three or four times as heavy a tax as the expensive grades, purchased by the rich. The levying of apparently harmless duties, at so much per pound or per yard, covers a multitude of grievous sins toward the most helpless classes of our millions of consumers.

In defense of specific duties, it will be said that in many cases they are preferable on account of the impossibility of preventing undervaluation of goods imported under *ad valorem* duties, and that they are much simpler and easier to collect. In so far as this is true—and it undoubtedly has some foundation in fact—it adds one more to the many reasons why we should get rid of the entire tariff system as fast as possible. In this respect, as in many others, it is incapable of honest or just application. Chairman Sereno E. Payne, having been thru two or three tariff sieges, begins to recognize this truth. Addressing a certain witness on the subject of specific duties, he referred to "difficulties which legislators have in reference to the tariff, not so

much from the lack of information, or correct information, as *from the nature of the problem itself.*" In general, the tendency of revision should be to change from specific to *ad valorem* duties and to get a more impartial arrangement of such specific duties as are retained. Better some undervaluations and frauds on the revenue than this discrimination against the poor by a professedly just government!

The prospect of relief for consumers from unequal and unjust tariff burdens, unfortunately, is clouded by the apparent necessity of raising revenue from import duties. Taxation of citizens in proportion to their expenditures for one or more articles of use is indefensible, so far as justice in distributing the burdens of government is concerned. But the Federal Constitution practically closes many of the avenues of legitimate taxation, and the Supreme Court has by construction closed certain others. Thus fortified in some measure by legal necessity, as well as by private cupidity, the system of raising revenue from tariffs will be continued for the present. The substitution of a better plan is hindered, not only by the avowed advocates of the protective theory, for whom tariff revenue is merely a convenient by-product, but also by many professed opponents of protection who do not scruple to secure, under plea of the necessities of the revenue, protection for some pet industry, and also by consistent opponents of protection who cannot see that revenue tariff taxes are unjust in themselves and are among the most effective supports of the protective system.

Where excessive or prohibitive duties are lowered to a point which puts domestic and foreign producers on a fair competitive basis, the revenue will usually be increased as a result of larger importations. Certain schedules have been recommended for abolition and certain others for reduction. It is likely that the increase in revenue from the schedules reduced, thru greater importations, would offset the losses of revenue from the schedules abolished. Above all, no plan of revenue requirements, however plausible should be allowed to secure the retention of any duty which has long

been the means of taxing the necessities of the people for the benefit of monopoly. Flagrant examples of this class are the duties on iron and steel, coal, lumber and petroleum. Undoubtedly much more revenue can be derived from luxuries than is now obtained, quite as often by reducing the rate as by raising it.

I recommend the taxing of luxuries rather than necessities, merely as a choice of two evils, well knowing that no complete and satisfactory division of articles into these two classes can be made; that what is one man's luxury may be another man's necessity, and that between the most elemental necessity and the most superfluous luxury there is a long and continuous series of articles, and of grades of articles, separated from each other often by almost imperceptible differences, so far as their relation to luxury is concerned.

What of the System?—A full discussion of the economic aspects of protection cannot be attempted here. But even if we grant the validity of all the essential arguments for the protective system in economic theory, it must, in my judgment, be admitted that the present public interest calls for successive radical reductions and for the ultimate abolition of the entire system. Whatever good, if any, can be obtained from a protective policy thru the diversifying of industries was secured by this country some years ago. The tendency of the system toward corruption of government and a lowering of the political ideals of the people is, I believe, irresistible. The tendency toward the support of monopoly has been most marked in our recent history. The system requires a choice between two serious evils—ineffective collection of the revenue and unjust discriminations against the less wealthy classes of consumers, with the chances in favor of the greater evil being chosen. And, finally, the levying of duties on imports is impossible of such adjustment as to afford a just or tolerable means of raising government revenue. For these reasons, which can be accepted by believers in the economic benefits of protection, the tariff system today stands condemned as a menace to the well-being of our country.

NEW YORK CITY.

The Painted Stelæ of Pagasæ

BY EDWARD B. CLAPP, Ph.D.

PROFESSOR OF GREEK IN THE UNIVERSITY OF CALIFORNIA

WITHOUT the least exaggeration, we may assert that the recent finds at Pagasæ of painted sepulchral slabs mark the opening of an entirely new chapter in our knowledge of ancient Greek painting. For it must be admitted that our acquaintance with this department of ancient art has hitherto been lamentably small. The Parthenon stands forever an imperishable monument of the splendor and perfection of Greek architecture. The Aphrodite of Melos, the Hermes of Praxiteles, the Delphi Charioteer, and the Mourning Athena still speak to us today in all their incomparable beauty. The strained eye needs only to fix itself upon these, and scores of other masterpieces, to realize that all later sculptors are but children compared with the Greeks. But with regard to Greek painting, the case is far different. The great pictures of Zeuxis, Parrhasius, and

Apelles were for the most part painted upon perishable material—upon wood, or the thin coating of the walls of buildings—and hence they have not been able to resist the ravages of time. Not a single authentic painting by an eminent Greek master has been preserved to us; nay, not even a well attested copy or imitation of such a work, dating from the best period of the art.

Where, then, have scholars found the materials for the learned and voluminous histories of Greek painting which may be seen in our libraries? Partly, to be sure, in the writings of ancient critics, such as Pliny the elder, Lucian, and others. But for our conception of the works themselves, we have been obliged to rely chiefly upon the painted vases which have been found in such numbers, and which form so characteristic and interesting a feature of the Greek artistic output. The painters of these vases

VIEW OF THE WESTERN SIDE OF THE OUTER TOWER OF PAGASÆ, WITH THE GAP TO THE INNER, WHICH IS FULL OF PAINTED STELÆ.

were far more than mere handicraft men. They were often real artists. Moreover, they frequently took their subjects and style of treatment and grouping of characters from admired works of the great painters of their day, and so afford us many useful hints as to the original pictures themselves. But it must not be forgotten that the art of vase painting reached its highest development in the fifth century before Christ, before the maturity of painting proper. After Polygnotus had introduced greater va-

attached to the mummies of Fayyum in Egypt. But the Pompeian wall paintings, tho they possess considerable merits of composition, coloring, and expression, yet draw their inspiration from an art already in its decline, and hence they can tell us little of the great painters of the fourth century before Christ. The Fayyum portraits are perhaps the best examples of Greek painting which we have hitherto possessed, and altho encaustic portraiture can never compare with painting in oils, yet some of the

VIEW OF THE EAST SIDE OF THE OUTER AND INNER TOWER OF PAGASÆ, WITH THEIR SOUTHEAST CORNER.

riety of coloring, and Apollodorus had begun to grade his colors according to the play of light and shade, the true art of painting burst its swaddling bands and soon reached a perfection which mere vase painting could not aspire to rival.

Next to vase painting the most important sources of our knowledge of Greek painting are the wall decorations of Pompeii and Herculaneum, and the portrait heads, mostly painted on wood, which have more recently been found

pictured faces from Egypt can hold their own with modern portraits. But the Fayyum mummy tablets, like the Pompeian wall paintings, are late, and so give us only tantalizing glimpses of an art whose real masterpieces are irrecoverably lost.

Perhaps some one may be inclined to ask how we know that the admired works of the painters of the fourth century were masterpieces. The answer is easy. We know it from the testimony of the ancients themselves. And among

these ancients there are not a few whom we have learned to respect as unerring critics of art. The paintings of Apelles, for example, were held in quite as high

esteem by his contemporaries as the statues of Praxiteles, and this in a gen-

erations, whose critical taste was instructed and refined by the daily study and enjoyment of works of art of all

kind, which the world still regards as of supreme excellence. Incredible as it may seem, it is not unlikely that if we

STELÆ OF THE WIFE OF ARTITOKOS.

possest, uninjured, the Aphrodite Anadyomene of Apelles, we should rank it even above the Dresden Madonna, just as we are forced to admit a grandeur in Phidias which even Michelangelo could not attain.

In view, then, of the unquestionable excellence of Greek painting, and of the very scanty specimens of its work which have been preserved to us, it is easy to understand why the recent finds at Pagasæ have been greeted with such enthusiasm by archæologists. The place where the discoveries were made is rich in mythological and historical interest. Pagasæ lies in southeastern Thessaly, a few miles south of the charming modern town of Volo, at the head of the Gulf of Volo, anciently known as the Pagasæan Gulf. The traveler reaches Volo from Athens by steamer in a little more than twenty-four hours (or fifteen hours, if the railway be followed as far as Chalcis). The sail around Sunium, past Marathon and Aulis, thru the Euripus at Chalcis, and on past Thermopylæ, is indescribably beautiful. At Pagasæ one is immersed in memories of Jason and the Golden Fleece. "Sunny Iolchus" is very near, and at Pagasæ itself the

ship Argo was built and launched, and the "flower of mariners" set forth on their immortal voyage into the unknown East. There the Clashing Rocks awaited them, and the fire-breathing bulls, and the dragon—perils which Jason surmounted by the help of friendly goddesses, and of the lovely sorceress Medea, who was moved to irresistible passion by Aphrodite's power, thru the spell of the iynx, "maddening bird." During the Macedonian period Pagasæ was partially deserted for the newly founded Demetrias, nearby, but in Roman times it again became an important city.

Excavations were begun at Pagasæ during the summer of 1907 under the leadership of Mr. A. S. Arbanitopoulos, Greek Ephor of Antiquities for Thessaly.* The excavations brought to light

*The writer is indebted to Mr. Arbanitopoulos for the opportunity of seeing his valuable finds [which are not yet published], and for much assistance in

STELÆ OF PAGASÆ

the fact that outside the original city wall of Pagasæ, perhaps during the second century before Christ, a new rampart had been built, apparently in the utmost haste, to meet some pressing danger. It was made with an inner and outer wall, filled in—and this is what interests us most—with a vast mass of sepulchral slabs, or stelæ, from the neighboring graves. If these had been stelæ of the ordinary kind, carved in relief, like the many beautiful monuments from the Ceramicus to be seen in the museum at Athens, they would have been interesting enough. But what

Many of the stelæ in the photograph are from the collection of Mr. Arbanitopoulos, in the Greek Museum, Athens. They are painted with a red pigment, and the relief is well preserved.

gives them their inestimable value is the fact that hundreds of the Pagasæan stelæ are painted with beautiful colored pictures, reminding us in many ways of the Pompeiian wall paintings, but, in the opinion of some of the most competent critics who have examined them, of even finer workmanship.

Painted stelæ, to be sure, were not entirely unknown before, but the very few which had been found were badly damaged and of little artistic merit. The stelæ of Pagasæ, on the other hand, are numbered by hundreds, some of them quite unbroken, with the colors as fresh as if they had been painted but yesterday. A number of these have been carefully reproduced in facsimile, and the copies are to be seen in the rooms of the Greek Archæological Society at Athens. The originals still lie in the little museum at Volo, in the basement of the excellent local gymnasium. The painted stelæ are believed by Mr. Arbanitopoulos to include works of all the centuries from 500 B. C. nearly down to the beginning of our own era. They, therefore, cover the whole period of the rise, perfection, and decline of Greek painting.

The Pagasæ stelæ are shaped like ordinary Greek sepulchral slabs. They are from three to four feet high and from one to two feet broad, often embellished at the top with gable and cornice, and with the familiar "egg and dart" ornamentation. Many of them bear inscriptions, first cut in the stone and then painted red. The style of the letters is naturally an important aid in estimating the age of the work. The inscriptions often state only the name of the person commemorated—"Phila, daughter of Melas," "Cleon, son of Timotheus," "Artemisia, wife of Cleon." In other cases an appropriate reflection is added.

The pictures represent scenes of the same general character as the reliefs upon the stelæ with which we are familiar—a single person, two persons standing or sitting, greeting each other or engaged in conversation, and usually with no conspicuous indication of mourning. The colors are warm and rich, dark reds and browns predominating, but these are set off by beautiful tints of violet and vermillion, blue, yel-

low, green, and purple. The composition and drawing, as well as the coloring, are excellent. Perhaps the finest of these paintings, in a technical sense, as well as the most full of human interest, is the one which is here reproduced, page 533, quite inadequately, of course. The stone is unfortunately broken, and no inscription is preserved, but the scene appears to be the death of a young woman in childbirth. On a couch with two mattresses and a pillow (represented with extraordinary fidelity) lies the mother in her youthful beauty. Her eyes are closed in death, and at the foot of the bed the father sits, gazing fixedly at the face of his wife, and scarcely noticing the child, which the nurse holds in her arms, apparently hoping to distract the father's grief. A youthful male figure, perhaps a trusted servant, stands at the door. The faces are painted in a rich reddish brown, which forcibly recalls the well-known "Aldobrandini Marriage" in the Vatican. The husband's features, in particular, are extremely strong and beautiful, and the portrait is certainly not unworthy of being compared with the most esteemed works of Dutch or Italian painters. The scene is full of pathos, and in its simple picture of human grief it reminds us that the great central events and emotions of life—love, marriage, birth, and death—were exactly the same to our kinsmen on the shores of the Ægean two thousand years ago as to us today. The external setting alone is changed. We may add that, above and at the sides of the picture, the stelæ is beautifully ornamented with architectural effects. Together with the other pieces of this remarkable collection, it will eventually find its way to the great museum at Athens—a museum already of supreme interest to all lovers of Greek art, and open, gratuitously, to all the world by the wise generosity of the Greek Government in its poverty. The prospective opening of the Balkan railway, connecting Greece at last with the European lines, will vastly increase the number of travelers who find their way to the mother city of all our Western culture.

The finds at Pagasæ are another illustration of the fact, now becoming familiar, that classical archeology is one

STELÆ OF PHILA.

of the most progressive of sciences. Within the memory of the present generation the limits of authentic Greek history have been pushed back more than a thousand years by the excavations in Crete and elsewhere, and today the most enlightened nations of the world, Greeks, Germans, Frenchmen, Italians, Englishmen, and Americans, are vieing with one another in the effort to find and interpret the buried accumulations of antiquity. The restless eagerness of the modern world will not be satisfied till every existing monument of that marvelous Ægean civilization has been brought to light and understood.

ATHENS, GREECE.

Literature

Carl Schurz's Last Volume

THE third and final volume of Carl Schurz's "Reminiscences"* begins with the Gettysburg battle. The author's narrative ends with 1869, when he took his seat as a Senator from Missouri. The remainder of his life is sketched by Fred-eric Bancroft and Prof. William A. Dun-ning.

All of Schurz's descriptions of battles are vivid. None is more so than his story of Gettysburg. The whole field is set before the reader as in a shifting pano-rama. The converging of troops at Gettysburg; the terrible first day's strug-ple in and about the town; the retreat to the heights and the massing there of the slowly arriving troops; the prolonged and desperate contests of the second day; the third day's cannonade and the dramatic charge of Pickett's division—are pictured in unforgettable outlines. Nor does the author forget the darker and more gruesome side of war in his description: the sight of the field after the battle, with its thousands of dead and mutilated forms, and the scenes in and about the tents and sheds where the surgeons performed their amputations, often breaking down with hysterical weeping over the horror of their tasks—all this he has given as we believe it has never been given before.

The Eleventh and Twelfth Corps were shipped to Chattanooga after the disaster of Chickamauga, and took part in Bragg's memorable defeat. But Schurz had difficulties with Hooker, and did not accompany Sherman on the march to Atlanta. He was for a time stationed at Nashville in command of a "corps of instruction," and in the following summer took the stump in advocacy of Lin-coln's re-election. The election over, he was at once sent forth by the War De-partment on the task of urging the State Governors to organize corps of veterans. In April he was ordered to

join Sherman at Goldsborough, North Carolina, and was present at the surren-der of Johnston's army. Then he re-signed his military commission.

It was a long and busy career in civil life that now opened for him. President Johnson sent him on a tour of investi-gation of the South, a task that soon ended in a complete alienation from the President. He entered ardently into the contest against Johnson, tho during the impeachment proceedings he was ab-sent from the country. In 1869 he was elected a Republican Senator from Il-linois. Favoring Grant's election in 1868, by 1870 he had become opposed to the President, and he was the leader of the Liberal movement of 1872. He distrusted Greeley, and supported the ticket with reluctance. In 1876 he sup-ported Hayes, and was made Secretary of the Interior. He supported Garfield in 1880, but went over to Cleveland in 1884. In 1896 he opposed Bryan, but in 1900 supported him, and in 1904, tho taking no active part in the campaign, advocated the election of Parker.

Schurz was a German Liberal of the old school. The newer problems of so-cial and industrial life seem not to have concerned him. Civil service reform, sound money, anti-imperialism, tariff re-vision, "good government," compre-hended the greater part of his political program. That his policy was uniform-ly consistent will always be a matter of debate. His change of attitude toward reconstruction was in its way almost as remarkable as Andrew Johnson's; and in many of his actions on public questions, a good case for an equal incongruity can be made out. But nothing ever dis-turbed the serenity of his belief in him-self. His words leave the reader in no doubt of his entire satisfaction in the rectitude of his acts and the infallibility of his judgment. His biographers keep up the same strain to the end. Perhaps the most instructive passages in the three volumes are those which give glimpses of Lincoln—the great ruler who was

*The Reminiscences of Carl Schurz. With a sketch of his life and public services from 1818 to 1904. By Frederic Bancroft and William A. Dunning. Vol. III. New York: The Macmillan Company. \$3.00.

often in doubt, who rigorously criticised himself, who so frequently confest himself in error. The contrast between the patient humility of the one and the aggressive self-assurance of the other is extreme.

Travelers in the Orient

So many men are traveling the untraveled wilds of Western China and the impassable Tibetan highlands that it will soon stop being profitable to write books about it—if it ever was. But *From Peking to Mandalay*,¹ being the outcome of a sort of rest-tour of a British magistrate of Wei-hai-wei, is not a chase after scientific or geographical discoveries, as the author frankly confesses, but a very human expression of interest in people and magnificent scenery. Mr. Johnson went by rail from Peking to Hankau, then four hundred miles westward by steamer to Ichang, after that across country thru the great, rich province of Sze-chuan until he had passed into the great highlands and turned southward along the edge of Tibetan China—or Chinese Tibet—in the grandeur of the eastern Himalayas, sometimes over passes of more than seventeen thousand feet, and coming down again in the province of Yunnan, he brought up finally at Mandalay, in Burma. Delicate-stomached explorers may be hindered from making these Tibetan highlands too common by noting that Mr. Johnson had to live almost wholly on tsamba, which is parched barley meal mixt with yak butter, and on Tibetan tea, a paste kneaded up mostly of the stalks of the tea plant, of which he says he found it “always drinkable if one added plenty of butter and forgot it was meant to be tea.” He found everywhere unvarying kindness, for the very good reason that he treated the natives with real human sympathy. Of the Chinese antipathy to foreigners he significantly remarks: “If they love the people of Europe no better than they did eight years ago, I am not aware that we have done anything to win their affections.” It is something of a pity that the West cannot see thru this British magistrate’s eyes the foolishness of not discriminating between mere stupid or malicious antip-

athy and the well-founded dread of that foreign aggression that threatens not only the right of the Chinese to develop their own country, but the very foundation of their political and social fabric itself.

To attempt a biography² of a woman who wrote so fully and vividly of her travels as Isabella Bird Bishop is to set out on a road plentifully furnished with pitfalls, and the author has fallen into a fair number of them. She admits at the beginning that she is only filling in the intervals between Mrs. Bishop’s own accounts, so that the book is sketchy at the most interesting points and burdened with a good deal of valueless detail in between. But having said this, it is but fair to add that the consecutive account of that wonderful little traveler’s life—she was only five feet high—and the gradual evolution of her attitudes on political and religious questions, makes a book which was distinctly worth the writing. The strangest thing about the woman was the contradiction between her life at home and abroad. In England she was an invalid, often confined to her bed, but once over-seas, furbisht out in some half-masculine costume, astride an Arab horse, a saddle mule or a Tibetan yak—whose particular propensities seem to be a natural peevishness, combined with an insane habit of going skipping over all the rocks that can be found at the edges of precipices—wet with rains and the fording of rivers, sleeping in tents in all weathers, eating the most impossible food when she could get it or going hungry for days, cut off for months from European care or companionship—under these conditions she seemed to tap some source of indomitable hardihood and courage, and to renew her hold of life in the open air in the midst of perilous adventures.

A Happy Half-Century, and Other Essays.

By Agnes Repplier, Litt. D. Boston and New York: Houghton, Mifflin & Co. \$1.10.

As Miss Repplier remarks, “this is a day given over to the shedding of ink.” Several thousand graduates of the English departments in our colleges are

ned out each year, and as, of course, all of them begin at once to shed ink in acceptable forms, it is no small praise to say that Miss Repplier retains a hold on the highest average of readers of our magazines that may reasonably be envied by the best of her rivals in the use of the blue-black blend. Her essays are not all in out-of-the-way fields, nor is she always engaged, like so many of our younger writers, in trying to make two blades of grass grow where there is a market call for only one. A gleaner, rather, in old fields she has been, and with an eye for the promising grains. What old-time ripeness of the filling cereals she has, first and last, gathered into the serviceable magazines is shown in just a baker's dozen of essays now before us, every one of which has its own peculiarly delicious savor. In them all the one word which best describes her own spirit is a word much used by her in telling us of that happy half century of which she treats so tantalizingly well—"vivacity"—liveliness, a laughing spirit gilding the gatherings of a keen intelligence. She has a good deal of fun—sober fun—out of the old ladies of our grandmothers' time—not all of them old ladies, either; for at that happy date there were grandchildren poking fun at *their* grandmothers, whose simplicity and old-time manners were droll enough. But Miss Repplier has excellent fun with both sorts of grandmothers—those who were then in their teens and those who had been. Not one of the thousand college bachelors minting the English vocables can make them half so gladsome as she makes them when she tells us of the days of "estimable Miss Monflathers," whose imaginary silks have been kept in lavender for more than half a century. Fashions were different then from fashions of to-day. Manners were different. And accomplishments! There has been evolution in accomplishments! Old ladies were not playing bridge whist in the morning. The young and fair were not sticking four pins into mysteriously concocted flyaway hats preliminary to a Bernard Shaw matinee. Quite the contrary. The unsophisticated young ladies at boarding school were making "flagree baskets that would not hold anything"—Oh, fie! fie!—"Ionic temples of

bristol board, shell flowers and paper landscapes." Poor things! we say. They should, like our Boston mothers of today, be poring over cardboard puzzles instead. They were "pricking pictures with pins, taking 'impressions' of butterflies' wings on sheets of gummed paper, and messing with strange, mysterious compounds called diaphanie and potichomanie, by means of which a harmless glass tumbler or a respectable window pane could be turned into an object of desolation"; and otherwise "accomplishing" themselves in the "ornamental arts." Thus she has her fun out of such dear, delightful old grandmothers' grandchildren—and they seem to have been very dear to all the men of their day, except, perhaps, to grim old Dr. Samuel Johnson, who, as Miss Repplier gleaningly quotes, thought next to nothing of their accomplishments. "Next to mere idleness," says he, as he swallows his twenty-seventh cup of tea—"next to mere idleness, I think knitting is to be reckoned in the scale of insignificance." If he had seen one of his hateful Boston grandnieces of today, if any such exist, working out a pasteboard puzzle of two cats and a little girl, he would have broken his cup with envy. But the grandmother field is only one of the baker's dozen in which Miss Repplier gleans modestly. She finds wheat of good quality, and, with a demure charm quite equal to that of Ruth gleaning after the servants of Boaz, she heaps her thirteen baskets. To us the best of them all is that particular basket in which lie all the foiled ambitions of little Miss Bender, who, in an unhappy moment, met Charles Lamb. Of course, Lamb just then was aching to get home to begin leaving off tobacco with one last pipe. We commend that basket to our readers, as, indeed, we commend all the thirteen. Taking up a new magazine, seldom do we fail to look first to see what Miss Agnes Repplier has contributed.
